Sometime in March 1798 a packet of letters from Europe was handed to Kosciusko. His emotion on reading the contents was so strong that, despite his crippled condition, he sprang from his couch and stepped without a helping hand to the middle of the room. "I must return at once to Europe," he said. At that time he received news that Poland was again being massacred. Before leaving America he gave Jefferson his power of attorney and wrote out the will in which more than half a century before the Civil War the Polish patriot advanced the cause of emancipation:

I, Thaddeus Kosciusko, being just in departure from America, do hereby declare and direct that my friend Thomas Jefferson employ the whole thereof in purchasing Negroes from among his own as any others and giving them liberty in my name, in giving them an education in trades and otherwise, and in having them instructed for their new condition in the duties of morality which may make them good neighbors, good fathers or mothers, husbands or wives, and in their duties as citizens, teaching them to be defenders of their liberty and country, and of the good order of society and in whatsoever may make them happy and useful, and I make the said Thomas Jefferson my executor of this.

T. KOSCIUSKO,
5th Day of May 1798.

By the end of June or early in July 1798, Kosciusko reached Paris. His arrival centered upon him the gaze of the whole world. Sympathy with himself and the Polish cause he heard expressed upon all sides. He negotiated at length with the Government of France for France's help in the restoration of Polish independence. This was promised him many times, but his cautious request for guaranties was never complied with. Then, like now, Poland was betrayed by its friends and used as a pawn to gain temporary peace, expediency, and advantage.

But Kosciusko's intercourse with his American friends did not slacken. In 1800, at Paris, at the request of Gen. William R. Davies, then envoy from the United States to France, Kosciusko prepared in French his Manoeuvres of Horse Artillery, and it was published. General Davies requested the United States Military Philosophical Society at West Point to have the manual translated and published. This was done in the same year, and Colonel Williams, the translator, presented President Jefferson with a copy of this work, the first upon its subject to be published in America and used for many years as a basic text in our country.

Napoleon was now big man of Europe. In 1806, from Berlin, he summoned Kosciusko to assume the leadership of the revolting Poles. But the former Polish commander in chief had little faith in the fortune of the Emperor and none in his promises. He declined to obey the call and remained in Paris. He refused to use Poland as a pawn to promote a dictator. He refused to bargain his honor and the honor of his native Poland. Appeasement hypocrisy was not part of his life.

In May 1815 Russia, Austria, and Prussia signed an agreement for a new partition of Poland, just like they did at Yalta. An autonomous Kingdom of Poland was to be formed with the Czar as King, but it would be but a small part of the true Poland. Kosciusko heard these things. In dismay, he wrote to the Czar. In vain he waited for an answer. Kosciusko refused all offers of office and honor in the newly partitioned Poland—now a puppet of the Czar. He felt that his very presence, even, would lend sanction to the new partition. He despised puppets and quislings. He chose, therefore, a voluntary exile among the Swiss.

In serene communion with nature, among eternal mountains, in unceasing meditation upon the future of Poland, he spent the two last years of his life. And here, on the sad autumn evening of October 15, 1817, far from his fatherland, though close in spirit, among strangers, with not a Polish face nor a Polish word to gladden his heart, Kosciusko died. Even in his loneliness he was faithful to Poland—her purest soul and the greatest of Poles. And his greatness in that it was not his own personal greatness; merely, it was the greatness of Poland.

Mr. Speaker, the greatness of Kosciusko is the greatness of Poland. The spirit of Kosciusko has always been the spirit of Poland. Wherever freedom needs a friend there you will always find Poland the first to bleed and suffer. No soil of any nation the world over is so saturated with blood gashed for freedom as it is in Poland. There in that land at all times freedom had a loyal and trusting friend. Kosciusko is dead—but his spirit still guides Poland and its people.

Let us go back just a few years to 1938 and 1939. The whole world was afraid of a little paperhanger from Austria, then the big man of Europe. I remember at that time even in our own country when I denounced the leader of the "master race" I was told I should temper my words because Adolf might get mad at us. Among all the nations of the world there was no voice courageous enough to even call Adolf Schickelgruber a bad name. The leaders of the world licked the boots of the tyrant. They went to Munich. Chamberlain even took an umbrella with him, hoping that he might get the privilege and high honor of protecting the paperhanger from the rain. Shaking in their boots the powers of Europe appeased and fought for the favors of the big man of Europe. Even the mighty Red Bear of Russia embraced the madman of Europe and plotted with him the murder of small and helpless people of small and helpless nations.

In all the world during these tragic years, 1938 and 1939, there was only one nation and one people courageous enough to call the paperhanger's bluff. True to the spirit of Kosciusko, the people of Poland said, "We care not what course other nations take, but as for us we shall stand up and fight. The cause of freedom is at stake. We would rather fight and die for that freedom than lick the boots of any tyrant."

How courageously the people of Poland fought is written in the records of the past 7 years. To the last man, woman, and child they stood up. In the long struggle ahead—6 years—there could not be found in Poland a single quisling. The spirit of Kosciusko was prevalent in the hearts, minds, and breasts of every single Pole—fighting and dying for their freedom, as well as ours.

Meeting the mightiest military power in all history, they fought on. Alone they bore the brunt of the killers of Europe. After 19 days of glorious resistance, they were stabbed in the back by one of Hitler's pals—the bear of Russia. The bank robber of Georgia—not a Russian—and the paperhanger of Austria—not a German—were now butchering and dividing the spoils and carcass of prostrate Poland. Now Poland was attacked from both sides by two of the mightiest powers the world had ever known. Still they fought on. Still the spirit of Kosciusko urged them on. Never in the history of mankind has there been such an exhibition of glorious courage and resistance. Poland did not get lend-lease to spur on their courage. The spirit of Kosciusko was all the inspiration these people needed.

As Members of Congress we know the story full well. Poland was not a warring nation. All they had to offer was courage, life, and blood. But that was not enough to stop the bank robber of Georgia and the paperhanger from Austria. Poland was overrun and destroyed. The paperhanger enslaved the Poles in the west in labor and concentration camps and the bank robber from Georgia took the Poles from the east and sent them to Siberia.

But it takes more than murder to destroy the spirit of Poland which is the spirit of Kosciusko. Enslaved and betrayed by the rest of the world Poland still fought on. They fought harder and longer than any of the Allies of this war. A few months after Poland fell, a Polish Army was fighting in France in the Maginot line. When mighty France folded up, the Poles were the last to lay down their arms in the Maginot line. From there the Poles went to England. Six months after Poland fell 12,000 Polish boys were flying in the British Royal Air Force. They shot down one out of every five planes during the London blitz. One of the Polish squadrons was named the Kosciusko Squadron.

The only help the Allies sent Norway was a small contingent of Polish boys and what was left of the Polish Navy. All this after Poland was destroyed and overtaken by the Red and Brown Fascists of Europe. By now Hitler was running wild in Africa. It was a group of Polish boys that gave Hitler his first defeat at Tobruk. This after Poland had been overrun. This Polish Air Force helped in the evacuation at Dunkerque. So did what was left of the Polish Navy. The spirit of Kosciusko will never be destroyed, nor will the spirit of Poland.

What American is there who does not remember the deadly battle of Monte Cassino Hill? It was a Polish general and a Polish Army that captured that murderous fortification and paved the road for the Allies on their march to Rome. Nor did Poland refuse to play a part in the invasion of Normandy. Side

by side with the Allies Polish forces marched through France, Holland, Belgium into Germany. Never in the annals of history have so few done so much for the cause of freedom and humanity. Wherever there was a fight there you found Poland. The first to resist—the first to be destroyed—yet out of the ashes of that destruction Poland contributed manpower for the air forces exceeded only by the United States and England. The first to resist and the first to be destroyed—yet Poland provided fighting troops in an amount larger than all the nations combined outside the United States, the British Empire, and Russia.

If all this were all it would be more than enough. But the people who stayed in Poland—what part did they play? True to the spirit of Kosciusko the people of Poland organized the largest and most effective underground in Europe. Every Polish man, woman, and child was a part of that underground. The Polish underground was the most effective weapon the Allies had in their march through Europe. In one uprising—the Warsaw uprising—alone, in August of 1944, 250,000 Polish men, women, and children laid down their lives. Even though betrayed by its own allies, the underground fought on. With true Kosciusko spirit they had faith in Almighty God.

The courage and the sacrifice by Poland in this last war has no parallel in the annals of history. More than 8,000,000 of her people gave their lives. That comprises almost one-fourth of her population. When in the annals of man has any nation paid so high a price for freedom? If Kosciusko were alive today he would be proud of his native land and its people; to whom freedom means more than life, and to whom freedom is so priceless that it can never be compromised.

But I am sad to say that there is one thing Kosciusko would not be proud of. I might also say that there is one thing Lincoln would not be proud of. I might add that there is one thing that decent people the world over are not proud of. It is the shameful and unprecedented betrayal of a brave and a gallant people by its own allies.

Poland has had a sad history. It was dismembered time and again. Three times before the nineteenth century—the fourth time by a bank robber and a paperhanger in fateful September 1939. But these partitions were by enemies. That is to be expected and endured. If you, as a person, are robbed by your enemies, it is sad but understandable. However, when you get robbed by your own brother or sister, that is hard to understand, let alone endure. Yet that is what happened to Poland. It was partitioned by its brothers and enslaved by its brothers, as a result of the crime of Yalta. What a shameful reward to a brave and gallant people—a people that gave us a Kosciusko and a people who gave 8,000,000 dead for the same cause for which we gave more than 300,000 dead:

O feeble statesmen,
O ignominious times
That lick the tyrants' feet,
And smile upon his crimes.

Shame on us. Shame on Britain. Shame upon the world for such cowardly appeasement. Shades of Munich. Shades of Chamberlain. But Munich is a Sunday-school picnic compared to Yalta, and Chamberlain a Sunday-school teacher compared to the big men of Yalta. I say Yalta will go down in history as worse than Munich and its conspirators worse than Chamberlains.

What did Poland ask for its sacrifice? Did they ask for four or seven billion dollars from American taxpayers? No. Did they ask for the atom bomb? No. Did they ask for us to ever bail them out and rebuild Poland? No. Poland did not even ask for bread.

Then what did Poland ask? They merely asked for their own land and their own government. In the name of truth, mercy, and freedom Poland had a right to expect that simple and honorable request to be fulfilled. But the answer Poland received from one of the White House palace guards was, "You Poles are just like the Irish; you are never satisfied."

So lo and behold—all this gallant blood of Poland was gashed in vain—because Poland by the acts of greedy and power-hungry men of Yalta—lies prostrate again. But mark you, fellow countrymen—Poland is not this sad drama's closing act. Its tragic curtain will rise anew again and again. On Poland's gashed breast today the beast of Red fascism plants his hunger and consults what nation's breast shall next be gored. This is just the beginning. There will be more and more stupendous slaughters of the free.

To gallant Poland we can well say—as other nations fall one by one—then and only then will they know what it means to be betrayed like Poland was betrayed. When these nations fall one by one they will miss Poland. As they fall one by one and plead for mercy on bended knee—then and only then will they understand the glory that belongs to Poland.

To you Members of Congress—the elected custodians of America—I wish to warn that the fall of the Polish eagle, caused by betrayal, is big with fate to man. If the New World is to begin by a broken word, it would be better not to be born. Our own strife is coming. You cannot sell out the freedom of your friends and neighbors and keep your own secure. The beast of Red fascism from the ashes and blood-soaked soil of betrayed Poland shall forge the fetters and fate of our sons yet unborn. It will not be a kind fate. It will be a hideous, murderous, and shrieking fate. Today its Poland—tomorrow it will be another—after that another, one by one, and us, too. It is nearer than you think. Someday and soon the world will understand the words, "Poland's setting star is the world's disaster-rising morn."

In conclusion, Poland, the world will someday mind how you bore the brunt of fate and how you bled for humankind. Poland, so hallowedly have you played your part that freedom-loving people everywhere have your name written on their heart. Poland, your sorrow in nobility transcends. Your conquerors' and betrayers' joy make their own cheeks blush. But shame never has and never will tinge the cheeks of Poland. Thank God that Poland never has and never will change her conscience, cause, and name for all the wealth and all that goes with a felon fame.

Poland might be dead for a while. Poland has died before. But the spirit of Poland has never died and never will die. Because Poland is the spirit of Kosciusko—even after suffering defeat in victory—the spirit of Kosciusko shall make Poland rise again and live again as it has before. Why do I say that?

I say Poland will arise and live again, because the Polish people have a patriot's spirit, an unconquerable spirit. Just a few days ago, for instance, 50 young Polish orphans left India for the United States to seek haven in various convents in America. When they boarded the ship in India, in unison they sang, "Jescie Polska nie Zginela," which means Poland is not yet lost. All the orphans of Poland, morning, noon, and night sing in their hearts "Jescie Polska nie Zginela." There are 250,000 Polish troops who bled all over the world for their freedom and ours. They are now in the beet fields of Canada and in the mines of England, but morning, noon, and night they sing "Jescie Polska nie Zginela." There are 12,000 gallant Polish airmen scattered over the four corners of the world without a country and without a home, and morning, noon, and night they sing "Jescie Polska nie Zginela." There are 6,000,000 Poles in America, proud and happy citizens of our own native land, yet morning, noon, and night they sing "Jescie Polska nie Zginela." There are 25,000,000 Polish people being tortured under the heel of Red fascism in Europe, but morning, noon, and night in their hearts and minds are the words of the immortal Polish song "Jescie Polska nie Zginela." That is the spirit of Poland; that is the spirit of Kosciusko. It is an unconquerable spirit that will never die.

I say that Poland will arise and live again, because they have a profound affection for their native land. I might mention that it is an old custom in Poland that when a citizen leaves that country, his last deed is to pick up a bit of Polish soil to take with him so that it can be buried with him in case he never returns to Poland. Such profound affection for a native land is unique among all people of the world.

I say Poland will arise and live again, because the Polish people everywhere have an abounding faith in Almighty God. You can steal their country and the Poles will be sad, but they will sing and pray "There is a God." You can murder their loved ones, but the Poles will sing and pray "There is a God." You can destroy every last segment of their nation, and the Poles will pray and sing "There is a God."

With the immortal spirit of Kosciusko, with profound and everlasting love for their country, and with an abounding faith in Almighty God, Poland will arise again, and live again, and be forever free.

Tragically, but with no surprise, honest Americans now learn the sad truth that the architect who at Yalta was largely responsible for the selling out of Poland to Communist Russia, was none other than

the convicted traitor in America, Alger Hiss. Tragically, we now learn that he was the planner appointed by President Roosevelt and our State Department who had the most to say regarding the future of Poland at Yalta. Poland today is a sad victim and lies prostrate because of the work of an American traitor and spy by the name of Alger Hiss.

We Members of Congress, in commemorating Lincoln and Kosciusko today, would do well to repudiate the work of this convicted spy and traitor and declare ourselves openly and loudly for a free and independent Poland.

This Is Murder

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. REED of New York. Mr. Speaker, the Republicans, comprising the minority on the Ways and Means Committee, on the first day that it opened hearings on taxes, moved that the first order of business should be the reduction of excise taxes. The motion was voted down, every Republican voting for the motion and every Democrat voting against it. The buyers' strike swept over the country as soon as the President's message was delivered to the Congress, in which he suggested an elimination of excise taxes covering a few—a very few—excise taxes. In the first session of the Eighty-first Congress 50 bills were introduced by Republicans asking for the reduction of excise taxes, and yet here we are well along in the second session of the Eighty-first Congress and the delay still continues. This refusal to meet the tax situation promptly and forthrightly is doing irreparable damage to the economy of the country. The only subject in which the administration seems to be interested is how to increase taxes and spend the people's money.

Under leave to extend, I am inserting as a part of my remarks an article by Sylvia F. Porter which appeared in the New York Post under date of February 7, 1950:

THIS IS MURDER

(By Sylvia F. Porter)

This is murder. All this publicity out of the White House, the Treasury, and Congress about near-term cuts in the wartime excise taxes—but no action.

Every day, more would-be buyers of jewelry, cosmetics, luggage, furs, etc., are deciding to postpone their purchases until the taxes are reduced or eliminated.

Every day, as a result, more workers in the industries involved are being thrown out of jobs.

Every day, more of the manufacturers and stores are caught in the squeeze and are going broke.

This is slow murder—via Washington befuddlement and red tape. It simply must be stopped and stopped at once.

It was bad enough when President Truman decided to drop the hint (just before Christmas, mind you) that he wouldn't be opposed to cuts in the 15 to 25 percent excise taxes if other means were found to offset the revenue loss.

That was an open invitation to the buying public to hold off on all except essential purchases until the cuts became effective. They held off—in droves. Truman's few casual words did million-dollar damage.

It got worse after Truman sent his official tax message, mentioning only seven excise taxes he thought might be cut. For he didn't specify any figures, he didn't leave the list open and he didn't close it, either, and he did hint strongly at a Presidential veto if Congress did not vote offsetting increases.

Now with Congress taking its time on debating a tax bill and discussing revenue increases before it gets to excise taxes, it's a 100-percent mess. The customers have all but disappeared.

Either Congress should cut the excise taxes quickly or it should dispense with the question. It should cut them.

Either Congress should slash the taxes enough to stimulate activity in the industries and thereby permit the Treasury to pick up some extra cash from taxes on profits and incomes or it shouldn't bother going through the motions. It should slash them.

What's happening now is not only cruel to the businessmen and workers involved. It's also a shameful financial waste.

In St. Louis, a big jewelry store sold three important pieces right before Christmas. All three have since been returned with a request for credit. The explanation? The buyers frankly admit "We're waiting for the tax to go off."

In Denver, a large department store revealed it didn't make a single fur sale in January. (Denver has had freezing weather.) The store's executives had just about decided to close the department and fire all the clerks; then, last week, they agreed to try once more. They're now running ads promising buyers "your tax will be refunded if a reduction is voted before April 1." A few customers have returned.

In New York, the major fur sellers have been advertising this tax refund angle to pull in the reluctant buyers. "Otherwise, we'd be flat on our backs," said one of the best-known furriers.

Fur sales were down 32 percent in December from 1949. Currently, they're running 50 percent below, it's estimated.

Jewelry sales were down 17 percent in December. Currently, they're running 20 to 25 percent below.

"The spring season already is being ruined by this uncertainty," a luggage manufacturer told me. "Distress merchandise in the jewelry industry is fantastic," a watch company official disclosed.

"Excise tax collections are reclining at a rate of $450,000,000 a year because of this," a tax expert reported. "The Treasury is losing out on this too."

What's occurring is easy to grasp. The tax-cutting publicity is encouraging buyers to strike, pending a decision.

But while their attitude is certainly understandable, it's murder for the businesses and workers concerned.

What's the answer? As far as the individual sellers go, I'd suggest they all investigate the fur trade's angle during this difficult twilight period. The "fair-trade" laws in the various States may be an obstacle. But many stores are making under-the-counter tax deals with their customers anyway.

As for Congress, it should—and must—stop this dawdling, put through the cuts, make them sufficiently broad to matter and settle the question. Every day's delay is cruel, unintelligent and wasteful.

Destroying Surplus Potatoes

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am including several editorials on the order of Secretary Brannan to destroy surplus potatoes.

I wish it were possible to include cartoons in the RECORD since the one in today's issue of the Washington Daily News by Talburt so effectively depicts what is going on in this instance with poor old John Q. Taxpayer pictured as a dazed goat with a tin can tied to his tail, standing on the top of a mountain of 65,000,000 bushels of potatoes, with two other mountains in the background of 219,000,000 dozens of eggs and 96,000,000 pounds of butter.

The first editorial is from the Boston Post, which is the leading Democratic paper in New England. It is as follows:

POTATO DUMPING

Secretary of Agriculture Brannan appears intent on dumping the 1949 potato crop, in one way or another. Balked in his plan to destroy some 40,000,000 bushels outright, by an outraged public opinion, he has finally decided to sell them back to the farmers at the give-away price of 1 cent per 100 pounds, after first dyeing them so they can't be sold for human consumption. Once again the emphasis is on not allowing them to be eaten, although it is all right to use them as fertilizer or livestock feed.

With so much starvation in the world and poverty in our own country, such a plan seems almost criminal. There are so many people, in so many places, that would welcome these surplus potatoes that to literally throw them away seems a travesty on good sense. Mr. Brannan says he can't use them in school-lunch or relief programs without spending additional money, but with all the millions already wasted on them, it would certainly seem wiser to spend a little more now to allow the human race to get the benefit of them, than to have them turned into fertilizer. Also, a more determined effort might have been made to get industrial users to buy them at bargain rates.

Mr. Brannan seems more intent on showing that the farm price-support program, which he wants ditched in favor of a plan of his own, is not working out than in getting the maximum value for the millions invested.

The second is from the Boston Herald and is as follows:

SOME COLD POTATOES

May we put a few 2's and 2's together, and then see what 4's we get on the interesting matter of potatoes.

1. Some time before the 1948 election the Commodity Credit Corporation sold a lot of grain-storage facilities. This had gone on over a period of years, so that storage capacity was reduced from 292,000,000 bushels to slightly over 41,000,000, but it continued even while President Truman, campaigning in the West was denouncing the Republican-dominated Eightieth Congress for failing to provide on-the-farm storage for surplus grain.

2. Also shortly before the election the Department of Agriculture not only failed to apply the support program on corn, but also withheld purchases for export, with the result that the price dropped to $1 a bushel on the farm. But during the 8 weeks immediately following the election, over 80,000,000 bushels of corn alone was handled under the support program. Low farm prices at election time were useful in persuading farmers that their salvation lay in President Truman and a Democratic Congress.

3. The Department of Agriculture is making a great show now of dumping 50,000,000 bushels of surplus potatoes. The spuds are to be allowed to rot on the ground as fertilizer. This is the first time since the national scandal of potato burning some years ago that the Department has resorted to dumping. It handled a surplus of 134,000,000 bushels last year in other ways. For an additional expenditure of $15,000,000 extra, the Department could put all this year's surplus to industrial uses. But though it spent $25,000,000 shipping last year's surplus, it won't spend $15,000,000 this year.

4. The political league of the American Federation of Labor has just reported that a growing farm revolt against Republican policies will help elect a Congress next fall to insure Taft-Hartley law repeal. The league's director says farmers have grown increasingly fearful of GOP price support in view of falling farm prices and prospects for more farm surpluses.

5. The Brannan plan for income support for producers of perishable goods is advanced by the administration as a way in which the potato farmers could have their support without surpluses.

You add all these things up, and you get an inkling of why Secretary Brannan is inviting the Nation to witness a mass destruction of good food, why he is courting another public scandal. He wants it that way because it will help in the congressional campaigns this fall. The Democratic candidates can offer the Brannan plan as a way to avoid the surpluses that result from the old price-support plans that have been advanced by such Republicans as Senator AIKEN.

No less an authority than Professor Black of Harvard has pointed out that the Brannan plan simply wouldn't work for potatoes. The 1949 crop, which supported at 60 percent of parity, would have cost the taxpayers $400,000,000 under the Brannan plan, instead of the eighty to one hundred million dollars it is now costing. And under the Brannan plan the farmers would have the incentive of full parity, not 60 percent of parity.

But whether the Brannan plan is practical or not, the administration is going to make the present system as unpalatable as possible. It is said that an offer by Spain for some of our surplus potatoes has been turned down, and there are reports that the Government has not been buying as many for school-lunch programs and welfare institutions as in the past. To make the thing look even more threatening, the majority leader in the Senate, LUCAS, has suggested scuttling the potato support program.

All this evidence of political manipulation of the farm program by the administration is pretty damning. It suggests that the party which makes so much of its solicitude for the farmer, is really simply using the farmer for its political ends. Not merely by promises it cannot fulfill, which is bad enough, but by the actual perversion of administrative functions.

The third is a portion of an editorial from the Springfield (Mass.) Union, as follows:

MORE ABOUT POTATOES

We didn't know whether to laugh or cry over the loss by fire of 50,000 barrels of Government-owned potatoes stored in a Worthington warehouse. We hope the warehouse was insured, as it doubtless was.

While the dispatch was very revealing, it left us rather confused, if not actually dazed. For example, the potato loss is estimated at $70,000 though the Department of Agriculture, which has already destroyed 50,000,000 bushels of surplus potatoes, was preparing to bag the Worthington potatoes "for use as required by the United States."

We think the Government could learn something from this incident. Charles Lamb depicted a character who got roast pig following a fire which burnt his house down. Thereafter there was a veritable epidemic of house burnings and roast-pig feasts in the neighborhood.

Instead of hauling away for destruction in one way or another the stored surpluses, why not set fire to the warehouses in which they are being made ready to use "as required by the United States"? It might be cheaper to pay for the burned warehouses.

Of course, no tears are being shed over this incident by Agriculture Secretary Brannan, who is being accused of playing politics with federally owned farm products, acquired to prop prices. All this publicity about dumping excess foods is playing directly into his hands. The public doesn't like this terrible waste. If it can be aroused sufficiently it might create a public demand for a trial for his own scheme.

But the Brannan plan has been so thoroughly discredited that it will take more than aroused public sentiment against waste under the present program to demand a trial for the Brannan "production payment" idea. Particularly when it is suspected that the Department of Agriculture is actually putting obstacles in the way of distributing the surpluses.

Each of these editorials express a unanimous opinion as to the real reasons for this destruction order. It is my hope that someone in the Department of Agriculture will make these editorials available to the Secretary.

Navy Language

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. HÉBERT. Mr. Speaker, ever since the Navy Department issued its rather amusing instructions directed at controlling the very speech of sailor men, I have wanted to say something about it.

The editor of the New Orleans States, generally recognized as the most accurate and reliable afternoon newspaper in New Orleans at this time, has said in an editorial what I would like to have said when I first read the press releases on the subject. Since what he said could not be said better I have asked the privilege of directing the following editorial to the attention of the House:

NAVY LANGUAGE

The Navy seems to have hit rough seas. First there was the Denfeld incident. Then the *"Mighty Mo"* was stuck in the mud. Now comes another blow. Colorful terms, such as "brass hats" to designate high-ranking officers, have been declared verboten under the new Navy regime.

We like to think of our sea arm as a hairy-chested institution that sparkles with color, tradition, and individuality. That has been the concept down through the years of the men who went to sea. They lived and spoke strongly and to the point.

In the Navy, as in other branches of the service, use of a humanized, workable language in lieu of the formal phraseology of the manuals and orders was a natural development. It was the practical thing to do.

Now the policying of thought in the new unification plan, on orders of the civilian Secretary of the Navy, is extending even to the use of common terms. No longer can the Naval Academy graduates be referred to as "trade-school boys." No longer can the naval aviators be dubbed "airedales." Navy personnel must avoid the use of "black-shoe Navy," "mustangs," "gyrenes," and other similar terms.

It seems to us that the vigorous old Navy is becoming just too, too divine—simply out of this world.

Alaska Statehood

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by Mr. Louis R. Huber, which appeared in the Christian Science Monitor of January 19, 1950.

Mr. Huber, a well-known writer of Seattle, Wash., is thoroughly conversant on Alaska matters, and I especially commend the following article as reflecting the feelings of the vast majority of Alaskans who are seeking statehood now:

PLEA ACCENTS MUTUAL HELP, 83-YEAR WAIT
(By Louis R. Huber)

WASHINGTON.—"Please, Uncle Sam, give us statehood. We need two Senators and a Representative in Congress to help us develop as the other 48 States have developed. Statehood for us will be good for you, too—both to bolster national defense and to prove to the world that you mean what you say about democracy."

That is what Alaskans are saying to Congress, and they have American tradition on their side. Alaska has waited long for statehood—83 years, if you count from the 1867 purchase from Russia, or 38 years, if you count from the year the District of Alaska became a Territory (in 1912)—with explicitly implied future statehood.

A cornerstone of American political structure, the question of statehood is one that nobody ever answers with "No." Alaskans have been repeatedly told "Not yet—later," or "Wait until you can afford it."

TRUMAN SUPPORT

In fairness it must be said that President Truman has advocated statehood for Alaska and Hawaii, too, in recent messages to Congress. The bills for statehood that were introduced in the first session of the Eighty-first Congress, however, became hopelessly stuck in the Rules Committee.

It should be said also that Alaska, though long in weak financial condition and even now with a deficit of $221,645, last year enacted in its nineteenth biennial legislature

measures which will more than balance its budget, and prepare the way for statehood.

If matters had taken their traditional way, however, Alaska would have become a State about 1910. Each of the Western States, upon acquiring a population and some degree of economic promise, was promptly made a State—and Alaska had all that in 1910.

ICEBOX MYTH MELTS

The northland's swiftest development immediately followed the gold rushes of '98 (the Klondike) and '99 (Nome). The flood of prospectors—perhaps 50,000, at the peak—that came to the north found not only gold but extensive copper and coal deposits, and agricultural land. The icebox myth of former years melted and the newcomers set about developing the new land.

But President Theodore Roosevelt withdrew the Alaska coal lands from entry in 1906; and, of roughly 1,000 coal claims, all but a handful were declared in 1911 to have been fraudulently filed.

It is generally believed today that the fraud charges of 1911 were groundless; be that as it may, the coal-claim action pulled the props out from beneath Alaska's boom. Four railroads had been planned and construction was under way; it was promptly halted, and an estimated 20,000 would-have-been Alaskans went south.

DELEGATE LAW PASSED

While the coal fight was going on, Alaskans also were struggling to secure self-government at home and representation in Congress. In 1906 the delegate law was passed, giving them one voteless representative in Congress—which is all they have today.

The 1911 coal-claims ruling told them in certain terms that economic development of the northland was not welcome; and it was cold comfort for them to receive home rule in 1942 through the organic act. It gave them a Territorial legislature of very limited powers. The real government was vested in fifty-odd bureaus 5,000 miles away—in Washington, D. C.

"Your Delegate occupies a very minor position in Washington," said Delegate James Wickersham, about this time, "despite the fact that he represents more coal than the 2 Senators and 36 Representatives from Pennsylvania, more gold than the 2 Senators and 13 Representatives from California, more fisheries than all the Atlantic-coast Senators and Representatives combined, and more copper than Montana's entire delegation."

Alaska's political circumstances have not changed one bit since the day Mr. Wickersham made his statement. It is not astonishing that Alaskans should have voted nearly two to one in 1946 in favor of immediate statehood.

"We want only the simple justice that is guaranteed all Americans in the Constitution—self-government, the right to vote in national elections, and representation in Congress," say the Alaskans. "But there are even more powerful reasons why you should give us statehood."

SOVIET ACTIVITY CITED

They point to the statements of military authorities who have visited Alaska and repeatedly urged statehood as a strong corollary to effective defense in the northland. The contention of the military men is that a vigorous economy alongside national-defense installations makes those installations immeasurably easier to service and maintain.

Alaskans also cite the Russian promotion of communism in the southwest Pacific that they believe is made easier by withholding statehood from Alaska and Hawaii. The Russians point out to the Asiatic peoples, say the Alaskans, that the United States is not sincere about democracy—how could it be, while denying sovereignty to Alaskans and Hawaiians?

"Alaska has, in fact, convinced nearly everybody it has earned the right to become a State," says Alaska's Gov. Ernest Gruening. "Nearly all the large national organizations—business, labor, patriotic, fraternal, State legislatures, and the past three conferences of governors—have gone on record unanimously favoring statehood for Alaska.

"The Nation's press is almost unanimous in urging Alaska statehood, editorially. We have on our side such diverse papers as the St. Louis Post-Dispatch, the New York Herald Tribune, the Washington Post, the Cleveland Plain Dealer, the Washington Times-Herald, the Hearst newspapers, and the Chicago Tribune."

What To Do About the Federal Government

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 13, 1950

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I include an outstanding address, revealing high statesmanship, and characteristic common sense, delivered by the distinguished minority leader of the House before the sixty-first annual dinner of the Builders' Exchange of Rochester, N. Y.

The address follows:

It is an honor to be here tonight to help celebrate your sixty-first anniversary. In these days of crumbling institutions you are to be congratulated not only for being 61 years young, but for the fact that it looks like you will be around for quite awhile yet. In fact, Rochester has a number of reasons to be proud of the high-type organizations it has, such as yours, and the character of the men it produces. It happens to be my privilege to work with one of them in Congress, a man young in years but wise and prudent in his judgments. I refer to your Congressman, KENNETH B. KEATING. KENNETH KEATING is a Congressman who is going far in public life, and I am confident that the people of his congressional district have the same faith in him that we all do in Washington, and I would like to pay tribute to another great Congressman who shares the privilege of representing Rochester. I refer to JAMES W. WADSWORTH. He is an outstanding statesman and one of the great Americans of our day. I regret absence from the city prevents my old and valued friend of many years, your patriotic and philanthropic citizen, Frank Gannett, from being with us.

I want to talk to you tonight about the biggest problem that faces the American people—what to do about the Federal Government. It is a problem that is on the minds of everyone—builders, real estate men, labor leaders, housewives, businessmen, and farmers alike. There are three sound reasons for this growing anxiety. First, the American people are genuinely concerned about the trend toward socialism in Washington. Second, the American people are aroused, as never before, over the ever-increasing cost of government and the ever-increasing burden of taxes they bear. Third, there is great uneasiness over the high cost of living.

I hope to show you that the first is causing the second, and the second is causing the third. I think I can demonstrate that the way to cut the cost of Government and to reduce taxes is first to ged rid of the socialist schemers and planners in Washington; and the way to cut the cost of living is to reduce the cost of Government and the burden of taxation that we all bear.

It is almost impossible to discuss what is going on in Washington today without taking a look at what has been going on in the world for the past century. The root of our trouble today goes back in a large measure to the philosophy of one man, a man named Karl Marx. Marx wrote thick books about his theories and published lengthy papers and manifestos about a revolutionary doctrine which he called socialism. If you examine the thousands upon thousands of words that he wrote and uttered, you will find that he was preaching one thing—that the stomach deserved more attention than the soul; that the physical necessities of life were more important than religion, liberty, or spirit.

Since the beginning of time, man had been struggling against oppressive government in all forms. Essentially, he has struggled for freedom of spirit, and for his own dignity as an individual. And he had made enormous gains, he had prospered and he had become more productive than ever. But the history of man is that when he gains something after a long struggle, his children and his children's children too often forget how he won it.

Marx, because he proclaimed that the state could give shelter, food, and clothing to all, began having an increasing appeal to those who enjoyed freedom but had not been forced to fight for it. As the followers of Marx made headway, they divided into two groups. One group called themselves Communists and advocated infiltration, violence, and revolution as a means of gaining power. The second group was more tricky. Calling themselves Socialists, they contended the way to achieve power was to do it on a piecemeal basis.

Both groups were amazingly frank and outspoken—but people simply did not believe them. It did not seem possible, for example, that 2 percent of a population could seize control of the remaining 98 percent. But the Communists in Russia finally proved it could happen.

In Great Britain, before the turn of the century, the Socialists banded together in a group which called itself the Fabian Society. And where do you think the name "Fabian" came from? They took the name from Quintas Fabius, a Roman general who believed that the best way to fight a battle was to fight it piecemeal—by quick thrusts and quick withdrawals. Slowly, the Socialists in Britain made headway. They won one minor skirmish after another, getting approval of this radical law and that radical law as time went on.

Although the Communists and Socialists differed in method of attaining power, they agreed on most everything else. They agreed, for example, that the more you taxed the people, the less they would be able to help themselves, and the more they would have to depend on government. If they were taxed long enough and high enough, they would soon be helpless and socialism would take over.

During most of these years, the spread of socialism was confined to Europe. It made no headway in the United States, but one European country after another was falling prey to the Socialist concepts. Russia went Communist in 1917; Italy went Fascist in 1922; Germany embraced nazism in 1933; Britain finally fell into the grip of the Socialists in 1945. In every one of these nations—Russia, Italy, Germany, and Great Britain—taxation was raised to almost confiscation levels, the tools of production were nationalized, and the people fell under the yoke of statism. Government drained off their savings and their capital and cut more deeply into their income—all in the name of providing them with the needs of life.

In America, the advent of the New Deal flung wide open the doors that had long been shut to the Communists and Socialists. They poured into Washington by the hundreds. They took modest jobs and worked like beavers. They hatched schemes by the score and they saw a few of them actually enacted into law. The Wadleighs, the Chamberses, and the Hisses went even further. They secretly joined the Communist spy apparatus. Those of us who, back in the thirties, tried to tell the Nation that this was going on were laughed at and ridiculed. We were called reactionaries, Lord Macaulays, and Tories. This abuse was heaped upon us because we still believed that the cherished freedom of Americans should not be traded for empty promises—promises that Government could provide shelter, food, and clothing if the people would only let Government manage their affairs. I am proud of the record we made. The American way of life was worth fighting for then and it is worth fighting for today.

It is noteworthy that during all this period Federal taxes rose steadily. From soaking the rich, the Government turned to soaking the poor, and there was scarcely a man or woman who did not feel the ever-increasing pinch of taxes as rates went up and the tax base spread.

The Second World War completed the job. Because every American willingly undergoes heavy taxation in time of war, no one could rightly complain as taxes went up. But war has always been favorable to the disciples of socialism and communism. War always tends to make people helpless—either by oppressive taxation or by outright destruction. Scarcely had the war ended than the proof of this was upon us. The iron curtain descended on a dozen European countries; Britain went Socialist; France and Italy teetered in the balance; China felt the pangs of a Communist revolution.

In the United States at the end of the war, most people breathed a sigh of relief, reached out their arms to those who had returned alive, and looked forward to some years of peace, happiness, and prosperity. But the breeze that had been sowed in the thirties was to be reaped as a whirlwind in the late forties. The planners and socialistic schemers were firmly entrenched in Washington. In the White House was an Executive willing to listen to their schemes and to advocate them. Taxes instead of going down went up. Total Federal, State and local tax collections in the years that followed the end of the war were actually higher than at any wartime peak.

Now, as a great political leader in this State used to say, "Let's take a look at the record." In 1933 total tax collections amounted to roughly $2,000,000,000. By 1941 the Federal taxes imposed almost three times that burden, and by 1948 the increase was 22 times what it had been in 1933. Of course, war was responsible for a great deal of this enormous leap in the tax burden. But the war has been over for nearly 5 years and the burden is still with us. The only tax reduction the American people have had in all that time was voted by the Republican Eightieth Congress when we relieved 7,000,000 people in the lowest income brackets of having to pay any Federal income tax at all, and we spread the benefits of that tax reduction in such a fashion that 71 percent of the total cut was given to people making less than $5,000 a year. By this tax cut, if nothing else, the Eightieth Congress enacted the first real road block in the path of socialism.

And what happened? With almost 45,000,000 people remaining at home in November 1948, the United States for the first time in this century elected a President who didn't have a majority of the popular vote. President Truman, with less than 50 percent of those voting behind him, was back at the old stand, advocating socialism and contending he had a mandate.

To those 45,000,000 people who did not vote in 1948, this much should be obvious: Complacency will never stop socialism.

The 1948 election proved one thing for certain—if the American people want socialism, they can have it by staying away from the polls.

But if the American people cherish their liberty and love their country, as I am convinced they do, there is one way they can stop socialism in its tracks—they can stop it by the greatest out-pouring of voters next November that this country has ever seen. They can stop it, as our founding fathers intended such alien philosophies should be stopped, by registering and voting their will.

At this moment in Washington, there are bills in Congress that paint a dire picture of the future for America if this administration stays in power. There are proposals in legislative form to socialize agriculture, to socialize medicine, to socialize credit, and to socialize the natural resources. These proposals have one thing in common—they require huge outlays of money and the most rigid controls.

It has been estimated that if the administration's entire program, as outlined in the President's state of the Union message, were to be enacted tomorrow, the cost of Government would double. At the present moment, the American people are paying almost 27 percent of all they earn simply to support government, Federal, State, and local. If the administration's program went into effect, government would soon be taking almost 50 percent of what the people earn.

Let the man on the tractor, the worker at the lathe, the bookkeeper at his ledgers, the businessman in his store or factory, and the housewife in her home, ask themselves this question: If half of their income were taken away from them, could they support themselves?

The answer in almost every case would be "No."

Yet this is the prospect we face, and the President makes no mystery of it. In his first three messages to Congress this year, he made it plain that taxes must go ever upward, and he asked for $1,000,000,000 more in revenue this year as a down payment on future increases.

Yes; the prospects have been made abundantly clear. The President in his messages used such words as "foolhardy," "foolish," and "unwise" in discussing possible cuts in the cost of Government and reductions in taxation. The President drew a picture of the future extending to the year 2000, and, in all the words employed to describe that vision, he could not find room in a single place to mention reduced cost of Government or relief from the tax burden. I think he has greatly underestimated the American people's patience. They are in no mood, if I am any judge, to wait 50 years for another tax cut.

There is a great awakening occurring in America. The people are discovering at last that whether they pay a Federal income tax or a State income tax or pay neither, they are still paying plenty of taxes in hidden levies.

This awakening is one of the greatest things that has happened to the American people since the Boston Tea Party. They are on the march. They are beginning to ask merchants and businessmen about the taxes that are passed on to them, the consumers. They are beginning to look at their phone bills, at their railroad tickets, and their theater admissions, with a practiced eye for the tax bite.

It is beginning to occur to people that the consumer in the long run is the great American taxpayer. They are discovering that duties, excises, and corporate levies are being passed on to them to pay in full. They are startled to find that practically everybody can pass on some or all of their taxes except the last purchaser, and that means it is Mr. and Mrs. Consumer who get stuck—everyone of them.

It is no longer a mystery that if the Government imposes more taxes at any level, it is the consumer who eventually pays. In short, it is at least dawning on the American people that high cost of Government means high cost of living.

Let's take a look at some these taxes, hidden and otherwise.

If you buy a new car in the $2,000 price category, you pay approximately $511 in taxes. Why, only a few years ago, you could buy an automobile for a few hundred dollars more than the tax itself today. Every time you buy gasoline, every time you buy a quart of oil, every time you buy a tire, you are paying Federal taxes, which, together with State and local taxes, add another $81 a year just for the privilege of operating your automobile.

I repeat, high cost of government means high cost of living.

Did you buy a refrigerator after the war for, say, $200? You paid a Federal tax of $20 on that refrigerator. When you paid your $6 phone bill the other day, $1 of it went to the Federal tax collector. If you got a new handbag for your wife, one-fifth of the price went to the Federal tax collector. If she bought a box of face powder, one-fifth of the price went to the Federal tax collector. If you recently took a rail, plane, or bus trip, one-seventh of the fare went to the Federal tax collector. If you attended the theater, and bought a $3 ticket, 60 cents went to the Federal tax collector.

Do you have a baby in the family? Well, for every dollar's worth of baby oil or baby powder you have bought, 20 cents went to the Federal tax collector.

I repeat, high cost of government means high cost of living.

Now, someone may say that things aren't so bad—at least food isn't taxed. Let's take a look at that proposition. There is a national organization devoted to studying taxes, known as the Tax Foundation. It recently made a study of a loaf of bread baked and sold in Indianapolis by a commercial bakery. The foundation study showed that by the time the single loaf of bread had been bought by the housewife, it bore 151 hidden taxes. Now, who paid those 151 hidden taxes on that single loaf of bread? You know the answer—the housewife.

Let's not fool ourselves. In the final analysis, it's not the farmer, it's not labor, it's not the businessman who is to blame for the high cost of living—the blame rests squarely on reckless Federal spending and exorbitant taxation.

Yes; high cost of government means high cost of living, and it means a lot of other things, too. It means that you have little hope of affording many things you want as long as the present administration is in power.

I pointed out earlier that a $2,000 automobile bore $511 in taxes. A lot of folks have been wondering when we are going to have low-cost automobiles again. Mr. James D. Mooney, who recently retired as president of Willys Overland, and who knows as much as anybody in America about building a low-cost automobile, has said: "The present tax rates make it impossible to get back to a real $1,000 car—a car that just is not a motor scooter."

A low-cost automobile would mean jobs for a lot of people who would be needed to make the cars. A low-cost automobile would mean cars for a lot of people who do not have an automobile. It should be clear to anyone that high cost of government means not only high cost of living, but it means we do without a lot of things we want and a lot of production that would mean jobs.

Exactly 1 year ago today I introduced a bill in Congress to repeal the wartime excise taxes. So while you and your organization

are celebrating your sixty-first anniversary tonight, my bill and I are celebrating our first. But I must say that you are doing better than my bill. Mr. Truman doesn't like it. He is looking for tax increases, not tax decreases.

My 1-year-old bill, which is a pretty popular baby in Congress, has been bottled up in the House Ways and Means Committee by the administration for 12 long months. From the present temper of the Congress I would not be a bit surprised if we took it off the bottle within a few weeks. President Truman has at last grudgingly admitted that perhaps there should be "reductions" in excise taxes, but he says that he will veto any bill containing such reductions unless it is accompanied by companion increases amounting to an additional billion dollars.

The probability is that he will get to exercise his veto, because most Members of Congress know what the American people are thinking, even if the administration doesn't. The Members of Congress know that excise taxes were enacted during the war to discourage sales of goods made out of materials needed in the war, and they know that those same excise taxes are still discouraging sales today and costing people jobs. They also know that this country cannot stand another billion-dollar tax increase. They know that if these excise taxes were repealed, the general stimulating effect on business and jobs would more than make up the relatively small amount of revenue these levies now bring. So Congress is not likely to vote a tax increase this year.

But Congress cannot stem the tide forever, nor can Congress stem it if the American people do not express themselves in one great voice at the polls next November. We are at the midpoint of the century in this year of 1950. We are also at the midpoint in a crisis threatening our form of government. Given one small shove in a forward direction and socialism will be upon us, with the Brannan plan, the compulsory health plan, the regional planning authorities, and all the trimmings, including bigger and bigger taxes for everybody.

The issue has been clearly cast. The American people, having watched the British debacle under socialism, know what is in store for them if we continue down the dead-end road the administration has chosen.

I have always contended that if the American citizen is given a clean-cut choice, he will make a clean-cut decision. His self-reliance is known around the world. His fear of big government is the product of 175 years of freedom and individual dignity. I am convinced that in this crusade to save America, that there are untold millions ready to join the fight. We cannot and must not fail them.

Military Housing

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to call to the attention of all Members the following article, which appeared in the February 8 issue of the New York Times, on military living conditions in Alaska and other areas. The conditions described in the article based on the recent visit of the Joint Chiefs of Staff to Pacific bases were high lighted in an excellent article which appears in the February 14 issue of Look, containing a report by Dr. Daniel A. Poling on similar conditions as found by the Joint Chiefs of Staff. I also commend that issue of Look to the Members' attention. Dr. Poling, editor of Christian Herald magazine, made an extensive trip to visit Alaska and Pacific installations of the Military Establishment early in 1949 as a member of the President's Committee on Religion and Welfare in the Armed Forces.

The article from the New York Times follows:

MILITARY HOUSING IN PACIFIC IS LABELED SLUMS BY BRADLEY; VANDENBERG HORRIFIED

HONOLULU, February 7.—Military housing in the Pacific was sharply criticized today by the Joint Chiefs of Staff, who arrived here on their return trip to Washington following conferences in the Far East.

Gen. Omar N. Bradley told a press conference that shabby service housing in Alaska, Guam, Okinawa, Kwajalein, and even Japan constituted "military slums."

Gen. Hoyt S. Vandenberg, Air Force Chief of Staff, said that he was "horrified" by some of these housing conditions, and that "we talk about slum clearance at home, but find conditions for troops in Alaska and elsewhere much worse."

The Staff Chiefs said that they were impressed by the combat readiness of the Pacific military forces despite these adverse circumstances.

Admiral Forrest P. Sherman, Chief of Naval Operations, said that Russia's submarine strength in the Pacific was a matter of concern. He added that he had no knowledge of how close to Hawaii these submarines were operating, but that their presence in the Pacific pointed up the need "for strong naval forces" in this ocean.

The Admiral reported that American destroyers were being modified for Pacific anti-submarine duty. Asked if the strength of the Navy in the Pacific was sufficient to guarantee the security of the scheduled atomic tests on Eniwetok, he replied that it was.

Admiral Sherman said that the poor housing criticized by his colleagues was preventing shore installations from properly servicing the fleet, and that the problem of mere existence took too much of the men's energies. He noted that some Quonset huts on Guam and Okinawa were in use after surviving 8 years and several typhoons.

General Bradley said that "it is quite common for families to wait 6 to 10 months before joining husbands, and then they find they must use quarters which would be classed as slums back home."

The length of the Hawaiian stopover of the Joint Chiefs of Staff, the fourth member of which is Gen. J. Lawton Collins, Army Chief of Staff, is indefinite, but they are expected to stay 2 or 3 days. During that time, they will inspect military installations in the Hawaiian area.

Changing the Color of Money

REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, late yesterday afternoon a representative of the United Press said that a Phoenix, Ariz., newspaper had requested my views regarding a hold-up there involving $130,000. They wanted to know how the colored money bill which I have been trying to get passed for 3 years would have affected that. Of course, I feel that if that bill were enacted it would be very easy to apprehend the robbers. I hope the Secretary of the Treasury, without legislation, will request a change in color of the money every 5 years, and that these robbers may be apprehended.

Faker Einstein

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. RANKIN. Mr Speaker, one of the greatest fakers the world ever knew is Albert Einstein, who should have been deported for his communistic activities years ago.

Ever since he published his book on relativity to try to convince the world that light had weight, he has capitalized upon his alleged reputation as a scientist.

According to the Committee on Un-American Activities, he has been engaged in communistic activities in this country for a long time. At this point I am inserting some excerpts from the report of the Committee on Un-American Activities received by me today showing what some of those subversive activities were.

Every time the word "Daily Worker" is used in this report it means the Communist Daily Worker—that is, a Communist newspaper published in New York by the Communist Party and dedicated to the overthrow of this Government.

He had no more to do with the development of the atomic bomb than if there had not been such a thing. American scientists developed the atomic bomb, as General Groves will tell you, and old Faker Einstein had nothing to do with it.

The "bunk" that he is now spreading to try to get this country into a world government, for the American people to assume the responsibilities of all the other nations of the earth, to fight their battles, and to pay their debts, is simply carrying out the Communist line.

At this point I am inserting excerpts from the report which I have received from the Committee on Un-American Activities today relative to Mr. Einstein. It reads as follows:

INFORMATION FROM THE FILES OF THE COMMITTEE ON UN-AMERICAN ACTIVITIES, UNITED STATES HOUSE OF REPRESENTATIVES

FEBRUARY 13, 1950.

For: Hon. JOHN E. RANKIN.
Subject: Albert Einstein.

A check of the public files, records, and publications of the committee has revealed the following information concerning the individual listed above:

According to a letterhead, dated October 27, 1942, Prof. Albert Einstein was one of the

patrons of the Congress of American-Soviet Friendship. He was a sponsor of the National Council of American-Soviet Friendship, as shown on Call to the Congress of American-Soviet Friendship, November 6–8, 1943 (p. 4); and a memorandum issued by the Council on March 18, 1946. He signed an open letter to the American people, sponsored by the National Council of American-Soviet Friendship, as shown in the New York Times of May 18, 1943, page 17C.

The Congress of American-Soviet Friendship was cited as a Communist-front organization in Report No. 1311 of the Special Committee on Un-American Activities, dated March 29, 1944; the same report shows that "in recent months, the Communist Party's principal front for all things Russian has been known as the National Council for American-Soviet Friendship." Attorney General Clark cited the National Council of American-Soviet Friendship as subversive and Communist in lists furnished the Loyalty Review Board, which were released to the press by the United States Civil Service Commission, December 4, 1947, and September 21, 1948.

The Daily Worker of February 26, 1942, page 4, named Albert Einstein as one of the sponsors of the American Committee for Protection of Foreign Born.

The American Committee for Protection of Foreign Born was cited as "one of the oldest auxiliaries of the Communist Party in the United States" in Report No. 1311 of the Special Committee on Un-American Activities, dated March 29, 1944. The organization had previously been cited in Report No. 2277 of the committee, dated June 25, 1942. The American Committee for Protection of Foreign Born was cited as subversive and Communist by Attorney General Clark in lists furnished the Loyalty Review Board, released to the press by the United States Civil Service Commission, June 1, 1948, and September 21, 1948.

Albert Einstein was an endorser of the North American Committee To Aid Spanish Democracy, as shown in the Daily Worker of April 16, 1937, page 2; he was named as a sponsor of the North American Committee To Aid Spanish Democracy, Medical Bureau, in New Masses of May 18, 1937, page 25. In Reports of the Special Committee on Un-American Activities, dated January 3, 1940, and March 29, 1944, the North American Committee To Aid Spanish Democracy was cited as a Communist-front organization. In a list furnished the Loyalty Review Board by Attorney General Clark, which was released to the press by the United States Civil Service Commission, April 25, 1949, the organization was cited as Communist.

Albert Einstein was a national sponsor of the Spanish Refugee Appeal of the Joint Anti-Fascist Refugee Committee, according to letterheads of that group dated February 26, 1946, and February 3, 1948; he signed a petition in defense of the Joint Anti-Fascist Refugee Committee, as shown in the Daily Worker of April 28, 1948, page 4; and was cochairman of the national reception committee for Madame Irene Joliot-Curie, whose speaking tour was sponsored by the joint anti-Fascist refugee committee (invitation to dinner, New York City, March 31, 1948).

The Joint Anti-Fascist Refugee Committee was cited as subversive and Communist by Attorney General Clark in lists furnished the Loyalty Review Board which were released to the press by the United States Civil Service Commission, December 4, 1947, and September 21, 1948; it was cited as a Communist-front organization in Report 1311 of the Special Committee on Un-American Activities, dated March 29, 1944.

Attorney General Clark cited the American Council for a Democratic Greece as a subversive and Communist organization formerly known as the Greek-American Council in lists furnished the Loyalty Review Board, which were released to the press by the United States Civil Service Commission, June 1, 1948, and September 21, 1948. Albert Einstein sponsored a petition of the American Council for a Democratic Greece, as shown in the Daily People's World of August 23, 1948, page 2; he signed a statement of the council condemning the Greek Government, according to the Daily Worker of September 2, 1948, page 7.

Dr. Einstein was a sponsor of the Spanish Refugee Relief Campaign, as shown on a letterhead of that group, dated at New Haven, Conn., November 16, 1939, and a pamphlet entitled "Children in Concentration Camps." The Special Committee on Un-American Activities cited the Spanish Refugee Relief Campaign as a Communist-front organization in Report 1476 of January 3, 1940.

Albert Einstein contributed a manuscript for Spanish aid to the League of American Writers, according to the Daily Worker of February 18, 1939, page 7.

Both Attorney General Francis Biddle and Attorney General Tom Clark have cited the League of American Writers as a Communist-front organization (CONGRESSIONAL RECORD, September 24, 1942, pages 7685 and 7686; letters to Loyalty Review Board, released June 1, 1948, and September 21, 1948). The organization was cited as a Communist front in Reports of the Special Committee on Un-American Activities, dated January 3, 1940; June 25, 1942; and March 29, 1944.

Albert Einstein signed a letter pledging support to China, which was issued by the American Friends of the Chinese People, as shown in the Daily Worker of July 16, 1940, page 4. He was an endorser of the Committee for Peace through World Cooperation, according to the Daily Worker of April 2, 1938, page 4. Both American Friends of the Chinese People and the Committee for Peace through World Cooperation were cited as Communist-front organizations in Report 1311 of the Special Committee on Un-American Activities, dated March 29, 1944.

Albert Einstein was a sponsor of the Freedom Crusade of the Civil Rights Congress, according to the Daily Worker, issues of December 15, 1948, page 2, and December 31, 1948, page 3.

In Report 1115 of the Committee on Un-American Activities, entitled "Civil Rights Congress as a Communist Front Organization," dated September 2, 1947, the Civil Rights Congress was cited as being dedicated "not to the broader issues of civil liberties, but specifically to the defense of individual Communists and the Communist Party" and "Controlled by individuals who are either members of the Communist Party or openly loyal to it." The Civil Rights Congress was cited as subversive and Communist by Attorney General Clark in lists furnished the Loyalty Review Board, released to the press by the United States Civil Service Commission, December 4, 1947, and September 21, 1948.

Albert Einstein was a signer of a declaration honoring Georgi Dimitrov, former head of the Communist International, as shown in the New York Times of December 22, 1943, page 40. The declaration was sponsored by the Reichstag Fire Trial Anniversary Committee, cited as a Communist front in Report 1311 of the Special Committee on Un-American Activities, dated March 29, 1944.

As shown in the Daily Worker of April 22, 1947, page 4, Albert Einstein was a speaker under auspices of the Council on African Affairs, an organization cited as subversive and Communist by Attorney General Clark in lists furnished the Loyalty Review Board, released to the press by the United States Civil Service Commission, December 4, 1947, and September 21, 1948.

Albert Einstein has been a contributor to the publication Soviet Russia Today (issue of June 1942, p. 6); he was a sponsor of the Soviet Russia Today dinner celebrating the twenty-fifth anniversary of the Red Army (Soviet Russia Today, February 1943, p. 34).

Soviet Russia Today was cited as a Communist front in reports of the Special Committee on Un-American Activities, dated June 25, 1942, and March 29, 1944.

Albert Einstein is named as a member at large of the National Council of the Arts, Sciences, and Professions on an undated letterhead of the organization (received January 1949). He was a sponsor of the Scientific and Cultural Conference for World Peace held in New York City, March 25–27, 1949, under auspices of the National Council of the Arts, Sciences, and Professions, according to the conference program, page 14.

Both the Scientific and Cultural Conference for World Peace and the National Council of the Arts, Sciences, and Professions were cited as Communist-front organizations in the Report of the Committee on Un-American Activities, dated April 19, 1949, which is entitled "Review of the Scientific and Cultural Conference for World Peace Arranged by the National Council of the Arts, Sciences, and Professions."

I do not see how any man can read this record and not realize that this man Einstein is not interested in the welfare of the United States.

Defense of Alaska and the Nation

EXTENSION OF REMARKS
OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 13, 1950

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to have included the following speech delivered by Hon. Ernest Gruening, Governor of Alaska, at the meeting of the All-America Defense Association on January 12 in Washington, D. C., relative to the importance of Alaska's defense to the whole Nation:

"Through to this day, Alaska has never received the attention in national defense planning that it deserves."

This moderate factual statement is not mine. It is found on page 204 of that very excellent book entitled "Global Mission," published within the year by our only General of the Air Force and great war leader, Hap Arnold. I doubt whether there is any better authority. And further on he says, after stressing the great strategic importance of Alaska:

"But we were never able to get the money or allocations for the Air Force that we really needed there to give us the kind of bases we required then—and need more than ever now."

Those of us who have been closely associated with Alaskan affairs for years—in my own case for over 15 years—realize the stark truth of this presentation. Alaska was virtually defenseless on the eve of World War II. For years previous to Pearl Harbor our Delegate in Congress—our voteless Delegate, for a Territory can be represented in the Congress only by a voteless representative in the House of Representatives—had pled for the defense of Alaska. From the floor of the House he had warned repeatedly that Alaska was undefended and vulnerable. Indeed, he prophesied exactly what would happen in the event of war with Japan. He foretold that Alaska would be invaded and occupied. And Alaska was invaded and was the only part of the American Continent that for a time was

held by the enemy. And while it is true that after over a year of occupation the invader was driven out and defeated in that theater of operations as in every other theater, the entire campaign was unnecessary. With adequate Alaskan defense it need never have taken place. It was needlessly costly of American lives, of shipping, of material. But for the success of the American forces at the Battle of Midway, which stopped the Japanese advance in the Pacific, the occupation of Alaska would have progressed further.

Now, 4½ years after the termination of World War II, Alaska is similarly defenseless. Alaska is similarly defenseless in the face of a far greater and more imminent danger of invasion than existed from the Japanese enemy.

Let me state briefly the obvious facts—known to everyone—but by a strange paradox not acted upon.

There is today only one potential enemy of the United States in the world. That is the totalitarian police state which stretches from the Baltic to the Bering Sea. During World War II Russia and America were allies in a war against totalitarianism and ruthless aggression. In the 4 years since the termination of that war the American people have hoped for an era of peace and self-rule on the part of the peoples of the world. Those high hopes have been bitterly disappointed. Instead of their fulfillment we have seen that police state extend its power and tyranny first over the Baltic and Balkan states. We have seen it roll over Hungary. We have seen it overrun and crush the most democratically minded people of central Europe, the Czechoslovaks. We have seen it attempt to carry that penetration throughout the continent of Europe, where its further advance has been stopped, fortunately, because of the economic aid given the peoples that were still not under the Soviet boot. We have seen how the Marshall plan and the Truman plan together have thus far managed to contain the advance of the iron curtain beyond these frontiers.

That is very gratifying, and, with the economic aid thus rendered and to be rendered, plus the military aid voted by the last Congress, it is to be hoped that a further advance of totalitarian tyranny on what might be considered the eastern front of freedom has been halted.

But in the meanwhile, what has happened on the western front? Within the last 2 years the Communist hordes have overrun China. Except for the southern extensions and peninsulas of that continent, they now hold all Asia.

No broad ocean such as the Atlantic separates the Asiatic mainland from the American mainland. The shores of Soviet Siberia are visible to the naked eye from the shore of Alaska. The distance across Bering Strait is only 54 miles. American and Soviet islands are actually closer to each other than that. It is a shorter distance from St. Lawrence Island, belonging to Alaska, where dwell American citizens, to the nearest Siberian headlands. Between American Little Diomede and Russian Big Diomede there are only 2½ miles.

Under these circumstances it would seem logical and proper that the defense undertakings of Alaska on our western front should bear a relation comparable to those on our eastern front. But, as General Arnold has indicated and as we all know, no such thing has happened.

After the close of World War II most of our Alaskan bases were abandoned either wholly or in part, and decommissioned. Practically all of these were, of course, constructed on the eve of or during the war with Japan for purposes solely related to that war and in many cases not appropriate to or adequate for the type of war that we now must guard against in the second half of the twentieth century.

But in these 4½ years when it has been increasingly and tragically evident that we cannot count on an era of peace and international friendship with our neighbor across Bering Strait, next to nothing has been done to defend our western frontier. We do not have to go back, although we may well do so, to the warning of Billy Mitchell, that great prophet and pioneer of military air power, that "he who holds Alaska holds the world," to realize that Alaska should be, and can be made the great bulwark of defense not merely for the United States but for the entire Western Hemisphere. And that means for the entire world or part of the world where rests the hope of peace, civilization, and freedom for all mankind.

Consider that Alaska, with an area of 586,000 square miles, an area one-fifth as large as the United States, is the only portion of our North American continent under the American flag which fronts on the Arctic Ocean, one of the great airways of the future and one that obviously should be protected against attack.

Consider, likewise, that Alaska is the only portion of the American continent within naked-eye view of our totalitarian neighbor.

Consider, finally, that Alaska is the only portion of the American continent which, with its island extensions, reaches well into the Eastern Hemisphere.

Elementary common sense would require making Alaska as nearly impregnable as possible. Common consistency with our wise policy in Europe would require that the United States do the equivalent in the matter of economic and military aid to our own fellow citizens on our northern and western boundaries—frontier in the Arctic and in the Pacific of freedom, and democracy. But no such thing has happened. During the 4 years from 1945 after VJ-day, till the summer of 1949 next to nothing was done for the building up of Alaskan defenses. Congress, which so generously voted funds to check the advance of imperial communism in Europe, voted next to nothing to prepare against a similar advance to Alaska and the American continent. Finally, in August of 1949, less than 6 months ago, we in Alaska were stupefied to learn that the extremely modest request of our military for an authorization of $137,000,000 for defense housing and public works in Alaska would be shelved and not acted upon during that session of Congress. At almost the same time, we received definite indications that some of these same military authorities were deeming that the northwest portion of the United States, the Puget Sound area, was vulnerable and were proposing and, indeed, had begun to transfer some of the airplane production located there since the beginning of aviation to what was deemed a safer point in the Prairie States on the other side of the Rockies.

I need not rehearse this episode which is now fairly familiar to most of us. Suffice it to say that as a result of the most emphatic protests from Alaska and great efforts on the part of the military, the first session of the Eightieth Congress in its closing days reconsidered in part its decision to postpone the beginning of adequate defense for Alaska. In almost the final hours Congress authorized an expenditure of some $96,000,000. And for that we are grateful, and all those who believe that permanent peace is made more likely by adequate defense, as we in Alaska firmly believe, are and should be grateful for that action of the Congress.

But note that the requested authorization of $137,000,000 was slashed drastically. The $96,000,000 reduced from $137,000,000, a cut of nearly one-third, contrasts with the almost unhesitating authorizations and appropriations for what was asked by the administration for the defense of our western front in Europe. Earlier, the same first session of the Eighty-first Congress had voted $5,700,000,000 for economic aid, plus $1,300,000,000 for military aid, a total of $7,000,000,000 on top of previous vast sums previously voted by the Eightieth Congress. Contrast this with the piddling $96,000,000—less than 2 percent of the amount readily appropriated for defense of European countries a few months earlier.

Now, the point is that these requests for Alaskan defense are minimal requests. They represent what, in the opinion of the military authorities in Alaska—in whom, incidentally, those of us who know them have the greatest faith and confidence—consider the absolute minimum required in the event of a sneak attack. Until these defenses are established, and they will not be for at least a year or more, because of the 4-year interval since VJ-day in which little or nothing has been done—until these defenses are established, Alaska continues defenseless and can be, as I have stated publicly before, taken by a minor scale airborne invasion.

What is needed for the minimal defense of Alaska is a complete radar screen, work on which has now been authorized, and sufficient housing to take care of the necessary ground troops to hold our airports in the event of a parachute attack and, finally, enough planes and air personnel to intercept and destroy any air attack directed at the northwest coast of the United States and passing over Alaska. It seems incredible that we should have to plead and fight and beg for such minimum requirements.

In this connection, let me pay a warm tribute to the Secretary of the Air Force, Mr. Stewart Symington, who not only is fully aware of and alerted to the paramount importance of Alaska defense and its needs but has been working unceasingly to bring this about. Coming to Alaska in the late summer to survey the situation, he subsequently gave up his Christmas vacation to return to Alaska for further investigation in order to be able to give to the congressional committees the first-hand information which they will undoubtedly require.

It is very unusual for Government officials inspecting Alaska to come up there in winter. But here we have the case of a top-level official foregoing the pleasures and comforts of the Christmas holidays at home, traveling about Alaska in the closing week of December for that purpose in order to see for himself how our soldiers had been forced to live under winter conditions in the Arctic and sub-Arctic. I desire to express the deep appreciation of Alaskans and my own gratitude to Secretary Symington. I hope that his efforts will be successful and will bear early fruit in this session of the Eighty-first Congress.

Hopeful as I am that Secretary Symington's efforts and those of the rest of us will be successful, I cannot forbear to terminate with the conclusion that Alaska will never be adequately defended unless and until we get statehood. This is perhaps not the place or time to elaborate fully the overwhelming evidence that leads to that conclusion. Moreover, adequate defense is only one of many compelling reasons why the Congress should grant statehood to Alaska at this session. But the history of our Nation during recent years demonstrates overwhelmingly that the development of Alaska, the defense of Alaska, the realization of Alaska's current mission and destiny, and statehood are inseparable.

That current mission and destiny, incidentally, are worth stressing. I have talked this evening about the need of defending Alaska for the sake of national security and as a preventive against enemy attack and the catastrophe of a third world war.

While we are all struggling, as all sane people must, to avert such a third world war, we are engaged in another form of conflict, the so-called cold war. This is a contest of ideologies. It is a competitive effort to demonstrate to all of mankind that a free society is better than a fettered one; that democracy is better than dictatorship;

and that government by consent of the governed, majority rule, and protection for the minorities, the basic tenets of our American faith, are more productive of happiness and therefore more enduring than the converse policies practiced wherever the Soviet idea dominates. If we are to win this war of ideas, if we are to gain adherence among the neutral and wavering peoples of the earth, it is essential that we live up to our professions, that we demonstrate by deeds rather than by declamations that we mean what we say.

And that means, among other such acts to prove our good faith, granting statehood to our Pacific Territories which, after a long period of semicitizenship and colonial rule, have requested statehood, have requested self-government on the established American pattern, have requested the full equality of citizenship which is their right.

The majority of the press of the Nation, public opinion, and every major national organization have endorsed this aspiration.

The Governors of the 48 States at three successive annual meetings have by unanimous vote endorsed statehood.

In both the Eightieth and Eighty-first Congresses the House committee which investigated statehood reported favorably—by a unanimous vote in the Eightieth Congress, with but one dissenting vote in the Eighty-first.

Can we continue to be the torch bearers of democracy in a darkened world if we deny statehood?

To win the cold war as well as to avert the calamity of a third world war, Alaska, above all else, needs statehood, and needs statehood now.

Mark of a Statesman

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Sunday Star of February 12, 1950:

MARK OF A STATESMAN

(By Bruce Barton)

In 1937 Fiorello LaGuardia, Senator Copeland, and Judge Mahoney were candidates in the primaries for mayor of New York.

There was hardly any talk about local issues. That might have been dangerous; it might have lost votes.

Senator Copeland's theme song was: "Vote for me. I am brave. I denounced Hitler in the Senate."

Judge Mahoney boasted: "I made Hitler mad by keeping our American boys away from the Olympic games in Berlin."

LaGuardia screamed: "I called Hitler a so-and-so."

Mr. Mahoney beat Copeland, and Mr. LaGuardia beat Mr. Mahoney.

Most of our political campaigns are like that. Most politicians are like the one in Sam Kiser's poem, who practiced his speeches before the mirror. Shaking his fist, he would shout that—

"White is white and black is black.
And he swore that even torture would not make him take it back."

Lincoln had a different kind of courage. In the closing days of the Civil War a delegation visited him in the White House—men so powerful that they could swing the votes of Illinois, and Illinois could swing the national election. They demanded a reduction in the draft quota of Illinois; her fathers and mothers, they said, had suffered enough.

Joseph Medill, owner of the most feared newspaper in the Middle West, was their spokesman. Quoting his own words, Ida M. Tarbell tells the story.

"I shall never forget," said Mr. Medill, "how he (Lincoln) suddenly lifted his head and turned on us a black and frowning face.

" 'Gentlemen,' he said, in a voice full of bitterness, 'you called for war until we had it. Now you come here begging to be let off from the call for men which I have made to carry on the war you demanded. You ought to be ashamed of yourselves. I have a right to expect better things of you. And you, Medill, you are acting like a coward. You can influence great masses, and yet you cry to be spared at the moment when your cause is suffering. Go home, and send us those men.'

"I couldn't say anything," Mr. Medill continued. "It was the first time I ever was whipped. We all got up and went out, and when the door closed, one of my colleagues said:

" 'Well, gentlemen, the old man is right. We ought to be ashamed of ourselves. Let us * * * go home and raise the men.' "

Lincoln had won his point, but he had risked powerful support to do so. That was real political courage—the hallmark of a statesman.

The Movement for Atlantic Union

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. BOGGS of Louisiana. Mr. Speaker, the growing movement for a union of Atlantic democracies which sponsored the North Atlantic Pact is less than 1 year old. It announced its formation on March 15, 1949, and then embarked upon all-out support for the pact. On July 26, 5 days after the pact was ratified, the Atlantic Union resolution—H. R. 107–111 and Senate Concurrent Resolution 57—was introduced into the House and Senate.

This resolution, as former Supreme Court Justice Owen J. Roberts has said, "offers a minimum of commitment with a maximum of hope." It provides in its resolving clause:

That the President is requested to invite the democracies which sponsored the North Atlantic Treaty to name delegates, representing their principal political parties, to meet this year with delegates of the United States in a federal convention to explore how far their peoples, and the peoples of such other democracies as the convention may invite to send delegates, can apply among them, within the framework of the United Nations, the principle of free federal union.

This resolution is now before the House Foreign Affairs Committee. Hearings on it by a subcommittee of the Senate Foreign Relations Committee are scheduled for early February.

Since the introduction of this resolution the Atlantic Union Committee has grown both in size and importance. Headed by Justice Roberts, former Secretary of War Robert P. Patterson, and former Under Secretary of State Will L. Clayton, it now includes more than 270 distinguished Americans from all sections of the country on its national council and has active chapters or community leaders in every State. More and more thinking Americans are beginning to realize that its proposal offers the broadest and safest road to peace and prosperity.

The Atlantic Union Committee is endeavoring, as the resolution indicates, to bring about early exploration of the possibilities of federating the Atlantic democracies. It seeks no commitment other than to explore; any proposals for action which might develop from such exploration would be submitted to the Congress and the American people for full discussion and consideration. Any actual steps in federating with other democracies would require amendment of the Constitution.

The practicality of this procedure has been underlined by two developments which occurred during 1949. The first of these was the adoption of the North Atlantic Pact, which furnishes a springboard for efforts by its parties to form an Atlantic Union. Article 2 of the pact pledges them to contribute toward the further development of peaceful and friendly international relations by strengthening their free institutions, by bringing about a better understanding of the principles upon which those institutions are founded, and by promoting conditions of stability and well-being and to encourage economic collaboration between any or all of them.

The second development was the discovery that Russia can make atomic bombs. When American cities have become exposed to atomic attack, the American people cannot afford to be content with small measures in their search for peace and security. They cannot afford to indulge in the tragic tendency of democracies to do too little and to do it too late.

How far the Atlantic democracies will be willing to go in federating cannot be foreseen now, since that can be determined only when their leaders and experts in government meet to consider together the complex problems involved. At this stage, we can do no more than point to the experience of existing federal unions, the greatest of which is our United States. They have been built upon a division of powers, certain specified powers being granted to the Federal Government and the rest reserved to the local governments. Among those granted to the Federal Government have been the conduct of foreign relations and defense, regulation of trade and communications, and powers to issue currency, raise revenue, and grant citizenship.

We can, furthermore, even at this stage, survey some of the consequences of successful creation of an Atlantic Union loosely comparable to the federal unions which have been established in the past. These are so far reaching as to indicate that the birth of the Atlantic Union would mark a turning point in history and make the second half of this

century an era of peace and unprecedented prosperity.

Peace and security are foremost in all our minds today. The Atlantic Union at its creation would possess 80 percent of the world's industrial capacity. Endowed with so vast a war potential and wide dispersion of territories, it would be too strong to be defeated in war. With or without atomic bombs, no aggressive government, and certainly not the cold-blooded Kremlin dictatorship, will undertake a world war unless it believes it can win.

The Union would possess at its birth a world predominance of power. This predominance, moreover, would grow progressively as a result of two developments. The first would be the rapid increase in the productive capacity of all the Union's people resulting from economic integration. The second would be the expansion of the Union resulting from the voluntary accession of additional free peoples. Thus the security of the union would grow year by year and decade by decade, affording to all its peoples a prospect of enduring peace which does not appear attainable by the methods we have pursued thus far.

The Union could be expected to establish a stable currency, and to create, at a relatively early date, one great economic area comprising more than 300,000,000 consumers. Such a stable currency and decreasing fear of war would stimulate private investment by both Americans and Europeans on an unprecedented scale. Its huge economic area, free from barriers to trade, would permit within a market twice as large as the United States the full development of the mass production and specialization which have made our American standard of living so high.

All the expected benefits of European integration would be multiplied many times in Atlantic integration covering a region which, unlike western Europe, would possess a balanced economy. These results would soon become evident in increasing productive capacity, rising standards of living, better business, more income, and more wealth.

These economic advances, moreover, would make the burden of defense progressively easier to bear. For Union would decrease defense costs not only in relation to income, but also in actual size. The inherent strength of the Union would enable it to maintain security with a smaller military establishment than the total of those the democracies would need separately. To take one example, its navy would not need to be as large as the combined navies of the United States and Great Britain. At the same time unification of forces and command, standardization of weapons and equipment, and specialization of functions and of production would make its forces far more efficient than the combined national forces of the democracies could be.

Such savings in defense costs, plus those resulting from elimination of United States Government aid to western Europe and of many thousands of officials engaged in functions which Union would render unnecessary, could be expected to reduce the burden on the American taxpayer by billions of dollars.

There is something else which Americans have proved that they prize more than either peace or prosperity. That is freedom. In the last 20 years the frontiers of freedom have drastically receded. In the last few months we have seen Communist despotism overrun the whole of China.

Creation of the Atlantic Union would reverse this process and set in motion a progressive expansion of freedom. It would not only bring victory in the "cold war," it would also wrest the initiative from Russia in the war of ideas and show up communism as the reactionary autocratic movement which it actually is.

Due to the magnetic attraction of the union's security and prosperity, many peoples who had not maintained free institutions would hasten to establish them in order to become eligible for inclusion. Once these peoples were included, those institutions would presumably be guaranteed by the union government, as a republican form of government is guaranteed the States in our own country. Meanwhile the peoples of the dependent territories of the Atlantic democracies within the union would be developing self-government and evolving toward the status of states or nations.

To appreciate the importance of these developments, we must remember that about two-thirds of the peoples of the world now have close ties with the Atlantic democracies. Atlantic Union would strengthen these ties, not weaken them, since these peoples would rely more on the union for security, markets, and industrial products than they do now on the democracies separately. Many of these peoples, notably those in South America, could be expected to seek to join the union at an early date. Others, hoping to join it eventually, would establish in the meantime some special relationship with the union government. In all of them and over the greater part of the earth, creation of the union would stimulate the expansion of freedom and the development of free institutions.

Supposing that we Americans prove to have wisdom and vision as our forefathers did, sufficient wisdom and vision to take this great forward step, what can we expect the world to look like a few years from now? There will be a union of free peoples, too strong to be crushed in war and growing progressively in strength, extent, and prosperity. There will be hundreds of millions of other peoples associated with the union and aspiring toward eventual inclusion in it. Freedom will be on the march. Communism will be on the defensive, compelled to concentrate on a task at which autocracy has always failed in the end, the maintenance of its grip upon subject peoples. Mankind will be advancing by a road which is broad and direct, even though it is long, toward an eventual free world.

How Do You Like Your Potatoes, if Any?

EXTENSION OF REMARKS
OF
HON. CARL D. PERKINS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. PERKINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Louisville (Ky.) Courier-Journal of February 2, 1950:

HOW DO YOU LIKE YOUR POTATOES, IF ANY?

And so the Government is getting ready to destroy 50,000,000 bushels of potatoes. It may let them rot in the fields or burn them or spray them with dye so they can't be dumped on the market. Under the law, you see, prices can't be suffered to go down, either for the consumer or the taxpayer.

It sounds terrible. And it is terrible, when you think of potatoes in terms of mouths to be fed and stomachs to be filled by this most filling of food. It sounds just as bad when you think that at $1.25 a bushel the Government has put out $62,500,000 of the taxpayers' money for these same potatoes.

However, nobody wants to buy them—and a lot of people can't buy them at the retail price which is kept high by the program of guaranty. Nobody seems to want them even for free, if this calls for paying the freight from fields or storage warehouses.

We have to begin at the beginning of the Government's sad experience with potatoes to find the villain in the case. And even then we can't be quite sure. Some signs point to the potato producer himself. Some point to the farmers' political friends. Some point to the whole system of price supports and particularly to the method of supporting prices by purchase which takes food off the market to keep the price up.

Early in the war, it was found that potato requirements for military, civilian, and lend-lease were about 50,000,000 bushels greater than the peacetime production. The Secretary of Agriculture asked for increased production. Under the law, this brought potatoes under the support plan at 90 percent of parity until 2 years after the end of hostilities.

Nobody was troubled much at the time. Wasn't the Government, to get war production, subsidizing the construction of huge plants, subsidizing profits, granting tax recovery in a postwar pinch, and taking huge losses in sale of surplus plants? But in potatoes, and other food crops, the production was bigger and better than expected, and the surpluses began to accumulate, and the guarantees began to work.

The Government tried to cut down losses by curtailing acreage. But the farmers were pretty good. As they were assured of a price for all they could grow, they set about to make the fewer acres produce more. They increased the yield as the acres decreased. In 1943 acres harvested totaled 3,239,000; the average yield, 141.7 bushels an acre. Last year, with only 1,900,000 acres harvested, the production was 401,000,000 bushels. This was 2 percent over the 1938–47 average—on little more than half the 1943 acreage. It was no skin off the potato grower's nose if his product never got to market, though it was cash in his pocket.

The supports did not end at the specified time, because the farm politicians in Congress extended them. Potatoes, like almost everything else, are under the support provisions of the present law. The pressure

from constituents and logrolling farm lobbyists worked well. It is a commentary on the system that even as Secretary Brannan announced the plan to destroy unwanted potatoes, Congress was yielding to the pressure of cotton growers and increasing the acreage allotments for that crop—with the certainty of more cotton to come, more drains on the loan funds, more surpluses.

At this rate, if the American Farm Bureau and the other pressure groups don't look out, they will find themselves hard put to stave off something like Secretary Brannan's plan to end supports, let prices fall in the market place, and pay the farmers a production subsidy to keep their income stable. Certainly they are likely to find public revulsion for the plan of support by Government purchase (and destruction) of surpluses. They may find production controls substituted for acreage controls. We have an idea that any or all of these things won't make the consuming public a bit mad. At any rate, the consumer couldn't be madder than he is at news like the potato shocker.

Abraham Lincoln

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1950

Mrs. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my speech on the Lincoln's Day broadcast, National Broadcasting Co., New York City, February 11, 1950:

Throughout history the words of great men have been used by other men to justify their own thinking on important issues.

In our own country the words of Washington, of Jefferson, of Jackson are often used in an effort to prove some point or other. We argue endlessly about what these great figures would do if they were faced today with this or that problem.

No American has been more quoted, not only in our own country, but in every land, than Abraham Lincoln, whose birthday we will be celebrating tomorrow.

Lincoln is quoted by many men for their own purposes and their own ends. He is held up for veneration by many men whose actions show that they do not believe what he believed, but who use his words to lend to themselves some of the coloring of his deep humanity, something of the greatness which attaches to one of the most beloved of all the men born in the Western World.

That is so. Some people seek to employ the words and the memory of Lincoln for small purposes. But it is also true that he cannot be truly quoted on both sides of a question. With his simplicity of mind and spirit, with his steadfastness of heart, Lincoln kept a straight clear line in this love and respect for all the people. And the people know it, and that is why their devotion to this man's memory is so profound.

Lincoln cannot be quoted on both sides of any question touching humanity, since we know so clearly where he stood. We know as well as if he were speaking to us today what he would have said about some of the problems which confront us now.

Before our Nation is the grave problem of civil rights, the granting of the benefits and opportunities, as well as the obligations of our democracy, to all our citizens with no regard to race or creed or color.

Congress has before it today a program to assure full civil rights for all of our people. As a part of that program it has before it a bill to establish a Commission whose purpose would be to see that race and creed were not used as bars to equal opportunity to earn a living.

Where would Lincoln stand on the question of an FEPC?

Lincoln said that the leading object of our Government—and these are his exact words—is "to elevate the condition of men; to lift artificial weights from all shoulders; to clear the paths of laudable pursuits for all; to afford all an unfettered start and a fair chance in the race for life."

Can anyone doubt where he would have stood?

Listen to what Lincoln says to us today: "What constitutes the bulwark of our liberty and independence?" he asks us. And then he replies, "It is not our frowning battlements, our bristling seacoast, our Army and our Navy. These are not our reliance against tyranny. All of those may be turned against us without making us weaker for the struggle. Our reliance is in the love of liberty, which God has planted in us. Our defense is in the spirit which prized liberty as the heritage of all men, in all lands everywhere. Destroy this spirit and you have planted the seeds of despotism at your own doors. Familiarize yourself with bondage and you prepare your own limbs to wear them. Accustomed to trample the rights of others, you have lost the genius of your own independence and become the fit subjects of the first cunning tyrant who rises among you."

Where would Lincoln have stood? We know, how well we know.

The question is, Where do we stand?

Do we measure up to his great, long dream of us, of an America great because it was free, and free for the very least among us?

Where do you stand?

Abraham Lincoln

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. VELDE. Mr. Speaker, in honoring Abraham Lincoln on this one hundred and forty-third anniversary of his birth it is befitting that I recall to this distinguished body a brief history of his service as a Representative of the Seventh District of Illinois.

Abraham Lincoln was elected as a Whig to the Thirtieth Congress on March 4, 1847, to March 3, 1849, after having been nominated at a convention held at Pekin, Ill., which I am proud to say is my home town. The Seventh District of Illinois was, at that time, comprised of the counties of Putnam, Marshall, Woodford, Tazewell, Menard, Mason, Cass, Morgan, Scott, Logan, and Sangamon. While Lincoln's service as a Member of Congress was not spectacular, he began evidencing at that time some of the courage of personal conviction that made him one of the outstanding leaders in world history.

Some of the words which he uttered at the time of his service, and afterward, are well worth repeating here, especially at this time when we are being carried in this headlong rush toward socialism. Lincoln said:

1. You cannot bring about prosperity by discouraging thrift.
2. You cannot strengthen the weak by weakening the strong.
3. You cannot help strong men by tearing down big men.
4. You cannot help the wage earner by pulling down the wage payer.
5. You cannot further the brotherhood of man by encouraging class hatred.
6. You cannot help the poor by destroying the rich.
7. You cannot establish sound security on borrowed money.
8. You cannot keep out of trouble by spending more than you earn.
9. You cannot build character and courage by taking away man's initiative and independence.
10. You cannot help men permanently by doing for them what they could and should do for themselves.

The Lonely Lincoln

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Sunday Star of February 12, 1950:

THE LONELY LINCOLN

All of his biographers speak of how lonely Lincoln was. Gamaliel Bradford says: "He lived in a solitude which neither man nor woman ever perfectly penetrated. * * * He ruled over millions of men and women who loved him; yet he was enormously alone." The words here quoted were written 25 years ago. They confirm the declaration of R. H. Dana in March 1863: "He has no admirers, no enthusiastic supporters, none to bet on his head." To multitudes who cared about him were far from him, distant as the poles, inarticulate, perhaps dismayed by their instinctive apprehension of the tragedy they sensed coming.

Doubtless it generally is so. Shakespeare's divinity that "doth hedge a king" extends to presidents. The elevation of a man to leadership removes him from the people. Lincoln felt that; "thought of it," as Mr. Bradford remarks, "all the time." The melancholy of the uncommon commoner traced back to his isolation, and he mourned the fact. Yet nothing could be done about it. Lincoln was above, beyond human fellowship. There are many theories intended to explain this, but they are not adequate; they remain mere guesses as the years go by.

What matters most, however, is that Lincoln still is magnetic, still dynamic. He is one of the half dozen great world figures of the nineteenth century who continue to possess power to stir men's thoughts, to influence their actions. If he be the symbol of America as Whitman, Vachel Lindsay, James Oppenheim, and other poets have believed, then he represents all of us in the experiences, the ordeals of our lives. Our ways are cast in bitter times as his way was. We, too, are lonely. Moving in millions,

closer in terms of improved facilities of communication than our fathers ever were, we yet are like Lincoln in our insularity, one from another.

But it would be an error to fail to note the automatic, inescapable bonds by which humanity is identified with its best exemplars. Their destiny is that of the least of their fellows in the shifting kaleidoscope of history. If we are affected by the enemies of mankind, we just as truly are advantaged by those who are our friends. Lenin in his mausoleum in the Red Square at Moscow is dead, despite the Soviets, while Lincoln—even though he still is lonely in his shrine by the quiet Potomac—never has died. The difference is an affair of the enlightened spirit. Read again the familiar lines from the second inaugural, cut on the wall of his temple: "With malice toward none, with charity for all, with firmness in the right, as God gives us to see the right, let us * * * do all which may achieve and cherish a just and lasting peace among ourselves and with all nations."

These words remain a compelling affirmation. America is noblest in the ratio of its approach to the ideal which they represent. The same observation applies to the world at large.

There's Some Fine Print in Farm Price Supports

EXTENSION OF REMARKS
OF
HON. CARL D. PERKINS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. PERKINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Louisville (Ky.) Courier-Journal of February 4, 1950:

THERE'S SOME FINE PRINT IN FARM PRICE SUPPORTS

Potatoes are eye-deep in politics today. It is a shocker that 50,000,000 bushels of them may have to be destroyed—and by the Government, at that—though potato prices keep high in the stores and people are hungry in this land of surpluses. It is no wonder that there is more than the usual amount of buck-passing in Washington.

The highly dramatized situation seems about to open the eyes of Congress as well as the public to the inconsistencies of the farm program, to the evils of Government purchases that create scarcity and high prices. If Members are aroused to action it will be worth all the $62,500,000 the potato-dumping is likely to cost.

There are signs that eyes are being opened and political consciences stirred. There are signs also many a Member of Congress is ignorant of much of the fine print in the Agricultural Act that was passed last fall. All that many of them seemed to see at the time was the headlined fact that price supports would be kept high—90 percent of parity—and that on the surface this would mean that farmers would stay happy, and vote to keep their faithful Representatives.

However, blinded by the dazzling thought that they were voting themselves political credit, and brushing off several more practical alternatives, they fairly outsmarted themselves. This was certainly the case as to the potato politicians. By dint of logrolling here and there, helping the champions of other groups in consideration of help for their own crop, they held potatoes in the bill as subject to mandatory price supports.

Previously it was possible for the Government to help clear potato surpluses by sending large quantities for school lunches and welfare institutions. The law permitted the Government to pay transportation and handling costs, so that the whole transaction was free, potatoes and incidental charges as well. But it applied only to "perishable nonbasic agricultural commodities," which were not under mandatory supports. Once the friends of potato-growing constituents got their product on the mandatory-support list, they were stopped by section 411 of the act from most of the benefits of free distribution.

The curious law permits the Government to pay freight and handling only if price-supported perishable foods are to be used to feed livestock. Potatoes might come under this head. But if the same perishables are to go to school lunches, welfare groups, or commercial processors, it must be f. o. b. at the shipping point. Secretary Brannan told the Senate committee this week:

"The paradox of a situation in which we would pay transportation costs on potatoes going for livestock feed, but would be forced to assess such charges to those who wanted them for human food, is so obvious that we feel obligated to discontinue paid-freight distribution for livestock feed."

And so the country is beguiled by the prospect of destruction of food for no other reason than that the law says its price must be supported; and that, being supported, the food is over-produced by farmers who know a good thing when they see it.

The potato situation is but one item, and a comparatively small one, in the price-support picture. This newspaper hopes to discuss shortly the broader aspects of the law and to point out what it considers to be follies and dangers. If Members of Congress, aroused by the potato scandal in which they have abetted the big commercial growers, don't move swiftly to mend matters, where will be the end?

Memorandum on the Proposed Bill To Provide for Certain Exemptions From the Federal Admissions Tax

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. BOGGS of Louisiana. Mr. Speaker, it is proposed that the Internal Revenue Code be amended so as to provide that admissions to a limited number of political facilities be exempted from the tax levied on admissions by section 1700 of the Internal Revenue Code. The proposed amended Code seeks to have admisssions to swimming pools, bathing beaches, public parks and other similar facilities, operated and maintained by the United States, or any State, Territory, or the District of Columbia, or any political subdivision of a State or Territory, declared exempt from the so-called Federal admissions tax. The proposed amendment also provides that no penalties shall be assessed in respect to past offenses relating to taxes on admissions to such facilities enumerated and specified in the proposed exemption.

The revenue cost to the Federal Government from this proposed exemption is almost nil. The consequences to the public health and juvenile delinquency programs of cities will be great.

The impetus to propose this amendment was precipitated by the decision of the Supreme Court of the United States in Wilmette Park District against Campbell, Collector of Internal Revenue, on December 12, 1949. In that case the Court held that the Wilmette Park district, a political subdivision of the State of Illinois, was liable for penalties for failure to collect, return, and pay taxes which were due and owing on admissions charged to enter the park and bathing facilities operated and maintained by the park district. The Court held that the charge made by the park district for use of its swimming beach were in fact admissions within the purview of section 1700 of the Internal Revenue Code and that the park district had the duty to collect and remit the Federal tax levied on such admissions. It was also emphasized in the Wilmette decision that under the present provisions of the Internal Revenue Code, Congress did not intend to exempt any admissions to activities like those here involved, that is, not conducted for gain, although Congress might readily have done so.

Many governmental units, and particularly those at the local level, have maintained and operated for many years swimming pools, bathing beaches, and public parks for the benefit of their citizens. Problems of local finance have, in many instances, required that nominal admission charges be levied in order to operate and maintain such facilities. These facilities are designed to fill an important public need by affording wholesome and beneficial recreation and relaxation chiefly to children, and in some instances to adults, who are unable to afford similar facilities operated by private organizations. The health value of such programs and their tremendous value in combating juvenile delinquency are obvious, as these facilities give children something wholesome to do during summer months when schools are closed. The public welfare requires that any admission charges to such facilities be kept at a minimum as children have only a few cents to spend. While the Federal admissions tax is not a large levy, it increases the charge to be paid by those who can ill afford anything but a token charge for recreation and relaxation, and imposes difficult duties upon the cities operating these facilities—duties all out of proportion to the small amount of revenue to the Federal Government derived from this source.

Some cities, counties and other political subdivisions have in the past collected, returned and remitted taxes on admissions to swimming pools, bathing beaches and public parks. Unfortunately, however, many other local governments have not collected, returned or remitted such taxes in the sincere belief that section 1700 of the Internal Revenue Code levying a tax on admissions did not apply to such public facilities. The impact of the Wilmette decision on such communities will be of considerable magnitude for the decision allows United States collectors of internal revenue to

assess penalties against local governmental units in the amount of the taxes which should have been collected. The assessment of such penalties would add immeasurably to the already staggering burdens of local finance and the serious ramifications of local taxation.

This memorandum in support of the proposed amendment to the Internal Revenue Code, to exempt admission charges to swimming pools, bathing beaches and public parks operated by governmental units and to provide that penalties shall not be assessed for past offenses relating to the taxes now levied on such admission charges, has been prepared in summary form, but it is believed it covers the great problem from which cities need the proposed legislation. Realizing the importance of such facilities to local communities, the dire and pressing fiscal problems of all governmental units, and the importance of sound local government to the welfare of the Nation, it is hoped that the Congress of the United States will enact the proposed amendment providing for the aforesaid limited exemptions from the Federal admissions tax.

Four Hopeful Movements in the World Today

EXTENSION OF REMARKS
OF

HON. DWIGHT L. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 13, 1950

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address by Rev. E. Stanley Jones, which I had the pleasure of hearing delivered at the Calvary Methodist Church of Washington, D. C.

Dr. Jones has been and is an outstanding religious leader of the world.

FOUR HOPEFUL MOVEMENTS IN THE WORLD TODAY

(By E. Stanley Jones)

There are four hopeful movements in the world today. Amid the encircling gloom, four things stand out as stars of hope: (1) The movement for world government. (2) The Christian missions movement. (3) The movement to win the 70,000,000 Americans who are members of no church—Jewish, Catholic, or Protestant. (4) The movement to unite the churches of America.

The movement for world government is a growing pressure from beneath, pressing on governments for action—a people's movement. It will probably go through the United Nations, or if this is impossible, then around the United Nations through a peoples' convention to the establishment of a world security for everybody. Under this security of world law, Russia would have a chance to carry out her way of life, within Russia; America would have a chance to carry out her way of life, within America. All other nations the same. Then the one with the best order would win. I am not afraid of that test, for underlying our civilization we have something lacking in Russia, a Christian basis. In the long run that will be the deciding factor. If this collective security were honestly set up for everybody, I am persuaded that the satellites of Russia would desert her and take world collective security instead of Russian security.

While this is a peoples' movement, yet the political leaders are in it too—over 100 in the House of Representatives of the United States, and over a hundred members of the British Parliament are committed to world government now. Twenty-four State legislatures have already voted for world federal union. Sixty-five percent of the people of America voted in a poll for America to delegate sovereignty to a world federal union. It is a rising tide as the half-answers are proving incapable of bringing peace and security for all.

The second hopeful movement is the movement of Christian missions, especially in relation to Japan. When I landed on the airport at Tokio a newspaperman ran up and said, "Sir, all Japan is talking about Christianity, what have you to say in regard to it?" An exaggeration, of course, but Christianity, from being a marginal sect, had moved to the center of the life of Japan as the subject of a national choice. With the disastrous defeat of Japan the bottom dropped out of the inner life of that people. They had been taught that they were a divine people, with a divine emperor, with a divine destiny to rule. That whole concept went down in blood and ruin and left a moral vacuum in the soul of Japan. Shintoism and Buddhism are too feeble to reorganize the inner life of Japan. Two virile forces are rushing into that vacuum—communism and Christianity. The life of Japan will be organized around one or another of these systems and that perhaps in 10 years. For the time being Christianity has the inside track I have done evangelistic work around the world for 42 years but never have I seen such spiritual responsiveness and hunger as Japan. They hang on your words wanting some sure word from God to fill the awful inner vacuum. In some places they charged admission, 10 yen, to get into evangelistic meetings and everyone was given a decision card when he went in and his name registered. They packed the buildings. In two meetings in Matsuyama 930 people signed cards saying they wanted to follow Christ, be baptised and come into the Christian church. In Tokio in one meeting 715 signed cards. We begged them not to do it through mere politeness, but only if it meant a real decision to go through the whole meaning of being a Christian. Even with these brakes on over 8,000 people signed cards within a month. Cut it in half and say only half really meant it, though for the life of me I don't see why they all didn't mean it, and yet the opportunity is amazing.

General MacArthur, whom I consider the author of the most outstanding piece of constructive work since the war, said to me: "The church has not faced a situation like this in 500 years anywhere. Where you have sent one missionary send a hundred and lay the foundations broad and deep to make this a Christian nation, for Japan will never become a democracy until it becomes Christian."

We have prayed for an open door in Japan and now the whole half side of the house is out. We must give Japan our best without any strings attached. For if the Japanese become Christian they can be the natural evangelists to the whole of the Far East. The old dream of national conquest has gone down in blood and ruin and a new dream of being the agents of a new order, the Kingdom of God, is beginning to take shape. They are virile people and will go far.

The third hopeful thing on the horizon is the fact that in America 38 denominations representing 38,000,000 Christians have united to make this mid-century year the year of evangelism in a concerted effort to win the other half of America to Christ. A vast mission field of 70,000,000 is at our doors. And the church is beginning to realize that if it can't convert it has lost its right to be called Christian. For the Christian faith is a contagion or it is not Christian. The laity are being mobilized to go out two by two and win people to a double allegiance to Christ and the church. This is putting evangelism where it should be—in the soul of the laymen. This will help individuals to a new life and will strengthen the moral and spiritual foundations of this country for the half century ahead.

The fourth hopeful movement is the movement toward an ecumenical church. This means that the Christians are beginning to feel the sense of solidarity of being Christians, that if we belong to Christ we automatically belong to each other. We may betray that brotherhood, but we cannot deny it.

The ecumenical movement will be precipitated into some form of union. There are four proposals for union before the American people: (1) That union be organized around the existing councils of churches on the local, State, National, and international level. (2) That the churches federate to do certain things together. Both these two proposals are good but not good enough, for they are this side of union leaving the denominations sovereign and intact, surrendered to nothing beyond themselves. (3) Merger. Where denominations have sufficient affinity with each other to merge, without splitting, then I'm in favor of it. But, if merger is taken as an over-all strategy for union, then it will result in a minority merging, leaving the majority outside, which would not be church union, but a union of some churches. We must have church union. (4) Federal union offers the possibility of church union now. The principle of Federal union would mean that the denominations would come together on the same basis as the Colonies came together—a Federal union but with local self-government or States' rights in the constituent branches. There would be one church: The Church of Christ in America," or "The United Church of America," but under it there would be branches, no longer separate, sovereign churches, but branches of the one church—the Episcopal branch of the Church of Christ in America, the Lutheran branch, the Baptist branch, etc. Within those branches there could be local self-government. If any branch wanted bishops or adult baptism by immersion it could keep such distinguishing characteristics but it wouldn't compel the rest to take them as the price of union. Then would be a union of diversity and not a union of uniformity.

Federal union puts together two urges—the desire for union with the whole, and the desire for local self-government. Applied to these States it has made us the most united people on earth—united in difference. Applied to the churches it could mean a union of rich diversity, for God has raised up these different denominations to emphasize forgotten or neglected truth. Now the same spirit of God that raised them up is moving on them to bring together these emphases and share them with the rest, not by compromise but by comprehension.

There is a peoples' movement on. In the 125 cities where we have gone with this crusade for a united church the most that have ever voted against federal union were 11 people out of an audience of 4,500 in San Antonio, Tex. The Christians, with the largest single allegiance, hold the balance of power in this country. United they could go anywhere and do anything—anything that's right. Christians of America, unite; you have nothing to lose except your dividing walls.

Oil-Depletion Allowance and National Defense

EXTENSION OF REMARKS
OF
HON. TOM STEED
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. STEED. Mr. Speaker, under leave to extend my remarks, I desire to include in the RECORD a statement I made to the Committee on Ways and Means in regard to the necessity for continuing the 27½ percent depletion allowance for the oil industry.

I hope the Members will read this statement, since the reasons for this allowance have become so confused to those who do not have an intimate working knowledge of the Nation's oil industry. I strongly feel that we will endanger our national defense by crippling this vital industry if this depletion allowance is eliminated or reduced, since it is almost entirely true that the present healthy oil-development program in the United States is created by this allowance.

The statement follows:

Mr. Chairman and gentlemen of the committee, I ask this opportunity to place before you my views on the proposed oil tax depletion clause because of the great harm I am sure will result from eliminating or reducing this allowance.

I presently represent one of the largest oil-producing districts in America. My district is of particular significance because of the fact that a large part of the oil activity in my district is carried on entirely by small independent operators. This is the group which does the most in the field of oil exploration and development and which is now receiving the greatest benefit from the oil-depletion clause. If this allowance is cut, this part of our oil industry will be driven out of business. Any person who has an intimate knowledge of the oil industry knows that we must maintain our independent operators if we want to maintain a growing industry.

This is true because in the field of "wildcatting" it is the independents who will spend the time and money required to find new oil reserves. This activity is such a great financial risk that few of the major companies are willing to engage in this field.

Elimination of the depletion clause would wreck the independent producing business in the United States because it would prevent these producers from getting back capital invested which is necessary if they are to continue in business. It would reduce exploratory work and the finding of new oil reserves to an extent which would menace the security of this Nation. It would make us, within a few years, dependent on foreign oil which might be shut off in case of war.

References made in the President's tax message to Congress are most misleading. These evidently were based on information from a few abnormal cases rather than on actual conditions which obtain for the oil-producing industry as a whole.

No other industry is as hazardous as that of the oil producer. During the last year, 82 percent of all "wildcat" wells drilled in the United States were dry. Only 15 percent were producers and 3 percent were gas wells. This so-called wildcatting deals with the problem in areas where no oil has been previously produced and is the way in which all new oil reserves are discovered.

After an area has been proved by such a "wildcat," drilling still remains a big gamble. Of all the wells drilled in the United States last year in these so-called proved areas, 25 percent were dry, 66 percent produced oil and 9 percent produced gas. Since oil was first discovered in America to the present day total drilling shows that only one well out of each seven wells drilled has produced oil or gas in paying quantities. Congress realized this situation long ago. Efforts made to provide the oil industry with sufficient help culminated in 1926 with what we now have as the 27½-percent depletion allowance. This figure was reached by compromise after a survey of the industry from 1918 to 1925 disclosed that actually the depletion figure was between 32 and 33 percent.

When oil or gas is produced from a property, there is a reduction in the capital represented by that oil or gas in place. The depletion allowance is designed not only to permit the producer a return of that amount of capital tax free, but also a return of capital invested in finding that oil or gas.

That is a point Mr. Truman failed to mention. He stated, "In the case of oil * * * the depletion exemption goes on and on, year after year, even though the original capital investment in the property has already been recovered tax free, not once, but many times over."

Each individual producing property or lease is considered separately in figuring the depletion allowance. Some producers have drilled as many as 20 wells before finding oil. Their capital investment in finding oil is far greater than the capital invested in that twenty-first well.

So, while depletion allowance for one producing property may, over a period of years, total more than the investment in that one property, it still falls short, in most instances, of returning to the producer all the capital he has invested in various properties in search for production. As the Government survey showed, the depletion allowance for the producing industry as a whole should be 32½ percent instead of the present 27½ percent.

Independent oil producers constitute only a part of the number of persons who would be harmed by elimination of the depletion clause. In 1948, the oil industry paid $1,200,000,000 in oil royalties, and lease bonuses and rentals. This money was expended in 37 States, 28 of which are oil-producing. Farmers, merchants, and others in all lines of businesses benefited from these payments. More than 200,000,000 acres, or 10 percent of the area of the United States, is under lease for oil and gas exploration and development by oil and gas companies.

I estimate as a conservative figure that at least 95 percent of the total population of my congressional district will be directly or indirectly affected to a harmful extent, if this depletion allowance is cut or taken away. It will be a general hardship that my communities cannot withstand.

Another illustration of why the depletion clause is important to the continued success of the American oil industry can be found in a recent development in western Oklahoma. The discovery well in the new oil field at Elk City, Okla., cost $750,000 to drill and that cost did not include $750,000 to $1,000,000 spent previously in exploration and preliminary development work. This new source of oil for our Nation is now available because independents were willing to gamble and risk such huge sums. They took this risk because the depletion allowance gave them a minimum hope of recovering their capital. Acreage in this same area was held by major oil companies for more than 20 years without a single cent being spent by them in wildcatting.

If this depletion clause is cut or eliminated, the time will not be long before foreign oil imports will have to supplant, not supplement, American production because no new fields will be discovered. This is a historical fact proven by a study of the entire search for new oil reserves. You must have the wildcatting independents if this phase of the industry continues.

Loss of revenue to the States by reason of a declining oil production will upset fiscal programs in virtually every oil-producing State. Unemployment will become widespread throughout all oil-producing areas. The ultimate cost to the Government in relief and other means of absorbing this impact on our economy will far offset any immediate tax-revenue benefits the Government can hope to gain by taking away this tax exemption of the oil industry.

Mr. Chairman, I cannot emphasize too strongly the point that all is not black gold that glitters in the oil industry. We must not, for the sake of the Nation's economy and for national defense, make the mistake of thinking that a few isolated cases of immense riches that an oil strike brings is any more typical of the oil industry than could be said of any other industry.

Strange as it may seem, the fact still remains that more money has been invested in the search for oil and oil producing in the United States than has ever been earned from such investments or gambles. This is true only because the oil-depletion clause constitutes an invitation for risk capital in the most risky of all industries that otherwise will not be available.

Increase this already terrific gamble and risk, and you will stop the balanced and continuing search for new oil reserves that this Nation needs and must have.

Federal Aid for Education

EXTENSION OF REMARKS
OF
HON. CARL D. PERKINS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. PERKINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

CONFERENCE OF PRESIDENTS OF
NEGRO LAND GRANT COLLEGES,
KENTUCKY STATE COLLEGE,
Frankfort, Ky., February 6, 1950.

Hon. CARL D. PERKINS,
House of Representatives,
Washington, D. C.

DEAR SIR: I am authorized by above-named organization to communicate to you its prayers and hopes that your Education and Labor Committee will report favorably on S. 246.

Our organization has a long record in support of legislation to provide financial assistance to the States for education because we know such aid is necessary for promoting the type of education which the people need and which our democratic society requires.

It is requested that this communication be made a part of any records, reports, or proceedings that the committee might issue.

May we hear from you?

Very sincerely yours,

R. B. ATWOOD,
Secretary.

Address by Secretary of the Air Force Before the Graduating Class of Baylor University

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, February 14 (legislative day of Wednesday, January 4), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a most inspiring address by the Honorable W. Stuart Symington, Secretary of the Air Force, which was delivered before the graduating class of Baylor University, Waco, Tex., on February 1, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

For some years now I have been a member of your national defense structure, America's team of land, sea, and air; and certain observations might be of interest to you today in connection with problems incident to the future security of the United States.

In his recent message to Congress on the state of the Union, our great President outlined the position and responsibilities of our country at this turn of the mid-century. In that challenging address he said in part:

"The human race has reached a turning point. Man has opened the secrets of nature and mastered new powers. If he uses them wisely, he can reach new heights of civilization. If he uses them foolishly, they may destroy him.

"In the world today we are confronted with the danger that the rising demand of people everywhere for freedom and a better life may be corrupted and betrayed by the false promises of communism.

"While the world remains unsettled • • • and as long as our own security and the security of the free world require, we will maintain a strong and well-balanced organization."

It is common knowledge that the source of the unsettled conditions to which our Commander in Chief referred is the threat of communistic aggression. Four years ago World War II ended. In 1922, 4 years after the close of World War I, the major powers were able to sit around the conference table in Washington, in a conciliatory atmosphere, and arrive at an agreement for the reduction of armaments. This they accomplished because no major power threatened the peace.

Ever since the end of the last war, however, America has become increasingly aware there can be no true peace while there is this threat of Communist aggression.

Indeed we may have already lived so long in this postwar cold-war atmosphere that unrest and instability are now being taken for granted and, therefore, disregarded.

If so, that is a very serious matter, because such lack of interest might result in loss of our freedom.

Such disregard may be natural for normal, healthy, peace-loving people. In this air-atomic age, however, it is dangerous, because the cause for this unrest—Communist aggression—is a threat not only to the preservation of the peace but also to our existence as a nation.

Never in the history of the United States has it been more important to recognize the truth about the world we live in; to recognize that truth, and then to follow the proper course necessary for America's preservation, no matter what the sacrifices required.

As our President said, "We know now that this is not an easy task or a short one." Prof. Arnold Toynbee, famed historian, recently predicted that these secrifices might be required for the next 50 years. Toynbee assumed, of course, there would be no successful world conquest by the Communists.

Some 12½ years ago, in the summer of 1937, I went to the seat of a great world empire, a gay and busy city. It was the end of the London season. There were the usual number of parties. Some of the wealthy were watching their horses race; others were taking off for the Continent. With the exception of very few men, always and primarily Winston Churchill, foreign affairs were viewed with but normal apprehension. Many were sympathetic with Hitler. There was fear of Communist Russia, and fear of the growth of communism in the French Army, which was considered the greatest army in the world. As against these two fears, many favored Hitler's Germany as providing a balance of power and a bulwark state.

Douglas Reed, of the London Times, sounded consistent warnings from his post in Berlin. Churchill pleaded with the good people of his country, in epochal speeches which later composed a famous book, While England Slept.

Appeasement, however, was the order of the day. World trade and the stock dividends from it were important. Some were trying to buy security through appeasement—as if any nation can ever buy security through compromise with evil.

Fourteen months later came Munich. Some countries, particularly Czechoslovakia, felt they had been sold down the river. By then, however, there was no alternative, because the wolf had taken off his sheep's clothing. Hitler and his gangsters had revealed their true intent, and neither England, nor any other democracy, had adequate armament with which to trade against the war now sure to come.

In all free countries men stirred uneasily. They realized that soon they might be called upon to fight and die. They asked one another: "How did we ever get into this position so soon after having won before?"

How did they? That is the point of such critical importance to us today.

Less than 4 years later I again visited London, in early 1941. We sneaked up the coast of Portugal by air, praying for bad weather, hoping to avoid Hitler's dominant Focke-Wulf, long-range bombers, as they returned over the Atlantic from their attacks on Allied shipping.

Times had changed in London. Nobody took off for the continent of Europe except in battle planes, because the Nazis controlled that continent, just 20 miles away. Horses were being eaten instead of raced, and most of the entertainment was deep in the shelter of basements, comparatively safe from the bombs raining down overhead.

One of Britain's greatest battleships, the *Hood*, had been sunk. Worse to them, a large island, Crete, had just been conquered from the air.

The British people stood up with indomitable courage. Their leaders knew, nevertheless, that all which stood between them and slavery was the potential production, wealth, and manpower, of the United States.

At this point let me ask you—in case our country in turn is caught with its defense guard down, what nation has the strength to stand behind us as we stood behind England?

At present the people on this earth are, in effect, split in two main political groups. One group is headed by an aggression dictatorship, ruling some 285,000,000 people directly, plus many millions indirectly through puppet or satellite regimes. This central Communist dictatorship has reiterated many times to its own people and to the rest of the world that it is conducting the modern equivalent of a holy war against all nonbelievers.

In every issue of Communist dogma, under the title "Problems of Leninism," published over the signature of Stalin, appears this basic Communist tenet:

"We are living not merely in a state, but in a system of states; and it is inconceivable that the Soviet Republic should continue for a long period side by side with imperialistic states. Ultimately one or the other must conquer. Meanwhile, a number of terrible clashes between the Soviet Republic and the bourgeois states will be inevitable."

The above statement of Communist policy has been reiterated many times, and as recently as after the close of World War II in 1945.

Furthermore, Communist leaders denounce all spiritual faiths, dictating as a substitute the cynical and materialistic doctrine of communism. As we all know, but sometimes are prone to forget, the Communist does not believe in God. That is part of the foundation of his philosophy. He has always fought to destroy religion.

The leaders of Russia have not only constantly reiterated their goal of world domination; they have also predicted the doom of all other political systems, especially capitalism. They have inflamed all Communists against all non-Communists, wherever the latter may be. They have sealed off their own people behind an "iron curtain," while taking advantage of free access in other countries to create constant distress and confusion from within.

Theirs has been a ceaseless campaign of aggression; ideological political and economic; and wherever expedient, that campaign has been supported by guns and marching men.

In the middle thirties it was important to know what the people of France and England and Holland and Denmark and Belgium and Norway were doing. It was far more important, however, to know what the Nazis were doing. Were they really rearming? Did they really believe their marching slogan, "Today we rule Germany, tomorrow the world"?

I believe that in these United States, at this midcentury mark, the most important question for all of us today is, "What are the Russians doing?" Not what we are doing in the way of rearming, at some slight expense to our standard of living, but what are those other people doing—those people who say they cannot live in the same world with our way of life? What is their weapons program, and why?

Surely we Americans do not want to be caught at any future time the way the democracies were caught by Hitler in the thirties.

This we know. Those who reiterate America must be destroyed now have—

1. A ground army greater in numbers than the combined armies of the United States and its allies;

2. An Air Force whose strength in nearly all categories is now the largest in the world and growing relatively larger month by month; and

3. The world's largest submarine fleet; and an intensive submarine development and construction program.

It is our belief that if any democracy attempted to maintain in peacetime a comparable regular armed force, the free economy of that democracy would be wrecked. In Communist countries, however, the will of the rulers, and not the economy of the nation, is the controlling factor. People under a dictatorship do not know when great

streams of national wealth which could be used to raise their standard of living, are diverted instead to further the aggressive ambitions of their rulers.

The Communist government dictators have no problems of money, because all money is owned by the state. The coin of the realm is the order of the dictator.

Nor have these bosses any problem of labor, because they have millions of slaves, captive prisoners from other countries, as well as their own political slaves. From our standpoint, every citizen of their state is but a slave to the handful of rulers at the top.

All men in such positions of dictatorial power, uncontrolled by the checks and balances of representative government, disdainful of the dignity and rights of the individual, and dedicated to the belief that the end justifies the means, are, and always will be, a threat to the freedom-loving peoples of the world.

Here are three facts which every American should know, because this is the world in which we live:

1. Behind the iron curtain there has been an atomic explosion.

2. Behind that curtain is the air equipment capable of delivering a surprise atomic attack against any part of the United States.

3. We have no sure defense against such an attack.

The bleak picture is that today we have a group of dictators dedicated to destroy our way of life. They are capable now of unleashing, without warning, the world's largest ground army, air force, and undersea fleet. The gravity of this situation is multiplied many times by our knowledge of achievements being made by Russian scientists in the field of atomic energy.

I ask you, if these leaders want peace, why are they building their armed strength to such staggering proportions?

Today America holds the position of world economic, moral, intellectual, and in some respects, material leadership, in a struggle as bitter and fundamental as that in the Middle Ages between Islam and Christianity. In that ancient conflict the battleground was religious belief. It is with difficulty that we now understand the intensity of feelings which led to those holy wars. Many feel those dedicated to communism are, in effect, now waging a new religious war, with the dialectic materialism of communism the basis of a godless faith.

In the past the United States has been relatively safe, because our allies have given us the time necessary to build our defense against attack. Then we were at relatively safe distances from our enemies. That is no longer true. Distance is no longer any protection from the long arm and smashing fist of modern military air power. In this air-atomic age the oceans and polar wastes are not barriers against attack. Remember Russian soil is but 5 minutes flying time from the American soil of Alaska; and but a few hours away from our great cities. Waco is but an 18-hours flight from Moscow for the bombers we know Russia is now producing in quantity.

Based on these facts, are there any who would question the importance of this country maintaining as much military strength as will provide what George Washington called a respectable posture of defense? Would any of us like to forfeit either (1) the capacity to defend ourselves as best possible against sudden atomic air attack, or (2) the strategic air capacity necessary for instant effective retaliation against those who would make a surprise move against this country?

America is reconciled to the necessity for a peacetime defense program greater than ever required in the past. We must remain steadfast and alert until that day—God hasten it—when we can have complete assurance that any power, or combination of powers, which threatens peace will abandon their aggressive schemes and participate effectively in the community of nations to advance, and not destroy, civilization.

History teaches that mere races for armed might do not prevent wars. History also teaches, however, that weakness invites aggression.

Our patience in seeking peaceful solutions must not be interpreted as weakness. Rather it constitutes evidence of our own lack of aggressive designs, a manifestation of our sincere hope that as one member of a world organization, we may help to realize the aspirations of mankind for a permanent and responsible peace.

It is a basic dilemma of our time that those who menace our way of life may force arms expenditures of a magnitude that could cripple our economy and thus imperil our free institutions. I submit, however, that those who are critical of this administration for not bringing the national budget into balance may be guilty of ignoring the grim realities of the world in which we live.

I share the businessman's traditional dislike for deficitis and am not unaware of the desires of the American taxpayer to have his burden made lighter. But under the circumstances of today, I am convinced that no loyal and informed American would knowingly consent to dangerous concessions in our security program in order to achieve some otherwise desirable fiscal objective. The risks involved are too great—the stakes too high, for any such false economies.

The arithmetic of the distribution of your tax dollars and mine establishes that during the current and coming fiscal year one-third of that dollar, or 33 cents, is being allocated to the Army, Navy, and Air Force. This figure does not include foreign aid, part of our payment for security, which averages 14 cents.

Those who say they would destroy the United States are thus forcing us to spend heavily from our resources, not only for our national defense but also for the rehabilitation and strengthening of our Allies. They hope to force us into economic collapse.

This danger is always present—consequently efficiency and quality assume transcendent importance in all our preparations; and selectivity in the building of our defense structure grows increasingly vital to our solvency.

If it is more important to balance the budget than to guarantee our security, it would be a relatively simple matter for our President to do so by recommending still further reductions in appropriations for national defense.

Based on the facts presented to you above, however, I ask again, is there any American who wants to see our defense budget reduced further?

We have made the mistake more than once. Let us consider what a single mistake of this kind cost us in money alone—not to mention hundreds of thousands of American lives.

In 1913, at the start of the First World War, the national debt was a little over $1,000,000,000. That war heavily taxed our resources; and a few years later we went through the greatest depression of them all.

A new President came in. He helped those people who wanted work but couldn't find a job. He did so because he believed that human dignity was better for the Nation than poverty and want.

At the time we started, somewhat leisurely, rearming for the Second World War, the national debt was around $40,000,000,000.

Today this debt is about $257,000,000,000.

Could there ever be clearer proof of the cost of unpreparedness?

If reports received from behind the iron curtain are correct, in a short time Russia will be at its strongest position in armaments; and under their present program that position will increase steadily year by year. So, I say today that further reduction in our payment for national security is unthinkable.

Our able and conscientious Secretary of Defense, Louis Johnson, is doing everything possible to promote true unification of the services which will guarantee the taxpayer maximum security at minimum cost. He is doing a fine job. But, it was Mr. Johnson himself who said recently that our "watchword should be military security first, economy second."

Both he and our President were front-line fighters in one war waged to preserve our way of life. They know that peace can be lost—but they know also, and you know, that the current price to America of losing any modern war is slavery.

I remind you that there is little, if any, peace in the world today. We don't have peace just because the guns are silent. Tragically, we do have fronts where the shooting could begin at any time; and no one knows when or where.

The history of Texas is the history of a battle for independence. May you in this great State, and in all our other States, remember the cost of such battles. When those who want to represent us in the halls of our Government consistently close their request for votes with the stressing of two words—peace and prosperity—let us remember the long rows of those who have passed on to us another heritage, and who believed that we in turn would pass that heritage on to our children, and our children's children. Let us ask our statesmen to add a third word to the appeal of peace and prosperity. From Sam Houston to SAM RAYBURN one word is engraved on the heart of every Texan, every true American. That word is "freedom."

Second-Class Mail Rates Have Been Increased Many Times Since 1879

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1950

Mr. HAGEN. Mr. Speaker, the information was given out during the recent consideration of H. R. 2945, that the second-class mail rates have never been increased since they were first established in 1879.

This is contrary to the truth and fact as the rates have been revised several times, both downward and upward, and more often increased. The rates have been changed in the following years: 1885, 1917, 1925, 1928, and 1932.

I am glad to insert in the RECORD a brief history of the various changes, revisions, and increases in second-class mail rates since the Congressional Act of March 3, 1879, which established the second-class mail privilege and rates. My source of information is the report on second-class mail to the Postmaster General, submitted by Charles E. Hiss, special consultant, on May 21, 1946, pages 17, 18, and 19.

It follows:

PRINCIPAL CHANGES IN SECOND-CLASS POSTAGE RATES SINCE 1879

The act of March 3, 1879, established a flat rate for second-class matter of 2 cents per

pound or fraction thereof for other than (a) free-in-country service; and (b) for newspapers—other than weeklies—and periodicals deposited in a letter-carrier office for delivery by its carriers: 1 cent per copy except for copies exceeding 2 ounces in weight for which the rate was 2 cents per copy.

The act of March 3, 1885, reduced the 2-cents-per-pound rate to 1 cent.

The act of October 3, 1917, established a flat rate for reading matter portion and zone rates on advertising portion as follows:

(a) Reading matter:

1. On and after July 1, 1918, and until July 1, 1919, 1¼ cents per pound.

2. On and after July 1, 1919, 1½ cents per pound.

(b) Advertising portion:

	Date effective			
	July 1, 1918	July 1, 1919	July 1, 1920	July 1, 1921
	Cents per pound	*Cents per pound*	*Cents per pound*	*Cents per pound*
Zones 1 to 2	1¼	1½	1¾	2
Zone 3	1½	2	2½	3
Zone 4	2	3	4	5
Zone 5	2¼	3½	4¾	6
Zone 6	2½	4	5½	7
Zone 7	3	5	7	9
Zone 8	3¼	5½	7¾	10

The act of February 28, 1925, reduced, effective April 15, 1925, the rates of postage on the advertising portion, as follows:

Zones and amount per pound

	Cents
Zones 1 and 2	2
Zone 3	3
Zones 4, 5, and 6	6
Zones 7 and 8	9

This act also increased the rate of postage on nonprofit religious, educational, scientific, philanthropic, agricultural, labor, and fraternal organizations from 1¼ cents per pound to 1½ cents per pound.

The act of May 29, 1928, reduced the rates per pound on advertising portion, as follows:

Zones and amount per pound

	Cents
Zones 1 and 2	1½
Zone 3	2
Zone 4	3
Zone 5	4
Zone 6	5
Zone 7	6
Zone 8	7

The act of June 6, 1932, increased for a 2-year period, effective July 1, 1932, the rates on advertising portion, as follows:

Zones and amount per pound

	Cents
Zones 1 and 2	2
Zone 3	3
Zone 4	5
Zone 5	6
Zone 6	7
Zone 7	9
Zone 8	10

During fiscal years 1932–34 the volume decreased: These rates were lapsed, effective July 1, 1934, and the rates in effect prior to July 1, 1932, were restored, as follows:

Zones and amount per pound

	Cents
Zones 1 and 2	1½
Zone 3	2
Zone 4	3
Zone 5	4
Zone 6	5
Zone 7	6
Zone 8	7

These are the zone rates now in effect.

Cooperative Housing Bill

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1950

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of William Green, president, American Federation of Labor, on the cooperative housing bill, H. R. 6618, before the House Banking and Currency Committee, February 14, 1950:

I am very glad to appear before your committee today to discuss a subject that has always been close to my heart, the problem of providing decent, comfortable housing for America's workers.

I consider this appearance in behalf of the American Federation of Labor of the highest importance. I have just returned from the winter meeting of the A. F. of L. executive council, at which the cooperative housing bill, H. R. 6618, introduced by Congressman SPENCE, was thoroughly considered. I bring to you this message: The American Federation of Labor pledges its full support for this middle-income cooperative housing program because we believe that, more than any previous housing legislation, it will really meet the needs of workers and their families. I am attaching a copy of that statement as an appendix to my testimony.

At our sixty-eighth convention, which met last October in St. Paul, Minn., a resolution was adopted unanimously urging enactment of the cooperative housing bill then before the Congress. The resolution pointed out that our postwar housing legislation has thus far failed to meet the needs of workers in the so-called middle-income group. It is because this new program is designed especially to meet the needs of the middle-income group that the convention unanimously urged that the cooperative housing bill be enacted at the earliest possible moment.

We in the American Federation of Labor have never supported any social or economic program unless we were convinced that the proposed program would meet a genuine and a specific need. We certainly apply that criterion to the subject of housing. It is because we believe that the cooperative housing program will meet a genuine and specific need which is not now being met that we are vigorously urging its immediate enactment.

I want to present our views regarding the present status of home building in this country before I discuss the specific points of the bill itself. I know that opponents of this legislation who have come before you during the past few days have argued that the private building industry which has just completed a record year can meet all of the housing requirements of the American people. If this were true, certainly there would be little need for the program you are now considering. Let us, therefore, examine the actual record of the private building industry to see if it is really meeting the housing needs of the American people and particularly of our moderate-income families.

An examination of the actual record will show that private builders have failed to pass two simple housing tests: quantity and quality. First, a word about quantity. The private builders are congratulating themselves on the fact that 1949 was a record home-building year with about 1,020,000 units constructed, as compared with the previous record of 937,000 units in 1925. Yet when we consider the growth in the Nation's population, the facts show that the 1949 record actually falls considerably below 1925, for in the latter year our population was smaller than it is today by more than 35,000,000.

Impartial sources agree that in order to meet our over-all housing requirements we need, not 1,000,000 homes a year, but a minimum of 1,500,000. Thus the 1949 record construction is only two-thirds of what is required to meet our minimum housing needs.

Nor does this 1949 record compare favorably with the output of other major industries. Compared with the 1920–29 decade, production of housing has increased much less than output of other commodities. Thus, in 1949, when industrial production was more than double our Nation's annual output during the twenties, housing construction had risen only 45 percent.

Not only is our housing woefully lacking in quantity, but in addition its quality is far below our standards for decent family living.

Gentlemen, I want you to find out about this quality for yourself. Last year a group of Senators and Congressmen, including, I believe, some from this committee, made housing history by visiting the District of Columbia slums within the shadow of the Capitol Building.

Now I am asking you to make housing history once more. I want you to make a visit to a number of private housing projects in the metropolitan Washington area to see for yourself whether private builders are meeting the housing needs of the American people.

You can get some idea of what you would find by studying a recent report of the United States Department of Labor analyzing housing units started in the Washington metropolitan area during the third quarter of 1949. According to this report, only 12 percent of the more than 11,000 apartment units built during that period had four and one-half or 5 rooms, and not one had more than five rooms. This means that only 12 percent of the units had two bedrooms, none had three bedrooms, and the remainder had one bedroom or none.

In the construction of one-family houses for sale, the report indicates that 60 percent of the homes started in the Washington area during this period contained only one bedroom, or no bedroom at all.

More detailed data concerning the survey are attached as appendix B.

To my mind, these figures are really shocking. They are a clear indication that private builders are forcing American families into housing units far too small for adequate family living.

Why has this been allowed to happen?

Let me call this to your attention. All of these apartments have been built with help from the Federal Government through the device of a Government-guaranteed mortgage approved by the Federal Housing Administration. I say that a chief reason for this shameful condition is the absurdly low standards which FHA uses to pass upon an application for an FHA guaranty. Let me point out one example of what I mean.

FHA sets a certain minimum size of space for rooms in a dwelling unit which builders of houses and apartments have to meet before they can get approval for FHA guaranteed loans. These standards simply do not provide enough space for decent family living.

Of course, in many cases builders do not construct apartments as small as they are allowed to by FHA, but in the Washington metropolitan area during the past few months, the situation with regard to size of apartments has definitely been getting worse.

Recently, our A. F. of L. housing committee noticed that some two-bedroom apartments now being made available in the Washington area were renting at $75 to $80 a

month instead of $85 to $95. Encouraged by this apparent trend, we asked a member of our research staff to inspect these apartments. He found that although the rents in these apartments were indeed somewhat lower than in most new apartment developments in this area, the living space had been reduced more than proportionately. In fact, the living space in these apartments is actually at or near the absolute minimum required by the FHA. For example, a typical two-bedroom apartment which our staff member inspected had the following measurements:

Living room: 10 feet 2 inches by 15 feet.

Bedroom: 10 feet 6 inches by 10 feet 2 inches.

Second bedroom: 8 feet 3 inches by 10 feet 8 inches.

Kitchen-dining space: 15 feet by 6 feet 2 inches.

This is an over-all area of about 440 square feet, which means that the total area of the apartment is about 525 square feet. These are apartments which are being rented to veterans in the Washington area with one, two, and sometimes even more children.

These are the housing units which private builders are constructing, and FHA is approving, for middle-income families. These facts by themselves are startling enough but they become even more vivid when we realize that the housing units the Federal Government is approving for middle-income families would not meet the standards set for low-income families in public-housing projects by the Public Housing Administration. In our opinion, the public-housing standards represent an absolute bare minimum for decent family living. A comparison between the standards set by FHA and those set by PHA for a two-bedroom unit as well as a three-bedroom unit is included as appendix C.

Gentlemen, I speak with the utmost sincerity when I say here today that if we permit these trends to continue, we are not only encouraging the construction of the slums of tomorrow, but we are creating definite psychological and community problems which will have a seriously injurious effect on every aspect of American life.

One of the most important reasons why we favor the cooperative housing bill is just because it can do so much to arrest this trend toward the construction of so-called homes which simply do not permit decent family living. We believe that this bill provides a workable method whereby moderate-income families can get together in cooperatives to build decent homes at prices that they can afford to pay.

No doubt others who have appeared before you have discussed the provisions of this bill in detail. I simply want to mention a few items with which we are particularly concerned.

Perhaps the major change in the bill now before you as compared with the legislation which your committee considered last summer, is the provision which will enable this program to be privately financed rather than supported by a system of direct Government loans. We approve the creation of a National Mortgage Corporation for Housing Cooperatives which would raise money by floating Government-guaranteed bonds and in turn loan this money to voluntarily organized cooperative housing associations. We believe that the financing arrangements in this bill will make possible an effective program under which the monthly housing costs in the projects constructed will fit the pocketbooks of middle-income families.

This bill will permit a 3-percent interest rate and a 50-year amortization period for the cooperative projects. I want to emphasize the fact that any increase in the gross interest rate or any decrease in the amortization period will be reflected in an increase in the required rents or monthly payments. This inevitably would mean closing off from the benefits of the program some of the families who are most in need of it. Likewise, any increase in the down payment will make it impossible for many middle-income families to participate in this program.

We have only one major criticism to make of the proposed amendment. That pertains to the question of administration. The legislation which you are now considering establishes a division within the Office of the Housing and Home Finance Administrator which would be charged with the administration of this program. We strongly believe that the cooperative housing program would be handicapped under such an arrangement.

A cooperative housing program for middle-income families represents a tremendous undertaking and an entirely new departure from previous housing programs. It must be headed by an individual who believes completely in the program, is vested with a certain amount of independence, and is fully responsible for the success of the program. That means that the agency he heads must be on the same administrative level with the Public Housing Administration and the Federal Housing Administration. It means further that the individual in charge of the program should be appointed by the President. We, therefore, strongly urge the establishment of a new unit, to be known as the Cooperative Housing Administration, within the Housing and Home Finance Agency, which would be responsible for the administration of this program.

I want to close my statement this morning by telling you in concrete terms what we think this cooperative housing program can accomplish.

We think that most of the cooperative groups organized under this program will construct multiunit developments, many of them so-called garden-type apartments. We think the savings made possible under this program will permit construction of apartments which, unlike so many of the apartments now being built under the FHA program, will be very attractive and of a decent livable size. These apartments could be built at an average cost of $8,000 for a 4½-room unit involving rents or monthly payments of no more than $55 to $65. This compares with rents for comparable units insured under the FHA of about $85 to $95 a month. These savings will be made possible through the nonprofit nature of the program, a very low vacancy rate, the use of tenant maintenance, and by the very substantial reduction achieved through the favorable financing terms.

Not all of the cooperative housing groups will wish to construct apartment-type projects. In some communities, particularly rural or semirural areas, members of such groups will undoubtedly want to construct free-standing homes. To cover such a possibility, the bill wisely provides a means whereby such families can eventually acquire individual ownership of their own homes after utilizing at the outset all the advantages of participation in a cooperative nonprofit group.

The American Federation of Labor is proud to have taken a leading part in the movement to obtain the cooperative-housing program for middle-income families. We have done so because we think it is the only program that can adequately meet the housing needs of millions of workers and their families. But I do not want to leave the impression that industrial workers will be the only group to benefit from this program. The fact that we have worked very closely with representatives of veterans, church, housing, and other public-interest groups indicates the broad support and the widespread appeal this program has.

I confidently expect that when this legislation is enacted members and affiliates of the A. F. of L. will play a leading role in making this program a success. I know from my own intimate knowledge of the housing needs of the American workers that there will be an immediate favorable response from A. F. of L. members and groups all over the country. I am sure that they will be taking a leading part in organizing cooperative housing projects for middle-income families. All of them are looking to your committee for the opportunity to participate in this great program.

APPENDIX A

STATEMENT ISSUED BY EXECUTIVE COUNCIL, AMERICAN FEDERATION OF LABOR, ON HOUSING AND RENT CONTROL

There has been much self-congratulation by the real-estate industry because 1949 was a record home-building year.

However, we feel it necessary to view that record realistically to find out how far it has contributed toward meeting today's acute housing shortage. Upon examination, it develops that the 1,019,000 homes built in 1949 is only slightly higher than the number constructed in 1925, a year when our population was smaller by more than 35,000,000.

Compared with the 1920–29 decade, production of housing has increased much less than production of automobiles or other consumer goods. Indeed, the 1949 record still represents only two-thirds of the level that is necessary if we are to lick the housing shortage within the next decade.

Not only has the 1949 level of construction failed to meet the over-all need, but it has particularly failed to meet the needs of moderate-income families, including, in particular, the majority of American workers. The average wage of factory employees today is about $55 a week. According to recognized standards, these workers cannot afford to pay more than 25 percent of their income or $60 a month for housing purposes. Last year, however, under the existing FHA private-housing program, rentals of new apartments averaged $90 a month and prices of new homes for sale averaged about $8,000, involving a monthly housing cost upward of $80. Clearly the housing needs of American workers and their families are not being met.

The real-estate interests point to the fact that moderate-income families are moving into these high-rent apartments and are buying these high-priced houses. The fact that soon moderate-income families may have somehow managed to pay far more than they can afford for privately built homes and apartments, in many cases at the expense of their health and well-being, does not indicate in any way that the real need of hundreds of thousands of middle-income families for decent homes at a price they can afford is being met under existing programs.

The crying need among American families today is a middle-income housing program. Such a program is now before Congress.

In the Senate, the Banking and Currency Committee is considering S. 2246 introduced by Senator JOHN SPARKMAN, as modified by an amendment introduced by Senator BURNET MAYBANK. In the House, a similar bill has been offered by Congressman BRENT SPENCE.

These bills would make possible private financing of long-term low-interest loans for cooperative housing projects for middle-income families. We estimate that under the terms of this bill rents for an average 4½-room apartment would be reduced to $55–$65 a month. This corresponds with rents of similar dwellings offered by private builders of $80 a month or more.

This program offers a practical means of obtaining decent homes for thousands of middle-income families at prices they can afford to pay. We urge its immediate enactment so that we can begin to meet the acute housing shortage of our moderate-income families.

However, we recognize that at the present time, the housing shortage is still with us.

Until the middle-income housing program as well as the low-rent public-housing program enacted last summer greatly increases our supply of homes, an effective rent-control program must be continued. We can safely remove rent controls in only one way—by building an adequate supply of homes that fit the pocketbooks of the millions of families who are without decent housing today.

JANUARY 31, 1950.

APPENDIX B

Housing started in Washington, D. C., Metropolitan Area, July–September 1949

ONE-FAMILY HOUSES

Number of rooms	Units		Average (square feet)	Comments
	Number	Percent		
Less than 3½	30	1	----------	No information available.
3½ and 4 rooms (1 bedroom)	450	14	790	Approximately ½ less than 700 square feet.
4½ and 5 rooms (2 bedrooms)	1,450	45	850	Over ½ less than 800 square feet.
5½ and 6 rooms (3 bedrooms)	1,200	38	1,160	Over ½ less than 1,000 square feet.
Other and unknown	60	2	----------	No information available.
All houses	3,190	100	970	50 percent less than 800 square feet, 20 percent more than 1,200 square feet.

APARTMENT PROJECTS

Less than 2½ rooms (no separate bedroom)	2,310	21	[1] 450	35 percent less than 400 square feet.
2½ and 3 rooms (no separate bedroom)	3,540	31	580	28 percent less than 500 square feet.
3½ and 4 rooms (1 bedroom)	4,050	36	650	33 percent less than 600 square feet.
4½ and 5 rooms (2 bedrooms)	1,370	12	730	46 percent less than 700 square feet.
All apartments	11,270	100	600	23 percent less than 500 square feet, 9 percent more than 800 square feet.

About That Controversy Over Colorado River Water

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1950

Mr. MURDOCK. Mr. Speaker, it was with pleasure I accepted an invitation from radio station KFI to send a transcription about 14 minutes in length on any subject which was thought to be of interest to the radio audience in the section around Los Angeles. I could think of no more important topic to discuss than one or two phases of the water controversy over pending legislation. There are so many aspects of this controversy and so little can be said in a 14-minute presentation, that I confined my radio talk to the two phases of the discussion which I thought of greatest interest to that radio audience. I wanted to make it clear to the people of the Los Angeles area that their municipal water supply was not endangered by my legislation, and I also wanted to make clear that any legal question as to who might rightfully use the waters flowing in the Colorado River could be determined by the Supreme Court of the United States under a provision inserted by two able Senators in the Senate version of the bill, and that the desired definite judicial decision would not be effected or even hastened by the various suit resolutions which have been so vociferously called for by some in Los Angeles. The transcription is as follows:

Friends, I am grateful to radio station KFI in Los Angeles for this opportunity to speak to this radio audience. As Congressman from the neighboring State of Arizona, I am deeply interested in our mutual progress. Commercially, Arizona is the hinterland of Los Angeles. We are in the same trade zone, and we have commercial and business ties that are very close. What hurts one hurts the other, and what benefits one benefits the other. Therefore, we ought to consider our mutual relations with great care. There exists a controversy between Arizona and California, or rather between Arizona and certain agencies in southern California over the division of the waters of the Colorado River. This is a tremendously vital problem which I want to discuss, but first let me say I have many personal friends throughout the great State of California and I have a deep personal interest in the State of California, second only to my interest in the State of Arizona. Now to this controversy.

All Members of Congress from Arizona are sponsoring legislation such as S. 75 and H. R. 934 in the present Congress which would provide for building another large dam on the Colorado River at the head of Lake Mead at the Bridge Canyon site, very much like the Hoover Dam which forms Lake Mead. Another feature of this legislation besides the dam and the power plant would be an aqueduct and facilities to carry 1,200,000 acre-feet of water annually from the Colorado River into central Arizona, very much as the All-American Canal and the metropolitan aqueduct are now carrying water into southern California. This central Arizona project as a whole is estimated to have a total cost of a little over $700,000,000. However, less than $300,000,000 of that would be the cost of the facilities to carry the water where it is greatly needed in central Arizona. Competent engineers and water authorities, not only in the Government but outside the Government in the Western States, have given long and careful study to this Arizona proposal and have approved it in spite of all contentions raised against it. Can all of these water authorities and engineers be wrong? That question ought to be considered by every citizen of the Pacific Southwest who does not want to be hoodwinked by a fog of propaganda.

The chief opposition to this Arizona project emanates from Los Angeles. Most of the witnesses who have appeared before congressional committees have been members of, or attorneys for, the Colorado River Board of California who have contended that Arizona has no such quantity of water to be legally used by her out of the Colorado River and that should Arizona be given the use of that quantity of water, it would deprive California of the use of water which is legally hers. That is what they say or clearly imply. That contention I most emphatically deny and I shall presently explain why I deny it.

The widespread propaganda which is being carried on conveys the idea to the millions who are reached by it that this Arizona move, if successful, would deprive Los Angeles of her municipal water even to the extent of robbing kitchen faucets today and would also prevent the great metropolitan aqueduct from serving the purpose for which you built it. This spirit of propaganda is very misleading. They may not say in so many words that the present aqueduct is running full now with water for Los Angeles which would be taken to Arizona, but they imply as much and millions of people believe that such is true. Such is not true. Arizona wants to take no water from Los Angeles.

The metropolitan aqueduct is a great piece of engineering. It is a waterway capable of carrying a billion gallons of water daily from the Colorado to Los Angeles. To build another today like it would undoubtedly cost a half billion dollars, but it would not be necessary, as this one is scarcely used. How much is the metropolitan water district using their aqueduct today? Let me tell you. I fear it would make the citizens of Los Angeles very indignant if they knew how little it is being used and for what they are paying. The United States Geological Survey knows to the gallon how much water has been diverted into that aqueduct out of Lake Havasu on the Colorado River during the 9 years from 1941 to 1949, inclusive. Has it been used to full capacity? No. Or to three-fourths capacity? No. Or to one-half capacity? No. Or to one-quarter capacity? No. During the 9 years of its use it has been used to less than 7 percent of its capacity. If there is a water shortage in Los Angeles, there need not be, because Lake Havasu behind Parker Dam is a great man-made lake in the Colorado River from which that aqueduct leads and it has always been ample during the past 9 years to supply Los Angeles with approximately a billion gallons daily if the authorities had seen fit to use the aqueduct's capacity. Your experts testified in Washington in 1948 that

Los Angeles was using one sixty-fourth—mind you, one sixty-fourth of its capacity.

Ah, but some of you who know the fact that Los Angeles is getting her water supply from other sources may say, "We are holding the Colorado aqueduct in reserve for future when our population has doubled." Well, how much could Los Angeles expand over and above the present population and still be amply provided by the present Colorado aqueduct? According to reliable figures, the present population of Los Angeles might double today and still not require the billion gallons daily of additional water from the Colorado River which the aqueduct could bring to add to the present supplies from the Owens River aqueduct and local sources. Ah, but you say, "Los Angeles is going to more than double in population within the next 15 or 20 years. In fact, the population has doubled each decade since 1890." Yes, we are told in congressional hearings, that the population of Los Angeles has doubled every 10 years for a half century, and the implication of one witness was strong that he expects the population of Los Angeles to continue to double each decade for the next 50 years. If such should be a fact, which I more than doubt, it would mean that the Los Angeles area, by the close of this century, would have a population of 100,000,000 souls. Such a notion is ridiculous. Let us combine sense and justice in our planning.

No, my friends, if the metropolitan water district would carry through the Los Angeles aqueduct 1,212,000 acre-feet of water annually which it can carry, that amount, in addition to the supply from your local sources and the Owens River, will provide for a population of more than 10,000,000 souls according to the best authorities. The additional water for the metropolitan aqueduct is in the Colorado River and no one in Arizona will deny that it is California's water. Why do I say that? Because California is allotted a supply of 4,400,000 acre-feet by Federal law and also by California law, which is not disputed by Arizona, and that amount is exactly four times what the big aqueduct was designed to carry. Think of it—you could build three more such aqueducts of the same size and still be within the large amount legally allotted to California.

Well, you say if it is a matter of legal right, let's have it settled by the Supreme Court. I too would like to have the Supreme Court tell these two States—Arizona and California—definitely just how much water they are legally entitled to out of the main stream of the Colorado River. The problem is to get such a controversy squarely before the Court so that it will take jurisdiction and make that definite decision. Certain Californians have proclaimed loudly that they want a Supreme Court decision and have introduced suit resolutions ostensibly to obtain such a decision by the High Court. But such resolutions will not effect a decision. Although these various suit resolutions have been fully considered by four different committees of the House and the Senate in the Eightieth and in the Eighty-first Congresses, none of these four committees has taken favorable action on those resolutions. Since these committees are made up mainly, or entirely, of distinguished lawyers, their refusal to report out these resolutions is very significant.

I am positively convinced that enactment of one of these suit resolutions would not bring about an effective judicial settlement which we want. Instead, I believe that had one of these California-sponsored suit resolutions been favorably acted upon by Congress, that such would have had the effect of stymieing all necessary legislation by Congress without furnishing Arizona or California a day in court. The effect of such a resolution, instead of furthering a settlement by the High Court, would have been a blind alley—a dead-end street—which would have gotten us exactly nowhere toward a final judicial settlement.

It's easy to say that a controversy of this sort ought to be decided by the highest court of the Nation, but we must remember that it is necessary to have a justiciable issue—that is, to get the issue squarely before the Supreme Court so that it can take judicial notice and jurisdiction. Now, what is the situation? Arizona can get no water out of the Colorado River, even though it is clearly her own water, unless we have legislation by Congress authorizing it. California needs no further legislation since the Boulder Canyon Act of 1928 granting her 4,400,000 acre-feet of firm water, and California has the physical equipment to take three times that amount of water out of the Colorado River.

What Arizona is asking for now in House Resolution 934 is an act of Congress authorizing Arizona to use her share of water, just exactly as Congress authorized California to use her share of water in 1928. Incidentally, California did not ask for any Supreme Court decision either before or after the passage of the Boulder Canyon Project Act which authorized the Hoover Dam and the All-American Canal.

If it is true that the supply of Los Angeles' water is not jeopardized, why are all these highly paid lobbyists here in Washington opposing the Arizona measure? It is plainly apparent that authorities of Los Angeles have been willing workers, along with a small group of Californians managing the Imperial Irrigation District, to prevent Arizona from getting any water out of the main stream of the Colorado River. They have put up the same fight unsuccessfully before.

Now, Imperial Valley is a great winter garden spot. Does it need water? Yes, but it has more water than it can use, so that the managers of the All-American Canal which furnishes the water to the Imperial Valley have been wasting into the Salton Sea more water annually than the Colorado Aqueduct could carry to the west coast. If you ask them why, they say they have more land bordering Imperial Valley to irrigate. But the Federal Department of Agriculture, the Department of the Interior, and the University of California have all declared that such land is not irrigable.

No, citizens of Los Angeles, there is really no quarrel between your city and my farmers. Your water supply is not jeopardized by my farmers or even by the farmers in the Imperial Valley, who are using more water than they need and who could give up some. Your water supply from the Colorado River is being jeopardized, just as Arizona's water supply is being jeopardized, by Californians who want that water to pass the Parker Dam (where your supply is diverted) in order to use that water, not for irrigation even in California, but for profitable use on and beyond the Mexican border. This is a matter which needs a thorough understanding of the people of the metropolitan area.

Lincoln Day Address by Hon. Kenneth S. Wherry, of Nebraska, at San Francisco

EXTENSION OF REMARKS

OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 14 (legislative day of Wednesday, January 4), 1950

Mr. WHERRY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at San Francisco, Calif., on February 9, 1950, at a Lincoln Day meeting under the auspices of the California Republican State organization and the San Francisco County Republican Committee.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Americans, tonight we celebrate, with other meetings across the land, the one hundred and forty-first birthday anniversary of Abraham Lincoln, the great emancipator, the great American, the cofounder of our party, and the molder of its never-dying principles.

The American people believe in the precepts, the admonitions, and the examples of Abraham Lincoln.

"Four score and seven years ago our fathers brought forth on this continent a new nation, conceived in liberty and dedicated to the proposition that all men are created equal."

True, oh, so true, are those words of Lincoln.

And again:

"Now, we are engaged in a great civil war; testing whether this Nation, or any nation so conceived and so dedicated, can long endure."

Once again that crucial test confronts us: whether we shall preserve in America individual freedom or surrender it to an all-powerful Federal Government; and whether, in foreign affairs, we shall restore constitutional procedures or continue to lose the peace by secret agreements, inefficiency, and drift.

Upon the decision of the American people hangs the life or death of our Republic.

We shall fight for our American heritage.

We will fight against the radical, alien-minded forces that are plunging America down the road to an all-powerful, spend-thrift, socialistic Federal Government.

And, of one thing I am sure, this time, in the 1950 election, we Republicans are going to fight.

In our opposition to their phony panaceas we shall give no quarter, no compromise, no "me too."

Red socialism has not worked anywhere, and we don't want it here.

Oh, yes; there are those who say: Don't worry; just relax.

They say all the President and his followers in Congress are attempting to do is to lure votes; making demagogic appeals; and that they have no intention to enact their socialistic spendthrift legislation.

This view of such a cynical procedure raises the naked issue of sincerity.

But challenges of insincerity will not stop this menace which threatens our form of Government. It can only be stopped by the Republican Party in the 1950 election.

I come to you from the firing line in Washington; and make no mistake about it, the President, over and over again, has officially demanded adoption of his radical schemes, which lead straight to the police state.

Don't let anyone mislead you. President Truman is going all-out to socialize America, just as they are socializing Great Britain. That is the pattern.

He has asked officially for power, power, and more power: power to deliver to the pressure groups; power to put ceilings over prices and wages, and floors under prices and wages; power to build and operate steel plants, and any other plant, in direct competition with private enterprise, to meet his ideas of what a balanced national economy should be; power over education, housing, health, and worst of all: power over food from farm to table.

He seeks to impose the monstrous Brannan plan, under which farmers would become the regimented wards of Government bosses, and all taxpayers and consumers would be swindled.

Under its provisions, the farmers will have to account for every head of livestock and every head of cabbage.

It will take a Gestapo to enforce it, penalties, fines, and jail sentences.

And, you consumers, out of your hard-earned dollars will be taxed to pay the bill.

Ah! don't be fooled, you are not going to get something for nothing.

All of these proposals are before the Congress. Many of them are on the calendar. And this administration is going all-out to elect Congressmen who will help force passage of these measures.

His campaigners will promise you this, and they will promise you that, but they never tell you what they will cost.

They will cost billions and billions of dollars; and, think of it, the Federal Government, today, is broke, flat broke.

The Government will be in the red five billion this fiscal year, much more next year, and the national debt is now more than the actual wartime peak.

The President is playing hocus-pocus. He is manufacturing money, through the banking system, to cover up the deficit.

This administration is spending $250 more than it takes in—every time your watch ticks.

This administration wrote 274,000,000 checks last fiscal year.

These deficit-spending dollars are contagious inflation dollars. They are Typhoid Marys. The President and his lieutenants, boldly attempt to justify deficit spending. They glorify it, but let me remind you, it has wrecked every government that has tried it.

It is just as certain with the Government, as it is with you, if you continue to borrow more than you can repay.

Deficit spending leads to national bankruptcy. And the first victims, already hit by the shrinkage in the purchasing power of the dollar, are people who live on fixed incomes, people who hold life-insurance policies, people who have saved for the rainy day, and for their children's education.

At the rate this administration is going, our dollar, which is already a rubber dollar, will be worth about as much, in the market place, as a bale of Chinese currency.

To finance his venture into the great blue yonder, the President asks for higher taxes.

He says he will relieve you of additional taxes by placing them on business.

But, again, fellow Americans, don't be fooled.

You carry the tax burden.

Wherever taxes are taken from business, they are passed on in your cost of living.

Do you know that in the building or the purchase of a house, there are 639 Federal and State taxes?

Do you know that in a loaf of bread there are more than 150?

And, now, you ladies listen to this: Do you know that when you buy your Easter bonnet, you will pay 150 different taxes?

When the Truman campaigners tell you that a little socialism won't hurt, remind them of Lincoln's simple words:

"Property is the fruit of labor; property is desirable; is a positive good in the world. That some should be rich shows that others may become rich, and hence is just encouragement to industry and enterprise. Let not him who is houseless pull down the house of another, but let him work diligently and build one for himself, thus by example assuring that his own shall be safe from violence when built."

The warning alarm of insolvency is coming from all sides.

Democrat Representative CANNON just said: "From every point of view, our fiscal situation is the most unfavorable in the peacetime history of the Republic."

Remember what Lenin, the Russian dictator, said:

"Some day we will force the United States to spend itself into destruction."

Is this terrible prophecy coming true?

Fellow citizens, the day of reckoning is here. What are you going to do about it? Why, the only sound, sensible thing to do now is cut the cost of government; cut government down to size; balance the budget; get on a pay-as-you-go basis, and provide for orderly reduction of the public debt.

Stand firmly on this Republican economy platform, carry it to the people; and you will elect a Republican Congressman in every district in the State of California, and a Republican President in 1952.

When the Republicans have a majority in Congress we will have a government by law and not by man. We will stand for no more bypassing of law, such as President Truman has done to the Taft-Hartley Act. In the coal dispute he has been playing politics with human misery.

He has made commitments to labor racketeers to sabotage this law, or he is befuddled by sheer incompetence. A long-suffering public at long last has compelled the President to enforce the Taft-Hartley Act in the coal dispute.

We Republicans believe in the continuation of the Taft-Hartley Act, because it has restored equality between employer and employees, guaranteed the right of collective bargaining, the recognition of unions, and the right to strike, while protecting the rights of the public and the union members.

Under this law union membership has increased to new highs; wages have risen to record levels; and strikes have decreased.

There is a desperate need for a strong policy against the spread of communism within our gates. And we insist that America's efforts toward that end be directed by those who have no sympathy with communism.

We condemn the failure of the administration to recognize the full implications of this threat to our security. We deplore the dangerous degree to which Communists have been employed in important government posts. We shall see to it that no Communist is on the pay roll of the Federal Government.

There is no room in our Government for the Alger Hisses and their fellow travelers.

We Republicans are fighting communism on all fronts. And in the front ranks is your own Congressman NIXON, who has made an all-out effort to expose these enemies of our Republic.

We need more NIXONS to get out and hit communism wherever it raises its ugly head.

Fellow citizens, there is the President's record of confusion, confusion that deficit spending is a sound fiscal policy; mounting national debt is an asset, not a liability, and higher and higher taxes can be imposed without killing initiative, incentive, and enterprise.

The President is confounded by the prolonged stoppage in coal production when, at the same time, he refuses to enforce the law.

He is bewildered by failure when it is pointed out his administration is infected by disloyal persons.

He reminds one of what Abraham Lincoln said of another President in his time:

"His mind, taxed beyond its power, is running hither and thither, like some tortured creature on a burning surface, finding no position on which it can settle down and be at ease.

"* * * He is a bewildered, confounded, and miserably perplexed man."

This confusion also holds true in foreign affairs, chapter after chapter of failure and defeat.

The American people face the hard fact that although hundreds of thousands of lives have been sacrificed, and billions have been spent, 5 years after the explosions of war we do not have peace.

The root cause of this failure goes back to recognition of Communist Russia, in 1933, when self-styled New Deal Democrats captured control of our Government.

Republican Presidents had refused to recognize Soviet Russia, because her dictators gave no assurance against spreading their propaganda to undermine our Government.

Unfortunately, no such guaranty was demanded in 1933. It was then that the Red rulers of Russia were welcomed into the family of nations.

At Cairo, Yalta, and Tehran, through secret agreements, the gate was thrown wide open for the expansion of Russia.

All of these secret deals to remap the world and freeze the ultimate peace were ratified and confirmed by President Truman at Potsdam.

The Republican Party had no part in those secret agreements, under which Soviet Russia gained jurisdiction over Poland, Czechoslovakia, and other Balkan countries, and under which China was eventually to be taken over by Moscow-directed Communists.

When the terrible consequences of the secret agreements became apparent—the appeasement of Russia, the Morgenthau plan to keep Germany forever an agricultural state, and the impossibility of shifting of millions upon millions of people from one jurisdiction to another—it was then the President called in some Republicans, ostensibly, to initiate and develop a bipartisan foreign policy.

But, the President, confronted by his own signature ratifying the betrayals of Cairo, Yalta, and Tehran, picked and chose his spots for advice, leaving out wide areas of foreign affairs.

From then on the administration has been using the bipartisan label as a pretense to cover up its own mistakes and escape responsibility for its tragic failure to win lasting peace.

Around the entire executive branch the Truman administration has built an iron curtain against information going to duly authorized committees of the Congress.

The President has issued orders that no department head or bureau chief shall give testimony to congressional committees at variance with his views.

This attitude of the President is in conflict with the principles of good government, and in defiance of the right of Congress, the policy-making branch, to information necessary for the discharge of its duties.

Is it any wonder we have no firm peace?

Is it any wonder we are losing the cold war?

Russia has grabbed and annexed into its orbit over 13,000,000 square miles and about 800,000,000 human beings.

So, while Secretary Acheson and his pal Alger Hiss were calling the signals in the State Department 14 men in the Moscow Politburo have captured control of one-fifth of the globe's land surface, and one-third of all mankind.

Since the end of the war wrangling and back-biting have raged in the National Defense Establishment. The President, as Commander in Chief of the armed forces, long ago could have put an end to this scandalous situation with one forthright order: unify, cooperate, or get out.

Our defenses in Alaska are woefully weak in the light of modern warfare, spear-headed by long-range bombing, rockets, guided missiles, atomic bombs, and now the hydrogen bomb.

Gov. Ernest Gruening, of Alaska, reported to Congress the defenses there are so weak that two air-borne divisions could capture Alaska in 1 day.

The blackest chapter in America's history, save one—Pearl Harbor—is the loss of China to Communist Russia by appeasement of this administration.

But there is still time to stop the Red tide in the Pacific, as has been so ably pointed out by your Senator KNOWLAND of California, if only the administration had the will to do so.

The first step is to assure China, and other countries in Asia, that the United States

morally supports their cause. This should be backed up by economic and military aid, wherever feasible.

Most important of all, take Acheson's hands off our military strategy, and keep the defense and national security in the Department of National Defense where they belong.

Formosa is the last citadel of freedom-loving people of China. Hold Formosa against the Communists and there will be kept alive active resistance by millions of Chinese on the mainland who want liberty and are eager to fight for it.

The Chinese nationalists have never asked for American troops to help them hold Formosa. They do desperately plead for military equipment.

Surplus military equipment is already in the Pacific and should be supplied them. Congress has authorized this aid and provided the funds, but the President refuses to act.

On the European front the American people have been most generous in helping ECA countries recover from the war's devastation.

More than $30,000,000,000 of your money, and your children's money, have been poured into western Europe, in 23 different money-spending schemes.

All the ECA countries have reached goals of productivity far above prewar levels. The economic problems, which now confront them, can only be solved by themselves.

Our procedures, in aid, for those countries now, should be directed toward restoring peacetime, private channels of commerce.

To attract private capital, the ECA countries must eliminate trade barriers, establish free convertibility of their currencies, and recognize that Germany's recovery, minus war-making power, is vital to the recovery of all Europe; and that Germany must have the tools to earn her living.

Fellow Americans: The solution of these problems, foreign and domestic, is up to all of us, every American. Public opinion, when aroused, is the strongest force in the land.

It is your job, and the job of every American, to see to it that the people never lose sight of the truth, that "eternal vigilance is the price of liberty."

Let us, here and now, rededicate ourselves to the proposition: "That this Nation, under God, shall have a new birth of freedom, and that Government of the people, by the people, for the people, shall not perish from the earth."

Let us go forward, as modern Paul Reveres and minutemen, sounding the alarm. Carry the facts to the people, into your business, the shops, the homes, the farms, into every precinct, and into the wards.

Ring all the doorbells and tell the American people:

We Republicans stand for a government in which the elected representatives and public officials are servants of the people, and not their masters.

We Republicans maintain Government can help its people to prosperity, by lightening the burdens of debt and taxes, laying down rules of fair play, and by protecting those whose own strength and resources are not sufficient to protect themselves.

We Republicans stand for the maximum of freedom of choice for the individual, consistent with the right of all to the same freedom.

We Republicans stand for competitive enterprise, under just laws fairly administered.

We Republicans stand for efficiency and pay-as-you-go economy in Government.

We Republicans stand for an equitable distribution of our tax burden, to stimulate enterprise to give incentive for investment in new and expanding plants for the increase of productivity, and to provide jobs at fair wages.

Tell them, the American people, we offer them a new leadership for the achievement of a lasting peace.

We Republicans insist upon restoration of our foreign agreements to their proper place inside the Constitution, and we insist that the United States shall not be bound to any course of action unless the spirit and letter of our constitutional procedure are followed.

We Republicans oppose secret agreements, and insist upon restoration of our foreign commitments to their proper place inside the Constitution.

We Republicans favor full support of the United Nations.

We Republicans support aid to those states resisting communism, but such aid should be given only if it is essential to our national security, if it is within the total limits which the American economy can afford, if it will be effective, and if there is a program for progressive reduction.

We favor promotion of world trade on the basis of fair and reasonable competition. We assert this can be done within the Republican principle.

Products of underpaid foreign labor should not be admitted to this country on terms which imperil the living standards of the American workman, or the American farmer, or threaten serious injury to a domestic industry.

Fellow Americans, on these principles we take our stand.

On these principles America will go forward to greater and greater strength, financially, economically, and spiritually.

This is the road to lasting peace, prosperity, and contentment for the American people.

And for the Republican Party this is the road to victory.

Air Engineering Development Center

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Tuesday, February 14 (legislative day of Wednesday, January 4), 1950

Mr. KEFAUVER. Mr. President, I am honored to be able to request to have printed in the Appendix of the RECORD a most enlightening address by our most able Secretary of the Air Force, W. Stuart Symington, delivered at a meeting of the Nashville Chamber of Commerce, Nashville, Tenn., on February 10, 1950, at which time a large number of the high-ranking staff of the Air Corps were present, together with scientists, educators, members of the press, and interested citizens of Tennessee and the Southeast. The meeting at Nashville was a very enthusiastic one, and certainly demonstrated the wholehearted cooperation of Tennessee and the Southeast in their desire to help the National Defense Establishment and the Air Corps in the development of this highly necessary air engineering development center. Tennesseans were delighted with the announcement of Secretary Symington that the center will be named in honor of that foremost American airman, Gen. Hap Arnold.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is my privilege to be here today in this great city of the South, center of all that America cherishes, home of the immortal Andrew Jackson, who believed that all the people of our country should be represented in and by their Government.

It is particularly fitting that this part of the country, which has such a record of devotion to the cause of liberty and freedom, should be selected as the location of this new project, so essential to our national security, and approved by our Secretary of Defense, our President, and the Congress.

At one time it did not appear as if such was to be the case, because many people for many reasons, desired that this development should not be placed on the waters of the Tennessee Valley.

Some felt it should go farther west, because they felt the West was the future of America.

Some announced that Tennessee was unhealthy. They probably had not met your great senior Senator.

Some even questioned whether, and I quote, "the brains of America would be willing to live in the Tennessee Valley."

I mentioned this to your own Congressman at a dinner for the President last Saturday, and just about ruined his dinner. We sat next to each other and with every course, my good friend Congressman PRIEST said, "The more I think of that remark, the madder I get."

All of those opinions were against the recommendations of those qualified engineers who studied this question of the right site for many years.

The history of the American people has been one of free enterprise and fair competition, always against any form of consolidation for special interests. This should be especially true in matters that affect national security.

Someone has said the last war was won by the small-town garage, and the boy on the farm, who could fix any kind of engine. In New Guinea, the Aleutians, all over the world, the American GI knew how to make the motors work.

But the war of tomorrow will require far more than mechanical ability. It will require real knowledge of such basic technical arts as electronics.

As an illustration, our reenlistment rate in electronics is less than half what it is in other branches of the service.

Investigation shows the reason is the desire of the airmen to go into the industry of television.

In other words, the taxpayer trains these boys; and they then leave to accept far larger salaries in private industry.

There is no such problem in any totalitarian state. You work where you are told.

It seems to us, therefore, that all parts of our country, not just a few locations, or a few institutions, or a few corporations, should be the core of America's security. It would seem all of America should be that core. Every engineering university in this part of the world should have the same opportunity to obtain this type and character of work as any institution in any other part of the country.

This Air Engineering Development Center will require programs that in turn will demand extensive engineering work in many laboratories; and regardless of some of the opinions mentioned, I believe that, given the same start, those engineers can be obtained just as much from the boys in the Tennessee Valley—boys of Virginia, North Carolina, Georgia, Tennessee, Mississippi, Kentucky, and Alabama—as they can from any other part of the country. I hope that in the future not only will large wind tunnels and test stands be at the AEDC at Camp Forrest, but also that many small ones will be in the universities which make up our great and growing South.

As we go into this air-atomic age, the more such vital questions as supersonic speeds and nuclear fission are disseminated throughout the youth of American schools, the greater will be our chance of survival.

UNIVERSITY OF MICHIGAN LIBRARIES

The term "supersonic speeds" is one of those technical terms used in connection with this Air Engineering Development Center—words like "sonic barrier," "subsonic," "transonic," "supersonic," and "hypersonic." One can hardly discuss the AEDC without using those words.

Here are some summary definitions.

The "sonic barrier" is an invisible wall encountered when the flight of an airplane approaches the speed of sound—the later being 764 miles an hour at sea level. When an ordinary airplane approaches this speed, strange things begin to happen; its wings and controls flutter, excessive vibration sets in, and usually the airplane is difficult, and sometimes impossible, to control.

This sonic barrier is so important to modern aeronautical design that airplane speeds are now measured in terms of percentage of the speed of sound. This percentage is known as the mach number. Aeronautical engineers give the speed of sound a value of (1), and any speed up to nine-tenths of the speed of sound they call subsonic speed.

Speeds between nine-tenths of the speed of sound (about 680 miles an hour) and up to about one and two-tenths times the speed of sound (about 915 miles an hour) are called transonic—in other words, the speed at which we pass through the sonic barrier.

Beyond that barrier, speeds up to five times the speed of sound (around 3,500 miles an hour)—they call supersonic; and speeds beyond five times the speed of sound—that is, more than 3,500 miles an hour—they call hypersonic.

The Air Force has had subsonic and transonic wind-tunnel facilities for many years; but it has never had wind-tunnel facilities for tests at supersonic and hypersonic speeds. That is one reason why these tunnels to be built at the Air Engineering Development Center are so urgently needed.

It is no secret that before World War II other nations were far ahead of us in supersonic research and development, as in many other aspects of national preparedness.

Now here are some more facts about this Air Engineering Development Center.

In technical terms, this AEDC initially will be what is known as a propulsion test center, where we will use laboratory-type tests, under closely regulated conditions, to help solve design and manufacturing problems encountered during the manufacturing and development stages of engines of all kinds. The test units are designed to simulate various conditions of altitude, temperature, and speed; and we expect to obtain much information which in the past we could get only by building the equipment and testing it in flight—an extremely costly and time-consuming method compared to what will be done here.

When fully developed, this new location in Tennessee will be one of the greatest aviation test centers of the world.

Who can forget the startling news in August 1944 that our pilots in P–47's and P–51's, which flew only about 440 miles an hour, had encountered jet and rocket-powered Nazi Messerschmitt 262's and 163's which flew between 500 and 600 miles an hour? In that connection, remember also that our 500-mile-an-hour jet fighter, the P–80, never got into action.

No airplane was used by the United States in World War II which had not been designed before we entered the war. Only improvements were made after Pearl Harbor; there was no change in fundamental design in any plane which saw war service.

I am glad to say we profited by that lesson. Since that time we have come a long way; and in 1947 the Air Force XS–1 penetrated the sonic barrier—an achievement ranking in importance with the first flight of the Wright brothers.

AN EXAMPLE OF UNIFICATION AT WORK

One could hardly find a better example of unification at work than the evolution of this project from its initial beginnings as a technical staff study at Wright Field in 1945, on through the passage of Public Law 415, Eighty-first Congress, which authorized the unitary wind-tunnel plan, and established the AEDC as an element of that plan.

The official language of that law describes it as "An act to promote the national defense by authorizing a unitary plan for construction of transonic and supersonic wind-tunnel facilities and the establishment of an air engineering center."

In other words, AEDC is just one part of an integrated unified plan to provide this Nation—the military as well as private institutions and industry—with the necessary facilities for exploring that relatively unknown world of flight beyond the sonic barrier, so that we may continue to improve our ability to use the air space more effectively, both in peace and war.

This whole over-all plan is the result of careful studies, extending over the last 5 years, by the Air Force, Army and Navy; the National Advisory Committee for Aeronautics; the Research and Development Board; the Air Force's Scientific Advisory Board; many private institutions, including colleges and universities engaged in aeronautical research; and private industries.

These studies took a long time, not only because of the highly technical nature of the subject, but also because it was necessary to establish without question that there were no existing facilities that could be altered or improved to meet the capacity requirements for the proposed supersonic and hypersonic test work; and therefore, it was necessary to build a new facility.

As a result of these studies, and the legislation authorizing the unitary wind tunnel plan, we may be sure that the effort is being truly integrated on a national scale.

When completed, the AEDC will serve not only the Air Force but also the Army, Navy, private educational and research institutions, and private industry.

WHY CAMP FORREST WAS SELECTED AS THE SITE

Camp Forrest was selected as the site of this center after many possible locations throughout the United States had been exhaustively studied by an expert firm of consulting engineers. They devoted 3½ years to studying possible locations, seeking a site which offered the best possible combination of many features.

The three most essential requisites were:

1. An adequate supply of electric power, huge amounts of which would be required. Camp Forrest met that requirement because it is within the power network of the Tennessee Valley Authority, and can furnish the necessary power without curtailing its service to other customers.

2. A large dependable water supply, particularly for cooling purposes. Anyone flying over this area will see ample proof that there's no water shortage in the Tennessee Valley.

3. A sufficient land area. The State of Tennessee took care of that by offering to donate some additional 33,000 acres.

The final report of the engineers, submitted to the Air Force in November of last year, pointed out that although no possible site could be superior to all others in all of those essential features, they believed that the Camp Forrest area was the best site for the country. After carefully reviewing that report, the Air Force agreed with the private consulting engineers; and accordingly, with the approval of the President, Secretary of Defense Johnson, and the Research and Development Board, Camp Forrest was selected as the site.

SUMMARY SCHEDULE OF DEVELOPMENT

It is difficult to give a brief yet clear picture of how such a tremendous, long-range project is to be developed, but I shall attempt to present a quick over-all summary of our plans.

First, a word about legislative authority.

By Public Law 415, the Eighty-first Congress authorized $252,600,000 for the Unitary wind-tunnel program, and specifically earmarked $100,000,000 of that amount for the Air Engineering Development Center.

That, however, was the authorization bill, not the money bill; the latter was Public Law 430, which appropriated an initial increment of $30,000,000 in contract authority and cash, to begin construction of AEDC during the fiscal year 1950.

With this $30,000,000 it is planned to begin construction of three principal test facilities.

The first facility planned is the high-altitude engine-test unit, which will make possible the testing of engines under conditions representing 75,000 feet pressure altitude. Incidentally, the nucleus of this unit is a jet-engine test plant taken over from the Germans at the end of the war, and modernized and expanded to increase its capacity. We have had that German equipment in storage since the war, but our existing facilities lacked the power capacity necessary to operate it. This unit would test jet engines much larger than those now used in our jet aircraft. It would have a testing capacity 6 to 8 times the capacity of Wright Field and would require about 75,000 horsepower.

The second principal test unit would be the hypersonic wind tunnel—capable of development-evaluation testing of models of aircraft and guided missiles at speeds in excess of 3,500 miles an hour. Here again we would be taking full advantage of captured German designs and drawings, as well as the services of the German designers. These German designs have been thoroughly checked by competent American authorities and have been modified to incorporate the most recent developments.

The third principal unit would be a supersonic propulsion wind tunnel, designed for development testing of scale models of high-speed aircraft, as well as aircraft power plants. The speed range of this tunnel covers an important part of the supersonic range from the high transonic—above 700 miles an hour—well into the supersonic, which goes on up to several thousand miles an hour. Approximately 200,000 horsepower will be required to operate this tunnel—a power demand equivalent to that of the entire greater Nashville area. By comparison, the 20-foot wind tunnel at Wright Field requires only 40,000 horsepower.

Construction of utilities and buildings should start in the near future, in order to be ready to receive the test equipment as soon as it is produced. In accordance with standard policy, all construction of structures and utilities will be handled by the Army Corps of Engineers.

Construction on the site is planned for midsummer this year. If everything goes according to plan, the center should begin limited operation within the next 2 or 3 years, and should reach full operation within 4 to 5 years from now.

INITIAL CONSTRUCTION PLANS

As businessmen, you will want to know what we intend to buy, and when we expect to begin letting contracts.

Answers to both those questions depend upon actual release of funds. Thus far, of the $30,000,000 already appropriated by Congress, $1,000,000 has already been released. This money is being used to complete the master plan for the project, also to provide initial funds for the Army engineers.

Our able Secretary of Defense, Louis Johnson, desires that there be no duplication in these facilities and that every dollar expended will bring maximum return to the taxpayer, this especially because of our already high cost of security. The Air Force has pledged to him that such will be the case. Plans will be reviewed constantly to insure that everything installed is essential to our national defense.

Pending release of additional increments of that first $30,000,000, we have authority to proceed with the preparation of procurement specifications for $20,000,000 worth of equipment, the issuance of circular proposals, the reception of bids, the award to low bidders, and preparation of contracts up to the point of signature.

During the rest of this calendar year the population of the center will be relatively small because the work to be done is preliminary, and requires only a small force. Thereafter, and of course, contingent on congressional appropriations, the center's activity and population would pick up rapidly.

AN ESSENTIAL ELEMENT OF OUR NATIONAL-SECURITY PROGRAM

Up to this point, I have discussed this project from the technical and commercial standpoint, and what it means to the South.

Of course, from the standpoint of our national security, it means a great deal more—not only to you but to your children and your children's children.

Two years ago, when the United States enjoyed a monopoly of atomic weapons, the President and the Congress each appointed committees to analyze our national-defense problems with respect to the role of air power in defending our freedom. Both of these distinguished groups—the President's Air Policy Commission, and the Joint Congressional Aviation Policy Board—pointed out that our security would be jeopardized unless we achieve and maintain technological leadership.

The Congressional Aviation Policy Board said:

"Technical preeminence is fundamental to air power. This can be achieved only through intensive research and development. The frontiers of aeronautical knowledge must be continually explored and pushed back through research to obtain new information required for the development of our air equipment."

And the President's Air Policy Commission said:

"For national security, second best military aircraft are simply not good enough. On the commercial side, inefficient or unsafe aircraft and unreliable or inadequate navigational aids cannot be tolerated.

"We must keep ahead in the race for military supremacy. And it is a race. Although the great aeronautical laboratories of Germany, Italy, and Japan have been dismantled and destroyed, other strong contenders are now in the field."

Have you ever considered the fact that the four scientific achievements which make possible the existence of the very long-range bomber and the atomic bomb, all have occurred within the memory of living persons? I refer, of course, to the gasoline engine, invented in 1885; the airplane, in 1903; radar-electronics, in 1936; and nuclear fission—the atomic bomb—in December 1942.

Could there be any clearer illustration of why the Air Force attaches so much importance to this air engineering development center; and why you, as leaders of this southeastern region, have a great opportunity to serve both yourselves and the Nation by giving this project your full support and cooperation?

Lincoln Day Dinner Address by Governor Driscoll, of New Jersey

EXTENSION OF REMARKS
OF
HON. H. ALEXANDER SMITH
OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, February 14 (legislative day of Wednesday, January 4), 1950

Mr. SMITH of New Jersey. Mr. President, at the Lincoln Day dinner held last night at the Waldorf-Astoria Hotel in New York City by the National Republican Club, Governor Driscoll, of New Jersey, made a notable address which I am happy to call to the attention of all of our colleagues here in the Senate.

In behalf of my colleague the junior Senator from New Jersey [Mr. HENDRICKSON] and myself, I ask unanimous consent that this address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It was Theodore Roosevelt who once said that the Republican Party "in the days of Abraham Lincoln was founded as the radical progressive party of the Nation." From the standpoint of our lineage we are therefore assembled here as "radical progressives." We know what a radical is. He is anyone who does not agree with us. But a progressive? If he cannot be defined, he can at least be identified. He is not only a person, he is an idea; he is not static, but flexible; he is not reluctant, but prudent; and if I were to place him in the environment of today, I would describe him like this—as one who thinks as much in terms of freedom as he does in terms of welfare.

Now, no party has a monopoly of these qualities. It was in 1894 that Democratic President Cleveland called out Federal troops to suppress the Pullman strike. It was in 1902 that Republican President Roosevelt averted a coal strike by compelling arbitration and motivating a settlement advantageous to labor. It was Republican President Taft, speaking in 1912 before a group similar to our meeting here tonight, who told you that "the development of business (has) provided problems which call for additional action by the Government to prevent the abuses of the concentration of wealth and the combinations of capital." It was Democratic President Roosevelt who assured the Commonwealth Club of California meeting in San Francisco in 1932 that "the Government should assume this function of economic regulation only as a last resort."

1860 PLATFORM QUOTED

We have come a long way since Lincoln led us to our first victory on a party platform (of 1860) which promised to secure "to workingmen liberal wages, to agriculture remunerating prices, to mechanics and manufacturers an adequate reward for their skill, labor, and enterprise and to the Nation commercial prosperity and independence." The world has since grown smaller. People and ideas now crowd each other within the confines of an industrial society. The frontiers of learning have taken place on land boundaries on the horizon of mankind. Political, social, and economic questions which were once the concern of a colony, a nation, or a continent are now the concern of the world.

We have come a long way only to find ourselves once again on the doorstep of conflict and destruction. No one can be certain why we are where we are or what the outcome may be, but every one knows that we are now reaping the harvest of careless war and postwar promises, of trifling with communism, of fumbling with containment and of squandering our assets. I venture to predict that when the history of this age is written, it will once again be the destiny of the Republican Party to preserve union—union within our own boundaries, union within the United Nations, and ultimately union within the hearts and minds of the people of the world.

What can America best do to steel herself against the force of its yet forming world responsibilities? The answer to this question is more important to our future as a nation, to the welfare of the little man and the big man, to the conservative and the liberal, than any of the battles of words and labels that would divert us from the problems of survival itself. It is to this question that I would like to address myself primarily tonight, not from the point of view of spelling out new principles or even of testing old ones, but rather to bring to bear the meaning of some of the experiments in our laboratories of democracy—the States and local governments—in terms of what we know to be the foundation requirements of national security.

Long before big government, big spending, and big taxing became commonplace at the national level, the torch of liberalism was lighted in the individual States. In the States, Republican administrations were adopting social and labor legislation to meet the needs of growing industrialization. Workmen's compensation, industrial-safety laws, minimum wages, eight-hour day, unemployment compensation were originated in the States. Even today, of the five States having temporary disability (cash sickness) benefits laws in operation, four of them were developed, sponsored, and enacted under Republican administrations. All of these four allow full opportunity for private enterprise and initiative. To assert that this is "me-too-ism," is to indict the course of history and to belittle Alexander Hamilton, James Madison, and John Jay, the authors of The Federalist Papers, because they recognized common problems and concurred in some solutions. Let us not divide our house against itself by an inability to say yes.

The Republican Party, still in the progressive tradition, stands committed to a government fully conscious of the needs of our industrialized age, ready and willing to take care of its casualties whenever and wherever they may occur. The real issues of today, however, are essentially of method rather than objective. Some would have us assume a defensive attitude, limit our objectives and orientate our party in favor of a vanishing order. We cannot come to praise Lincoln and at the same time to bury his philosophy. The creed of liberal Republicanism asserts broad social objectives sensitive alike to the needs of competitive business and interdependent labor in an industrialized society, to a constructive view of party responsibility and to adapt government to the requirements of private initiative and enterprise. To use Lincoln's words: "The legitimate object of government is to do for a community of people whatever they have need to have done, but cannot do at all, or cannot do so well, for themselves, in their separate and individual capacities."

This is the dilemma of our day. To the party now in power the answer is: The people can do little for themselves—big government, a paternalistic philosophy, and a socialized economy are the answers. To the party we represent the answer is very different—the people can do much for themselves, self-

government, a self-sustaining philosophy, and a free economy are the answers. But there can be little hope of even a start toward a solution of this dilemma so long as we are governed under that version of liberalism which promises the southern planters and the eastern labor unions the same utopias, and all at the expense of the western rancher and the Pacific fruit grower who need not worry because it is all coming out of the Marshall plan anyhow. This is not even paternalism—it is false, disappointing, and dangerous.

HUSBAND OUR RESOURCES

Our position in the world as the sole remaining arsenal of democracy is reason enough to hold the line on new expenditures. Republicans are doing this in the States and fighting for the same policy in Washington. The one thing we can all do for the cause of peace is to husband our resources. It is foolhardy to act as if the capacity of the American people to buy and pay for more and more government knows no limits. If we spend ourselves to death in peacetime, what hope can we have for survival in an emergency? What hope can we have to survive at all?

The country is beginning to understand that starry-eyed predictions of the gross national product at the end of the next half century cannot hide the fact that those who make them are already being buried under increasing deficits and mountains of surplus potatoes. Suppose our total national income should be quadrupled by the year 2000, and suppose the average family's income in today's dollars should be $12,000 by the year 2000. The same method that arrives at that rosy prediction would give us a National Government taking no less than 40 percent of the total production of the country. Even last year it was 14.4 percent. If we project the future of the dollar in the same way that the President would project the future of the national income, those people who have any dollars left in the year 2000 will be able to buy 18 cents worth with each dollar. It has been estimated that this will mean a mere $3.75 for a pound of roast beef and $250 for a medium-price suit. Who is the administration trying to fool?

WONDERLAND OF BUREAUCRACY

This promise of a government which grows bigger and bigger, of prices which rise higher and higher, and of taxes which take more and more is fitting from a party which has already given us a wonderland of bureaucracy. Money would circulate like mad. The taxpayer would pass his earnings on to the big government faster and faster. We would truly live in a different country—if we are not there already—the like of which can be seen only through the eyes of Alice after she had been driven by the queen to run faster and faster.

"The queen propped her up against a tree and said kindly, 'You may rest a little now.'

"Alice looked round her in great surprise. 'Why, I do believe, we've been under this tree the whole time. Everything's just as it was.'

"'Of course, it is,' said the queen. 'What would you have it?'

"'Well, in our country,' said Alice, still panting a little, 'you generally get to somewhere else—if you ran very fast for a long time as we've been doing.'

"'A slow sort of country,' said the queen. 'Now, here, you see, it takes all the running you can do to keep in the same place. If you want to get somewhere else, you must run at least twice as fast as that'."

We have not come a long way only to get nowhere. The plain dealing of Lincoln can still mean a balanced budget followed by true tax reduction. The formula is simple: stop promising every one too much from too few. It has been said that the function of finance is to be sure that nothing is ever decided upon the basis of finance. But it is common sense to demand that the price of merchandise be plainly marked and to look at the price before we buy. This is neither liberal nor conservative, it is prudence—if we want pensions and annuity benefits to provide what our present hard-earned premiums are supposed to be buying.

A vital, liberal, progressive Republican Party can offer the America of our day, as Lincoln did in his, something better than government by political expediency. We can offer stability as well as security—by taking full care of those who need and want government programs, without treating the butcher, the baker, the grocer, and the manufacturer like so many children for whom Uncle Sam knows best. That is, we can provide a floor of security below which no one would be permitted to fall, but we would not knock every one down to the floor to prove the point.

The common man would still rather place his emphasis upon individual initiative and private enterprise than dependence upon government. What we object to in the welfare state is not that it implies a "state of welfare," as Governor Dewey has so well described it, but rather that it would make us all wards of the Government with only incidental private enterprise. The Republican Party still believes that liberalism and progressivism thrive best in the free air of competitive ideas—that they will wither and die under any form of authoritarian government—even under the sweet-sounding phrases of welfare. We are steadfast in our faith in the ultimate rightness of the many as opposed to the select judgment of the few. But let the many confide the great powers of big government to the few and the few will contrive to defeat the will of the many—this is the common knowledge of mankind.

We are ready and willing to take a new approach to the weakness of bigness—uncontrolled power—wherever it occurs, in big business, big unions, or big government. The curse of bigness does not lie in bigness as such. What was big in Lincoln's day might be small today. Big machines require big investment of capital. Big production for lower prices requires big management. Big industry requires big unions. What we oppose is not size but bigness which produces power or responsibility which can neither be controlled, managed, nor held accountable. This is the kind of bigness which is just as much a threat to the liberal as to the conservative.

NEW FUNCTION FOR PARTY

We have already staked out the answer to big government through decentralization to the States. This is a matter of party policy which might imply a new function for the political party in our Federal system of government. This function is to become the balance wheel of federalism by formulating Federal-State policies to be carried out in the Congress. These policies would turn over to the States—even as the present unemployment-compensation system—the responsibility for more and more services of government. This is the only way to prevent a socially minded Federal Government from crushing its citizens by its own weight. It is the best way to restore government to the people.

A century ago both parties to the conflict deprecated war, but one of them would make war rather than let the Nation survive, and the other would accept war rather than let it perish, and the war came. Today, both parties deprecate second-class citizenship, but one would rather talk about it, while the other would rather act. In our neighboring States of New York and New Jersey, Republican administrations have acted. Here, Governor Dewey has shown the way, and every citizen knows his name, his efforts, and his accomplishments. Throughout the Nation, Republicans want action. It goes to the heart of decent and responsible government at home, as well as a respected government abroad, to set ourselves squarely to the guaranty of one first-class citizenship throughout our Nation.

In another day and under the stress of arms, Lincoln declared:

"Our popular Government has often been called an experiment. Two points in it our people have already settled—the successful establishing and the successful administering of it. One still remains—its successful maintenance against a formidable internal attempt to overthrow it."

There are ways to destroy a popular government without armed rebellion—ways more subtle but more devastating. There are those who would destroy the substance and leave the frame—that is the method of world communism. Our task is to combat it without losing that for which we fight. Others would bleed popular government to death by squeezing it into their own pattern of interest. The task of a political party is to avoid attachment to any one interest or group and to express the best interests of all.

The force of political absolutism is, perhaps, the most subtle of all dangers to popular government today. It thrives on the emotional appeal of majority vote. Its symptoms are an unshakable faith in the infallibility of government and an unquenchable capacity to tell other people how to dispose of their earnings.

It is startling to think of how much absolutism may flourish in a democracy—the absolutism of a rampant majority, the absolutism of a boss-controlled political machine, the absolutism of business monopoly, the absolutism of boss-minded union leadership, the absolutism of taxing authority which knows no restraint. One is as bad as the other. One weakens our capacity to meet our world responsibilities as much as the other. These are the common problems of the liberal and the conservative today. The Republican Party is free, willing, and able to face them honestly and effectively. In the true heritage of Lincoln, this can yet be our greatest contribution to the security of popular government and to the welfare of the common man.

Lincoln Day Address by Hon. Kenneth S. Wherry, of Nebraska, at Los Angeles

EXTENSION OF REMARKS

OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 14 (legislative day of Wednesday, January 4), 1950

Mr. WHERRY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at Los Angeles, Calif., on February 10, 1950, under the auspices of the California Republican State organization and the Los Angeles County Republican Committee.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is an honor to come to California and join you Republicans in celebrating the one hundred and forty-first birthday anniversary of Abraham Lincoln.

Glory hallelujah His truth marches on!

Under his leadership, our Republic was saved when its life hung in the balance. And,

it will take that kind of leadership, the Lincoln leadership, to save our Republic now.

The American people are downright worried over the disastrous trend in our domestic and foreign affairs.

They face the hard fact that though they won the war nearly 5 years ago, they have not yet won the peace.

They see we are losing the cold war.

They are alarmed by the mounting cost of government, deficit-spending, and administration demands for more taxes.

And, worst of all, they are fearful of losing their freedom to alien-minded government spoilers.

In Lincoln's day the issue was preservation of the Union.

Today, the crucial, fateful issues are whether we shall preserve in America human liberty, the dignity of the individual, and freedom of choice, or, surrender them to an all-powerful government, which seeks to control our lives and all of our activities; and whether, in foreign affairs, we shall restore constitutional procedures, with even-handed justice, or continue to see the peace frittered away by secret agreements, incompetence, and drift.

The people want, and deserve, that the issues be clearly drawn.

The Republican Party adopted a platform in Washington this week, which gives the people a clean-cut choice on the issues in the 1950 elections.

It is your job in California, my job in Nebraska, and the job of all Republicans, to see that candidates are nominated who stand foursquare on those issues.

Let those who believe in free competition, and the right of the individual to make the most of his skill, initiative, and enterprise, come into our corner.

And, let those who are for spendthrift socialism, get in President Truman's corner.

In the elections of 1950 there can be no compromise. There is too much at stake.

Liberty and socialism won't mix. One or the other will be destroyed.

As Lincoln said: "This Government cannot endure permanently half-slave and half-free."

During the past few months, as I have traveled across the length and breadth of the land, I have been asked this question, over and over again: "What can we, as citizens, do about it?

The answer I gave them, is what I say to you now.

You cannot win the fight or preservation of the principles of our Republic, by wishful thinking.

You cannot stop inflationary deficit-spending, by wishful thinking.

You cannot stop passage of the Brannan Farm Plan to sovietize the American farmer, by wishful thinking.

You cannot prevent compulsory health insurance, by wishful thinking.

You cannot get rid of Communists and their fellow-travelers, by wishful thinking.

And, you cannot by wishful thinking, win the cold war through the administration's incompetence, vacillation, contradictions, and confusion.

Your job as Americans is to enlist in the cause of freedom, see that those who represent you restore stability and competence in Government, and keep open the doors of opportunity.

These are worth fighting for.

And this time, we Republicans are going to fight.

Most of our troubles, the secret agreements at Yalta, the armament race, back-breaking taxes, inflation, and deficit spending, stem from a leadership that is tainted by a concept of government, which does not square with the American heritage.

Is it any wonder that an administration which harbors so many radicals at home, is tolerant of the spread of socialism and its twin brother communism abroad.

We all know that foreign policy is like a chess game, move after move, a long series of moves. The decisive moves now being made will determine whether the principles of our Republic will prevail.

The present administration's foreign policy line was laid down in 1933, when the self-styled New Deal Democrats captured control of our Government.

Republican Presidents, up to that time, had refused to recognize Soviet Russia because her dictators would give no assurance against spreading their propaganda to undermine our Republic.

Unfortunately, no such guaranty was demanded and none given in 1933, when Soviet Russia was officially recognized and taken into the family of nations.

At Cairo, Yalta, and Tehran, through secret agreements, the gates of the world were thrown wide open for the expansion of Russia and her Godless communism.

All of these secret deals to remap the world and freeze the ultimate peace, were ratified and confirmed by President Truman at Potsdam without the knowledge or consent of the American people or their Congress.

At Yalta, with approval at Potsdam, the Red rulers of Russia were handed Poland, Czechoslovakia, and other Balkan countries; and China, our faithful war ally, was betrayed into the grip of communism.

Even the text of the monstrous Yalta agreement was kept secret by the Truman administration until the Republican Eightieth Congress, under threat of refusal to authorize Greek-Turkish aid, forced publication of its hideous terms.

The terrible consequences of these secret deals, bombed the free world into confusion.

Couched in no uncertain language were appeasement of Russia, the revengeful Morgenthau plan to keep industrial Germany forever an agricultural state, and, the herding of millions upon millions of human beings, from one jurisdiction to another.

When President Truman attempted to put these terms into effect, chaos spread around the world. It was then, he called in some Republicans, ostensibly to initiate and develop a bipartisan foreign policy.

But, confronted by his own signature at Potsdam, he picked and chose his spots for advice, leaving out China, and other wide fields of foreign affairs.

Already the way had been paved for Russia to grab and annex into her orbit over 13,000,000 square miles and about 800,000,000 human beings.

While Secretary of State Acheson and his pal Alger Hiss were calling the signals in the State Department, 14 men in the Moscow Kremlin, captured control of one-fifth of the globe's land surface and one-third of all mankind.

In its conduct of foreign affairs, the administration has broken faith with the Republican Party and the Nation.

It has bypassed constitutional procedures.

The administration has been using the bipartisan label as a pretense to cover up its own mistakes and escape responsibility for its ghastly failure to win lasting peace.

Around the entire executive branch of government the President has an iron curtain against information going to duly authorized committees of the Congress.

He has issued orders that no department head or bureau chief shall give testimony to congressional committees at variance with his views.

He has exerted his powerful influence in efforts to smother congressional exposure of Communist spy rings that have run through the Government like water through a sieve.

When the House Committee on Un-American Activities uncovered the Alger Hiss scandal the President cried "red herring."

But, he knows differently now. He learned the hard way.

He has ordered withheld from Congress the official loyalty records of Government employees.

Think of it, fellow Americans, such an attitude when Congress, the policy-making branch, has the inherent right to all information necessary to the accomplishment of its duties.

That kind of government must end.

Instead of suppressing information and yelling "red herring," the President should give the FBI the "go" sign to get rid of these Communists.

And, right here, I just can't help mentioning that your Congressman RICHARD NIXON is doing a great job in the battle against communism. He is a credit to California and the Nation.

We need more men like NIXON, who have the courage to expose Communists and their fellow travelers in our Government.

Since the end of the war wrangling and back biting have raged in the National Defense Establishment. The President, as Commander in Chief of the armed forces, long ago could have put an end to this scandalous situation with one forthright order: Unify, cooperate, or get out!

Our defenses in Alaska are woefully weak in the light of modern warfare, spearheaded by long-range bombing, rockets, guided missiles, atomic bombs, and now the hydrogen bomb.

Governor Ernest Gruening, of Alaska, reported to Congress the defenses there are so weak that two air-borne divisions could capture Alaska in 1 day.

The blackest chapter in America's history save one, Pearl Harbor, is the loss of China to Communist Russia by appeasement policies of this administration.

There is still time to reverse the Red tide in the Pacific.

Your Senator, BILL KNOWLAND, has been battling in the front line at Washington, prodding and pleading with the administration to act, to do something, get off dead center, and toss overboard its policy of abandoning all China to the Moscow-directed Communists.

The first step is to assure China and other countries in Asia that the United States morally supports their cause.

This should be backed up by economic and military aid—wherever feasible.

Most important of all, take Acheson's hands off our military strategy and keep the defense and national security in the Department of National Defense where they belong.

Formosa is the last citadel of freedom-loving people of China.

Hold Formosa against the Communists and there will be kept alive active resistance by millions of Chinese on the mainland who want liberty and are eager to fight for it.

The Chinese nationalists have never asked for American troops to help them hold Formosa. They do desperately plead for military equipment.

Surplus military equipment is already in the Pacific and should be supplied them.

Congress has authorized this aid and provided the funds but the President refuses to act.

In Europe, the American people have been most generous in helping ECA countries recover from the war's devastation.

More than $30,000,000,000—$30,000,000,000—of your money and your children's money, have been poured into western Europe in 23 different money-spending schemes.

All the ECA countries have reached goals of productivity far above prewar levels. The economic problems that now confront them can be solved only by themselves.

But ancient nationalistic patterns again are taking shape over there, thwarting the intent of Congress in authorizing ECA.

Those countries should be eliminating trade barriers, establishing free convertibility of currencies, and recognizing that

Germany's recovery is vital to the recovery of all Europe and must have the tools to earn her living. If these countries are to get any more cash and goods they should be required to carry out the purposes of the act.

They should now be looking forward to a return to private channels in commerce rather than depend upon the United States to finance and support them indefinitely.

Our foreign commitments are having a terrific impact upon our domestic economy.

The administration is bolstering socialism abroad. And when we charge them with socialistic programs for the United States, they say we are using scare words.

Well, let's see if these are scare words.

If the administration's bill, to give the President—one man—absolute power to put ceilings over prices and wages and floors under prices and wages is not socialism, what is it?

If giving the President, one man, power to build and operate steel plants and other plants in competition with private industry is not socialism, what is it?

If federalized education, through control, is not socialism, what is it?

If compulsory health insurance, managed and directed by the Government, is not Government control of the lives of the people, what is it?

If Government, all taxpayers, paying part of the construction cost and rental of homes for some of the people, dictating the design, size, and type of house they shall live in, is not socialism, what is it?

If the making of foreign-trade agreements in secret and refusal by the President to explain, when he cuts tariff rates to ruinous levels for American industries, agriculture, and labor, is not socialism, what is it?

And, worse of all, 's the Brannan plan, a plan to sovietize the farmers. It is a swindle.

Under it, farmers would work for the Government. They would produce surpluses of food so that prices would be low. The farmers would be paid a production subsidy, and the American taxpayers would pick up the check.

Whenever the farmers are forced to stand with tin cups in their hands, in exchange for their freedom, then a long step toward complete regimentation of the food industry, from producer to consumer, will have been taken.

Fellow Americans, the solution of all of these problems, foreign and domestic, is up to all of us, every American.

The road to peace, security, prosperity, and individual freedom is clearly marked in the 1950 Republican platform.

Your job is to see to it that the people never lose sight of the truth that "eternal vigilance is the price of liberty."

So let us, here and now, rededicate ourselves to the proposition: "That this Nation under God, shall have a new birth of freedom, and that Government of the people, by the people, for the people, shall not perish from the earth."

Go forward as modern Paul Reveres and Minute Men.

Carry the facts to the people, in your business, the shops, the homes, the farms, and into every voting precinct.

Ring the doorbells.

Tell the people, every voter, the fate of the Nation is in their hands.

Tell them:

We Republicans offer a new leadership, untainted by communism, that will win the peace.

We Republicans insist that the United States shall not be bound to any course of action, unless the spirit and letter of our Constitutional procedure are followed; and that means no secret agreements bartering away their rights and liberty.

We Republicans stand for a strong policy against the spread of communism at home and abroad, and we insist that the offices of Government shall be purged of those who are disloyal to America.

We Republicans favor aid to other countries resisting communism, only if it is essential to our national security; if it is within the total limits which the American economy can afford; if it will be effective; and if there is a well-conceived program for progressive reduction.

We Republicans favor the promotion of world trade on the basis of fair competition, within the Republican principle that American industry, agriculture and labor must be protected against ruinous importations.

We always have and will continue to insist that the national defenses be completely adequate to any emergency.

We are for the Taft-Hartley labor law, because it guarantees the right of collective bargaining and recognizes unions and the right to strike, while protecting the rights of union members and the public.

Under this law union membership has increased to new highs and wages have risen to record levels.

We favor amending the law in the light of experience under its fair and just provisions.

We won't stand for any bypassing the law.

At long last the President has been compelled by public opinion to enforce the Taft-Hartley Act in the coal dispute, after months and months of playing politics with human misery.

We Republicans, true to the example of Lincoln, the Great Emancipator and cofounder of our party, believe the right of equal opportunity to work, to vote, to advance in life and to be protected under the law, should never be limited in any individual, because of race, religion, color, or country of origin.

We Republicans believe agriculture is fundamental to a prosperous America.

We favor a fair price for the farmers' products in the market place, aided by a system of price supports and tariff protection.

And, fellow Republicans, carry this message to the people:

Deficit spending leads to national bankruptcy.

Deficit spending will further cheapen the dollar, rob the wage earner, impoverish the farmer, and destroy the savings, pensions, insurance and investments of millions of people, winding up in jobless millions and a national poorhouse.

We believe the only sound, sensible thing to do now is cut the cost of government, balance the budget, get on a pay-as-you-go basis, cut the debt, and cut taxes.

Fellow Republicans, all these Republican principles and objectives will build and maintain a strong America; strong economically, strong financially, and strong spiritually.

The overwhelming majority of Americans cherish our heritage of freedom and will join us in this crusade to see that it shall not perish from the earth.

America is the custodian of human liberty.

Let us be worthy of its guardianship.

Opposition to Ratification of the Genocide Convention

EXTENSION OF REMARKS

OF

HON. JOHN C. STENNIS

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Tuesday, February 14 (legislative day of Wednesday, January 4), 1950

Mr. STENNIS. Mr. President, on behalf of the senior Senator from Mississippi [Mr. EASTLAND] and myself, I ask unanimous consent to insert in the Appendix of the RECORD a statement by the Honorable Leander H. Perez, district attorney of Louisiana, against ratification of the Genocide Convention before the Senate Foreign Relations Committee at a recent public hearing.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY LEANDER H. PEREZ, DISTRICT ATTORNEY OF LOUISIANA, AGAINST RATIFICATION OF THE GENOCIDE CONVENTION BEFORE THE SENATE FOREIGN RELATIONS COMMITTEE

The Senate has been requested to ratify a United Nations Genocide Convention which calls for the punishment of individual citizens of a state for the newly defined crime of genocide, and which, if ratified, would compromise our system of constitutional government and would internationalize matters which are solely within our domestic jurisdiction.

At the same time this Genocide Convention would not make any contracting party or government responsible for genocidal crimes committed by it against its own nationals, nor would it add to the existing responsibility of any government for genocidal acts committed by or at its instigation or with its complicity against nationals of a foreign state.

Therefore this proposed Genocide Convention is nothing more than rank meddling with our domestic affairs, and is a violation by the United Nations of the article of its Charter which prohibits it from intervening in matters which are essentially within the domestic jurisdiction of any state.

THE EXECUTIVE MESSAGE

On June 16, 1949, the President delivered a message to the Senate urging ratification of the International Convention on the Prevention and Punishment of the Crime of Genocide, and submitted an explanation of the Acting Secretary of State in support thereof (81st Cong., 1st sess., Senate, Executive O).

The report condemns the genocidal acts of the Nazi government, and cites that disintegration of the mind caused by the imposition of stupefying drugs may destroy a group—evidently referring to such well-known acts recently committed by the Communist governments of Europe in their so-called treason trials.

But this horrifying build-up for support of this Genocide Convention is shown by the report itself to be entirely irrelevant and immaterial.

GOVERNMENT'S NATIONALS UNPROTECTED

When the representative of the United States voted in favor of the Genocide Convention in the United Nations General Assembly, he made the statement that if "responsibility of a state" for genocide or any of the other acts enumerated in article 3, is not used in the traditional sense and if these words are intended to mean that the "state can be held liable in damages for injury inflicted by it on its own nationals, this provision is objectionable and my Government makes a reservation with respect to such an interpretation." Then the Acting Secretary, with the endorsement of the President, recommended to the Senate that it ratify the Genocide Convention "with the understanding that article 9 shall be understood in the traditional sense of responsibility to another state for injuries sustained by nationals of the complaining state in violation of principles of international law, and shall not be understood as meaning that a state can be held liable in damages for injuries inflicted by it on its own nationals." (See p. 6, Executive O.)

Therefore it is clear that the Genocide Convention is not aimed at governments which may commit genocide against their own nationals. Furthermore, under established international law, governments are and have been responsible to other states for killings or injuries of their nationals in violation of the principles of international law.

International law applies to nations and governments in their international relations.

Further, all members of the United Nations are ipso facto parties to the Statute of the International Court of Justice, which has jurisdiction to decide controversies between them in accordance with the general principles of law recognized by civilized nations.

Article 93 of the United Nations Charter, clause 1, provides:

"All members of the United Nations are ipso facto parties to the Statute of the International Court of Justice."

The Statute of the International Court of Justice, article 38, section 1, provides:

"The Court, whose function is to decide in accordance with international law such disputes as are submitted to it, shall apply: * * * c. the general principles of law recognized by civilized nations."

GENOCIDE INTERNATIONAL CRIME

The fact is, that all civilized nations, members of the General Assembly of the United Nations, have recognized "that genocide is a crime under international law," by its adoption of resolution 96 (I) dated December 11, 1946. (See p. 7, Executive O.)

Therefore, we see that "genocide" has been recognized as a crime under the general principles of law recognized by civilized nations.

So, what would be the purpose of the Senate ratifying this Genocide Convention, when, first, genocide under general principles of law recognized by all civilized nations is an international crime, and secondly, the International Court of Justice has jurisdiction to adjudge against states through whose governmental policy or complicity genocide may be committed. Surely the ratification by the United States Senate of this proposed Genocide Convention, with the recommended reservation that it would not make a state or government liable for injuries inflicted by it on its own nationals, could add nothing to the international crime of genocide.

GENOCIDE CONVENTION AGAINST PERSONS

It is plain that the whole purpose of the proposed Genocide Convention is to make the international crime of genocide apply to individuals and thereby to intervene in matters which are essentially within the domestic jurisdiction of the state.

Article I of the proposed Genocide Convention confirms what the United Nations General Assembly has already sufficiently declared by its resolution 96, that genocide "is a crime under international law"; articles II and III define the crime of genocide, and article IV limits the commission of the crime to persons (not states or governments), and article V provides:

"The contracting parties undertake to enact, in accordance with their respective constitutions, the necessary legislation to give effect to the provisions of the present convention and, in particular, to provide effective penalties for persons guilty of genocide or of any of the other acts enumerated in article III."

Regarding article II defining genocide, including the killing or maiming, or causing mental harm to, any member of any national, racial, or religious group, the United States representative on the United Nations Legal Committee said: "However, if an individual is murdered by another individual, or by a group, whether composed of private citizens or government officials, as part of a plan or with the intent to destroy one of the groups enumerated in article II, the international legal crime of genocide is committed as well as the municipal-law crime of homicide" (p. 4, Executive O).

The purpose, therefore, of this proposed Genocide Convention adopted by the United Nations is to extend the international crime of genocide to the individual citizens of a state.

UN VIOLATED ITS CHARTER

Bear in mind that article II, paragraph 7 of the United Nations Charter specifically provides that nothing contained in that charter shall authorize it to intervene in matters which are essentially within the domestic jurisdiction of any state. Therefore, it is plain that by the United Nations proposing such a Genocide Convention to operate against citizens of the state, or to interfere in local law enforcement within a state, which is essentially within the domestic jurisdiction of the state, is nothing more nor less than rank intermeddling in the domestic affairs of the state, and is a violation of the specific provision of the United Nations Charter.

Therefore, how can the United States Senate be asked, or urged, to ratify this so-called Genocide Convention which is a direct encroachment on the domestic affairs of this country under the Constitution of the United States, in face of the fact that adoption by the United Nations of this so-called Genocide Convention is a flagrant violation of one of the solemn provisions of its own Charter, or a violation of that part of the international agreement by which the United Nations came into being?

The fact that the Acting Secretary points out (p. 3) that this so-called Genocide Convention was prepared under the chairmanship of the United States representative and that the United States delegation played an important role in the formulation of the convention, offers no alibi for the violation of the United Nations Charter provision in article II, paragraph 7, that the United Nations shall not interfere or meddle in domestic affairs of member states.

The American members should have known better. They should have been duly respectful of the provisions of our Constitution under which the municipal sovereignty of law enforcement is reserved to the individual States of the Union and not to the National Government, such as would result if this so-called genocide convention were ratified by the Senate and would become the supreme law of the land. If such convention as submitted were ratified, it would become the supreme law of the land and would displace State constitutions and laws wherever they may conflict with the broad provisions of the Convention.

TREATIES UNDER FEDERAL AUTHORITY

The United States Constitution provides, in article VI, clause 2 "that all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land; and the judges in every State shall be bound thereby, anything in the Constitution or laws of any State to the contrary notwithstanding."

Article III, section 2 of the Constitution provides that "the judicial power of the United States shall extend to all cases arising under treaties made, or which shall be made, under authority of the United States."

The United States would become a contracting party if the Senate should ratify the Genocide Convention.

Under a decision of the United States Supreme Court in the case of *Missouri* v. *Holland* (252 U. S. 416) the conclusion of a treaty by the Federal Government confers upon it authority in fields of action reserved to the States which the Federal Government would not have without such a treaty.

The ratification of the Genocide Convention, as submitted, would therefore confer upon the Federal Government jurisdiction which it does not now possess under the Constitution, and likewise deprive all States of the Union to the same extent of their jurisdiction, police powers, and the right of law enforcement in any cases which might be claimed to be genocide, or crimes or offenses committed against any person or persons of a national, ethnical, racial, or religious group, whether it be homicide, mayhem, assault, libel, or slander, or other mental harm to person or persons of any such group (art. II).

BROAD FIELD INVOLVED

It must be noted in this regard, and should not be overlooked, that the crime of genocide applies to all persons regardless of whether he is of the same national, ethnical, racial, or religious group.

In other words, the crime of genocide is not limited to a crime committed against persons of different national, ethnical, racial, or religious groups, but to any individual of any such group, even when committed by one or more persons of the same groups.

Therefore, if the Senate should ratify the Genocide Convention and make the United States a contracting party thereto, a vast area of police powers and criminal law enforcement could be transferred from the State and local governments under State laws, to the National Government under laws to be enacted by Congress and enforced solely through the Federal courts.

Thus, at one fell swoop a large part of the municipal sovereign reserved to all the States of the Union over the domestic affairs of their citizens and their police powers and law-enforcement authority would be supplanted.

If this ever comes to pass, then State and county criminal judges, prosecutors, and law-enforcement officers would become largely unnecessary, and they might as well be supplanted by the Federal police, prosecutors, and courts.

CONSTITUTION INVOLVED

Every member of this committee and of the Senate and Congress well knows that the Bill of Rights was adopted as amendments to the United States Constitution promptly after its adoption by the American people, and that the States entered into the compact to create the United States Government with a solemn understanding that the States, or the people of each State in their collective sovereign capacity, would retain their right of self-government, regulation of law enforcement in regard to their domestic and personal affairs, and that these powers of government specifically were not granted to the United States.

The provision for control of their own internal affairs was the chief concern of the States in their Constitutional Convention which wrote the United States Constitution in 1787 and they were careful to delegate to the United States Government only those powers which were deemed necessary to enable it to perform the functions of a central government which were beyond the powers of a single State, such as military operations, interstate and foreign commerce, and foreign affairs.

So, to make the position of the States and their people more secure, the Constitution was ratified by the various States, with reservations which were later embodied in the Bill of Rights, including the tenth amendment which reserved to the States, or the people thereof, all rights and powers not delegated to the National Government nor prohibited to the States.

After the adoption of the fourteenth and fifteenth amendments, there were those who contended for the United States Government, that its authority had been extended over the legal rights of individual persons, but the United States Supreme Court held in various cases (*U. S.* v. *Cruikshank*, (92 U. S. 589 (1876)) to a late case, *Adamson* v. *California* (302 U. S. 319 (1947)) that while the fourteenth amendment protected citizens of the United States against any State violation of their civil rights, individual invasion of individual rights was not the subject matter of the amendments, and they did not invest Congress with power to legislate upon subjects which were within the domain of State

legislation or to create a code of municipal law for the regulation of private rights as between individual citizens.

In 109 United States, page 18 (1893), the United States Supreme Court held that—

"Such legislation by Congress cannot possibly cover the whole domain of rights appertaining to life, liberty and property, defining them and providing for their vindication. That would be to establish a code of municipal law regulative of all private affairs of man and society. It would be to make Congress take the place of all State legislatures and to supersede them.

"It is repugnant to the tenth amendment of the Constitution, which declares that powers not delegated to the United States by the Constitution nor prohibited by it to the United States are reserved to the States respectively or to the people," (p. 24).

Thus what has been prohibited to the Federal Government, is attempted through the route of the so-called Genocide Convention which plainly is not aimed against a repetition of the genocide horrors of the Nazis during the last war, nor of the reported liquidation of many thousands of Russians and of other nationals by their own governments behind the iron curtain; all of which would be exempted from the Genocide Convention, according to the reservation made by the representative of the United States Government when voting to adopt the Genocide Convention, and by recommendation of the President and Acting Secretary of State in the message submitted to the Senate, because the ratification would leave a government's own nationals unprotected.

WOULD COMPROMISE CONSTITUTIONAL GOVERNMENT

We submit that the only effect of the ratification by this Senate of the Genocide Convention would be to make the United States a contracting party so as to give the Genocide Convention the effect of an international treaty and under article VI of our Constitution, would make it the supreme law of the land and under article III, section 2, would extend the judicial power of the United States to all criminal cases which could be put in the category of genocide and would effectively annul all applicable State criminal laws, the police powers and the right of law enforcement by all the States of the Union, in any of the kindred crimes under which the broad mantle of the so-called Genocide Convention could be thrown, and would in large measure repeal the tenth amendment of the United States Constitution.

Thus, the ratification of the Genocide Convention would most seriously compromise our system of constitutional government prevailing in the United States. It would displace State constitutions and laws wherever they may conflict with the provisions of the convention, which is very, very broad because it applies to all persons of whatever national, ethnical, racial, or religious group, without exception. It would convert the simple misdemeanor of slander or libel which causes mental harm to any person of any national, racial, or religious group into the category of the international crime of genocide just as it would all physical crimes whether of assault, mahem, or homicide, which now are all covered by the common law or State criminal codes.

We should bear in mind that, with the exception of France, the United States is the only nation in the world whose Constitution provides that its treaties (or conventions) are included among the supreme law of the land on the same basis as provisions of the Constitution and acts of Congress pursuant thereto. Certainly we are not committed to destroying our constitutional form of government nor of destroying the reserved right of States and their people to the right of self-government, police powers, and law enforcement by any international commitment assumed in the Charter of the United Nations. To the contrary, article II, paragraph 7, of the United Nations Charter specifically provides that nothing contained in that Charter shall authorize the United Nations to intervene in matters which are essentially within the domestic jurisdiction of any State.

VIOLATES SENATE RESERVATIONS

It is pointed out in editorial comment of the American Journal of International Law, volume 43, October 1949, at page 735, that when the Government of the United States accepted the compulsory jurisdiction of the International Court of Justice under article XXXVI of the statute, the Senate attached the Connally reservation which retained for the United States the determination of whether or not a matter is within its domestic jurisdiction. The Genocide Convention bypasses this reservation, as well as the Vandenberg reservation relating to the interpretation of multilateral treaties, and confers jurisdiction upon the International Court of Justice in all disputes relating to the interpretation, application, or fulfillment of the convention at the request of any party to the dispute (art. IX).

Therefore it should be remembered in this connection that, according to an advisory opinion of the Permanent Court of International Justice, a matter solely within the domestic jurisdiction of a state becomes a matter of international concern when a treaty is entered into on that subject. This principle of international law must not be overlooked if we are to maintain the internal enforcement of our constitutional rights without risk of alien interference or submission to an international appellate jurisdiction.

For the above and other reasons which will be submitted by representatives of the American Bar Association and other opponents of the Genocide Convention, we therefore respectfully submit:

1. That this committee report unfavorably on the matter of ratification of the Genocide Convention by the United States Senate;

2. That the United States Senate refuse to ratify the Genocide Convention; and

3. That the committee and the Senate suggest to the United Nations that the crime of genocide, properly defined, is inherently one committed by or at the instigation or with the complicity of a foreign state which already has been declared to be a crime against international law; that this proposed Genocide Convention adds nothing to the responsibility of governments or states in their international relations, but is only an attempt to inject the United Nations in the domestic affairs of member states, in violation of article II, paragraph 7, of the United Nations Charter.

Respectfully submitted.

LEANDER H. PEREZ,
District Attorney of Louisiana.

JANUARY 24, 1950.

The CVA and Conservation

EXTENSION OF REMARKS

OF

HON. ZALES N. ECTON

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 14 (legislative day of Wednesday, January 4), 1950

Mr. ECTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an open letter entitled "The CVA and Conservation," to the editors of Nature magazine, written by Mrs. Winton Weydemeyer, master of the Montana State Grange.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE CVA AND CONSERVATION

OPEN LETTER TO THE EDITORS, NATURE MAGAZINE, WASHINGTON, D. C.

JANUARY 7, 1950.

GENTLEMEN: Having been a member of the American Nature Association for a quarter of a century, perhaps it is my privilege to comment on the editorial, What About CVA? appearing in the current (January 1950) issue of Nature magazine. This editorial, as I read it, places a general stamp of approval upon the proposed CVA legislation, as the essential basic approach to coordinated-resource management in the Columbia River Valley. It repeats the familiar charge that some of the opposing groups are merely fronts for the power interests; it implies that all programs of the three directors would be responsive to local views because the administrators of any such agency as CVA would be continually on trial before Congress; it expresses opposition to supergovernments and dictatorial tendencies, but seems to decide that these should be risked in the interest of natural-resource management. The closing sentence carries not only a challenge, but an accusation that seems unjustified. "If the opponents of the specific proposals now before Congress would exert as much energy in constructive suggestion as they now do in blind and often uninformed opposition, there would be happier prospect of a solution vital to all of us."

I shall comment briefly on these statements, consider the main conservation issue involved, and finally answer the challenge and accusation of the final sentence of the editorial. But first I think it will be agreed that endorsement of the pending CVA legislation automatically carries endorsement of the full plan for dividing the entire Nation into a group of watershed regions administered by huge Government corporations to be known as Authorities or Administrations.

Now it is true, and it is perfectly logical, that power interests are opposed to this national plan as patterned by the CVA bill before Congress (S. 1645). For the system planned would not merely regulate power companies to prevent monopoly in private enterprise; eventually it would eliminate them completely, creating in their place one gigantic power monopoly little subject to regulation by the people. It is also true that some of the opposition to CVA bears—in the words of the editorial—the "invisible fingerprints of equally opposed power interests"; but it is likewise true that much of the support for CVA arises thusly: "If the damned power interests are ag'in it, I'm all for it." Neither side has a corner on blind and often uninformed opinion.

"What about CVA?" carries the belief, doubtless sincere, that the provision for local advisory groups and the need for the administrators to stand continually on trial before Congress would insure responsiveness to local views and interests. If this theory works in practice, why is the National Grange—one of the two leading general farm organizations of the Nation—asking that provision be made for court settlement of disputes between the United States Forest Service and citizens having a voice through present local advisory groups? The CVA bill provides that the directors shall establish such advisory boards and councils as they may decide to be necessary or appropriate to achieve the objectives of the act—as they interpret these objectives. Such a provision is hardly reassuring to those of us who feel that conservation programs must have maximum flexibility to deal with local conditions. Neither is the editorial's continually on trial before Congress statement reassuring when the CVA bill gives the directors power to

determine the necessity for and the character and amount of its expenditures and the manner in which they shall be incurred, allowed, and paid; provides for lump-sum appropriations from which the directors may allocate construction costs (of dams, reservoirs, buildings, industrial plants, hydroelectric plants, and transmission lines) without approval by Congress; and provides that the directors may use receipts of power and other projects to pay for costs incurred in projects constructed according to their own allocation.

Let us examine two general arguments in the editorial, What About CVA. In support of arguments for a coordinated conservation program: The topsoil 'of other rich lands washes down the river for lack of an integrated soil-conservation program and funds to carry this through. Denuded watersheds erode for lack of funds to reforest, as a part of an over-all plan. Fish and wildlife suffer as a byproduct of both of these situations." In other words, the present Soil Conservation Service, United States Forest Service, and Fish and Wildlife Service are failing to do their conservation job for lack of funds granted by the people through Congress—in our democratic manner. Contrast this with an earlier statement that under the CVA the functions of these present Services "would not be taken over by CVA but coordinated into its over-all conservation and development plan for the area. Such a plan the CVA would be charged with preparing, basing it upon consultation with all Federal, State, local, and private agencies in the region." The reasoning behind these statements postulates one or the other of two theories: (1) That upon creation of a CVA the taxpayers will gladly shell out the extra dollars for which the Forest Service has repeatedly been asking for replanting of denuded lands, and the money which they have been refusing the Soil Conservation Service for the reduction of soil losses; or (2) under the CVA funds can be used for conservation—according to the ideas of the Directors—without consent of the people. The first theory appears merely to be wishful thinking; the second raises the fundamental issue involved in CVA and related schemes—an issue more important and far-reaching than valley authority legislation itself. Can conservation best be accomplished by Government planners or by the people?

Perhaps because a necessary foundation in resource conservation in America was laid by Theodore Roosevelt and Gifford Pinchot through providing Government ownership and administration of vast land, forest, and mineral areas, we conservationists through the years have overemphasized the role of public ownership or control of natural resources. Even today, with conservation becoming such a popular religion that it is used to camouflage numerous political power and vote-getting schemes, it is essential that public ownership be employed to save resources which we wish to preserve in their natural state for the benefit of all people, such as our national park areas; to set aside for national defense needs certain mineral resources; and to insure adequate administration of areas having multiple-use values, such as our western mountain and plateau watershed areas. But it is high time we realize that programs of conservation for use can never be adequately successful if applied primarily as Government programs devised by the planners and dictated to our citizens—even if Congress approves. The wise function of government is to provide tools with which its citizens, independently or cooperatively, can accomplish the field work of conservation. If enlightened through conservation education to the necessity of—and opportunity for—proper soil, water, forest, and wildlife conservation rather than compelled to action by legislation or forced to support Government programs through taxation, the citizens of America can and will do the job with vision, vigor, and generous use of elbow grease.

If anyone doubts this statement, let him consider carefully the amazing development and accomplishment in soil and water conservation under the democratic soil-conservation-districts system. Under this successful program, local farmers elected by their neighbors study the needs of their area, devise and finance their own conservation activities, and carry them out with the use of technical tools provided by the Soil Conservation Service and other public agencies. The local citizens themselves plan and administer the programs, while Government experts act as advisers—just the reverse of the CVA set-up. And the system works—it results in conservation achievement. It is working so well that in a dozen years it has been extended to cover three-fourths of the Nation's farms—by voluntary vote of the landowners themselves. It has given the rural people of America a chance personally to use their own brains and brawn in saving the land they love. It is providing the means for expanding programs of forest and wildlife conservation on private lands. It refutes completely the familiar argument that Government must step in with sweeping conservation programs because private citizens won't do the job.

Some conservation programs, of course, are too large for such local action. Some are geographically too extensive for separate States to deal with. I heartily join the writer of What About CVA? in the statement "We are convinced that coordinated handling of all the natural resources of such a geographical and biological unit offers the only answer" to adequate watershed resource management. I am forced to disagree, however, with the assertion made regarding the needed broad plan, "Whether it is CVA or some other combination of initials is not too important." It is vitally important. To eliminate the weaknesses of present separate local, State, and Federal agencies by adopting the CVA plan would be like eliminating spot fires by fanning the whole forest into one flame. Administration of the CVA and other valley authorities could easily destroy the successful democratic soil-conservation-districts programs; it could put an end to the gradually improving conservation programs of the Forest Service, Bureau of Land Management, Fish and Wildlife Service, and the Soil Conservation Service; of State and local game, forestry, and water-conservation agencies; and the cooperative programs of citizen organizations. It would divide Glacier National Park between two authorities, Columbia Valley and Missouri Valley—with these two perhaps squabbling for jurisdiction of that large section of the park lying in the Saskatchewan River watershed.

The valley-authority plan is like so many bright dreams of public-welfare planners; if it could be administered by angels, it would establish a measure of heavenly peace and well-being upon earth. But with human nature being what it is, adoption of such a plan would reveal the basic mistakes of most vanished civilizations and crumbled nations of history; the concentration of too much power and authority in too few hands, and denial to the individual citizen of opportunity personally to contribute to the welfare of his country according to his own beliefs.

In closing, lest the labels "tool of the power interests" and "uninformed groups" be applied, let me say that I am supporting the vigorous stand against CVA and similar valley authorities taken by members of the Montana State Grange and the Montana State Farm Bureau after long and careful consideration of the issues involved; and that I am writing as a long-time member and supporter of a dozen of the Nation's leading conservation organizations. I have written at some length because I appreciate the influence of Nature Magazine, and feel that the views herein expressed should come to your attention.

In further reply to the closing sentence of the editorial, may I refer you to the plan of watershed administration being proposed by the National Grange, featuring coordination of activities of present State and Federal agencies, study of economic feasibility of projects proposed, emphasis on agricultural values, and regional policy-making boards of which the majority membership would represent the watershed area. Your near neighbor in Washington, Dr. J. T. Sanders, at National Grange headquarters, 744 Jackson Place NW., would be glad to explain the plan further.

Most sincerely yours,

WINTON WEYDEMEYER,
Master, Montana State Grange.

Development of the Cumberland River

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Tuesday, February 14 (legislative day of Wednesday, January 4), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a splendid editorial entitled "Looking Forward," by Mr. W. Percy Williams, publisher of the Paris (Tenn.) Post-Intelligencer.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LOOKING FORWARD

Tennessee and Kentucky Congressmen have petitioned the President to exercise a provision of the Tennessee Valley Authority Act to permit a thorough study of possibilities for developing flood control and electric potentialities of the lower Cumberland River.

At the time the TVA was established it was thought that someday the Cumberland watershed would, and should, come under its jurisdiction and consumption of electricity by the Government has developed so rapidly that a larger output will be needed to supply increasing demands for power on the part of the public for industrial and domestic purposes.

When TVA was established no one dreamed there would ever be such a thing as the Oak Ridge Atomic Energy development, nor the new airforce installations to be constructed at Tullahoma, both of which will require enormous supplies of electricity. We did not even anticipate the large increased use of current for industrial purposes.

TVA is the only source of power for a large territory in five States and it must keep pace with the increased demand. We would expect the same from private industry if it were the source of supply.

There will always be those who regard TVA as socialistic, and accuse the Government of tricky bookkeeping by building dams for flood control and using them to produce electricity for sale in competition with private industry, but they are 15 years too late to present arguments against the practice.

The taxpayers have invested a billion dollars in TVA for flood control and power production and, while there is an honest difference of opinion on whether it was right to do it, it is an accomplished fact now and we had might as well make the best of it, which is exactly what we people of the Tennessee Valley are doing. If TVA were in New

England we suspect the folks in that area would do the same.

It is our opinion that the taxpayers' investment in TVA would be justified as a flood-control proposition even if the Government didn't produce a dime's worth of electricity. We think that has been proven since the first of the current year.

We have had more rainfall in the watershed of the Mississippi, Missouri, Ohio, and Tennessee Rivers this year than we had in 1937 when flood damage was estimated at more than $50,000,000. If we have saved that much this year by controlling the flood we have earned at least 5 percent on the full amount invested in river development.

It will be up to Congress to determine whether the Cumberland shall be placed under TVA jurisdiction eventually, but we believe our Congressmen from Kentucky and Tennessee have acted wisely in asking the President to proceed without delay a study of the possibilities.

Conditions in China

EXTENSION OF REMARKS
OF
HON. TOM CONNALLY
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, February 14 (legislative day of Wednesday, January 4), 1950

Mr. CONNALLY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Three Bad Weeks," written by Mr. Walter Lippmann and published in the Washington Post of this morning.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TODAY AND TOMORROW
(By Walter Lippmann)
THREE BAD WEEKS

If our object is to make everything as easy as we can for Moscow and as difficult as possible for ourselves, then we have managed one way and another to do a lot during the past 3 weeks. But if we are still trying to win the cold war, we have hurt our own cause very seriously indeed in Asia and in Europe.

The Republican minority in Congress which adheres to Chiang, unable to impose its own policy on the administration, has nevertheless succeeded in impairing, perhaps ruining, the chances of any other policy. It cannot be their intention to hamstring the United States Government. But that is precisely what they are doing.

The record shows that when they were overruled by the President on the issues of intervention in Formosa, they did not accept the decision but instead took steps to nullify it. Their method was to vote against economic aid to Korea in the House in order to log-roll the administration into giving additional support to Chiang in Formosa. Their plan was to compel the administration to keep itself tied to Chiang or to sacrifice the American position in Korea.

The President and Secretary Acheson chose to appease them and agreed to buy aid to Korea with aid to Chiang. This act of appeasement was followed promptly by Chiang's use of American planes to bomb Shanghai and by his threat to bomb Peiping. When we protested against our being involved against our will in this massacre of Chinese civilians, Chiang rejected our protests haughtily. He felt able to defy the American Government and to bomb the American power plant in Shanghai and the installations of the Socony-Vacuum Oil Co., and to kill or maim a thousand Chinese civilians. Why? Because he interpreted the actions in Congress as meaning that he had such strong supporters in Congress that he could thumb his nose at the President of the United States.

And what is Chiang's purpose in these raids? They have no conceivable military value in his war with the Chinese Communists. It is an insult to anyone's intelligence to argue that Chiang from Formosa with his tiny air force can defeat, or seriously injure the Red regime of the Chinese mainland.

Chiang's purpose in these raids is not to fight his war but to keep us entangled so that his war may become our war. By using American planes and American bombs against defenseless Chinese civilians he means to provoke the Chinese into reprisals against Americans and westerners generally. Chiang's object is to embroil us in a Chinese war. For he thinks that then he would get unlimited money and arms.

Nothing could suit the Kremlin better. Their object is to force Red China into the Soviet orbit and to isolate it from the United States. That is easy to do if America is represented in China only by Chiang's American airplanes killing Chinese civilians. The Russians have nothing to fear from Chiang or from any military help that Senator KNOWLAND or Representative JOHN DAVIS LODGE could or would get Congress to give to Chiang. But the Russians have everything to gain by keeping us permanently entangled with Chiang and forever embroiled and hated in China.

That is their very best insurance against any form of Titoism in China. It is their very best way of diverting the attention of the Chinese from the north, where Chinese and Russian interests conflict, to the south. For if China can be provoked into becoming engaged in a struggle for Indochina and Thailand and Burma, what will be the result?

The struggle will surely be indecisive. But it will also be exhausting both to the Chinese and to the western nations involved. The Chinese will be too weak to win in the south against the British, the French, and the Americans. They will be too weak to resist the Russians in the north. On the other hand, the French will not be strong enough to reconquer Indochina—they already have their whole professional army engaged and have denuded themselves of effective military power in Europe. But with American help the French will be strong enough to remain pinned down in a cruel and indecisive little war.

What could suit the Russians better than to have the only land army in western Europe fighting guerrillas in Indochina? If there is a cheaper and easier way to nullify the military-aid program of the Atlantic Pact, I do not know what it is.

Chiang's Republican friends in Congress are assuming an awful responsibility.

And simultaneously we have gravely injured our position in Europe by the thoughtless frenzy of our dealings with the hydrogen bomb. The net result of the announcements, congressional hearings, and press conferences on that subject has been to inform our Allies that we do not know how they can be defended because we are afraid we cannot even defend ourselves. That, I repeat, is the net result, the practical, human consequence of the unmanly, demoralizing, and most un-American yielding to panic at the sudden and belated discovery that we do not have undisputed military superiority.

This cannot go on, or we shall destroy our influence in Asia and in Europe, and we shall worry and frighten ourselves into a humiliating and dangerous isolation. We have before us the inordinately difficult task of reorienting our foreign policy, which has been overextended and miscalculated, to what Mr. Acheson calls the existing situation of fact.

It cannot be done while we are frightened out of our wits, and so divided among ourselves by partisan hatreds and personal suspicions that we think only with our viscera and not with our minds. We shall have to become sane again if we are to be safe, and we shall have to rally to some standard and close our ranks.

That standard cannot be raised by the minority members of a minority party. It will have to be raised by the President of the United States.

The Fulbright Exchange Program in Operation

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, February 14 (legislative day of Wednesday, January 4), 1950

Mr. FULBRIGHT. Mr. President, in the news letter of the American Council of Learned Societies for December 1949, there appears an article entitled "The Fulbright Exchange Program in Operation," by Charles E. Odegaard. I think the article is one of the best on the subject, bringing up to date the operation of the program. Therefore I ask that it be printed in the Appendix of the RECORD.

The manuscript as submitted is estimated to require two and three-fourths pages in the CONGRESSIONAL RECORD, at a cost of $225.50.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE FULBRIGHT EXCHANGE PROGRAM IN OPERATION
(By Charles E. Odegaard)

With a truly substantial exodus of American professors and students to foreign parts under Fulbright awards beginning in the fall of 1949 the time has finally come when the influence of the Fulbright Act will be felt throughout the length and breadth of the United States as well as in a number of foreign countries. It has been more than 3 years since Senator FULBRIGHT's highly significant proposal became law (Public Law 584, 79th Cong., approved by the President, August 1, 1946), and many persons in America whose hearts skipped a beat at the thought that they might study or teach abroad have long since wondered if anything would ever come of the Fulbright Act and if their personal dreams would ever have a chance to be realized.

Now that a considerable number of Fulbright exchanges of persons between the United States and other countries are taking place, it seems especially appropriate that more people know something of the procedures which have been developed for the administration of the Fulbright program, and of its difficulties and limitations. The description which follows is drawn from the personal experiences of one who has served this past year as a member of the Committee on International Exchange of Persons established by the Conference Board of Associated Research Councils. It is not an official statement of the Committee, nor of course of the Department of State. It is partial in the sense that it does not concern directly exchanges in the student category or in the primary and secondary school teacher category, although many things said here apply to these categories as well as to the research scholar and professor category. It is hoped

that this description will provide interested persons with some understanding of the present operation of the Fulbright program.

It is important to note at the very beginning that the basic legislation establishing this program of educational exchanges, the Fulbright Act, is in substance an amendment to the Surplus Property Act of 1944. Where outside of the continental United States, Hawaii, Alaska (including the Aleutian Islands), Puerto Rico, and the Virgin Islands, there was United States surplus property at the end of World War II, and where the countries concerned are able to pay the United States Government for it only in their own currency but not in dollars, there, and there only, is the possibility of negotiating a Fulbright educational-exchange agreement. The entire Fulbright program rests financially on this nondollar base in those specific countries in which surplus property owned by the United States happened to be located. There are no dollars available for grantees, and this fact constitutes one of the rigid limitations of the program with which individual Americans and foreigners must reckon in any plans for the utilization of a Fulbright award. The hope that supplemental dollar aid might come from the Smith-Mundt Act has only recently materialized; and there seems to be good reason to believe that supplemental dollar aid from this source will always be limited.

Under the act the Secretary of State is authorized to enter into executive agreements with foreign governments for the disposition in each case of not more than the equivalent of $20,000,000 to be spent on educational exchanges at a rate of not more than the equivalent of $1,000,000 a year. The maximum figure of $20,000,000 will probably be available only in the United Kingdom, Italy, France, and China, though conditions in the last country obviously threaten the extinction of a Fulbright program there. For other countries which now participate or might participate in Fulbright exchanges, the available sums fall at different levels below this maximum.

Executive agreements were signed long enough ago with Burma, China, the Philippines, Greece, and New Zealand that Americans have actually been present in these countries on Fulbright awards during the academic year 1948–49. The program with China has perforce been suspended, but for the year 1949–50, except for China, there will be Americans abroad on Fulbright awards in these countries and also in Norway, the Netherlands, France, Italy, Belgium-Luxemburg, and the United Kingdom and its colonies. Agreements have recently been signed with Iran, Egypt, and Australia, so that awards will presumably be made for 1950–51, if not before. It is possible that in time agreements will be signed with Austria, Korea, Siam, Turkey, Pakistan, and India, thus permitting exchanges with these countries.

For any understanding of the Fulbright program and an evaluation of its present operation it is essential that one grasp at least the main outlines of its administrative peculiarities and the reasons for them. The Secretary of State is responsible for the general administration of the program but for the purpose of selecting students and educational institutions qualified to participate in this program and to supervise the exchange program the President was authorized to appoint a Board of Foreign Scholarships consisting of 10 members serving without compensation. It is this Board then which actually approves policies for the educational programs under the act and the types of programs and projects to be undertaken, which selects the institutions abroad approved for participation, and which makes the final choice among candidates for awards, both American and foreign.

These onerous responsibilities could obviously not be borne unless the Board received substantial assistance. To bring together all the elements involved into a working program of exchanges it has been necessary to establish a rather elaborate machinery. Responsibility for gathering together the recommendations from various agencies concerned and for taking the necessary action pursuant to the Board's decisions is vested in its immediate secretariat, which is located in the Division of Exchange of Persons of the Department of State, the Division which carries the responsibility within the Department for the administration of the act.

Since the Fulbright program is established through diplomatic agreements with foreign countries to permit educational exchanges both ways, it is obviously necessary to have a base of operations in the foreign countries. In accordance with the act, there is therefore established in each country a United States Educational Foundation, the exact character of which is determined in each case in the executive agreements negotiated by the Secretary of State. In most instances the Foundations consist of 10 members, half of whom are United States Embassy officials or other Americans resident in the foreign country concerned, the other half being nationals of the foreign country who are associated with the educational and research activities of their own country. Since the funds are actually impounded abroad, the Foundation abroad is responsible for their disbursement in accordance with directives of the Secretary of State based on policies approved by the Board of Foreign Scholarships. The foundations, however, play a very large role in the determination of the actual character of the exchanges. They prepare in the first instance the program proposal for each year of operation, including recommending fairly specific allocations within the budget. Since the act requires that Americans going abroad be associated with schools and institutions of higher learning, the Foundations recommend the foreign institutions with which they should be connected and negotiate with these institutions to secure their acceptance of American candidates who have been recommended for awards. The foundations also screen and recommend to the Board of Foreign Scholarships foreign candidates for what can be in the nature of things merely travel grants to the shores of the United States, there being no dollars available in the Fulbright program for the support of foreigners while they are in the United States. Some of the implications of these responsibilities of the foundations will be discussed later.

The recommendations of the foundations to the Board of Foreign Scholarships clearly call for analysis and subsequent implementation which in kind and in amount exceed the capacity of the board to bear alone. For this reason it has asked for the assistance of the so-called cooperating agencies. The act provides for "financing studies, research, instruction, and other educational activities of or for American citizens in schools and institutions of higher learning." The Board of Foreign Scholarships and the Department of State have construed the act to permit the granting of awards to Americans who fall into three main categories: (1) Students, and for the present this means students at the graduate level, (2) teachers in elementary schools, secondary schools, and junior colleges, and (3) professors, specialists, and advanced research scholars. To secure recommendations concerning American applicants, program proposals originating with the foundations, and other related matters, the Board of Foreign Scholarships turned for assistance to agencies already in existence with well-established means of tapping appropriate information concerning persons and policies in American education. Accordingly students are directed to make application to the Institute of International Education, 2 West Forty-fifth Street, New York 19, N. Y., which maintains a national committee to review applications and submit nominations to the board. Teachers are directed to submit applications to the United States Office of Education, Federal Security Agency, Washington 25, D. C., whose committee performs a similar function for these applicants. Professors, specialists, and advanced research scholars are directed to submit applications to the Conference Board of Associated Research Councils, 2101 Constitution Avenue NW., Washington 25, D. C., composed of representatives of the American Council of Learned Societies, the American Council on Education, the National Research Council, and the Social Science Research Council, organizations whose connections reach out into all areas of research and instruction in higher education in America.

A further word is appropriate here concerning the actual screening procedures used by the conference board. Responsibility for submitting specific nominations in its behalf is vested in its Committee on the International Exchange of Persons which consists of eight members representing the various areas of concern to the four councils (Messrs. Bellinger, Bronk, Brumbaugh, Counts, Graves, Herring, Trytten, and Voegelin). The operations of the committee require a substantial secretariat which is directed by Dr. Gordon Bowles, executive secretary. The applications received by the conference board, complete with the individual letters of recommendation, are distributed in appropriate groupings for review by experts on standing committees of the councils or ad hoc committees established for the purpose as circumstances require. If there are only a small number of applications in given areas, this review may be conducted by mail. If there is any considerable number in a given area, as is often the case, these committees meet in person to discuss the candidates and prepare their recommendations. The reports of the screening committees are then reviewed by the conference board committee which makes the final nominations but always within the limitations set by the country programs as proposed by the foundations and subsequently approved with or without modification by the Board of Foreign Scholarships.

The nominations of the conference board committee, like those of the Institute of International Education and of the United States Office of Education, are submitted directly to the Division of Exchange of Persons within the Department of State, where they pass through an additional stage before they are presented to the Board of Foreign Scholarships. The Department forwards the application of each candidate to the United States Educational Foundation abroad, for the Board of Foreign Scholarships must look to the foundation for assurance that the candidate will be welcome in the host country, that he will be acceptable to an approved institution or research center in that country, and that the facilities for carrying out his project are sufficiently adequate to insure him a reasonable measure of success. It is on the basis of these assurances and other information, including possible evidence of disloyalty, that the Board of Foreign Scholarships makes its final selection among the applicants included in a recommended panel.

Many will remark immediately that this machinery is cumbersome. Yes; but it is difficult to see how, without some such structure which takes into account all the interests involved, an international educational exchange program can be operated at all. With more experience it will be possible to speed up and to streamline the various parts of this complicated process, thus reducing the long intervals of waiting so disheartening and exasperating for the applicants. There will always be, however, an irreducible minimum time required for action on applications, and those who aspire to receive Fulbright awards will have to accept a certain period of waiting.

So much for the bare machinery for operating the program. Now for a discussion of some of the problems which vitally affect the character of the program but which can be understood only against the administrative background here described.

This article is addressed to an American audience. The first reaction of individuals within this group is likely to be, I wonder if I can obtain a Fulbright award to permit me to go to this or that country to continue study, research, or teaching in this or that special field in which I have a great interest. The answer may turn out to be in many cases a very flat "no" regardless of the high competence of the individual and of his particular fitness for study in the country of his choice. No applicant can be successful no matter how great his qualifications, unless he personally is accepted abroad for a particular billet within the annual program of the country concerned. There are these two elements in the program which are insufficiently understood by Americans; namely, the availability within the program of an appropriate billet and the acceptability of the individual applicant to the foundation and to particular institutions abroad. On having these unexpected elements in the program explained to them, some Americans are wont to snap back in irritation at discovering this unforeseen possibility of the frustration of their hopes: "What do these foreign institutions have to do with this program? It is based on our money, isn't it?" Unfortunately—though perhaps in the long run it is not a complete misfortune—the Fulbright program is based on foreign currency which may technically accrue to the United States Government as credit for the sale of surplus property but which cannot be spent without the cooperation of the foreign government. There is then a bilateral aspect to the Fulbright program which cannot be ignored. No educational exchange program could work successfully anyway on a strictly unilateral base. The opportunities for study, research, or teaching abroad desired by Americans almost always depend upon a hospitable welcome from foreign institutions. It is by no means then a complete loss that circumstances require their consent in fact to the Fulbright exchanges.

The foundations have exerted a profound influence on the character of the exchanges to date. The highly commendable effort of the board of foreign scholarships and the Department of State to set the program in operation as quickly as possible has in the past often precluded the possibility of extensive review of country proposals by the cooperating agencies in the United States prior to the acceptance of the program by the board of foreign scholarships. As the program in various countries moves into the second year of operation, there is more time for such review. It must be admitted, however, that there are serious difficulties in any last-minute attempt to make significant modifications in these proposals in view of the danger of the charge of American cultural imperialism. There is a very real need of increased understanding of all parts of this program on the part of foundations, cooperating agencies, the Department of State, and the board of foreign scholarships. More is required than good will—of which there has been an ample stock in this past year. There is needed also considerable knowledge and information. Americans need to know more about the special circumstances, needs, and opportunities in the various Fulbright countries. The foundations in turn need to know more about the potentialities and aspirations of Americans. The kind of knowledge required is not gained overnight, certainly not in the atmosphere of haste and emergency action which has prevailed of necessity during the last, really the first, year of significant exchange operations.

The Department of State has endeavored to instruct its emissaries abroad in the operation of the program, a few of whom, being recently in the United States, have discussed various aspects of the program with the cooperating agencies before going to their foreign posts. In a number of cases in the spring and summer of 1949 the Department arranged for persons associated with various foundations to come to the United States to discuss the program with appropriate persons. This has been most helpful; and it is to be hoped that there will be still more activity of this kind. The cooperating agencies and the State Department officials concerned with Fulbright matters are far better equipped now, after reviewing the programs for 11 countries and endeavoring to operate under them, to discuss problems and possibilities than they were 6 months ago. It would seem highly advantageous not only to continue bringing individuals associated with the foundations to the United States but also to send to the Fulbright countries a team of experienced persons representing the Department of State and the cooperating agencies. Such a procedure in the early phases of the Fulbright program should ensure the establishment of annual programs which are more likely to be mutually satisfactory. Discussions of this kind prior to the submission of the annual program proposals are likely to be far more effective than any modifications suggested after the foundations have made formal submission of them; and from such discussions Americans are likely to gain a better understanding of the conditions and purposes which underlie these proposals.

It has been an interesting experience this past year to discover as one program after another has been submitted how widely the basic conceptions of the foundations have differed. The earliest programs received tended to be especially rigid, giving relatively little room in which to accommodate a professor or research scholar whose specialty did not happen to coincide with very specific interests expressed in the program. The New Zealand program affords a good illustration of this tendency, partly because of the very clarity with which it was presented. The professional and research billets were carefully described and grew out of a specific stated need in New Zealand, generally of an applied character. In a number of instances the foundation stated the special problem which it wished a particular named American to undertake. A program of this sort containing a large percentage of these billets is often very difficult to fill for lack of American candidates with these specific interests who in the given year are free to leave their normal habitat for a year abroad. Meanwhile there may be other well-qualified Americans desiring awards who cannot be given serious consideration. When faced with this situation, the conference board committee has tried to loosen up the program by submitting the names of a limited number of well-qualified Americans for whom there are no stated billets in the hope that the foundations will take a favorable interest in these nominees for positions in the program which have not been filled.

The British program, one of the largest, is very different in character; it has proved to be one of the easiest to manage and in all probability will be the one in the first year of operation which will bring the greatest satisfaction to both countries concerned. This is due in large part to the happy circumstance that Sir Hector Hetherington, vice chairman of the foundation, visited the United States prior to the submission of the British program to discuss the Fulbright exchange with all parties concerned. In the course of this visit he made a notable contribution to the thinking of many persons concerning the operation of the program. The basic plan of the British program is very simple. It assumes that the American agencies know more about the personal qualifications of American candidates and should be left with the responsibility for nominating good candidates with serious interests which may presumably be furthered by a year in Great Britain. The foundation, being better informed concerning institutions in Great Britain, endeavors, in the spirit of a good host, to determine if there is a suitable place available for the nominees. The British program has not specified a large number of rigidly defined billets, thus leaving room for a relatively free expression of interest on the part of Americans which may be gratified. The foundation has indicated a very limited number of special fields in which for some particular reason it hopes to see an American representative nominated. The generosity of spirit which pervades the program as proposed by the foundation obviously invites strenuous efforts on the American side to gratify these few special wishes.

In judging any program one must, of course, take into account the special circumstances of each country in relation to the interests and possible contribution of the United States. A program such as that of Great Britain is calculated to work easily and well when the intellectual developments, scientific skill, and educational institutions of the foreign country and the United States are roughly comparable. This condition prevails with reference to the west European countries, and in the category where there might be some difficulty, that of the professors, a policy such as that adopted by the Netherlands, would go far to eliminate difficulties. The Dutch universities have chosen to regard the courses offered by visiting American professors as outside the normal curriculum. In this way the American is free to make his contribution without having to fit his offering into a preexistent scheme with which he may not be familiar and which might place upon him cramping burdens which are not truly essential to a profitable educational exchange.

In the case of countries where educational interests and institutions are not comparable to those of the United States, the program is likely in each instance to take on a special character. For example, the Burmese Foundation, eager to reconstruct its educational institutions and to improve the welfare of its rural population, places a heavy emphasis on filling particular vacancies in its university structure and on agricultural extension activities. The Philippine Foundation, seeing in the Fulbright program an opportunity to obtain American assistance in building a public-school system which will raise the general level of education of the Philippine people, places a heavy emphasis on educationists in its program.

It is inevitable that the foundations, using as a starting point an analysis of needs of the foreign country, will tend to propose programs which involve bringing to their countries Americans who, it is believed, can make a contribution to these needs. Sometimes the requests within the programs prove to be unrealistic in the sense that they cannot be filled. For example, there is an impressive number of requests for nuclear physicists, but the premium on them is so high in the United States that there is little likelihood that they can or will leave the United States. The demand for specialists in various kinds of medicine is often difficult to fill.

Starting with an analysis of needs in the foreign country, foundations have a natural tendency to overlook interests which Americans may have in study in their countries. Those countries which are impressed by what they regard as their need of American technology and science, out of their very humility tend to think that Americans can have very limited research interests which would lead them to wish to come to their countries. Yet there may be Americans who wish to study their human culture and their physical

environment and who could conduct field studies very profitably even if there is no highly developed program in these subjects in their educational institutions.

The aspects of the programs which have been discussed affect particularly the professor and research scholar category of awards. There are similar complications with reference to the teacher category, especially in view of the fact that the linguistic hurdles are greater at this level in educational institutions and that many countries have licensing requirements for teachers in the school systems which interfere seriously with utilizing Americans. Foundation proposals are least rigid with regard to the student category, though students have to face serious limitations in the great differences in opportunities for actual study in the various countries.

The comments presented here have had to do primarily with factors affecting the flow of Americans to foreign countries. It has been indicated, however, that the program is based on more than a unilateral agreement permitting a flow in one direction. It is based essentially on a bilateral agreement which permits a flow in two directions, of Americans abroad and of foreigners to the United States. To secure the kind of cooperation needed for the reception of Americans abroad and, indeed, to serve the ultimate high purpose which is at the base of Senator FULBRIGHT's plan, a mutual understanding among peoples, Americans must not forget the need of encouraging the flow of foreigners to the United States. Indeed, a considerable measure of responsibility for insuring the success of these exchanges rests with individuals in the American academic world, administrators and professors, who have the opportunity to show initiative in procuring the dollar support necessary to permit foreigners to teach or study in the United States. Fulbright funds can be used in most cases to pay the travel expenses involved in bringing to the shores of the United States foreigners who have been recommended as qualified by the foundations. The United States Government has only very limited dollar funds which can be tapped. In very few instances are the foreigners able to procure from their own governments or from private sources abroad the necessary dollars. In almost all cases, then, the dollars must be provided by agencies within the United States.

By showing some ingenuity, American universities and colleges have created opportunities for a considerable number of scholars to visit them for the purpose of teaching, study, or research. Most institutions at one time or another discover that they have funds available which cannot be used for long-term commitments, but which could be used for a short-term grant. Since the larger part of the travel costs can be paid for with Fulbright funds, fairly modest sums may enable the institution to bring a scholar or student to its campus.

The Board of Foreign Scholarships has recognized the importance to the program of bringing as many foreigners as possible to the United States, and at the same time the difficulties in obtaining extensive dollar support, by permitting shorter term grants for foreigners than for Americans. Americans going abroad can be supported in full with Fulbright funds, and much the largest part of the Fulbright funds will accordingly be used for the expenses of Americans. There is, then, no strong practical reason why Americans cannot stay abroad for a period as long as a normal academic year. Only under exceptional circumstances has the board approved grants for periods as short as 6 months. Because of the shortage of dollars the board has been willing to make grants to foreigners who have secured sufficient dollar support for shorter periods within the United States. The board has even approved grants for foreign professors who were invited to teach in summer sessions. It would certainly be preferable, however, if more of the opportunities offered foreigners were for longer periods of time.

Thanks to this foresight on the part of various individuals in American institutions, a fair number of foreigners will attend American institutions in the year 1949–50. It would be desirable from all points of view to see more such opportunities. In most cases in the past exchange arrangements have been made by direct contact between an American institution and a foreign scholar in person or his institutional connection. Subsequently application has been made to the foundation for a Fulbright travel grant. The American interest could be equally well served if institutions, willing to receive a foreign scholar or student, submitted the specifications of the opening, along with an indication of the dollar support available, to the appropriate cooperating agency in the United States for forwarding to the foundation. In particular, openings which could well be filled by visiting professors from abroad should be called to the attention of Dr. Gordon T. Bowles, executive secretary of the conference board committee. The foundation could then nominate qualified candidates. It should be remarked that American institutions would have the same veto power now possessed in fact by the foreign institutions in that their failure to accept the nominee would preclude the possibility of the board's giving the nominee a travel grant.

The Fulbright program is by all odds the greatest fellowship program in the world's history. Anyone who has had the slightest connection with the operation of a fellowship program within a single college or university knows the difficulties involved in making proper selections. These difficulties increase when more institutions become involved. In the case of the Fulbright program the wishes of innumerable institutions in a variety of lands with very diverse traditions must be considered. There is, and will continue to be, a steady stream of new problems calling for rational analysis and policy determination. Many of these cannot be foreseen in advance. Under these circumstances there are bound to be delays, and what may turn out to be in some cases outright mistakes. The indulgent sympathy of the entire educational world in America and abroad is needed. The cooperative agencies are certain to welcome constructive comments on various aspects of the program and its awards; interested persons should not hesitate to write them.

At the same time, it is important that those who are gratified with various aspects of the program as it now unfolds should make that gratification known. The Fulbright Act is a tool which has been fashioned in the expectation that it would lead to better international understanding. Support by the United States Government of such efforts is still in its infancy. Those who believe in such efforts have a responsibility not merely to criticize mistakes of operation, but also to make known in all appropriate places the full meaning in terms of human experience and understanding of a Fulbright year.

Jefferson as a National Planner

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 9, 1950

Mr. BLATNIK. Mr. Speaker, the Democratic Party is preparing to honor two great Democratic Presidents—Thomas Jefferson and Andrew Jackson—at our annual Jefferson-Jackson day dinners, and while we do so, the atmosphere is filled with the anguished cries of reactionary politicians and Wall Street plutocrats about the "evils of Democratic planning" and the dangers of the welfare state. I believe that the best answer to these calamity yowlers is found in the words, deeds, and philosophy of Thomas Jefferson. Under leave to extend my remarks in the Appendix of the RECORD, I include the article entitled "Jefferson as a Planner of National Resources" which appeared in the July 1943 edition of the magazine Ethics, and which was authored jointly by the eminent political scientist at the University of Chicago, Prof. Charles E. Merriam, and my good friend Mr. Frank P. Bourgin, of Virginia, Minn., a former graduate student at the University of Chicago:

JEFFERSON AS A PLANNER OF NATIONAL RESOURCES

(By Charles E. Merriam and Frank P. Bourgin)

The clue to the understanding of Jefferson is found in his idea of liberty. Jefferson was for freedom, not only from something but for something. Jefferson hated tyranny and demanded freedom from oppression, but he also demanded the pursuit of happiness. In his thinking, equality, liberty, and the pursuit of happiness were real and inseparable parts of a world in which human beings might best develop. Underlying this was his confidence in the perfectibility of mankind, in the possibilities of continuing growth and development.

Jefferson was against tyranny in any form, whether physical or mental, whether by public or private agencies, whether by State, church, land jobbers, or bankers. The tyranny of landlords and land speculators, the tyranny of central government or local government, the tyranny of ignorance—all these were the objects of his attack from time to time. What may seem inconsistent in the thinking of Jefferson arises from failure to observe his real objectives—the ends toward which he moved in the emancipation of mankind and in the equipment of men for the pursuit of happiness.

Jefferson was not merely a philosopher; he was also a statesman and a social engineer—also a party leader, to be sure, but that is not our present topic. Jefferson not only set forth the ends but also planned constructively the means of attaining liberty, equality, the pursuit of happiness, and the consent of the governed.

Jefferson was a planner and, indeed, the first great American and democratic planner. But he was first, last, and always a planner with a philosophy. The roads he indicated might wind round and at times even seem to be going in opposite directions, but his sense of direction remained the same.

The keen intelligence of Jefferson, which found recognition in his repeated election as president of the American Philosophical Society, led him to elaborate his programs and plans, not alone in the grand manner of philosophy but with the care and pains of the practical observer and technician. Jefferson's Notes on Virginia was the first report on State planning in the United States and may well be compared with some of its later followers in forty-odd American States. He was concerned from the first with the development of all the resources of his State and, later, his Nation—both physical and human resources. Thus he brought over the Italian, Mazzei, to advise him regarding the development of olive growing and wine making in Virginia; and in like manner he organized the University of Virginia and per-

sonally supervised the construction of the first buildings. His land planning, his educational planning, his transportation planning, and his broad national expansion planning are marked all the way by their broad range of vision and also by their minute attention to technical detail. He planned not only a land and free-labor policy for the Northwest Territory, but also the method of land survey. He was concerned not only with education as a basis for democracy, but with the way the bricks were being laid in building the University of Virginia.

LAND PLANNING

Jefferson was deeply concerned with land planning, thinking of agricultural development as a basis of democracy. From his earliest days Jefferson planned energetically and constructively for the development of democratic land resources. He sought to incorporate a homestead provision into the Virginia constitution. In his draft of the new constitution this paragraph appeared: "Every person of full age, neither owning nor having owned 50 acres of land, shall be entitled to an appropriation of 50 acres, or to so much as shall make what he owns or has owned 50 acres in full and absolute domain." The Virginia convention refused to incorporate the free-land-grant principle into the constitution. But Jefferson went further to attack the land problem from other directions.

In Virginia, in the first session, after the Declaration of Independence, the privilege of primogeniture was abolished and also entails. Furthermore, it was provided that the land of intestates should be divided equally. "These laws," said Jefferson, "drawn by myself, laid the ax to the root of pseudoaristocracy."

No less important than the abolition of feudal land tenures for the future of America's democratic land system was the establishment of a system of land disposal avoiding the dangers of large-scale land speculation. Few persons today realize the dangers that existed at the close of the Revolution, threatening our whole land policy.

For years prior to the Revolution speculative land companies, made up of some of the most influential persons both in England and in America were engaged in intrigue at the royal court to obtain grants of land in the Ohio Valley amounting to millions of acres. Following the breach with England, the scene of conflict for land-grabbing shifted from the royal court to the new State legislatures. The extent of the speculators' power may be judged by the fact that, through their influence over certain legislatures, they were able to delay for over 3 years the ratification of the Articles of Confederation. Had they been successful, it is possible that the vast territory of the Northwest would have been organized into great baronial estates rather than a multiplicity of small land holdings. Had the land speculators been able to seize the territory of the Ohio Valley in a few great tracts, Congress would probably have been precluded from launching its constructive land surveys and territorial policies.

As a landowning gentleman, cultivating his own acres, Jefferson had a healthy dislike for the practices of the land jobbers. He disdained personally to adventure in land speculations, and he readily appreciated that it was completely at odds with his own policy of saving the land for the actual settler. He was not slow in acting to make sure that the land speculators would get no more of Virginia's western lands than was unavoidable. The great northwest territory was saved by Jefferson from the land jobbers and speculators and held for land settlers. Virginia did not cede its western lands until it was given assurance by Congress that the land would be disposed of for the common benefit of the United States.

Jefferson's engineering mind went further and led him to the organization of a rectangular survey system. He even attempted, but unsuccessfully, a decimal land system, corresponding to the decimal coinage system he was endeavoring to apply on a national scale. Great pressure was brought to repeal the land-survey system inaugurated by the act of 1785, but these efforts were unsuccessful and the Land Act of 1796 settled the principle.

Most significant of all, however, was Jefferson's plan for free labor in the new land economy. After the year 1800 it was provided that there should be neither slavery nor involuntary servitude in any of the States organized in this new area. In his Notes on Virginia Jefferson explained his legislative program for the abolition of slavery in that State through a process of gradual emancipation on reaching the ages of 18 and 21 for females and males.

Jefferson likewise planned in great detail for the rehabilitation of southern agriculture, with which he was thoroughly familiar. He proposed a threefold scheme for the betterment of agriculture in his own State. It comprised (1) the gradual abolition of slavery, (2) a gradual breaking away from the one-crop tobacco culture, and (3) the introduction of household manufactures. On the basis of his own experience he recommended a diversification of products, with a view to giving greater strength and stability to the agricultural economy of Virginia.

But not only did this planner plan for the development of agriculture in Virginia and in the Northwest Territory; he also reached out to acquire further lands in the famous Louisiana Purchase. He believed that the foundation of freedom in the United States for many years to come rested upon the abundance of its lands and also that Congress should declare the policies for the newly acquired areas. When the chance to acquire the new vast domain of Louisiana was placed within his reach, he seized the opportune moment and extended our national boundaries as far as circumstance would permit. He contemplated an extensive program of economic development by the Government of the United States for the Territory of Louisiana.

EDUCATION

Jefferson held that education is fundamental to a democracy. "If a nation expects to be ignorant and free in a state of civilization, it expects what never was and never will be." On the subject of extending equal opportunities, Jefferson wrote: "The object is to bring into action that mass of talents which lies buried in poverty in every country, for want of the means of development, and thus give activity to a mass of mind which in proportion to our population shall be the double or treble of what it is in most countries."

The reservation of the sixteenth lot of every township for the maintenance of schools in the land ordinance of 1785 was one step in this direction. Congress also reserved the sixteenth section of every township for schools and also two complete townships for universities when it arranged for the sale of lands in the Northwest Territory to the Ohio Company in 1787. In 1802, however, when Jefferson was President, the United States Government made land reservation for education a fixed and binding policy of the Federal Government. When the public lands in the southwestern part of the Louisiana Purchase were offered for sale in 1806, the same policy of reserving the sixteenth section for the use of schools was continued. With the exception of the States of Texas, Maine, and West Virginia, every State admitted into the Union since 1802 has received a grant of land from the Federal Government for the endowment of its public schools.

In his own State of Virginia, Jefferson planned the development of the University of Virginia and gave much personal time and attention to the details of organization and construction. On a national scale he looked with interest and sympathy upon proposals for the national establishment of education and also upon Barlow's plan, modeled on the National Institute of France.

Nowhere is Jefferson's belief in the close affinity between democracy and science more clearly and concisely summed up than when he referred to the "value of science to a republican people; the security it gives to labor by enlightening the minds of citizens; the protection it affords against foreign power; the values it inculcates; the just emulation of the distinction it confers on nations foremost in it; in short, its identification with power, morale, order, and happiness."

TRANSPORTATION

Jefferson laid the foundations of a national transportation system, to be developed at public expense. The farmer was having trouble transporting his products to market and needed the Government's help in road and canal improvements. Jefferson and his Secretary of the Treasury, Gallatin, planned to provide relief for the transportation needs of the Nation. This plan centered in the famous Gallatin report of 1808.

This document did not merely propose an expanded program of Federal aid; it was also an exact plan to establish a national system of transportation improvements, accompanied with a detailed financial program of how this was to be done. It was proposed that $20,000,000 be appropriated from the anticipated Federal surplus over a period of 10 years for the construction of roads and canals. The specific improvements recommended were as follows: (1) Great canals along the Atlantic seacoast, uniting New England with the South; (2) communications between the Atlantic and the western waters; (3) communications between the Atlantic, the St. Lawrence River, and the Great Lakes; and (4) interior canals and roads.

Gallatin argued in his report that his transportation program would aid in promoting the economic development of the Nation by making the maximum use of its natural and financial resources. The kind of projects outlined were on too large a scale for private organization alone. Without subsidy from the Government, they could not be built at all. Gallatin estimated that the transportation costs saved by new roads and canals would in the long run pay the costs of their construction. In addition, the value of the unsold public lands held by the Government would be enhanced. The Government could easily sell the improved lands at a higher price if the produce of the land could find better markets. Gallatin was not dogmatic as to the specific method to be used in pursuing these objects. The Government might itself undertake the improvements, but Gallatin believed in private enterprise where possible. Under such circumstances the Government might make loans to private companies or, preferably, might subscribe to shares of their stock. Detailed problems of this kind could be worked out in practice. As an immediate step he urged that surveys be made to determine more definitely the feasibility of each project.

Gallatin's transportation program was also urged as a necessary measure for our national security. Not only would roads and canals shorten distances so as to promote commercial intercourse but they would, in addition, improve our defenses and provide an alternative to maintaining a large standing Army and Navy. Good roads would make possible mobility of our existing military forces and afford the means of rapid concentration of that force and a formidable body of militia at any given point.

Jefferson also planned to finance the proposed transportation improvements by allocating a fixed portion of future revenues for that purpose.

In addition to offering to the newly admitted State of Ohio the sixteenth section of every township for the support of schools, it was proposed that the State be given one-tenth of the net proceeds of all lands sold thereafter by Congress (after deducting the expense of the sales) to "be applied toward laying out and making turnpike and other roads, first from navigable waters emptying into the Atlantic to the Ohio and afterward continued through the new States; such roads to be layed out under the authority of Congress and of the several States through which the same will pass." Since some form of compensation to the States was necessary for their loss of revenue due to the fact that the public lands, being sold on credit, could not be taxed for a 5-year period thereafter, Gallatin devised this scheme for reimbursing the States and also for obtaining future road improvements. This proposal was accepted, although the grant of the net proceeds of the land sales was reduced from one-tenth to one-twentieth, or 5 percent. In a subsequent act, Congress remitted 3 of the 5 percent to the States for constructing roads within the State; the remaining 2 percent was retained by the Federal Government as a fund for the construction of the national road.

In 1806 Congress appropriated $30,000 for a survey and authorized the President to appoint three Commissioners to report a plan for the road. The amount of money contained in the 2-percent fund was obviously not sufficient to construct a road of the dimensions planned. In 1807 Gallatin wrote President Jefferson that the "money already appropriated would be sufficient to construct about 4 or 5 miles of the road." He was determined to build the road "in the most complete manner just as many miles as the money will pay for." Once the road was begun he felt sure that Congress would appropriate enough money to complete it. He regarded it "as a national object of primary importance." He estimated that the road would effect an annual saving of transportation costs of over $200,000. "Ten thousand tons will be carried westward annually and perhaps 100,000 barrels of flour brought back."

The Cumberland National Road represented the first completed part of Jefferson's national transportation program. Because of shortage of funds, the completion of the road was seriously delayed. The first 10 miles of the road west of Cumberland, Md., were not completed until 1812. Jefferson and Gallatin planned to extend the road west as far as St. Louis, on the Mississippi River. The rapid growth of railways during the decade of the 1830's made unnecessary the extension of the road as originally planned, and it was never built beyond Illinois.

INDUSTRIAL ENTERPRISE

It is quite true that Jefferson was primarily concerned with the development of an agricultural economy, just as his contemporary, Hamilton, was primarily concerned with the industrialization of the United States. It cannot be too hastily concluded, however, that Jefferson was indifferent to industrial development, particularly in the later years. In time Jefferson came to be more familiar with the facts of America's growing industrialization. Concerning the Nation's reliance for its national security upon its ability to produce its own armaments, Jefferson's later views were substantially similar to those of Hamilton in his Report on Manufactures. In 1816, for example, he acknowledged to Benjamin Austin his change of policy:

"You tell me I am quoted by those who wish to continue our dependence on England for manufactures. There was a time when I might have been so quoted with more candor, but within the 30 years which have since elapsed, how circumstances changed."

He insisted that views must be governed by conditions of time and place. The trend toward industralization in the United States required corresponding adjustment of our national policies:

"To be independent for the comforts of life, we must fabricate for ourselves. We must now place the manufacturer by the side of the agriculturist. The former question is suppressed, or rather assumes a new form. Shall we make our own comforts, or go without them at the will of a foreign nation? He, therefore, who is now against domestic manufacture, must be for reducing us either to dependence on that foreign nation, or to be clothed in skins, and to live like wild beasts in dens and caverns. I am not one of these; experience has taught me that manufacturers are now as necessary to our independence as to our comfort."

Jefferson even raised the question whether or not the national growth of manufacturers might some day permit going beyond our own supply, and he characteristically answered that no a priori answer could be made:

"If it shall be proposed to go beyond our own supply * * * will our surplus labor be then most beneficially employed in the culture of the earth, or in the fabrications of art? We have time yet for consideration, before that question will press upon us; and the maxim to be applied will depend on the circumstances which shall then exist; for in so complicated a science as political economy, no one axiom can be laid down as wise and expedient for all times and circumstances and for their contraries."

PLANNING FOR THE GENERAL WELFARE

Jefferson's plans for social improvement were contingent upon the prosperity of the country and upon the resulting state of Federal finances. The policy had been marked by success; as the Government commenced its second term of office, only $10,500,000 of Federal bonds remained to be immediately discharged. For the first time the country could relax Gallatin's policy of stringent economy. The Government could choose between a reduction of taxes or a diversion of the surplus revenues to other objects.

In order to understand why Jefferson adopted the latter course, it is necessary to understand the nature of the Federal tax structure at this time. Of approximately $11,000,000 constituting the total annual revenue of the Government at the beginning of Jefferson's administration, about 90 percent was derived from customs duties. The Government had, in effect, continued the tariff rates established by the previous administrations and had not seen fit to alter them. Opposition to them was virtually nonexistent, even in the purely agrarian sections of the country. For the greater part, they bore chiefly on luxury imports. They afforded, furthermore, some measure of encouragement of domestic industry. The internal taxes had been abolished in 1802, and, as far as the mass of the people was concerned, taxes for the maintenance of the Federal Government hardly existed. Some additional revenue was derived from the sale of public lands and from postage, but this was more in the nature of fees for services rendered. There could be few justifiable complaints against the continuation of the import taxes.

The problem of the surplus offered its own answer. The solution lay in a continuation of the existing taxes and in a diversion of the surplus revenues to realizing objects of social improvement which would not otherwise be possible. In his second inaugural address, Jefferson indicated his intention of converting the Federal surplus into a permanent fund for creating public welfare:

"Redemption once effected, the revenues thereby liberated may, by a just repartition among the States, and a corresponding amendment to the Constitution, be applied, in time of peace, to rivers, canals, roads, arts, manufactures, education, and other great objects within each State."

It was proposed that the annual amounts set aside for debt payment be reduced from $8,000,000 to four and a half million, thereby leaving three and a half million for public improvements and defense expenditures.

Again, in his annual message of December 2, 1806, Jefferson informed Congress that the goal of full redemption of the debt was rapidly being approached. Did Congress thereupon propose to suppress the import duties on foreign goods, he asked? To his own question he replied negatively. The elimination of the tariff would only give an advantage to foreign manufactures over our own. He pointed, furthermore, to the fact that the most of the goods upon which the impost was paid were luxuries, purchased only by those who could afford them:

"Their patriotism would certainly prefer its continuance and application to the great purposes of the public education, roads, rivers, canals, and such other objects of public improvement as it may be thought proper to add to the constitutional enumeration of Federal powers."

He looked forward to the time when a continued, wise utilization of surplus revenues might achieve on the Federal level many of the reforms which Jefferson and his colleague Gallatin had fought to effect through action by the States. Nowhere in his writings did Jefferson better express the policy he envisioned for the United States than in his letter to his friend, du Pont de Nemours:

"We are all the more reconciled to the tax on importations, because it falls exclusively on the rich and, with the equal partition of interstate's estates, constitutes the best agrarian law. In fact, the poor man in this country who uses nothing but what is made within his own farm or family, or within the United States, pays not a farthing of tax to the general government, but on his salt; and should we go into that manufacture as we ought to do, we will pay not one cent. Our revenues once liberated by the discharge of the public debt, and its surplus applied to canals, roads, schools, etc., the farmer will see his government supported, his children educated, and the face of this country made a paradise by the contributions of the rich alone, without his being called on to spare a cent from his earnings. The path we are now pursuing leads directly to this end, which we cannot fail to attain unless our administration should fall into unwise hands."

It should not be supposed that Jefferson at all times necessarily favored defining Federal powers within extremely narrow limits. He believed in a written enumeration, to be sure, but the enumeration of powers was not intended to become a governmental strait jacket. Jefferson's constitutional doubts did not prevail when he feared he might fail to acquire the Louisiana Territory. He did not prepare a written draft of the constitutional amendment which he recommended to make possible his program of public improvements. For one who is generally accredited with desiring to keep Federal powers within the narrowest scope, the number of powers which he would have conferred on the Federal Government is truly astonishing. In addition to empowering Congress to dispose of the land of the new territory and to exchange lands with the Indians, he proposed "to work salt springs, or mines of coal, metals, and other minerals within the possession of the United States or in any others with the consent of the possessors; to regulate trade and intercourse between the Indian inhabitants and all other persons, to explore and ascertain the geography of the province, its productions and other interesting circumstances; to open roads and navigation therein where necessary for beneficial communication; and to establish agencies and factories therein

for the cultivation of commerce, peace, and good understanding with the Indians residing there."

That Thomas Jefferson was a national planner, and a distinguished one, can hardly be doubted in view of the evidence presented in these pages. His activities show clearly his concern with the systematic and intelligent development of our national resources. The various proposals offered by Jefferson reveal not only his philosophy but also the technical care with which he proceeded. While appealing to the interests of the immediate beneficiaries of his plans, he was consciously trying to shape a policy for many years to come.

We may now summarize his contributions toward planning. (1) Jefferson anticipated the Homestead Act by about 85 years. As long as the finances of the Government could permit a generous policy, he recommended donating small tracts of land to actual settlers. Society would be compensated, he said, by the increase in the wealth and income that would result from more rapid settlement of the land. (2) In his own State Jefferson successfully brought to an end all feudal survivals in the land laws. By laying the ax to primogeniture and entail, he influenced their abolition elsewhere, thus further promoting democratic equality on the land. (3) The beneficial effects of Jefferson's activities in frustrating the attempts of the large speculative land companies were so great that they cannot be measured except by comparing the early Federal policy with that practiced in almost all the States. The national land policy, without doubt, not only was more democratic but also promoted more orderly settlement. Had Congress early parted with the title to the western lands, our history would have been written quite differently. (4) Jefferson contributed directly to the development of the land surveys by his land plan of 1784 and by his consistent support for the survey system. (5) The Northwest Ordinance of 1787, one of the great monuments of national policy, bears undeniable evidence of having been influenced by Jefferson's territorial plan of 1784. (6) In the period after the Revolution, Jefferson was most vigorously opposed to slavery. He tried to abolish it in his own State and, having failed, sought to arrest its growth by prohibiting its expansion into any of the Territories. (7) Jefferson's purchase of Louisiana was an outgrowth of that agricultural expansion of which he had always been an ardent advocate. (8) Jefferson laid the foundation for our democratic system of education. (9) Jefferson's plan included a broad system of national transportation.

We may measure Jefferson's open-mindedness by the fact that he was convinced of the desirability of encouraging domestic manufactures. His thinking was at first dogmatically opposed to the conduct of manufacturing enterprises in this country. Later, as he began to see how machines not only made goods more plentiful but also improved the comforts of life, he too began to sense some of the possibilities of the industrial revolution. Here he joined hands with Hamilton.

We conclude that Jefferson was not only a philosopher of democracy; that he was not only a party leader; that he was not only a great statesman, but that he was also, in the modern sense of the term, a planner of national resources, both physical and human. The Jeffersonian planning equipment included a knowledge of trends and tendencies, a keen insight into surrounding conditions, ability to use the latest developments of scientific techniques with imagination, courage, and practical judgment, and, above all, broad social vision giving him a sense of direction toward the realization of the higher and finer values of life.

Deliberately and systematically, Jefferson planned to put a floor under equality and liberty: first, through a free public land system, matching and complementing Hamilton's commercial system; second, through a broadly conceived transportation system; and, finally, through an American democratic educational system, of which he laid the foundations. Jefferson planned not only liberty from evils but also liberty for something—for the pursuit of happiness of all men.

World Federal Government

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1950

Mr. HALE. Mr. Speaker, some publicity has been given recently to the fact that the Georgia Legislature rescinded a resolution passed some time ago in support of the organization of a limited world federal government.

In the last session of the Maine Legislature held in the winter of 1949 a similar resolution had been adopted by the Maine Legislature. In a special session of the Maine Legislature held last week an attempt was made to rescind the action taken at the general session. This attempt was defeated in the State House of Representatives by a vote of 58 to 57.

For the information of the Members, I append the text of an editorial from the Portland Evening Express of February 9, 1950.

MAINE'S DECISION STANDS

The House of Representatives of the Maine Legislature has done well in its refusal to make the lawmaking body of this State look ridiculous by recalling the pledge of support given less than a year ago to the proposition that world peace might best be secured under a world federation of national governments.

In its regular session of 1949 the legislature had adopted a memorial urging the Congress of the United States to do everything in its power to seek a limited world federation of governments in the name of peace.

But the Maine Senate on Wednesday, by a roll-call vote of 18 to 10, and at the urging of a Knox County member who made the absurd charge that some sources behind the World Federalist movement "have been found to be * * * Communist in tone," approved a memorial to Congress which would have rescinded last year's memorial in support of the Federalist plan.

The House yesterday—albeit by a 57-to-57 tie vote which was broken by Speaker of the House Nathaniel M. Haskell—defeated the Senate proposal, which means that last year's legislative memorial favoring world federation will stand.

The State of Maine will not be made to appear, therefore, like a community incapable collectively of making up its mind and standing by its avowed principles from one year to the next. Instead, the memorial sent by the State of Maine to Congress in 1949 continues to represent Maine's made-up mind in 1950.

As for the Knox County senator's heated charge that "some sources behind the World Federalist movement have been found to be non-American, Communist in tone, and directly opposed to anything we call American," we have today the strong rebuttal from Chairman William E. Clark, of the United World Federalists of Maine, Inc., who reminds the senator that:

"Those who seek to pin the label 'Communist' upon every person or cause they oppose for any reason are unwittingly playing the Communist game." And Mr. Clark adds:

"I charge that those who shout 'Communist' at every new solution propcsed for today's political, social, and economic problems are unintentionally disloyal to democracy.

"It is nothing less than stupidity to give the Soviet Union or its Communist agents here credit for every decent impulse which arises on the American scene."

Amen to that.

Educational Trends

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1950

Mr. HARRISON. Mr. Speaker, under leave granted to extend my remarks in the Appendix of the RECORD, I hereto append an article by Mr. Branch Spalding, headmaster of Christchurch School at Christchurch, Va., which I earnestly commend for the consideration of those who may be disturbed by the present trends in public education.

The article appeared in the Richmond (Va.) Times-Dispatch under date of February 5, 1950.

DANGEROUS EDUCATIONAL TRENDS SEEN

(By Branch Spalding)

Phony educational philosophies abroad in the land constitute the heaviest handicap laid upon the school of 1950. They have resulted in a tampering with the high-school curriculum which has misshapen it out of recognition as a pattern for preparing youth for either college or vocation or citizenship.

Boys and girls graduate from Averageville High with credit units in band, physical education (meaning not even good athletics), music appreciation, social studies (not usually meaning sound history or economics), language arts (not French or Latin or English seriously taught), general mathematics, and other gimcrack courses.

This might be all right if parents had the money to spend on such mildly beneficial indulgences in addition to what students really need. But these taxed parents are paying for something more substantial. Their sons and daughters are entitled to get it.

Moreover, the preponderant majority of these parents wish their offspring to go to college, and the offspring share the desire. This program of study does not prepare anybody for college. It simply cheapens the quality—but not the price—of a product still sold under an old and respected label, diploma.

VICIOUS CIRCLE

And herein enters the expanding effect of lowered standards backed by law:

State-supported colleges must admit the high-school students on the strength of such credit units—in many States as few as 15 of them. Inevitably the colleges, to accommodate the boys and girls from Averageville High, must lower their standards. The law requires that they accommodate them. Thus grows a vicious educational circle.

A most detrimental tenet of the current educational philosophies is that there is no

failure. A student must not be told that he failed; that might impair his morale. Surely he has gained something in the nine months spent in this course; pass him on up to the next grade.

Result: It being human nature to take the line of least resistance, even capable students study and learn but little. Why should they when they will be promoted anyhow? Why work when reward comes without it in this convenient kindly world? Along with the lazy and the incapable, they move up from grade to grade, and finally to a false diploma.

It is obvious that this process spells a lack of sound learning. Worse still, for the Nation, it involves a plethora of dangerous false learning: namely, that good things may be had without hard work. "Life is that way, society will look out for me. In fact, the world owes me much; I owe it nothing."

WRONG PHILOSOPHY

If this scheme of schooling does not conduce to some such citizen logic, then a guiding providence does, indeed, have the Nation by the hand; America gets a break. For no procedure would seem better designed for development of a colossal welfare state on the broad north continent. It is like that if Joseph Stalin himself were permitted to draw the plan for that end, he might not change one line of this blueprint.

Be that a far-hauled jeremiad or not, it is false teaching and a moral wrong to youth to instill in the young mind the idea that there is no failure and that good ends are achieved otherwise than by hard work in high emprise.

It may be rightly argued that the high school is not simply to prepare youngsters for college; there are vocational and living purposes. But it may be rightly answered that in an attempted straddle Averageville High is not doing either. It permits the obviously unqualified college candidate to remain in school (complying with truancy laws) and offers him no good preparation for any useful vocation.

What with the great American white-collar fallacy it is insulting to tell a young man he should not go to college. But it ought not to be taboo to tell a teen-ager that, while he has failed in mathematics or science, that does not mean that he or she will fail in auto mechanics or bricklaying or cooking. They are vocations highly useful to society—and highly profitable and satisfying to those who do them well.

WHITE COLLARS—ALL

We have defaced the dignity of labor. Not enough of us want our children to become good carpenters, electricians, dietitians, machinists, and housekeepers.

We do not recognize that the usefulness of the occupation should combine with the temperament and talents of the individual in governing vocational selection. And many of us are pathetically prone to think that nature automatically invests the temperament and talent to be a doctor or lawyer in the sons of men engaged in those professions.

Nature is whimsical with her gifts. Man cannot afford to be so in administering education to implement them. He faces a categorical imperative to find them in the sons and daughters of artisans, or whoever's child, and adapt the education accordingly. A sound democratic society allied with individual happiness lays down this imperative. Averageville High has no department of vocational education to which the noncollege material must go.

The lamentable watering down of the curriculum is due in large measure to another line of crooked thinking by the currently dominant educational philosopher, the vicious tenet that the purpose of education is to enable one to adapt himself to his environment. Hence it is that courses loom in automobile driving, personality, salesmanship, and a form of civics which resembles too closely communism, spineless public welfare, and other side-line social quarterbacking.

MUST SHAPE ENVIRONMENT

Aren't these false prophets of pedagogy tending to blink the fact that social and spiritual evolution of man has had its impetus from leaders who devoted their talents to shaping their environment rather than to adapting themselves to it?

While Mr. and Mrs. American Taxpayer Parent have given priority to other business, the self-appointed philosophers have gone about their redesigning of the curriculum to the near-exclusion of geometry, history, foreign languages, English grammar and composition, and science worthy of the name.

The old bone and flesh of the structure can scarcely be found for the bloated overbarding frill and fancy dress. But life, for which this education must prepare, is not fancy dress.

The present situation is aptly stated in a recent comment of a sane authority on education: "It would seem that they are not running schools but welfare agencies."

And then the matter of financial support for education. It has been kicked around in the press until the public labors under a dangerous delusion: "All that the schools need is money." They need money, true; but all the gold of Croesus will do them little good without removal of these other evils only tenuously related to financial need.

SCHOOLS STINTED

This does not at all minimize the penuriousness of Mr. and Mr. A. T. Parent. They have been downright miserly toward the most important function of a democratic society. In this they present serious contradictions. Never before did they have so much money, and never did they, in spending it, make the proverbial drunken tar so closely resemble a skinflint.

They do not hesitate to spend hundreds running into thousands for another car, a trip to Florida, a television set, an elaborate party, or other superficial accretions of midtwentieth century civilization. But when it comes to investing a thousand in the sound education of a fine boy or girl—now there is another matter; there is cause to pause. For the most precious potential they and the Nation possess is purchased a cheap product at a cheap price. They will get what they pay for—or less.

The latest patent medicine afforded under specious ballyhoo to cure this ill is Federal subsidy of education. The spuriousness of it lies in the double-barreled fact that it will cost not less but more, and that it is an extremely hazardous thing for a democracy. It is all right for a collectivist state headed by a dictator.

A NEW DANGER

If Americans have not already learned the bitter lesson of extravagance in bureaucratic centralization of citizens' functions in Washington, when will they learn? It is evident they have not learned that lesson and have not otherwise thought through this vital decision now before the public mind, for all the handwriting on the public-opinion walls proclaims the early enactment of legislation for Federal subsidy of education, in all its aspects.

It is more than an accidental coincidence that one of the first official acts of a Mussolini or a Hitler or a Stalin upon gaining control of a nation is federal subsidy and supervision of all education—control of the mind.

Mr. and Mrs. Average Taxpayer Parent are a kindly, well-meaning, even sentimental, couple. At moments, they appear stupid. Just now they are enjoying no end of pleasure in this splendid American civilization that has come to them through clear convictions, accompanied by stalwart courage and vigilance in their ancestors. They are drawing off a rich cream in national wealth and spending it on themselves, buying luxuries hitherto undreamed of.

They are not spending it in keeping with the realistic vision and patriotism of their forebears. They are not investing it in the future of this America, their own potentially fine children. They are defaulting to the teacher for development of that human national resource and denying her the essential means for its development while they buy other things. They are getting what they want.

They think they are paying for it, but democracy is apt to pay in the end. The darkest omen for a self-reliant democracy is its mature citizens wanting the wrong thing.

Will Mr. and Mrs. Average Taxpayer Parent's epitaph read: "They sold their finest birthright for a mess?" Will that automatically be the epitaph of American democracy?

Unfinished Task in Poland

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1950

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Wilkes-Barre Times Leader of Saturday, February 11, 1950:

UNFINISHED TASK IN POLAND

The story of Thaddeus Kosciusko, who was born at Siechnowicze, Poland, on February 12, 1746, has been told many times, so it need not be repeated here today as America prepares to salute on Sunday the memory of the Polish soldier who fought for United States liberty and died in exile in Switzerland because his own beloved country was enslaved then as now.

The conditions that prevailed in Kosciusko's last days were not unlike those prevailing today. It was in 1815 that Russia, Austria, and Prussia signed an agreement to partition Poland again. The Russians had promised an autonomous kingdom of Poland with the czar as king, but this was to be only a small part of the true Poland, just as today so much of Poland is incorporated into Soviet Russia and what remains is a puppet state.

Kosciusko, true patriot, refused all offers of office and honors in the newly partitioned Poland. He would not lend sanction to the act of partition by his presence. Instead, like so many Poles of this generation, he chose to remain in exile, first in France and later in Switzerland where he died on the evening of October 15, 1817, far from home but surrounded by a few devoted friends who shared his love for Poland and liberty.

The birthday anniversary of Kosciusko tomorrow not only recalls the life of one who has been called the greatest of Poles but it focuses attention again on the present plight of his country. Save for a brief spell of freedom between the First and Second World Wars, Poland has not achieved the objective for which Kosciusko and others struggled and sacrificed so much.

In the hearts of the people of Poland, the name and spirit of Thaddeus Kosciusko live on. We may be certain no tribute will be paid to him tomorrow by the Soviet stooges in Warsaw, but that does not mean the day will go unobserved in Poland or elsewhere in the world where men and women with Polish blood in their veins are gathered. They will take courage from his inspiring example and they will rededicate their lives to the unfinished task before them.

Quakers Warn Against Intervention in China

EXTENSION OF REMARKS
OF
HON. VITO MARCANTONIO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1950

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks, I include herein a letter appearing in today's New York Daily Compass written to the President by Mr. Clarence E. Pickett, executive secretary, American Friends Service Committee:

QUAKERS WARN AGAINST INTERVENTION IN CHINA

DEAR EDITOR: The following letter has just been mailed to the President, expressing the views of the American Friends Service Committee on our policy toward China:

The PRESIDENT,
The White House, Washington, D. C.

MY DEAR MR. PRESIDENT: The executive board of the American Friends Service Committee has asked me to express to you its gratification at your statement of January 5 on China. It seems to us most appropriate for you to have stressed the moral basis for our country's policy, viz: international respect for the territorial integrity of China, and, no desire to obtain special rights or privileges.

For over 8 years, Friends have been engaged in relief work in China. Some 400 people have taken part in our projects there and have seen intimately the sufferings of that country under conditions of peace and war. Of these 400, approximately a hundred have lived, traveled, and worked in both Nationalist and Communist territory. They have constantly impressed on us at home their concern that the United States should not follow "a course which will lead to involvement in the civil conflict in China," to quote your recent statement. The primary consideration is moral, but in addition, we would like to present some of the practical facts that have led our workers to the conclusion that further American intervention is unjustified.

First of all, we wish to point out that the Communist success in China is a phase of a deep-seated revolution that grows out of the ancient sufferings of the Chinese people. In 1911, the revolution was proclaimed by Dr. Sun Yat Sen, the leader of the Kuomintang. For many years, the Kuomintang was the party of the revolution. Now the Communist Party has assumed leadership of the revolution and it is largely because of this leadership that they are now in power. They are riding on a tide which has been swelling for many decades. They have received a very large measure of popular support among the peasants and the educated classes of China. Our workers have observed a marked enthusiasm for the new regime among the people, not just among the members of the Communist Party, who number only about 3,000,000. The younger generation of educated Chinese has thrown itself into governmental activities with a self-denying and enthusiastic spirit that is in striking contrast to the despair and cynicism with which those same students regarded the Kuomintang government. This attitude toward the Communist government, whether justified or not, is important to reckon with.

Secondly, our protracted observations in Communist territory during the past 3 years have led us to the conclusion that the success of the Chinese Communist Party cannot be attributed to the Russians. We have never had any workers in Manchuria and, therefore, cannot speak for that part of China. But none of our returned workers with experience in many parts of Communist-held China below the Great Wall has ever seen any Russian military equipment or Russian military advisers. Our observations confirm the view generally held by others who have been in China during recent years that the Communists have won because the Nationalist Government has lost popular support.

Thirdly, we have been struck with the sensitivity of the Chinese people to foreign intervention. The Chinese people as a whole are opposed to military aid from the outside. Not only is the Chinese Communist movement an outgrowth of the economic revolution, it is also a manifestation of the growing nationalism of China. The people of China are determined not to be puppets of any foreign government, and the Communists have adopted an aggressively nationalist attitude in order to capitalize on this determination. The large-scale American military intervention during 1947 and 1948 has played into the Communists' hands in a most dramatic and effective way, of which we could cite many instances. Countless towns and village in north China have been indiscriminately bombed by American-made planes which this country furnished the Nationalists. Some of our own workers in China have had to take shelter in trenches from these bombing attacks. This has helped them appreciate the feelings of the peasants with whom they shared the trenches. Quantities of American arms have been captured by the Communists when Nationalist armies have surrendered. The ordinary people all over China have been quick to notice these evidences of American intervention, and the Communists have not let them forget it.

AID TO NATIONALISTS DEPLORED

The foregoing facts and others appear to us to refute the assumptions on which the proponents of further aid to the Nationalists rely. These assumptions are:

(a) That the Communist victories in China represent the conquest of China by Russia, which has imposed a puppet regime upon the unwilling Chinese people; and

(b) That the United States can by force thwart this Russian penetration.

On the contrary, our observations indicate:

(a) That the Communist movement in China has been committed primarily to carrying out a revolution within China. It has close ideological ties with Moscow, but has framed its program with reference to the conditions and traditions of China;

(b) That American intervention has impelled the new government in an anti-American and pro-Russian direction. The Chinese people are hostile to foreign intervention from any source, and at present that hostility is directed primarily against the United States.

(c) That no amount of future intervention short of war can turn the tide.

We believe that further intervention will result in the hardening of Chinese resentment against America, perhaps beyond redemption, and the strengthening of Sino-Russian ties. In the future we should give ample evidence of our sympathy for the welfare and wishes of the Asian people. We believe that by treating Communist China as an enemy and by refusing to recognize her, we are not isolating China, we are isolating ourselves and throwing away the chance of influencing the course of events in the Orient.

It is part of wisdom to know the right limits of power and the right methods of influence. There is a time for waiting and a time for action. The United States must now wait in China, whether we like the turn of events or not. The time will come when the United States can once again take positive action of a constructive sort. Through voluntary religious and welfare groups, through international organizations, including UN, through encouragement of private capital and through technical assistance and other aid as set forth in your point IV, our country can someday restore the good will we once enjoyed in China, which is the only reliable basis for peace between nations.

On behalf of the executive board of the American Friends Service Committee,

CLARENCE E. PICKETT,
Executive Secretary, American Friends Service Committee, 20 South Twelfth Street, Philadelphia, Pa.

Should the Hoover Commission's Fishery Recommendations Be Adopted?

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1950

Mr. THOMPSON. Mr. Speaker, public interest in and demand for the reforms suggested by the so-called Hoover Commission prompt me to insert in the RECORD a pertinent discussion which took place at the National Canners Association convention last month.

I had the honor of presiding at this discussion, and I listened to both sides of the general question: Should the Hoover Commission fishery recommendations be adopted? The opinions were so interesting and enlightening to me that it impresses me they might well have a similar effect on my colleagues. I, therefore, insert them under leave granted:

SHOULD THE HOOVER COMMISSION'S FISHERY RECOMMENDATIONS BE ADOPTED?

STATEMENT BY DONALD P. LOKER, DIRECTOR OF PUBLIC RELATIONS AND LABOR RELATIONS, FRENCH SARDINE CO., AND CHAIRMAN, FISHERY PRODUCTS COMMITTEE, NATIONAL CANNERS ASSOCIATION

One of the most important and constructive pieces of legislation ever approved is Public Law 162, Eightieth Congress. This law led to the creation of a body entitled "Commission on the Organization of the Executive Branch of the Government," or as it is more familiarly known—the Hoover Commission.

For once, partisan politics seemingly had no part in a proposal to promote economy and efficiency in Government, since a far-seeing Democratic President appointed a Republican ex-President to head the Commission, which itself was made up of 12 members, consisting of 6 Democrats and 6 Republicans.

The commercial-fishing industry took a keen and sincere interest in this legislation and in the Commission set up to carry out its purpose. Our industry just as any other, or indeed, as any good citizen, is interested in efficient and ecnomic government, and like all industries—and in both management and labor—it contributes many millions of dollars each year in taxes to pay the cost of running our Government.

But the commercial industry had an exceptional interest in the activities of the Hoover Commission, as it was required to make recommendations as to the proper placement of fisheries in the Federal Government.

For more than 75 years there has been in existence in one form or another some agency of the Federal Government directly concerned with fishery matters. The genesis of such an agency was the act of February 9, 1871. By statutory authority more and more fishery functions have been delegated over the years, so that the present agency now exercises a very considerable degree of influence over the fisheries of the Nation, whether they be sport or commercial. Today that organization is known as the Fish and Wildlife Service and is incorporated among the units in the Department of the Interior.

Nevertheless, as is true to some extent with most Government agencies, the Service has been built up in a most haphazard manner. It is quite possible that less basic planning has gone into the evolution of the Service as now constituted than in the development of any other Government group.

Let us go back a little into recent history and see what this Fish and Wildlife Service is and how it was put together.

The Bureau of Fisheries and the Bureau of Biological Survey were transferred to the Department of the Interior July 1, 1939. In the message transmitting this reorganization plan to Congress, the President stated:

"The plan provides for the transfer to the Department of the Interior of the Bureau of Fisheries from the Department of Commerce, and the Bureau of Biological Survey from the Department of Agriculture. These two Bureaus have to do with conservation and utilization of the wildlife resources of the country, terrestrial and aquatic. Therefore, they should be grouped under the same departmental administration, and in that Department which, more than any other, is directly responsible for the administration and conservation of the public domain."

It should be noted that the President's only reason for transferring these two agencies to the Department of the Interior was that each was connected with the conservation and utilization of the wildlife resources of the country, but the President failed to mention or apparently to take under study that in the Bureau of Fisheries there were many functions involved relating to the importance of fish as a commercial food product.

Congress gave little consideration to the desirability of this transfer, and there were no hearings, no printed committee reports, and very little discussion on the floor of Congress. In fact, as Congressman Dirksen pointed out in the House, the reorganization plan was approved by the Senate in approximately 6 minutes. And for your information this transfer of the Bureau of Fisheries and the Bureau of Biological Survey was not even mentioned on the floor of the Senate.

In 1940 the President went one step further and consolidated the Bureau of Fisheries and the Bureau of Biological Survey into one agency—the Fish and Wildlife Service, in the Department of the Interior. In his message transmitting to Congress the reorganization plan which accomplished this change, the President stated:

"Reorganization Plan II transferred the Bureau of Fisheries of the Department of Commerce and the Bureau of Biological Survey of the Department of Agriculture to the Department of the Interior and thus concentrated in one Department the two Bureaus responsible for the conservation and utilization of the wildlife resources of the Nation. On the basis of experience gained since this transfer, I find it necessary and desirable to consolidate these units into a single bureau to be known as the Fish and Wildlife Service.

"The Bureau of Biological Survey administers Federal laws relating to birds, land mammals, and amphibians, whereas the Bureau of Fisheries deals with fishes, marine mammals, and other aquatic animals. The natural areas of operation of these two Bureaus frequently coincide, and their activities are interrelated and similar in character. Consolidation will eliminate duplication of work, facilitate coordination of progress, and improve service to the public."

Here again, the sole reason for the consolidation seems to be that both agencies had some relation to conservation. Again the President failed to mention those additional activities in the Bureau of Fisheries which relate to the use of fish as a food.

Congress again appeared disinclined to consider the merits of this reorganization plan and the consolidation of these two Bureaus. There were no committee hearings, no printed committee reports, and no discussions on the floor of Congress. This reorganization plan also went into effect and opponents of such a consolidation were given no opportunity to be heard.

Perhaps you can understand now why the commercial fishing industry was so intensely interested in the creation of the Hoover Commission and in the task force which was set up to study natural resources.

I see no reason why I should take the time at this point to go into the report of this task committee, since that report, together with supplementary material, may be readily obtained by anyone. For the benefit of those who may not have read it, however, it is known as Task Force Report on Natural Resources (appendix L), prepared for the Commission on Organization of the Executive Branch of the Government.

This task-force report is briefly summarized as follows:

1. That the Federal functions dealing with fishery resources be consolidated in a Fisheries Service.

2. That the other responsibilities of the Fish and Wildlife Service be placed under a Wildlife Service.

3. That both the Fisheries Service and the Wildlife Service be placed in a Department of Natural Resources.

4. That the basic data and research activities of the Fisheries Service and the Wildlife Service be made adequate to assure the development of sound policies and effective administration.

5. That the Federal Government give adequate attention to the need for sound development of fishery and wildlife resources and the needs of an expanding fisheries industry.

6. That adequate provision be made for the coordination of the work of the two Services with each other and with other agencies of the Department of Natural Resources and other departments.

The Hoover Commission then submitted to the Congress reports containing its recommendations as to proposals to reorganize the Departments of Commerce and Interior.

These reports, approved in toto by eight Commissioners, contained the recommendation that all commercial fishery activities of the Department of the Interior be transferred to a Bureau of Commercial Fisheries in the Department of Commerce. Four of the twelve dissented from this recommendation but three of the same four supported in part the recommendations of the Natural Resources task force. The fourth dissenter simply favored retention of the Fish and Wildlife Service in the Department of the Interior.

It is significant that all concerned with this study—all completely disinterested persons, mind you—agreed that reorganization would promote efficiency in Government handling of fishery matters. All here today do not necessarily agree with that premise but I am sure all of us are interested in the increased efficiency and effectiveness of a fisheries department. We may have different ideas as to what is needed. Some, for example, may feel that all that is necessary to improve efficiency is increased appropriations; some may feel decreases in some appropriations would accomplish the same result, while others present may—and I might add, certainly do—feel that other steps are necessary to achieve the most efficient management of fishery matters.

What then does the commercial fishing industry think of the foregoing recommendations?

The commercial fishing industry agrees with all of the recommendations in part but not in whole.

It definitely favors the separation of fisheries from wildlife, whether fisheries be transferred to Commerce or whether a new Department of Natural Resources be created.

May I explain:

President Roosevelt's statement of the advantages to be gained by the consolidation are very compelling and if experience since 1940 had shown that advantages have resulted in respect to fisheries, our case would be very weak indeed. In actual practice, however, these advantages simply do not appear. The natural areas of operation seldom coincide. Consolidation cannot reduce duplication of work because there is very little duplication. It does not facilitate coordination of programs which by nature are separate. A wildlife biologist cannot be substituted for a fishery biologist and this has not been attempted. The administrative details of fishery programs are so different than those of wildlife programs that they cannot be handled except by men who have different backgrounds, training, and experience.

These are but a few examples of areas where because of the comparatively close relationship, it was expected the claimed benefits would materialize, but experience has proven it necessary to have fisheries work done by people with fisheries training and wildlife work handled by people with wildlife training. The lack of promised benefits from the consolidation has not been our only worry. One of our primary concerns has been that consolidation of fisheries activities with wildlife activities has resulted not in coordination but in subordination.

A logical reason for this is the chain of command in the Fish and Wildlife Service. Not only is the Director and one of the two Assistant Directors from the Wildlife branch, but so are all of the regional directors. Not only is the director of the Alaska region a Wildlife man, but so are the directors of the New England region and the Pacific coast region. There we have men with no experience or training in fisheries, directing Federal fishery policy in regions now producing 4,000,000,000 pounds of essential food annually and probably where, with efficient management, this harvest could be vastly increased.

The most important fishery functions of the Fish and Wildlife Service is the conservation of the Alaska salmon fisheries under the White Act of 1924, by which the Service is given authority to adopt and enforce regulations for the protection of Alaska salmon. Although the Service, by virtue of this authority, has undertaken an extensive program of research and regulation, the fact remains that production from the resource has been steadily going down. A few pack figures will suffice to illustrate this point:

	Cases
1935	5,155,826
1936	8,454,948
1940	5,026,378
1942	5,089,509
1945	4,333,692
1946	3,971,109
1947	4,302,466
1948	4,010,612

Why is this condition present?

Subordination of interest in fishery matters and lack of sympathetic understanding of this resource has resulted in inefficiency, misdirected research, improper and insufficient regulations, and inadequate enforcement.

Of course, it may be claimed that wildlife enforcement officers have been assigned to enforcing the Alaska fishery regulations on occasions, but those occasions have been few and far between; the number of men so assigned is extremely small and there is some question as to whether the assignment of men inexperienced in problems of these fisheries has contributed at all to the effective enforcement of the fishery regulations. As a matter of fact, there is reason to believe that enforcement of the Alaska fishery regulations has suffered by reason of diversion of funds, and of planes and patrol vessels which could have been operated with those funds, to enforcement of Alaska game regulations. And these are some of the reasons why experienced and capable fisheries experts have resigned from the Service in great numbers in recent years, or have been transferred to other assignments, and have thereby crippled the program.

The situation in Alaska had become so dangerous that the Alaska salmon industry itself in 1947, in cooperation with the University of Washington, established the Fisheries Research Institute, financed entirely by the salmon industry, but under the complete control of the university, to find the answers to the problems that the Fish and Wildlife Service had been looking for, but which, as has been indicated above, it failed to find.

We have been told by representatives of the Fish and Wildlife Service that one of the reasons fisheries have been better off since the transfer of the old Bureau of Fisheries from the Department of Commerce, and the consolidation of the fisheries with wildlife in the Department of Interior, is that the Fish and Wildlife Service has been able to obtain appropriations of far greater size for fishery work than was obtained by the old Bureau of Fisheries.

Let us examine that for a moment.

I wonder whether we are getting as much return per dollar spent as we obtained while the Bureau of Fisheries was in the Department of Commerce. The commercial fishing industry feels that we are not, for while we may be getting more dollars, inflation has lowered the dollar value to such a degree that increased appropriations are woefully offset.

The correct scale to use, from the standpoint of conservation, business, or just plain common sense, is what has been accomplished? Very frankly, not enough, and the industry feels that proper attention has not been accorded our fishery problems, and as a result the industry is profoundly disturbed.

And again, let me emphasize at this point—it is not necessarily the number of dollars appropriated—maybe we have enough now. What counts is how efficiently those dollars are used toward the solution of our grave and pressing problems.

The only other reason I have ever heard advanced by those who oppose the separation of fisheries from wildlife is that such a splitting up would be a step backward. But they cannot tell us why.

I spoke a moment ago about subordination of fisheries to wildlife. If this were the only instance wherein handling of fisheries were subordinated, it would be bad enough, but the facts are that fisheries are not only subordinated to wildlife by the authorities of the Department of the Interior, but fisheries are subordinated to every other single activity in that Department where there is even the slightest contact between the respective interests.

I merely mention this now to remind you that the reason for this subordination is the fact that fisheries apparently are considered only a minor part of a not-too-important unit within the Department of the Interior.

Now may I call your attention to an important point that is frequently overlooked by our friends in the wildlife field as well as by a good many of our friends connected with recreational fishing interests. This is that the fisheries functions of the Federal Government and the interests of the commercial fishing industry are concerned almost entirely with high-seas fishery resources, with the notable exception of the Great Lakes fresh-water fisheries. Only to a minor degree, moreover, do the inland sport fisheries of the Nation, the fisheries of our streams and lakes, come within the scope of the Federal Government. The Federal Government's activity in this field is limited to the operation of some hatcheries and to some minor biological studies, but nowhere does it have the authority to regulate the inland fisheries. In fact, except in the Territory of Alaska, and the sponge fishery of Florida, the Federal Government has no authority to initiate regulations for any fishery. Recreational fishing on the high seas by comparison with commercial fishing on the high seas is extremely minor. It must re recognized, however, that many of the fishes in the commercial fisheries are important to the recreational fishermen and it is for this reason that the commercial fishing industry, while attempting in no way to speak for the sport fishermen of the country, feels that all fishery functions of the Federal Government should be together and that any attempt to separate them might prove unwise. Not only could it lead to conflicts between the two groups when there is no real conflict of major interest, but in all probability it could result in a loss of efficiency and too much duplication of effort. The area wherein the interests of both groups coincide far exceeds the area wherein their interests differ.

The commercial fishing industry, as well as the sportsmen, is intensely concerned with the conservation of resources and, we believe, to an even greater degree, for fish are the necessary raw material of our business.

Our interest in conservation is neither theoretical nor recreational—it is absolutely essential—for if the fishery resources decrease, our business becomes uneconomic and we go broke. We conserve properly or we die.

To show what I mean, let me list a few illustrations of the conservation activities in which the commercial fishing industry is directly involved:

1. The Atlantic States Marine Fisheries Commission: This is the organization of all the States on the Atlantic seaboard which was set up under authority of Congress and 11 State legislatures to correlate and extend the fisheries conservation work of the Atlantic States. In the 7 years of its activity it has accomplished a great deal toward this end.

Commercial industry men pushed this compact in the Congress and the State legislatures and industry men from each of the States serve as commissioners, and the chairman of the commission is the owner of a thriving commercial fish business.

2. The Pacific Marine Fisheries Commission: This, like the one above, was adopted and put into action through pressure by the commercial fishery people who serve actively on its advisory board, and strongly support conservation research and proposals for proper fishery management.

3. Gulf States Marine Fisheries Commission: This is almost identical with the Atlantic States Commission. Industry men pushed for its adoption, act as commissioners, and are interested in pushing its program for conservation research.

4. International Fisheries Commission: The halibut fishery is the outstanding example of fishery conservation management in the world. The halibut industry forced the adoption of the treaty between the United States and Canada that set up the Commission, has worked with the Commission at every step of its way for 25 years, and is continuing to do so today. This is the strongest and most strictly regulated commercial fishery in the world. The industry not only supports the regulations of its activities but is pressing both Governments today to give the Halibut Commission additional regulatory powers.

5. There are four other similar international treaties to set up commissions which will have the responsibility for conservation in fisheries which produce nearly a billion pounds of fish per year for American fishermen. These are (1) The International Pacific Salmon Fisheries Commission, (2) the International Commission for the Northwest Atlantic Fisheries, (3) the International Commission for the Scientific Investigation of Tuna, and (4) the Inter-American Tropical Tuna Commission.

In each case the commercial fishing industry has pressed for the adoption of these treaties and in the Salmon Commission has already participated for several years in planning and carrying out intensive regulations governing the catching of salmon covered by the Commission's authority.

6. California Sardine Advisory Commission: Let me tell you about something of which we Californians are a little proud. A few years ago our California sardine began to decline in productiveness. Immediately the sardine industry forced through the California Legislature a measure which doubled our tonnage tax and set aside new funds for conservation research. I do not know of another United States industry that has voluntarily increased its tax bill for the specific purpose of having investigations made which would restrict its activities, and a comment as to this fact appears in the State of California Legislature.

7. Fisheries Research Institute: The Alaska salmon industry, alarmed by the decrease in the source of their raw material, as I have already reported, voted to tax themselves voluntarily so much per case of salmon packed in order to provide a fund for biological research to find out what was the matter with the present conservation regulations and where they could be improved to maintain normal abundance, which so obviously was imperative, if the Alaska salmon industry was not to perish.

This voluntary program of taxation has been going on for 3 years and has raised more money for biological research than the Federal Government itself puts into the Alaska fisheries. It comes directly out of the salmon canners' pockets and it is given willingly. This program has, in fact, been broadly increased in each of the 3 years since its inception.

We are trying to be foresighted, for we realize the necessity of these treaties, these investigations, these regulations, before the resource is depleted and not afterward.

I have dwelt in some detail on what the industry is doing to get the information necessary for adequate conservation regulation. Where conservation is needed we not only help to get it, we demand it, and we are proud of the record of the commercial fishing industry in the conservation of this great resource.

But while we have intense interest in fish conservation, this is only half of the worries we have with raw material. We have a problem of supply and we must explore continually for new sources to feed the Nation and to meet the growing demand for our product.

Also, as a food industry we are in the fortunate position of dealing with one of the greatest potential sources of protein food in the world.

Centuries of land abuse in every civilized country have lessened the ability of that land to produce essential protein foods, but the vast resources of our seas have scarcely been touched.

Rich new areas are known to be available close to the United States in both the Atlantic and the Pacific and are believed to be in the Gulf of Mexico.

The reason why these and other fishery resources all over the world are not being utilized is that at the present time they cannot be brought to market at a price the consumer can pay. We need to know more about the seasonal abundance and occurrence of these resources so that our fishermen can be adequately informed. Too, there are a thousand and one other problems that we have in getting the costs of harvesting, processing, and marketing down to the point where we can afford to get the food out of the sea onto the consumers' table where it does good.

This is where our problems depart widely from those of the inland fisherman and hunter. The game and fish resources of the land and inland waters are known and are certainly less than we would like. Production from those resources can only be maintained and increased by strong conservation regulation measures. Here there is no room for expansion of any consequence, and all thinking must be directed toward conservation.

But for our major ocean fisheries the emphasis must also be on better and cheaper means of harvesting.

I want to drive home to you as hard as I can that waste from underutilization is just as dangerous as waste from overutilization, and more food is being wasted in the sea each year from underharvesting than is being taken from the sea. This is our problem, too.

Besides conservation, both sport and commercial groups have another point in common which should weld us together. The noncommercial fishing groups emphasize the recreational feature of the Nation's fisheries, but they would be the last to claim that there is no commercial importance attached to recreational fishing. Indeed, they hasten to point out the tremendous value to the Nation's economy of the sale of tackle, boats, bait, and also the vast revenue derived by the States from the sale of fishing licenses. It would seem, therefore, that the recreational fishing interests would, of necessity, derive definite benefits from being included within a department whose primary interest is the welfare of the business economy of this country. And to us it seems quite obvious that this reasoning points to the Department of Commerce.

The preceding discussion has clearly expressed the convictions of the fishing industry, and we are sure that the Department of Commerce would support those convictions.

Surely no department would wish the destruction of this natural resource of our country, nor would the fishing industry allow it. Therefore, we concur with the Hoover Commission's recommendation that the Bureau of Fisheries be established in the Department of Commerce, while a Bureau of Wildlife or a Wildlife Service remain in the Department of the Interior.

Such a move would insure that fisheries would be managed by men whose primary interest would be fisheries; whose training would be in fisheries, and whose outlook would be a practical businesslike outlook.

Additional advantage would result from the removal of fisheries to a department where their interests would not be subordinated—again note the use of this word subordinate—to the interests of other groups, and policies of other bureaus concerned with empire-building and paternalistic schemes. In plain, blunt language, I am referring to the domination of the Department of Interior by the Bureau of Reclamation, the Bureau of Land Management, the Bureau of Indian Affairs, and the various power administrations. The record of the treatment accorded fisheries when any seeming conflict of interest arose between it and these other groups is shameful indeed. Ask any salmon packer, commercial salmon fisherman, or any man who fishes salmon for sport on the west coast, about the proposals to destroy this valuable salmon resource by the unwise construction of dams. Their side of the story reveals facts of interest and importance not only to them but to every citizen in our country. The benefits we were told would result from the reorganization which threw the Bureau of Fisheries and the Biological Survey together simply did not materialize.

The Hoover Commission recommended splitting fish from wildlife and putting the former in the Department of Commerce. The task force on natural resources recommended splitting fish from wildlife, but putting both resulting services into a new Department of Natural Resources.

We in the commercial fisheries think the transfer of fisheries to the Department of Commerce, where it functioned so well for so many years during the growth of our fisheries would be the soundest move.

We are, however, not at all adamant on this point and if it is the consensus of the majority that the task force recommendations be followed, we will not complain.

Where we are adamant is that the basic recommendation of the Hoover Commission be followed; that is, to split fish from wildlife so that we can once again have efficient management for both of these valuable natural resources.

We must have a fisheries service in the Federal Government which is administered by men who know fisheries, who have been trained in fisheries administration and fisheries research, and who by experience know how to deal with a fishery problem when it is put before them.

We must have a fisheries service that has a sympathetic interest in fisheries, staffed by men who have the imagination and vision required to plan fisheries programs of their own and coordinate those programs with the programs of the sovereign States, the commercial industry, the sportsmen's associations, and the trade associations.

These men must review the basic objectives of Federal policy concerning fisheries and organize a dynamic program for the maximum utilization and sound conservation of this valuable resource.

This revitalized service must be capable of providing expert guidance and efficient aid to the fisheries agencies of the 48 States and the Territories in dealing with the problems of sport fish in inland and coastal waters. It must be able to lead the industry and the State agencies in high seas biological and oceanographical research; it must establish vastly improved programs for technological problems of gear utilization and development, marketing of species not now utilized, consumer education, and we must have additional help in surveys of potential foreign markets; collection of statistical data; and the analysis of marketing trends and developments in the United States market, and in the markets of the world.

In short, gentlemen, we must have a fisheries service that will know fish, think fish, and dream fish. A service which will represent our industry at high level in the Federal Government and which we can proudly support. A service, finally, which will lead us to the full utilization and proper conservation of the fisheries resources of the seas.

STATEMENT BY C. R. GUTERMUTH, VICE PRESIDENT, WILDLIFE MANAGEMENT INSTITUTE, WASHINGTON, D. C.

It is a distinct pleasure to attend this large gathering of food processors and to participate in this panel discussion on natural resources. Heretofore, my contacts with your industry, other than that of a consumer, have been limited almost entirely to fighting with some of your contemporaries about stream-pollution abatement.

Much has been said and done in recent years to encourage better land use throughout the Nation, but it took a critical water shortage in one of the largest population centers in the world to focus public attention on the importance of water and upon the seriousness of stream pollution. New Yorkers ultimately may be able to use heavily chlorinated water from the upper Hudson for drinking purposes, but they may have to use toothpicks after each drink for a while until they get those upstream industrial and municipal wastes out of that badly polluted river which flows past their door. Today, on Times Square, you can hear, "Water, water, everywhere, but not a drop to drink."

Those so-called sentimentalists, the conservationists of the country, have been pleading for consideration for a third of a century or more, and when it gets so bad that prosperous Wall Street brokers can't shave on Fridays, then things begin to happen. President Truman appointed a temporary Water Resources Policy Commission but it is questionable if that recently created body will make any new or different recommendations.

All of us must be concerned with the wise use of natural resources. There can be no other choice since health, wealth, and security stem from nature's bountiful gifts which form the basis of all commerce and industry. Agricultural production may be high now with hybrid corn, more potent fertilizers, and everything, but how long can science continue to compensate for those deficiencies resulting from improper use?

Freedom, continuing prosperity, and everlasting enjoyment of the high standards of the American way of life depend upon the sound management of our shrinking resources, which for generations have been regarded as inexhaustible.

The time has come in this modern age when critical decisions must be made. We must adopt a well-defined and efficient pattern of land and water use on this continent to avert a crisis. There may be objectionable features to the Hoover report, but they recognized the problems and called attention to the imperative need for action.

The Hoover Commission, after a long study of Federal Government activities, made the following recommendations that would have a pronounced effect on the administration and utilization of natural resources. The Commission would retain the Department of the Interior but would make that agency more of a water-development and mineral-management service. To accomplish that objective the Commission suggests a construction agency in Interior created largely by combining the present activities of the Bureau of Reclamation and Army Corps of Engineers, together with the construction functions now assigned to other agencies.

Briefly, the recommendations are as follows, it being understood that the present bureaus in Interior would remain there unless otherwise indicated.

1. The Department of the Interior should be given clear major responsibility for governmental development of the Nation's water and mineral resources. Since those activities require large public works, other major public works also should be managed by this Department.

2. To these ends, the Interior Department should take over the flood-control and rivers and harbors works of the Army engineers, plus public building construction and community services from the Federal Works Agency. It also should manage certain other major construction on assignment from other governmental agencies.

3. The following agencies should be shifted from Interior to other departments: (a) Bureau of Indian Affairs to a new department; (b) Bureau of Land Management (except minerals) to the Department of Agriculture; (c) Division of Commercial Fisheries to the Department of Commerce.

4. A Board of Impartial Analysis for Engineering and Architectural Projects should be created in the President's office, consisting of five members of outstanding abilities appointed by the President. It would review and report on the economic, social, and technical worth of all projects proposed by the Interior Department. It also would review authorized projects periodically and advise as to their progress or discontinuance.

Although the Hoover Commission tactfully refrains from mentioning it, such a board, with sufficient prestige, might materially diminish congressional logrolling and pork-barrel grabs.

The Hoover Commission, in its final recommendations affecting conservation agencies, did not follow the reports of any of the task forces which made extensive proposals regarding renewable natural resources. The report by one committee would have scattered the conservation agencies through the Government and would have put the Fish and Wildlife Service in a Public Works Department. The Agricultural Committee recommended a drastic reorganization of the Department of Agriculture and included a transfer to Agriculture of all major public-land administration activities and functions. The task force on natural resources developed an even bolder and more far-reaching program. It would abolish the Interior Department and create in its place a Department of Natural Resources, consisting of a consolidated water-development service to administer the present functions of the Bureau of Reclamation the river-development functions of the Corps of Engineers and numerous related activities of other governmental agencies and departments. It recommended the division of the Fish and Wildlife Service into two units, a Fisheries Service and a Wildlife Service.

The minority report, by Vice Chairman Acheson did not disagree too much with the task force on natural resources. The minority did disapprove of the separation of the Fish and Wildlife Service but recommended:

1. A Department of Natural Resources consisting of a Water Development Service (including the Bureau of Reclamation and river-development functions of the Corps of Engineers), a Forest and Range Service, Geological Survey, Bureau of Mines, National Park Service, and Fish and Wildlife Service. The Department of the Interior would cease to exist.

2. The consolidated Forest and Range Service would be based on the present Forest Service and furthering its general policies, but including the functions of the Bureau of Land Management, now in Interior, and research functions of the Agriculture Department relating to forest insects and diseases.

3. Retention of the Tennessee Valley Authority in its present form but the establishment in the President's office of a board of review which would coordinate the programs of the Department of Natural Resources and those of the new regional authorities, if any, with each other and with such governmental agencies as Agriculture and the National Military Establishment.

Although the Commission steered a somewhat midway course among the committee recommendations, the final report included the feature of consolidating all water services in Interior, but retained the Department of the Interior as presently constituted, except that the Bureau of Indian Affairs, the Bureau of Land Management, and the Division of Commercial Fisheries, one unit of the present Fish and Wildlife Service, would be shifted out of the Department.

Needless to say, there are differences of opinion over the recommendations which should receive support. Those conservation organizations interested primarily in forests tend to support the recommendation of the transfer of public lands administration to Agriculture which would leave Forestry in Agriculture where it has been for many years and where it has fought vigorously to stay. The agricultural task force based its recommendation on the premise that trees and grass are crops. It argued that research, management, and conservation of all crops might well be concentrated in one organization. It recommended a drastic regrouping of present functions and assignments which would cause most of the present agencies in the Agriculture Department to disappear or be divided and distributed between regulatory services, conservation services, extension services, research services, and others.

Regardless of the name by which the Department would be known, it seems that the recommendations in the minority report, with minor exceptions, offer the soundest conservation program. Ignoring the perennial contest between Interior and Agriculture, this report urges the placing of the water-development services and public land-management agencies under one head. This approaches closely the idea of a Department of Conservation that has been advocated by many conservationists for several years.

Perhaps the one point that will be raised most frequently will be to question the advisability of combining all water services into one huge unit and then placing fish and wildlife, national parks, and other relatively small but exceedingly important units in direct competition with the large division. Some will feel that this might intensify the disadvantage under which small bureaus operate in Interior now when their need for funds or their programs conflict with proposals of the Reclamation Service. Nevertheless, if a coordination and review board were established in the Office of the President simultaneously with such consolidation, perhaps there would be some check on the apparently endless ambitions of Government-paid engineers to make over the entire face of America in the shortest time possible.

The one inconsistency that stands out in a review of the Commission's recommendations is the one which would divide the Fish and Wildlife Service into two units, a Fisheries Service and a Wildlife Service. With this single exception, the Hoover Report recommends consolidation and closer coordination. Only in this instance does the Commission recommend the division of one small unit into smaller units. In my judgment, it would be a serious mistake to follow this suggestion. This would divide the present Fish and Wildlife Service, which is small now compared to many Government bureaus, into still smaller units which might make it even more difficult to deal successfully with large issues. Furthermore, I can find no logic in the recommendation.

In many States the same agency is handling the administration of both resources. The basic biological problems are largely the same, differing only in details rather than fundamentals. The only argument advanced in favor of this recommendation is the understandable one of tradition. The Biological Survey and the Bureau of Fisheries were operated separately for many years and some of the present members of the Fish and Wildlife Service can remember this condition. Perhaps they hope to restore it.

Prior to the consolidation, Dr. Gabrielson, who served as Director of the Service for many years, opposed the plan largely because he already had plenty of troubles in the administration of wildlife work. Gabrielson, who is president of the organization that I represent, now admits that most of his fears proved groundless and that from an administrative standpoint, there were good reasons for the merger. The obvious advantage to both groups has been that of presenting a united front. Both lines of work have secured increased appropriations. They have had additional money to more adequately perform their responsibilities, and more than they ever were able to secure alone.

Consolidation gives those interested in outdoor recreation, both hunting and fishing, a single unit to deal with on their problems. There is an obvious advantage from this standpoint. Therefore, I believe that the recommendation calling for the division of the Fish and Wildlife Service into two units is unsound.

The proposal to put the commercial fisheries division by itself in the Department of Commerce borders on the ridiculous. There can be no logical reason for it other than perhaps the desire of some commercial fishing interests to have a group which might be more sympathetic to their pleas.

A few States have separate units for commercial and sport fisheries, the latter usually combined with the fish and game agency. In the majority of such cases, however, the two fishery units have spent fully as much time trying to undermine each other as they have in conducting their work. The same thing could be expected if the commercial fishery groups succeeded in getting the commercial fishery activities in a unit by themselves. In fact, the basic reasoning behind the desire for separation is one of the strongest arguments for keeping the administration of the resource in one agency.

It obviously would be foolish to divide administration and research work for one group of fish into two separate parts, depending upon whether the man who catches it is going to eat it himself or sell it for someone else to eat. Such a procedure would be comparable to breaking down the administration of agricultural production by establishing one branch to handle regulation, research, and so forth for the parts of crops consumed by farmers and another unit for those to be processed by you folks or sold in the market place. The fishery resource is a unit and should be administered as a unit. Establishing two competing administrative groups would be a long step backward and an invitation to duplication of effort and wasted funds, which the Hoover Commission was intended to correct. Such an idea deserves no support from those who really are interested in the wise, efficient, and economical management of a valuable resource.

If the eventual reorganization follows the recommendations of the Hoover Commission report, those interested in fish and wildlife will be confronted with a rather difficult dilemma. Fish and wildlife are effected by both land and water management. If the Commission report is followed, water development will be in one agency and land management in another. In that case, the fish and wildlife unit, wherever it is placed, will be faced with the necessity of working across departmental lines to secure proper management.

The minority report and the one by the natural resources task force recommended a Department of Natural Resources which could administer both the public lands and water resources. It is the only plan which would place to a considerable extent in one department the administration of both the public lands and the water resources, and that would afford an opportunity for closer cooperation. Even then, these agencies still would have to cross departmental lines to work with the others dealing directly with farmers and private landowners on crop and pasture land.

In conclusion, it seems that the proposal for the establishment of a Department of Natural Resources comes nearer to meeting the requirements of a sound, Nation-wide conservation program. We certainly should not separate the Fish and Wildlife Service.

STATEMENT BY ROBERT O. BEATTY, CONSERVATION DIRECTOR, IZAAK WALTON LEAGUE OF AMERICA, INC.

I believe I should take just a moment, preceding my remarks on the vital question before us, to clarify for you just what the

Izaak Walton League of America is. Although the name may connote otherwise, it is much more than a sport fisherman's club. The league is a broad-gage organization of laymen, operating through 550 chapters and 19 State divisions in the United States and Alaska. The organization has as its principal objective the fostering of sound management, in the long-range public interest, of all renewable natural resources. Broadly speaking, the league concerns itself with promoting better management of, and disseminating to its membership and the public factual information about soil, forests, waters, fisheries and wildlife.

A large number of our members are held together by a common interest in fishing and hunting. A great many more—perhaps 25 percent—have never gone afield with rod or gun and probably never will. We believe—we know—that good fishing and good hunting are but byproducts of the proper use and husbandry of our basic natural resources, land and water.

As the fisheries of the Nation, at one and the same time, are a vital recreational, economic and food resource to the people, they come well within our legitimate field of interest and have received a large share of our attention over the years.

The question before us today is broader and more basic than just that of whether the Hoover Commission recommendations on fisheries should be adopted. That something is wrong with the management of the Nation's fishery resource, both sport and commercial, we all agree. The basic questions are: "What can we do about it?" and "What should we do about it?" By "we" I mean a sizable segment of the American public made up of assorted interests in the whole resource, most of them legitimate interests and some of them certainly in conflict.

The Hoover Commission, in its final reports to Congress on the Department of the Interior and the Department of Commerce, has proposed one solution. The Commission recommended that the commercial fishery activities and functions of the Fish and Wildlife Service, Department of Interior, be transferred to a Bureau of Commercial Fisheries in the Department of Commerce. Enabling legislation which would, among others, translate this recommendation into fact was introduced in the Senate on January 11, 1950, by Senator CAIN, of Washington. That's Senate bill 2833.

As far as we can gather from the assorted Commission reports, the chief reason given for this suggested transfer is:

"A Bureau of Fisheries can be one of the most important industrial and commercial agencies in the Government. It is related to industry, to commerce, and to the merchant marine at many points."

In our opinion the recommendation completely ignores three basic facts: (1) (And this is pointed out by a dissenting opinion of 4 of the 12 commissioners) that the chief problem is one of how to achieve better management, exploration, and development of the fisheries as a natural resource, rather than how better to exploit the fishery commercially as a dollar resource; (2) that the dollar value of the recreational fishery is exceedingly important and, in fact, closely approaches that of the commercial fishery; and (3) the commercial and sport fisheries are closely interdependent in the natural environment.

I'd like to discuss my reasons for those two statements in a little more detail, but in so doing want to make it perfectly clear that it is not my hope, nor my intention in any way to widen further the breach in points of view between commercial and sport fishing interests.

Such a breach apparently exists in some places in spite of honest and sincere efforts by many parties to close it. By the very nature of any natural resource, which is subject, first, to the laws of nature and, second, to man-made laws, nothing will be gained by either group in the long run taking a "stand off and let's fight it out" attitude. Much can be gained, however, if both parties will stand to one side together and try to look at the total fishery as a vital present and future natural resource. That is what I am trying to do here.

We concur that the commercial fishery resource needs considerably more and careful attention and development, but it needs these things along two lines, (1) in the field of marketing and manufacture, and (2) in its management as a renewable natural resource. We know all too little about what makes for sustained-yield populations of commercially valuable fish species. There is only one example of a fishery resource that has been successfully studied and conserved over most of its range—that is the Pacific halibut administered by the International Fisheries Commission since 1930. This is the only fishery agency that has to date come even close to being adequately supported with money and personnel.

Far too little is known of the life habits, cyclic influences, and other factors affecting the abundance or scarcity of fishes, especially with regard to salt-water species.

There is ample testimony available to show that an important reason for the decline of many commercially valuable species has been overexploitation over the years—taking too many fish of too small a size the year around without regard to spawning seasons, migration habits, etc. Placing the management and administration of the commercial fishery back in the Department of Commerce, whose chief function is the development of industry for economic reasons, would, it seems to me, be inviting more of the same, and would be a dangerous and false solution to the problem.

I do not think I am being idealistic about the practical economic problems facing the industry when I say that. I believe, in fact, that I am being quite hard-headed, for I am thinking about what the economic status of the fishery will be 10 or 20 years from now. Nobody profits if there are no fish and we are rapidly approaching the "no fish" stage, for practical purposes, with many commercially valuable species in more than one area.

The second basic fact which the Hoover Commission report on Interior ignores in its recommendation is the close interdependence between sport and commercial fisheries, plus the great economic value of the sport fishery itself.

The same basic problems of lack of adequate research, personnel, and management which plague the commercial fishery also plague the sport fishery. The latter is by no means picayune from an economic standpoint, yet under the Hoover Commission recommendations receives bare lip-service recognition.

Let me show you, in dollars and cents, what status sport fishing has as big business in this country. For the year ending June 30, 1949, 15,478,570 American citizens bought angling licenses. Most of these are freshwater anglers, as only one State I know of, California, requires a license for salt-water sport fishing. Conservative estimates place at an additional 5,000,000 the anglers who fish costal and off-shore waters from Maine to Texas and from Washington to southern California.

In 1944 the Fish and Wildlife Service, as a part of its river basin work, began studies to determine the amounts of money fishermen and hunters spend in pursuit of their respective sports. They determined that the average annual outlay for fishing tackle, which represents but 5 percent of the fisherman's total expenditure in pursuit of his sport, was $6.25 per person. Even if we ignore the estimated 5,000,000 nonlicense buying anglers, that amounts to $99,740,000 annually for tackle alone. The other 95 percent includes what anglers spend for transportation, clothing, meals, and lodging and miscellaneous items of equipment including $32,657,940 annually for licenses. It makes a total of $1,995,000,000 spent annually by fishermen in pursuit of game fish. Bear in mind that these are 1944 cost figures applied to 1949 angler numbers. As such, the total undoubtedly is quite conservative.

In Colorado, the National Opinion Research Center made a survey of thousands of resident anglers and hunters on what they spent to pursue their sport in 1946. Among other things, they found that warm-water fishermen spent an average of $47.80 each and trout fishermen, $76.22. The number of resident fishing licenses sold in Colorado last year was 257,925, of which number, it is safe to say that four out of five were trout fishermen. The money placed in circulation by Colorado's resident anglers last year amounted to upward of $18,192,000.

Colorado's tourists were estimated by official State sources to have spent $216,000,000 in the State in 1949. It has been calculated by the same sources that sport or family food fishing is the major attraction for approximately 35 percent of the visitors. They generally spend at a considerably higher rate, per capita, than the residents—based on the above figures, about $75,500,000 annually. Added to the amount spent by resident anglers, that's upward of $93,500,000 spent for sport fishing in just one State.

Colorado is fairly representative of most of the 11 Western States with the exception of California which had a considerably larger number of license buying fishermen; 1,030,617.

These figures are not just pulled out of thin air. They are based on just as careful statistical surveys, interviews, and inventories as are used in business. As a matter of fact, it is business, big business.

The economic value of the sport fishery, therefore, and the number of persons in industries employed directly and indirectly in meeting the sport fisherman's needs in the tackle, boat, railroad, air line, auto, gasoline, restaurant, and resort businesses, compares quite favorably with the 1947 estimated consumer value of commercial fishery products, of $1,000,000,000 which furnished employment directly and indirectly for some 525,000 persons. These figures are taken from a report on the commercial fisheries to the natural resources task force by a technical consultant representing the industry.

The other fact to remember has been well stated in the report of the task force on natural resources: "Sport fishing is becoming increasingly dependent on commercial fishery resources." But one example of this is the increasing numbers of fish species which are sought after by both the commercial and the recreational angler. Here are but a few: In fresh water—the salmons, yellow perch, walleye or yellow pike, smelt, catfish and bullheads, sheepshead, paddlefish, buffalo, red horse, white bass, crappie, northern pike and pickerel, hickory shad; in salt water—amberjack, tuna, barracuda, bluefish, bonito, cod, haddock, halibut, mackerel, sea trout, croaker, shad, porgy, sea bass, striped bass and many others. The basic biological research and controls needed to better manage many of these species would be of lasting benefit to both commercial and sport fishing interests.

But the Hoover Commission would separate the management of commercial and sport fisheries. Certainly the management of sport fisheries does not belong in the Department of Commerce. Even if we could honestly agree that commercial fisheries did, we would not support such a move on the basis of its demonstrated interdependence with the Nation's sport fisheries.

I have probably taken too much time on this one question but it seems the principal problem before us and one difficult to cover adequately in a short time.

The other two recommendations we should briefly consider are those of the task force on natural resources and the minority report on the Department of the Interior signed by Dean Acheson, James K. Pollock, and James H. Rowe, Jr. Both of these recommend a Department of Natural Resources with cabinet status. As you know, they differ with respect to treatment of the fisheries.

The task force recommends that fishery functions and wildlife functions be split, in a proposed Department of Natural Resources, into a Fisheries Service and a Wildlife Service. The minority recommendations appended to the Hoover Commission report on Interior opposes this split for lack of adequate definitive study to show the need for it.

There is another basic difference between the two reports which I want to call to your attention. The task force report has no status before Congress today. It has served its function. As a document it is today proud but poor—proud, as perhaps the best blueprint yet drawn for the sound management of the Nation's publicly owned and publicly controllable natural resources; poor—as a document which will begin to gather dust on the shelves unless the people decree otherwise. The minority report, on the other hand, does have status as part of an active document presented to Congress for translation into legislation.

The question is: "Split 'em or not split 'em?" In my opinion, the only things we are splitting by devoting a lot of time and worry to that question are hairs.

The task force gave a few not too specifically documented reasons for splitting. The minority dissenters said: "That's not proof enough." As far as we in the Izaak Walton League are concerned, based upon the evidence we have seen on both sides, it is a question needing further specific study and proof one way or the other. In its arguments for a split between wildlife and fisheries, the task force gaves some excellent additional reasons for not separating commercial from sport fisheries.

From the standpoint of the long-range good of the total fishery resource and its subsequent benefit to the people, the question of separating it from wildlife hinges, I think, on whether we would have a Fisheries Service and a Wildlife Service operating together in a Department of Natural Resources or whether we would have a Fisheries Service in Commerce or Public Works and a Wildlife Service in Interior or Agriculture or—God knows—maybe the Army Engineer Corps.

This much we do know today: The Department of Natural Resources idea, without the split, is before Congress. As an organization, the Izaak Walton League has gone on record in favor of such a department. It has not yet been demonstrated conclusively to us that a split between fishery and wildlife functions is either necessary or desirable. On the other hand, the beginnings of a good argument for a split have been started and have demonstrated that the commercial fishing industry, as well as the sport fishing industry, is in crying need of better administration, financing, and management. We would, however, support legislation for a Department of Natural Resources regardless of whether fisheries and wildlife were separated.

That's a good safe middle-of-the-road course on a burning issue perhaps. But we do not take it through any desire to avoid an issue. Those of you who are acquainted with the work of the Izaak Walton League know that, I am sure. We take it rather because we are trying to view the over-all natural resource picture of which fish and wildlife are just a part—albeit an important one.

We do not speak for all of the organized groups of sport fishermen in the country, by any means. But this you can be sure of: We will fight until the last goose is hung for what we believe to be the best plan for the wise use and husbandry of all the Nation's resources. In this particular case the Department of Natural Resources transcends in importance the question of whether fisheries and terrestrial wildlife should be managed together or separately. We would not bicker over the question to the detriment of whatever chance such a department might have.

That some better set-up for administration of commercial and sport fisheries is needed, we agree. Frankly, we don't know the answer. We do not set ourselves up as experts in administrative matters. We do believe strongly, however, that the administrative and management changes in the fisheries as currently proposed by the Hoover Commission and as outlined in S. 2333 would work to the ultimate detriment of the fishery resources of the Nation.

You have heard, or will hear, ample testimony today in favor of the split, and you have heard, or will hear, ample testimony opposed to it. The thing we must all do is remember that we are considering first and foremost the long-range welfare of a vital renewable resource which in all its aspects provides revenue, food, and the increasingly important health and well-being through recreation for a sizable segment of our population. Let us first determine how we can surely perpetuate that resource, and, secondly, how best to use it to the benefit of all concerned.

STATEMENT BY ALBERT M. DAY, DIRECTOR, FISH AND WILDLIFE SERVICE, UNITED STATES DEPARTMENT OF THE INTERIOR

It is hardly proper for me as Director of the Fish and Wildlife Service, one of the agencies that is proposed for reorganization by the Hoover Commission, to discuss whether that Commission's recommendations are sound and should be adopted. Rather, I prefer to make some general observations about the background of the Hoover Commission report on this particular subject and explain what the Fish and Wildlife Service is attempting to do to aid in the broad development and utilization of the highly important fishery resources of this Nation.

In the first instance, it should be well understood that the final recommendations of the Hoover Commission resulted only after a great deal of conflicting and diverse testimony on this important subject had been given careful consideration. The whole problem is complex because fishery management is complex. It must always be woven into the intricate patterns of land and water uses and human needs in our expanding civilization. This fact is well emphasized when we recognize that the three different task forces studying the organization of the Government came out with three different recommendations when it came to fish and wildlife matters.

The report of one committee would have dispersed the conservation agencies through the Government and would have put the Fish and Wildlife Service in a Public Works Department. The Agricultural Committee recommended a transfer to Agriculture of all major public land administration activities and functions including the Fish and Wildlife Service. The task force on natural resources proposed to abolish the Interior Department and create in its place a Department of Natural Resources, in which would have been a division of the present Fish and Wildlife Service into a Fisheries Service and a Wildlife Service, each separately administered. The final recommendations of the entire Commission were that only the commercial fisheries activities of the Service should be transferred to the Department of Commerce. As evidence of the diversity of opinion among the members of the Commission, it should be noted that dissents to this proposal were expressed by Vice Chairman Dean Acheson and Commissioners James Forrestal, James K. Pollack, and James H. Rowe, Jr.

With this divergence of opinion among the members of the Hoover Commission and the various task forces as to the proper place in Government for the Federal responsibility for fishery activities, it is not surprising that the resultant reactions of the public also have been mixed. The American Fisheries Society, organized in 1872 and now the oldest scientific biological organization in the United States, at a meeting in Winnipeg, Canada, last September, passed a resolution endorsing the task force recommendations of the report on natural resources, with the exception that the society opposed that portion of the report which recommends the separation of fisheries administration from wildlife administration.

Likewise, a meeting of the International Association of Game, Fish and Conservation Commissioners, also meeting in Winnipeg, in September, passed a resolution endorsing the general purposes of the natural resources task force report, but also stated that they opposed the recommendation of the report which would separate fisheries from wildlife in the present Fish and Wildlife Service. Within the past few weeks, the executive officers and the legislative committee of the international association again reaffirmed to Secretary Chapman their strong opposition to this proposal. The international association is made up of representatives of all of the State conservation departments in the country, the great bulk of which administer both fisheries and wildlife in a single organization of the State. In fact, of the 48 States only 8 have separate departments devoted to commercial fisheries. In the other 40, commercial and sport fishery and wildlife management activities are all in the same department. The same, of course, is true in Alaska.

To the contrary, the Pacific Fisheries Conference, composed largely of members of industry operating on the west coast and in Alaska, by action taken at a recent meeting in California, adopted the following resolution, and I quote:

"Whereas the consolidation by Executive order of the former Bureau of Fisheries and the former Bureau of Biological Survey into one Bureau in the Department of the Interior, called the Fish and Wildlife Service, has been demonstrated as unsound, illogical, and ineffective; and has not served to further the sound, efficient administration of fisheries, and whereas the Commission for the Reorganization of the Executive Branch of the Government, commonly referred to as the Hoover Commission, recommended that the administration of fisheries should be separated from the administration of wildlife: Now, therefore, be it

"*Resolved*, That the conference heartily endorses the recommendation that such separation should be made and also urges that the reestablished Division of Fisheries should be transferred in toto to the Department of Commerce or to a new Department of Natural Resources if such a Department should be created, and now, in whichever Department placed, fisheries should be under direct charge of an officer of the rank of Assistant Secretary."

It is to the assertion of the Pacific Fisheries Conference that the present organization has been demonstrated as "unsound, illogical, ineffective, and has not served to further the sound, efficient administration of fisheries" that I wish to direct my remarks today. I challenge that statement as incorrect, and I call upon the drafters of the resolution to furnish proof of their assertions. The present organization is sound, it is logical, and it is effective. In the 10 years it has been in effect, it has done more to further the interests of fishery management, conservation, and utilization than was accomplished in the three or four decades previously

Memories about public affairs and previous events are short, and I feel that the drafters of the resolution that I have just mentioned must have been unfamiliar with the background and did not know the original reasons for the consolidation of the Bureau of Fisheries and the Bureau of Biological Survey. Such moves are seldom made without good reasons, as was the case in this instance. At the time of the merger in 1940, both of these predecessor agencies were weak and to a considerable extent were discredited in the public mind. The Biological Survey, which I joined in 1918 and in which, together with the present Fish and Wildlife Service, I have served continuously ever since, had suffered from weak administration for several years prior to the merger. Waterfowl coming under Federal regulation under a treaty with Canada had been consistently declining over a period of years. The only remedy that the Bureau seemed to be able to prescribe was ever-shortened seasons and ever-smaller bag limits. Because of resultant public dissatisfaction and clamor, President Roosevelt appointed a special committee of citizens to study the problem and to recommend remedies. "Ding" Darling, the famous cartoonist, prominent in conservation circles in the Midwest, served on this special-study committee. It recommended a positive-action program—the acquisition and restoration of marshes along with severe restrictions on the take by hunters. Darling was induced to serve as Chief of the Biological Survey, an organization that had been virtually leaderless since the disability retirement of the previous bureau chief. He remained less than 2 years and was succeeded by Dr. Ira N. Gabrielson, an outstanding scientist and able administrator, but in 1940, when the merger came about, the public had not yet regained confidence in the efficiency of the administration of the Biological Survey.

A similar situation existed in the Bureau of Fisheries. It was a small organization and the morale of its employees, as well as the confidence of the public, suffered severely because of the quality of its leadership. Controversy raged, particularly in the Alaska fisheries field, where the Bureau then had and still has as the Fish and Wildlife Service sole regulatory authority over the extremely valuable salmon and herring fisheries. We are still trying to live down some of the things that happened in Alaska in in those days.

Government reorganizers concluded that there might be a strengthening of the administration of both fisheries and wildlife programs if the two closely related small bureaus were merged into one larger group. This has been the trend of Government for many years and, with the exception of the recommendations for the transfer of the commercial fishery activities to the Department of Commerce, was also the philosophy of the Hoover Commission.

When the merger of the Biological Survey and the Bureau of Fisheries came about in 1940, the Biological Survey was on its way back into public esteem under the leadership of Dr. Gabrielson. It was, therefore, logical that he should become the first Director of the new Fish and Wildlife Services. As a minor employee in Washington at the time of this "shotgun wedding" of the two Bureaus, with Secretary Ickes, incidentally, holding the old double-barreled gun on us, I can personally testify that it was an unpopular move with the employees of both Bureaus, particularly those who revere tradition and the "good old days" of the past. I also know that the proposal to return to those "good old days" does not fall upon completely unsympathetic ears with some in the present organization. It is difficult to understand their philosophy, because I cannot think of a single individual who has not personally benefited in rank and salary by the creation of a larger and more important agency. With some, tradition is truly a potent factor.

But, of more importance to you and the other people we are paid to serve, did the mandatory trip to the altar pay off? Let us merely check the records.

First, let's review the appropriations for fishery work for the past 20 years—the 10 years of operations under the present system and the 10 years immediately preceding. Granted that during recent years the costs of operations have risen and appropriations have been more liberal to take care of these factors, appropriation figures are probably still the best over-all yardstick to measure the services the Government gives its citizens in matters pertaining to the fisheries.

In 1930, Federal fishery appropriations amounted to $2,498,550; in 1940, $2,421,075. That represents a decrease during the 10-year period of almost $100,000. The average for that period was approximately $2,000,000 per year. The fishery appropriations for the fiscal year 1950 amount to $10,875,251. Of even greater significance, the budget which the President sent to the Congress within recent days and which Fish and Wildlife Service representatives justified before the Appropriations Committees a week ago carry proposed appropriations for fishery items amounting to approximately $12,000,000 for the fiscal year beginning next July 1. To be more specific as to items in which you are most interested, the work of the Branch of Commercial Fisheries received $229,540 in 1940; $668,500 in 1950. The Branch of Fishery Biology received $390,835 in 1940 as compared with $1,546,000 in 1950; Alaska Fisheries, including the Pribilofs, from $516,460 to $1,480,100 in those 10 years. And the wildlife appropriations have likewise increased at the same time. In 1940, they amounted to $6,149,343, almost three times the then appropriated sums for fishery activities. For 1950, they amounted to $16,502,049. This sum included duck stamp and Pittman-Robertson revenues. Not bad for an "unsound, illogical, and ineffective" organization.

At the time of the merger, not a single research or exploratory vessel was owned and operated by the Bureau of Fisheries. Now, the *Albatross III* is carrying on investigations extending from the Grand Banks to the Carolinas on the Atlantic coast. Within recent months, two vessels, the *Oregon* and *Alaska*, have been acquired through special legislation and appropriations and are now stationed in the Gulf of Mexico. One will do exploratory fishing and the other will do biological research. A new vessel, the *John N. Cobb*, was commissioned at Astoria, Oreg., this month to carry out exploratory and experimental fishing in the North Pacific, reaching far into Arctic waters. The *Black Douglas* is carrying on experimental and biological work in an effort to find answers to some of the perplexing problems surrounding the pilchard fishery off the coast of California and lower Mexico. The *Hugh M. Smith* is conducting biological and oceanographic research, while the *Henry O'Malley* and the *John R. Manning* are doing exploratory fishing in the waters of the South Pacific in a program that has been developed in close cooperation with tuna-fishing industry of the west coast. The *Spencer F. Baird*, the *Theodore N. Gill*, and the *David Starr Jordan*, three well-equipped research and exploratory vessels, are now completing a 5-year study of the South Pacific fisheries in connection with the rehabilitation of the Philippines. It is planned that the *Theodore N. Gill* will soon be stationed in the Great Lakes to undertake the difficult study of the decline in that great fishery, made possible by special legislation and appropriations passed during the present session of Congress. That adds up to 11 large vessels compared with not a single one at the time of the merger. In the entire previous history of the Bureau of Fisheries, reaching back to 1871, in fact, there were never at one time more than three ships doing that sort of work and that occurred for only 2 years. None had been in service since 1932—8 years before the merger. Does that add up to the assertion that the present Fish and Wildlife Service is an unsound, illogical, and ineffective organization?

Ten years ago the famous laboratory at Woods Hole, steeped in traditions of fishery research and oceanography since the days of Spencer Fullerton Baird, had been virtually abandoned. Within the past 2 years we have rehabilitated the station, have transferred the scientific staff of the New England area there for headquarters, and the *Albatross III* is now berthed at Woods Hole. The laboratory at Beaufort, N. C., is being reconditioned and important studies in cooperation with the Atomic Energy Commission are being conducted at that point. A new laboratory is being constructed in Hawaii and the technology lab at Ketchikan, Alaska, has within recent months been enlarged and expanded. During that decade, a small laboratory was constructed in Puerto Rico, and fisheries research in the Caribbean area was carried on. In addition, the research stations at College Park, Md.; Milford, Conn.; Seattle, Wash.; and Pensacola, Fla., have been expanded.

Never in the 80 years of Government participation in matters pertaining to the fisheries has there been such great activity in the international field as there has been during the past few years. That is perfectly logical because of the increasing influence of the United States in world affairs. I should like to cite some of the more recent developments, however, as proof that fishery matters are not suffering at the hands of the present organization.

The Northwest Atlantic Fisheries Convention concluded just a year ago and ratified by the President last September 1 brings 11 nations having common interests in the North Atlantic fishing grounds under treaty arrangements for the first time in history. The fisheries of this great area have been the battleground for some exceedingly tough international problems that date back to days prior to American independence. A convention between the United States and Mexico for the establishment of an International Commission for the Scientific Investigation of Tuna was signed at Mexico City in January 1949, and has been ratified by the President. A similar convention between the United States and Costa Rica for the establishment of the Inter-American Tropical Tuna Commission was signed at Washington in May 1949, and was ratified by the President on September 1, 1949. Three years ago 22 nations, including Canada and the United States, met in Washington and arrived at an international agreement which established the International Whaling Commission, empowered to conduct investigations and regulate whaling throughout all the marine waters of the globe. In 1946, a treaty was negotiated with Canada for the protection and management of the Great Lakes fisheries. This, so far, has been the least effective of the treaty programs because of opposition of one or two States surrounding the Great Lakes.

I have mentioned some of the more recent developments but I should record also the continuing activities in connection with the Sockeye Salmon Commission which came into being in 1936, and which has now assumed regulatory powers after the first 10 years of investigation. This has included the construction of the $2,000,000 fishway at Hells Gate on the Fraser River. I serve as one of the American members of this Commission. Assistant Director James is a member of the Halibut Commission, established in 1937, which has done a remarkable job of restoring the stocks of halibut along the stretches of the North Pacific coast.

UNIVERSITY OF MICHIGAN LIBRARIES

In the field of management of the fisheries of Alaska, I am proud of the progress that is being made. For the first time in history, we are now developing a closely integrated program, using all available manpower and equipment for enforcing both the fishery and wildlife laws and regulations in a joint operation. Enforcement of the fishery regulations is now vastly improved because of the use of Alaska game agents as well as about a dozen transferred from the States each season. During the war years the fishing regulations were probably more liberal than they should have been. This was due to the pressure for food for our own people and our allies. Many of our trained personnel were in the Army and Navy and many Service ships were devoted to military uses. Inadequate observations and patrol, together with overfishing, created a serious depletion in the Alaska fishery. I am happy to say that it looks as though the situation is improving rapidly. Following severe restrictions during the past 3 years, the southeastern Alaska pack of pink salmon responded to the point where the pack last year not only returned to but also exceeded the previous normal 20-year average. Two large vessels have recently been secured by transfer from the Navy to augment our Alaskan fleet, and several smaller ships have been built as a result of new appropriations by the Congress. In the Service's combined Alaskan operations, there are now owned and operated 18 vessels ranging from 40 feet to 150 feet in size, with 11 additional patrol vessels ranging from 30 to 40 feet. There are also about 100 speedboats used in fishery patrol. Surplus planes have been made available since the end of the war and we now have a very excellent fleet of 20 planes which services both fishery and game agents in the Territory. Congress, last year, appropriated $250,000 for a new airplane hangar and shop at Anchorage, and as a result our facilities for observation and patrol will be much improved in future years. Moreover, Alaska regulations are now being made and enforced without fear or favor.

Ten years ago there were no effective means of correlating the needs of fish and wildlife with the construction programs of the Army engineers and the Bureau of Reclamation. That is not the case today. The Fish and Wildlife Service maintains a river basin staff whose responsibility it is to review the plans of the construction agencies while the projects are in the making. We work in close coordination with these two Bureaus. Much has been done to protect and increase the fishery potentials in the reservoirs because of this service.

The relations of the Fish and Wildlife Service with the Congress and the Bureau of the Budget are excellent. The needs of both fisheries and wildlife are given sympathetic attention both as to appropriations and as to legislation. This, in my opinion, is due in large part to the fact that practically every Member of the Congress has a personal interest in something that the Fish and Wildlife Service is doing. If he or his constituents are not particularly interested in the commercial fisheries, it is a pretty safe bet that he either likes to hunt ducks and geese or he enjoys fishing for trout or bass or bluegills. Maybe he comes from the West and is more interested in the coyote and ground squirrel control program of the Service, or perhaps he wants to go to Alaska to hunt moose or brown bear. It is an assured certainty that if there is a Federal fish hatchery in his district, he is anxious to see that it produces as many fish for his sportsmen constituents as can possibly be done. I doubt that there is another single agency of Government that has such wide interest for so many people as do the varied activities of the Fish and Wildlife Service.

Last year there were 13,500,000 people who bought fishing licenses and almost 13,000,000 who bought hunting licenses. Another 2,000,000 bought duck stamps to hunt ducks and geese. Many probably purchased all three kinds of licenses, but yet the fact remains that approximately one out of every five people in the United States is influenced in some degree by the activities of this Service. As such, the single organization known as the Fish and Wildlife Service yields much more power and influence than either the Bureau of Fisheries or the Biological Survey ever did before or would ever do again, if they were reconstituted separately.

I could continue this recitation all day, but I fear that I have already used my allotted time. I shall close by inviting the members of the resolutions committee of the Pacific Fishing Conference, or anyone else for that matter, who believes that the "consolidation by Executive order of the former Bureau of Fisheries and the former Bureau of Biological Survey into one Bureau in the Department of the Interior, called the Fish and Wildlife Service, has been demonstrated as unsound, illogical, and ineffective" to take a little more careful look at the record. I sincerely believe that if those members of industry who are not satisfied with the present accomplishments of the Fish and Wildlife Service would tell us and the Congress, frankly, what in the way of accomplishments they want but are not now getting, they will come closer to seeing it done than if they were to depend upon a much smaller agency, with much less prestige. Remember the appropriation figures I gave you—$2,421,075 in 1940 as compared with $10,875,251 in 1950, and approximately $12,000,000 which President Truman has recommended to the Congress for next fiscal year. Again, I say, study the record.

Poem by Horace G. Carlisle

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks, I include the following poem by Horace G. Carlisle, poet laureate of Washington, titled "There's But One Way, Then Why Delay?'

If the natural law of supply and demand,
And the Master's divine Golden Rule,
Were obeyed by Americans, throughout the land,
And they all would quit acting the fool,
By engaging in covetous methods and schemes
To acquire more than their just due,
The peace past understanding would come, and our dreams
Of a prosperous day would come true.

Russianized communism can't grow in a soil
Wherein faith, hope, and charity thrive—
Communism depends on confusion, turmoil,
Hate, and enmity, to keep alive—
There is no force on earth, anywhere, that retards
Communism's advance, that we know,
More than true Christianity, which it regards
As its most indestructible foe.

When Americans practice what they'd rather preach,
In the church and the home and the school,
Communism's defeat will be within their reach;
For the Master's antique Golden Rule
Is effective today—as it ever has been—
And by it alone just wars are won—
The peace past understanding all nations will win
When they pray, "Not my will, Thine be done."

Grass Roots Progress

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1950

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to present to the House of Representatives an editorial that records the progress of a unique farm program in Pike County, Miss. This program is unique in that it did not originate with a bureaucrat or a swivel-chair farmer. The businessmen and farmers of Pike County worked out definite goals to obtain, and the editorial reports the amazing progress that has been made in the 2 years of its operation. Oliver Emmerich, editor of the McComb Enterprise-Journal, suggested this program and it was aided and encouraged by his newspaper. Recognition of his leadership was recently made when he was named "man of the year" in the service of agriculture by the Progressive Farmer, one of the South's most widely circulated farm magazines. The achievements of this program, as recorded in the following editorial of the McComb (Miss.) Enterprise-Journal of February 8, 1950, prove that local citizens can help themselves more in 2 years than an all-powerful, all-benevolent Federal Government can in a hundred.

GRASS ROOTS PROGRESS

HISTORY OF 16-POINT PROGRAM

Cooperation has made the Pike County 16-point farm program the success that it is recognized to be. Now in its third year, the program has kept pace with the dreams of the men and women who have sponsored it. It was set forth as a 3-year program with 16 projects and involving the close partnership in community activity of the business leaders of McComb, Magnolia, Summit, and the farmers of Pike County.

The idea was first suggested editorially by the McComb Enterprise-Journal. Five Pike County banks actively participated.

The Illinois Central railroad system, the Pike County board of supervisors, the Mississippi Power and Light Co., the Mississippi Agricultural Extension Service, all have worked hand in glove.

The community leadership picked up the challenge and 110 sponsors, including individuals and firms, have worked earnestly to make it succeed. The budget called for an expenditure of $20,000 annually for each of 3 years. The first year's expenditures, that of 1948, amounted to $20,882, and all of this money was paid into the program's treasury. The second year cost was $17,526.79.

Committees from numerous counties and parishes have visited Pike County to witness the program in operation. From Tangipahoa Parish alone, in Louisiana, came a delegation of 55 citizens to learn of the program. The good work is spreading. The third year of the farm campaign, 1950, gives promise of far exceeding the achievements of 1949. The sponsors know that farming is basic in Mississippi and to the end that agriculture may prosper farm and business leadership will continue to march arm in arm to new triumphs.

NEW FARM INCOME, $1,362,625

The leadership of Pike County carried a campaign of basic economy improvement to the grass roots of America. Herewith is presented results of the achievement during

the second year of a widely recognized program: 1949 was a bad cotton year. Cotton production, on same acreage as 1948, dropped 3,200 bales. Cotton income in Pike County in 1949 dropped $690,000, but farm income from other sources increased $1,362,625. Rain may hurt cotton but it makes green grass grow.

CORN YIELD OF COUNTY DOUBLED

The 1947 announcement was that the goal of the 16-Point Farm Program in 1947 was to double the corn yield in Pike County on the same acreage within 3 years. What has happened since 1947? Think of a county with a goal so ambitious.

With use of hybrid seed and proper fertilizers corn yield increased: 1947—28,000 acres averaged 15 bushels per acre, value $420,000. 1948—28,000 acres averaged 24 bushels per acre, value $672,000. 1949—21,000 acres averaged 25 bushels; 7,000 acres averaged 49 bushels. Value of gain $448,000. 1949 average per acre, 31 bushels.

The corn yield of Pike County was doubled on the same acreage, not in 3, but in 2 years.

NEW MONEY FROM BEEF, $172,000

In 1947 the number of beef cattle in Pike County was 17,300. In 1948 the number of beef cattle was 18,500, with value of increase, $142,000. In 1949 the number of beef cattle was 20,100, with value of increase being $172,000.

SPRING CATTLE SHOW SUCCEEDS

In the spring cattle show 260 head of cattle were shown in 1948, 290 in 1949, with prize money to farmers in the amount of $2,650. Receipts from calves sold were $9,225, with a total value of $11,875.

COWS BRED ARTIFICIALLY, 5,394

In the artificial insemination program 870 cows were bred in 1947, 1,507 in 1948, and 1,948 in 1949. Nine hundred and eighty heifers thus bred showed milk increase over their dams valued at $46,315.

In the artificial insemination program, the total cows bred artificially in 6 counties bordering Pike in 1948 was only 300, while the total cows artificially bred from Pike plant in 6 counties in 1949 was 3,446. The total number of cows thus bred in 6 counties plus Pike County in 1949 was 5,394. The Pike County program is expanding values over other Mississippi areas.

In the investment in bulls, the number of bulls at the artificial breeding plant in 1948 was 6; in 1949, 9, with a value of $15,000. This program is benefiting all of southwest Mississippi. The number of cows bred throughout this area in 1949, 5,394. The valued increased milk flow to this area, $138,945.

CLUB'S DAIRY CHAIN GROWS

In the 4–H Club dairy chain, the Illinois Central Service Club donated two heifers in 1948. The Magnolia Rotary Club donated two heifers early in 1949. Value of calves from this dairy chain, $2,000. This chain will go on forever.

4–H BEEF CHAIN GROWS

In the 4–H beef cattle chain, McComb Lions Club donated two purebred heifers in 1948. The Summit Rotary Club donated one purebred heifer early in 1949. Value of calves from this chain, $1,800. This endless chain will go on indefinitely.

In the 4–H Club banquet program, two banquets were staged for top-flight members—one for white clubs and one for Negro clubs. 4–H Club membership increased from 2,346 in 1948 to 2,826 in 1949. Value of 4–H Club products, $72,195.

BANG'S DISEASE FIGHT LAUNCHED

In the eradication of Bang's disease program, as a result of leadership of the Magnolia Rotary Club, the board of supervisors has launched a county-wide Bang's disease program with a value of immeasurable possibilities.

BIG INCREASE IN LIME

In the pasture-land improvement program, 33 carloads of lime were imported in 1947; 205 carloads in 1948; 224 carloads in 1949; and in 1949, 11,000 acres were mineralized. The value of this program in meat and milk is $220,000.

The total number of acres of improved pasture in Pike County in 1947 was 2,000 acres; in 1948, 10,000 acres; and in 1949, 21,000 acres. The total acres of potential pastures in the county, 45,000 acres. The goal is 100 percent.

DAIRY EXHIBITS INCREASED

In 1948 there were seven counties with 165 head of cattle that participated in the State dairy show established by the 16-point farm program with the cooperation of the Mississippi Legislature. In 1949 there were 14 participating counties with 195 head exhibited. In the highly competitive dairy circuit 13 Pike County cattle won top prizes at five dairy shows. Value of fair prizes won: $3,154.85.

SWEETPOTATO FESTIVAL STAGED

In 1949, 600 acres commercial sweetpotatoes were grown, 600 bushels commercially stored, and 11,000 bushels farm stored. The profit through improved production and handling, $23,200.

The sweetpotato festival, sponsored by the McComb Exchange Club, with the purpose "to glamorize the yam," exhibited 24 individual farm exhibits, 23 4–H Club exhibits, and 4 community exhibits. A farmer was crowned king and a 4–H Club girl queen. Top price for potatoes at festival was $25.50 per bushel.

The sweetpotato festival parade was widely publicized. In 1948 the parade provided 9 community and commercial floats, while in 1949 there were 68 floats in the parade. It is growing bigger, and one of the biggest crowds in local history came to town to the 1949 parade.

ONE HUNDRED AND EIGHTY THOUSAND DOLLAR GAIN IN POULTRY

In 1947, 4,900 birds were produced every 12 weeks, with annual value of $20,000. In 1948, 31,000 birds were produced every 12 weeks, with annual value of $124,800. In 1949, 60,000 birds were produced every 12 weeks, with an annual value of $200,000. The 1950 goal is 150,000 birds every 12 weeks.

The corn yield of Pike County was doubled on the same acreage between 1947 and 1949, but poultry production increased 1,000 percent. All Pike County merchants and all Pike County people are asked to give Pike County birds first choice when purchasing poultry products.

FORESTRY METHODS PRODUCE PROFITS

In the forestry improvement with adult farmers in 1949, 356 farmers made forestland improvement, 3,500 forest acres were checked by foresters, 1,070 units of pulpwood were marked and sold, 2,870,100 feet of saw logs marked before sale, with resultant increase in sale value of above being $64,910.

In the forestry improvement with 4–H Club members, sponsored by the Summit Rotary Club fire prevention was guaranteed on 21,484 acres of forest land. Conservation schools sponsored with adult farmers and 55 4–H Club boys in marking timber and other forest improvements to an increase in value amount to $21,484.

ONE MILLION THREE HUNDRED AND SIXTY-TWO THOUSAND SIX HUNDRED AND TWENTY-FIVE DOLLARS FROM $10,026.79

Cost of Pike County's 16-point farm program (NOTE: This does not include cost of regular farm and home agents and their 4–H Club assistants) shows the following figure: State extension service, $2,160; additional county appropriation, $5,400; contributions of 110 sponsors, $10,026.79. The total cost in 1949 was $17,526.79. Return in extra farm income, total, $1,362,625.

It was reasoned that the way to overcome hazards of a one-crop cotton system was through diversification and improved land utilization. Here are the results of 1949 as compared with same categories in 1948:

Actual dollar value increase of 1949 over 1948

1. Sweetpotatoes	$23,200
2. Artificial breeding	138,945
3. Corn-yield increase	448,000
4. 4–H Club projects	72,195
5. State dairy show premiums	2,465
6. Poulty increase	180,000
7. Beef chain	1,800
8. Dairy chain	2,000
9. Lime program	220,000
10. State compensation	2,160
11. Bang's disease fight	(1)
12. Yam festival	(1)
13. Spring cattle show	11,875
14. Beef production	172,000
15. Forestry improvement	87,285
16. Pasture contest (prizes)	700
Total	1,362,625

[1] Inestimable.

Early Excise Tax Action Imperative To Aid Small Business and Its Employees

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1950

Mr. BOGGS of Delaware. Mr. Speaker, on several occasions I have publicly stated that war-imposed excise taxes should be reduced or eliminated at an early date. I now reiterate that point of view.

However, Mr. Speaker, irrespective of the merits of that position, I consider it imperative for an entirely different reason that a definite decision be made at the earliest possible date with respect to the action which the Congress is going to take on the reduction or elimination of all or selected excise taxes. An early decision must be made to prevent further losses being incurred by small businesses and their employees by reason of the understandable unwillingness of prospective purchasers to purchase taxed articles while so much talk about excise taxes causes the buying public to expect widespread and appreciable tax reductions.

Mr. Speaker, unbiased surveys show that in Delaware and throughout the Nation small manufacturers, distributors, and retail merchants are suffering substantially from a lack of sales, and workers are becoming unemployed in increasing numbers for the same reason. These facts show that all lines of merchandise on which there are excise taxes are considerably affected, but that those suffering most severely are businesses engaged in the production, distribution and retail selling of furs, luggage, jewelry, handbags, and cosmetics. The public is simply waiting for the taxes to be reduced or removed, and the decline in sales of these articles ranges from 20 to 50 percent in comparison with sales of 1 year ago.

UNIVERSITY OF MICHIGAN LIBRARIES

Consequently, Mr. Speaker, I urge that in the interest of small businesses and of continued employment that final action on the subject of excise-tax adjustments be brought about at the earliest possible moment. I understand that certain delays are unavoidable because of our legislative procedure and the desire for fair and adequate consideration of all interested parties. However, I do urge that whenever it is known that excise taxes in certain categories will in no way be altered by this Congress, that appropriate announcement to that effect be made to the public. The public, as well as small businesses and employees in the affected industries, have a right to be so informed. Furthermore, it may be added, unnecessary delays will result in additional revenue losses to the Government not only in the form of excise taxes, but in the form of seriously reduced corporate income taxes as a result of unprofitable or less profitable business.

Resolutions Adopted by United Farmers of Minnesota

EXTENSION OF REMARKS
OF
HON. AUGUST H. ANDRESEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1950

Mr. AUGUST H. ANDRESEN. Mr. Speaker, I was privileged to attend and address the annual convention of the United Farmers of Minnesota. This organization is made up of actual farmers, who are vitally interested in the future welfare of American agriculture. Mr. Martin B. Tongen, a farmer in my home county in Minnesota, is the president of the Minnesota organization. He and his associates in the organization are men of courage and conviction. Since farm legislation is still an important matter before Congress, I feel that Members of the House of Representatives will be interested in studying the following resolutions, which were adopted at the annual meeting of the United Farmers of Minnesota:

RESOLUTIONS OF THE MINNESOTA UNITED FARMERS SECOND STATE CONVENTION

To the Congress of the United States and to the State Department we submit the following resolutions, adopted at the second State convention of the United Farmers of Minnesota, Inc., assembled at Wanamingo, Goodhue County, Minnesota, November 26, 1949:

We resolve that—

1. The Department of Agriculture be made entirely independent from any organization representing farmers. Taxpayers are, at present, actually helping support an organization representing farmers by paying taxes for the support of the Department of Agriculture, the Extension Bureaus, and the Colleges of Agriculture.

2. The cost of producing any agricultural product must be the primary basis for determining the market price for that product. Cost of production floor prices in the market place for all agricultural products shall be determined by Federal statute and enforced just as industrial wages are set at a minimum of 75 cents per hour. Subsidy programs, such as the Brannan plan, and government buying of surpluses under the Agricultural Act of 1949, are not the answer to a lasting farm program because of the excessive cost involved in tax money and because of the unpopular and unnecessary regimentation through acreage allotments and marketing quotas. Farmers want no hand-outs, but simply protection of equal opportunities in a free-enterprise system.

3. Cost of production floor prices must be high enough to secure for agricultural workers an average net income in balance with the average net income of nonagricultural workers. Such a price program alone can provide a true parity for agriculture, in contrast with the "outmoded, theoretical parity" of the past. Setting up a guaranteed income for farmers is not advisable since it may result in inefficiency, but setting up guaranteed cost of production floor prices on individual products will be an incentive to raise more products, thus resulting in higher efficiency.

4. The Granger bill be enacted. Anyone importing fats and oils in competition with domestic fats and oils shall pay a fee on the import making its price equal to the cost of production floor price of fats and oils produced here. The failure of the Government of controlling these imports has had a widespread depressing effect on the prices of not only oil-bearing crops but on almost all farm commodities. It is advisable, for the benefit of our whole national economy, to have this bill extended to cover all farm products that are imported in competition with products we can produce domestically.

5. The present Federal tax on oleomargarine, colored to imitate butter, be continued. The dairy business cannot survive if butter must compete with yellow oleo.

6. Purchases must stop of agricultural products raised in foreign countries to be given away under the Marshall plan when the same products are bought up as surpluses and stored in our own country. Any farm surpluses not needed for domestic use or for reserve stock piling shall be offered to world trade at world prices. Our Government shall not try to support world prices.

7. The proposed plan of compulsory health insurance be rejected. It is an undemocratic, socialistic scheme.

8. Federal employment, Federal taxes, and the Federal debt be reduced, and Federal spending be cut to the minimum. This will aid our national economy by encouraging new private enterprise and increasing the national income.

9. The trend toward socialized education be discouraged. Reorganization of school districts must be carefully undertaken as not to result in too much centralization of control.

Nature Songs To Make America Conservation Conscious During Wildlife Week, March 19–25, Featuring the Antlers of Flint, Mich.

EXTENSION OF REMARKS
OF
HON. WILLIAM W. BLACKNEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1950

Mr. BLACKNEY. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I am inserting an article from the National Wildlife Federation, of Washington, D. C., featuring nature songs appropriate during Wildlife Week, March 19–25, in which the Antlers of my home city of Flint, and the Nation's third-ranking quartet, play a prominent part:

It shouldn't require a water-shortage crisis in New York City to arouse Americans into becoming conservation conscious, according to the National Wildlife Federation.

Americans like music, especially old-time barbershop harmony, so why wouldn't a song like Cool Water, as harmonized by a barbershop quartet—the Antlers, of Flint, Mich., for example—help to promote the idea of conserving cool, clear water, and other natural resources, the federation would like to know.

Anyway the federation wants Americans to sing songs of the outdoors and nature in connection with the celebration of its thirteenth annual National Wildlife Restoration Week, March 19 to 25. It will be assisted by 600 city and small town chapters of the Society for the Preservation and Encouragement of Barber Shop Quartet Singing in America, Inc.

The Antlers, the Nation's third-ranking quartet, recently became the first SPEBSQSA foursome in the society's 12-year history to entertain at the White House, as well as to sing barber-shop harmony for a world-wide radio audience through the United States State Department's Voice of America transcribed programs. The Antlers are among the quartets being considered to accept a United States Army invitation to tour the Far East to sing for our troops there next spring.

After entertaining in the east wing of the White House, the Antlers, past Michigan champions, presented albums of their latest recordings, including Cool Water, to Maj. Gen. Harry H. Vaughan, military aide to the President, for himself and the President, a member for several years of Kansas City chapter of SPEBSQSA.

Later the Antlers sang Cool Water for Carl D. Shoemaker, Washington correspondent of the National Wildlife Federation, and member of the Federal Water Pollution Control Advisory Board. The occasion was Mr. Shoemaker's appearance before the International Board of SPEBSQSA, in convention assembled at Hotel Statler, to thank President O. H. King Cole, of Sheboygan, Wis., and the society's directors for their cooperation to "keep America singing" during wildlife week.

Already barbershoppers are participating in conservation radio programs in New Jersey, according to the Federation's representative in that State, Reuben Cain, of Plainfield, and in other States they are preparing for special wildlife-week events.

Milwaukee's High Life Quartet has volunteered its services for wildlife week to Rudy Kornetz, of Milwaukee, president of Conservation Unlimited, Inc., Wisconsin State affiliate of the National Wildlife Federation. This quartet features a special wildlife-week version, written by its tenor, John Sutschek, of a song, Way Up North in Wisconsin, originally composed by Edward Berg, Milwaukee barbershopper and group chairman of the industrial-arts department of Washington High School.

Herbert McKnight, of 51 Cherrywood Avenue, Toronto, Canada, has written the words and music of a song for wildlife week, about a 4,000-acre wildlife sanctuary, in which he states he has made 9 lakes "for wild water birds to rest during the migration period in flight to and fro between Canada and the United States." Mr. McKnight has offered his song to the Federation "to further wildlife conservation" in the United States and Canada.

To aid in the musical activities in connection with the wildlife-week conservation drive, SPEBSQSA headquarters in Detroit has furnished a selected group of songs from a recent society compilation of 500 songs arranged for four-part harmony.

The list includes the Hunters' Chorus, for hunters; I Get the Blues When It Rains, for sport anglers; Trees, for foresters; Listen to the Mocking Bird, for bird lovers; Deep River, for boating enthusiasts; and My Music Mountain Home, for mountaineers.

Several songs are suggested for farmers and soil conservationists, such as By the Watermelon Vine, Old MacDonald Had a Farm, the Three Little Pigs, and Coming Through the Rye.

For zoologists, the list includes Down in Jungle Town, the Monkey's Wedding, and Don't Go in the Lion's Cage Tonight. Dog lovers can sing Old Dog Tray and You Gotta Quit Kicking My Dawg Around.

For trail riders, there are Old Pal of My Saddle Days, the Old Grey Mare, and I Found a Horse Shoe. For cattlemen, Home on the Range. For hikers, While Strolling Through the Park One Day. For yachtsmen, Moonlight Bay. For apiarists, When the Bees Are in the Hive. For horticulturists, Sweet, Sweet Roses of Morn. For water conservationists, How Dry I Am; the Old Oaken Bucket; and Old Man River.

Even insect collectors have such familiar numbers as Moth and the Flame and Blue Tail Fly; while mineralogists can harmonize Down in a Coal Mine; geologists, You're Not the Only Pebble on the Beach; and orchardists, In the Shade of the Old Apple Tree.

In the Good Old Summertime appeals to millions of recreation seekers, while seashore devotees have Cockles and Mussels, and motorists, Highways Are Happy Ways.

According to the federation, there are literally hundreds of American songs relating to water, soil, trees, plants, and wildlife, all essential to human living, that are appropriate for Wildlife Week harmonizing.

"Barber shoppers" are distinguished as civic-minded preservers and encouragers of barber shop quartet singing, the federation said, and they set an example for 150,000,000 Americans to be militant preservers and encouragers of sound conservation and wildlife management practices.

Some species of wildlife today are only a memory, and unless Americans take conservation problems more seriously still other species will be remembered by future generations only in song and story, the federation warned.

Shall I Wasting in Despair would fit the situation if the conservation battle were to be lost, it has been suggested.

Let's preserve our natural resources together with the good old songs of the outdoors, and Americans will lead truly harmonious lives for many generations to come, the federation declared.

As reminders of our heritage of wildlife and plants, the federation is distributing millions of its 1950 series of full-color wildlife conservation stamps in connection with Wildlife Week. Proceeds from the sale of these stamps, depicting birds, mammals, flowers, and trees, are used for maintaining its conservation-education program and its news and legislative reporting services.

National chairman of Wildlife Week is to be announced. Honorary chairman is Bing Crosby, famed songster and outdoor sportsman. Governors of the 48 States have been asked by Federation President David A. Aylward to serve on the National Wildlife Restoration Week Committee. Several governors are already preparing to proclaim Wildlife Week in their respective States, including New Hampshire, Ohio, Oregon, and Tennessee.

Veterans' Newspapers Favor National Lottery

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. TEAGUE. Mr. Speaker, on the inspection trip I made with members of the House Foreign Affairs Committee last fall, I noticed that a great many of our neighboring countries used a national lottery to support their eleemosynary institutions. They have found that Government-controlled gambling will help defray a great part of the necessary expenses for hospitals of all kinds, homes for the aged, and so forth.

Here in the United States we have not looked with favor upon legalized lotteries either in our States or in the United States as a whole. I was surprised to learn, however, from the following editorial, that our forefathers helped finance the Revoluntionary War with a national lottery which was voted by the Continental Congress in 1776.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial appearing in the December 17, 1949, issue of the Vet-Times, together with the February 1950 Veterans Report editorial entitled "Vote National Lottery":

[From the Vet-Times of December 17, 1949]

We think the time has come to plan the method to be used in paying a Federal bonus to the veterans of World War II.

We think we have the logical plan, but it is up to you veterans yourselves to say whether or not you want us to begin and carry on the long and costly crusade which will be necessary.

Here's the idea: Do you think the Federal Government should finance the payment of a bonus by legalizing and holding regular national lotteries?

We say "Yes."

The only objection we have ever heard raised against a Federal bonus is the cost involved. We have been told—falsely—that it would bankrupt the country. We have been told that the veterans themselves would have to pay for the bonus in taxes.

We think that the time has come when the problem of a bonus and the method of paying such a bonus should be looked into in the light of common sense. A national lottery is the logical answer to all of the problems involved.

The readers of the Vet-Times have long since proved themselves accurate barometers of veteran opinion throughout the United States. Therefore, if a preponderance of our readers vote to endorse payment of a bonus by means of a national lottery, we shall forthright launch a crusade to get Congress to enact the required legislation.

Such a crusade will not be an easy one. There has been public agitation in this country for a national lottery before. This time, however, the wishes of 16,000,000 veterans and their families should be given some heed by the Congress.

During the progress of any such crusade the Vet-Times will expect to be the target of editorial abuse in many areas. The "do-gooders" and the supermoralists will cry "shame."

But once the crusade is launched and backed by your support and the support of your buddies in every walk of life, we can't lose.

Aside from the great advantages accruing from a national lottery in the payment of a Federal bonus, we believe that it will play a substantial part in decreasing the kind of crime which breeds upon such illegal forms of gambling as the numbers racket, off-track horse-race betting, etc.

The arguments in favor of a Federal bonus lottery are many and valid. Every year the American people expend billions of dollars on gambling in one form or another and more often than not become lawbreakers in the process. Too often the odds are all against them.

Horse racing—the sport of kings—has become such big business in this country that it now gives direct employment to about 260,000 people and its annual take runs into the multimillions.

The numbers racket, flourishing illegally in every major American city, reaps a golden harvest for those who operate it outside the law and is charged with corrupting and demoralizing law-enforcement agencies through the pay-offs that are necessary for unhampered operations.

Rarely do the profits from such illegal sources of income find their way into the United States Treasury in the form of payment of taxes in full.

There is no way to stop Americans from gambling if they want to gamble any more than prohibition laws could stop Americans from drinking if they want to drink. And today, with the Treasury receiving huge dividends from liquor taxes, those who oppose drinking on moral grounds still do not drink themselves.

While almost all forms of gambling are illegal in this country, Americans gamble constantly. Seldom is there anything pernicious in the type of gambling that attracts the majority.

Money from this side of the Atlantic makes up more than half of the millions which are gambled yearly on the famous Irish sweepstakes. But hospitals in Ireland—not veterans in the United States—are the beneficiaries of this money.

Although lotteries are banned in every one of the 48 States, churches and other charitable projects from coast to coast are financed by lotteries, disguised in a variety of forms to get around the legal ban that few believe in and even fewer obey.

Office pools on football and baseball games, election bets, turkey drawings, bingo games, slot machines, pinball machines, even those friendly Friday night poker games, usually involve gambling and as such are illegal.

Millions of dollars in monthly revenue would pour into the Treasury through a national lottery. The proportion of the money necessary to finance prizes for winners and to pay the costs of administration would be deducted from the pool and the balance deposited in the Treasury for use in paying the Federal bonus.

Most veterans of World War II were drafted in a national lottery. If it is legal to draft men to fight and die by lottery, why should it remain illegal to use a lottery to give them a small reward for their service?

[From the Veterans Report]

VOTE NATIONAL LOTTERY

Our forefathers financed the Revolutionary War with a national lottery, voted by the Continental Congress in 1776.

If you don't believe it, just check the files of the Library of Congress, which further reveal that prizes were awarded the holders of lucky numbers in the form of United States Treasury notes which could be converted into cash within 3 to 5 years.

We don't have the figures on the kind of money collected by our founding fathers to fight the British, but we do have the figures on what gambling racketeers are collecting annually, in many instances outside the law and without benefit of taxes.

They pocketed $21,500,000,000 last year, exclusive of such forms of gambling as lotteries, raffles, and carnival games.

That's a whale of a lot of money that rightfully should be diverted into the United States Treasury, which today is spending more than it takes in to finance the staggering cost of modern government.

The biggest item in Government today is national defense. We appropriated roughly $13,500,000,000 this year to guarantee defense of the United States against a potential aggressor.

That is a tremendous amount, and even though it represents a large proportion of every dollar collected in taxes in this country annually it still is $8,000,000,000 less than organized gambling syndicates in America are grossing each year.

With the remaining $8,000,000,000 we not only could pay a bonus to every veteran of World War II, thereby rewarding him for the sacrifices he made to defend our country against Germany and Japan, but we could also virtually eliminate the tremendous drain on the Treasury incident to Veterans' Administration costs, which amount to $7,000,000,000 per year.

What's all this talk about the necessity for more taxes to pay current governmental obligations, when with one stroke of the pen our President could sign into law a bill that would serve to wipe out our multi-billion-dollar deficit in slightly more than 10 years?

We speak of a bill to authorize a national lottery—just such a bill as was passed by the Continental Congress in 1776 at a time when the United States was struggling for independence.

Last month we cautiously suggested in a small editorial that depending on the reaction of our subscribers, Veterans Report might suggest to Members of Congress that a national lottery should be authorized to pay a World War II bonus.

Since our January issue was published, we have thrown all caution to the winds, for we know that our subscribers are behind us, and, further, we know that there is an excellent historical precedent for authorization of a lottery in time of national emergency.

From now on, Veterans Report will actively campaign for a national lottery, not only to pay a bonus, but also to guarantee defense of the United States against all potential aggressors, and to ensure balancing of the Federal budget, while at the same time guaranteeing a more abundant life for the underprivileged of our great Nation.

Who says a bonus for World War II veterans would be a grab on the United States Treasury if financed by a national lottery? Rather, we say it would be a grab on the purse strings of the gambling tycoons in America, who are making more money illegally today than it costs to rearm against the Soviet Union.

Since January, hundreds of ballots favoring a national lottery have been arriving in the office of Veterans Report with every mail. These are not enough, we need thousands of ballots in every mail so that we can put sufficient pressure on Congress to bring the matter of a lottery to a vote this year.

Throw those ballots in. You'll find yours on page 6 of this issue. If you need more ballots, write us, and we'll send them to you for circulation among your friends.

To fight your battles, we need your full support.

The Rising Demand for Sound and Economical Government

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1950

Mr. WHITE of Idaho. Mr. Speaker, many earnest and thoughtful citizens of this country are demanding a change in Government policies and cessation of wasteful spending.

There is submitted herewith for the consideration of my colleagues a letter from prominent residents of Idaho:

EMMETT, IDAHO, *February 9, 1950.*

DEAR MR. WHITE: We are very much in favor of the recommendations of the Hoover Commission and sincerely hope it will be put into effect very soon to stop this vicious senseless waste of taxpayers' money. We do not mind paying taxes but when there is such a terrible waste and still up goes the cry for more and more taxes, we feel a stop should be put to it. The budget certainly should be balanced and if it isn't in times of such prosperity just when is it going to be? It can be now and with lower taxes, too, if this criminal waste is stopped. Many of the policies of the present administration are mighty hard to take to say the least. This food surplus fiasco is a disgrace. Why are potatoes coming in from Canada when 50,000,000 bushels of our own are to be destroyed? Why are dried eggs and milk coming in from Communist China when we have a huge surplus? To think that a country and one of the few in the world which has enough food should have men in power who order that food destroyed is almost unbelievable and such tragic, vicious nonsense should be stopped. These are only a few of the things that weigh heavily on us and we are wondering why such policies are being continued. It is a Democratic (so-called) Congress it is true, but it seems to many of us that there are enough Republicans and others too, who, if they do not agree with these policies, could change them if they wanted to. If the opposition would spend some of the time on these problems that they spend disagreeing with each other perhaps more needed changes could and would be made. Look at some of the proven charges against some of our officials. Shameful to say the least. Still some seem to want to discredit Mr. Hoover of the FBI. Seems to many of us that Mr. Hoover has given much more service to his country than he has been paid for and that he, if anyone, needs not only more pay but more men too. There are so many things that point to our country being sold down the river that we are just getting plenty tired of it and feel our Representatives and Senators alike can do something about it while there is still time. Let's hope that one of these days we will have the kind of government resembling the one built on the principles that made our country great.

We are,

Sincerely yours,

Mr. and Mrs. FRANK LEECE.

Rent Control Robs an Infant

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. HOFFMAN of Michigan. Mr. Speaker, all too often the administration and the Congress, under its control to remedy some real or fancied hardship, has forgotten the principles laid down in the Constitution.

Let us lay aside the thought that legislation is sometimes enacted because those who desire it, who will be benefited by it, are voters and outnumber those who do not want it, who would be injured by it.

Nevertheless, it is true that when the administration or the Congress under its guidance attempts to take from one class of citizens a part of the income from its property, make another group the beneficiaries of that income so taken, it violates that provision of the Constitution which guarantees that a man shall be secure in his property, that it shall not be taken from him, even by the Government, without just compensation.

In recent years, the Supreme Court has been giving us judicial legislation. Apparently, instead of seeking out the true intent of the Congress and measuring that intent by the standard set up in the Constitution, it has, by judicial legislation, imposed upon the people its theory of what the law should be.

I am familiar with the decision of the Supreme Court in the case of *Woods* v. *Miller Co.* (333 U. S. 138), where it upheld the validity of the rent-control law, but, notwithstanding that decision, I assert that it is unjust and unconstitutional through rent control to deprive an individual of a part of the rent from his property in order to benefit another citizen.

Neither the Congress nor the Court has authority to take from one man even a part of his property and give it to another.

An example of how the rent-control law robs an infant is found in the following correspondence, I quote:

ROLLIN R. WINSLOW,
ATTORNEY AT LAW,
St. Joseph, Mich., February 3, 1950.

The Honorable CLARE E. HOFFMAN,
Member of Congress.

DEAR CLARE: I am reluctant to bother you knowing the heavy demands upon you in these difficult times. However, the application of the rent-control law in one of my cases seems so very unfair and unreasonable that I feel constrained to do so.

As the guardian of the estate of Joan Faith Pitcher, a minor and the victim of a broken home, I leased the only asset in the estate, a residence in Niles, under date of February 14, 1949, at $420 payable semiannually for a term of 3 years. The lease was approved by the probate court. The lessees were very anxious to obtain the premises at this rental.

The rent director, as you will see by the enclosed correspondence, admits that at the time the lease was executed the premises were not under rent control as they had not

been previously leased having been occupied by members of the family; nevertheless, he tells me that I must cease accepting payment 6 months in advance and threatens to reduce the rent from $70 a month to $45 a month unless I can show comparable rentals on similar properties in the neighborhood as of April 1, 1941. You can realize in view of the increased cost of living since 1941 how much of a chance I have of doing that.

The area rent attorney denies that the Housing and Rent Act of 1949 thus operates ex post facto and, though the rent is reduced by $25 per month and cannot be collected in advance, yet he maintains that this does not vitiate the contract (see penultimate paragraph of his letter dated January 11, 1950).

I am asked to refund to the lessees all rents over $45 per month since April 1, 1949, or $275. The estate does not possess this sum as the taxes are high and I have paid $25 a month for the child's care and comforts since lease was signed under order of the probate court so you may have to bail me out of jail as I certainly will not pay from my own funds.

The rent attorney (Cholis) is well thought of. This matter is no reflection upon him as he probably gets directions from Washington.

Sincerely yours,

ROLLIN R. WINSLOW.

P. S.—If the estate had any money I would fight the matter in court but that is not possible.

JANUARY 10, 1950.

Re 520 Cedar Street, Niles, Mich. Docket No. M-3230.

R. L. JACKSON, Esq.
Rent Director, South Bend, Ind.

SIR: I acknowledge the receipt of Form No. D-402 stating that you have been advised that I am in violation of the rent regulation.

As guardian of the estate of Joan Faith Pitcher, minor, I did on February 14, 1949, with the approval of the probate court enter into a 3-year lease of the above premises to Emerson Vaughn and Cleo Vaughn, husband and wife, for the sum of $2,520, i. e., rent of $420 payable semiannually in advance.

Members of my ward's family advised me that from the time the Emergency Price Control Act of 1942 went into effect and up to the time the lease was executed, the premises had not been rented but had been occupied by members of the family. As the lease was executed before the Housing and Rent Act of 1949 went into effect it was my understanding that it was not necessary for me to register the above housing accommodation. If I have been wrong in this assumption I should be grateful if you would advise me wherein I have been in violation. I shall hold Form D-402 pending your reply.

Sincerely yours.

OFFICE OF THE HOUSING EXPEDITER,
AREA RENT OFFICE,
South Bend, Ind., January 11, 1950.

In re: 520 Cedar Street, Niles, Mich.
Mr. ROLLIN R. WINSLOW,
Attorney at Law, St. Joseph, Mich.

DEAR SIR: Acknowledgment is made of your letter of January 10, in reference to the above-captioned premises. Under the Housing and Rent Act as it existed prior to April 1, 1949, certain housing accommodations were exempt from rent control. Among these were those accommodations which were not rented to anyone, other than immediate members of the owners' family, for 24 consecutive months between February 1, 1945, and March 30, 1949. Thus, from your letter, it is obvious that the premises in question were free of rent control up to April 1, 1949.

The Housing and Rent Act of 1949, effective April 1, 1949, however, would modify and change the rent act, among other changes, eliminating the above exceptions. Thus, the premises in question reverted to rent control on April 1, 1949, and as a result, a registration statement should be filed showing the maximum ceiling rent that was charged on April 1, 1949. This Office, in turn, will process the registration and, if it deems the rent in excess of what comparable units are renting for, it will, after due notice to you, reduce the rent to that of comparability. In addition, the rent act provides that only 1 month's rental at a time may be collected.

It is appreciated that the contract was entered into during a period of time in which the premises were free of rent control. In spite of this, the premises in question are subject to rent control and the maximum rent subject to being properly fixed by the rent office. If the rent office does decrease the maximum-ceiling rent, in my opinion it does not vitiate the contract, but rent suspends any portion of that contract which is in conflict with the rent act so long as the rent act is in effect.

If you have any further questions in this matter, please feel free to call on us.

Very truly yours,

ALEXIS T. CHOLIS,
Area Rent Attorney.

JANUARY 12, 1950.

Re 520 Cedar Street, Niles, Mich.
Area Rent Attorney,
South Bend, Ind.

ALEXIS T. CHOLIS, Esq.,

DEAR SIR: I acknowledge receipt of your letter dated January 11, 1950. As guardian of the little girl who owns the above property I am under the jurisdiction of the probate court here. For this reason it will be necessary for me to submit the matter to the court in the event that the sole income of the estate is affected. I should, therefore, appreciate your advising me concerning the specific retroactive provisions of the Housing and Rent Act of 1949 since it was passed ex post facto. I do not see how it can be contended that a decrease in the maximum rent ceiling as established by the lease and a refusal to permit me to accept rent in advance as provided by the contract would not in fact vitiate the contract.

My ward is the victim of a broken home and these rents represent the only income of her estate. The mother has had a very rough time of it through no fault of her own if I read the files in the divorce case correctly and any reduction in the rents would work a genuine hardship. The people who rented the property were very anxious to pay the rent demanded and were restive under the delays which were necessary in order that the probate court might approve the lease.

Sincerely yours.

OFFICE OF THE HOUSING EXPEDITER,
AREA RENT OFFICE,
South Bend, Ind., January 18, 1950.

In re 520 Cedar Street, Niles, Mich.
ROLLIN R. WINSLOW,
Attorney at Law, St. Joseph, Mich.

DEAR SIR: I am in receipt of your letter of January 12, in reference to the above captioned premises. As yet, no rent reduction has been ordered. A request has been merely made that a registration statement be filed, showing the rent first charged on April 1, 1950, as being $60 per month. The rent office will then make a determination as to whether this amount is excessive. It will before entering an order of reduction, if any, give you an opportunity to present evidence as to whether you think the sum of $30 per month is proper. The only action which should be ceased immediately is the prepayment of rent 6 months in advance.

The Housing and Rent Act of 1949 would not operate ex post facto. It merely stated that the particular premises in question would be controlled from April 1, 1950, and thereafter. It did not effect the rental prior to April 1, 1950. I assume that since a contract had been entered into, prior to April 1, 1950, it is your contention that the setting aside of that lease is the ex post facto action. The following paragraph is indicative that the provisions of the Rent Act controlling the property from April 1, 1950, is constitutional.

It has long been established that "the operation of reasonable laws for the protection of the public cannot be headed off by making contracts reaching into the future" (Holmes, J., in *Dillengham* v. *McLaughlin* (264 U. S. 370, 374).) "Federal regulation of future action based upon rights previously acquired by the person regulated is not prohibited by the Constitution" (*Fleming* v. *Rhodes* (331 U. S. 100, 107)). There are many other decisions under the old rent act and the new rent act. Among these decisions are: *Woods* v. *Cobleigh* (75 F. Sup. 125, affirmed 175 F. (2d) 167, certiorari denied, 337 U. S. 924); *Woods* v. *Durr* (176 F. (2d) 273); *Porter* v. *Shibe* (158 F. (2d) 68).

Affirming the judgment of the *Woods* v. *Cobleigh* case, the court of appeals, speaking through Chief Judge Magruder, declared in *Cobleigh* v. *Woods* (175 F. 2d 167, certiorari denied, 337 U. S. 924 (at p. 169)):

"The constitutional power of Congress so to provide is none the less effective though it may involve prospective modification of existing agreements between landlords and tenants, valid when made" (*Fleming* v. *Rhodes* (1947, 331 U. S. 100, 107, 67 S. Ct. 1140, 91 L. Ed. 1368); *Taylor* v. *Brown* (Em. App. 1943, 137 F. 2d 654, 659, certiorari denied 1943, 320 U. S. 787, 64 S. Ct. 194, 88 L. Ed. 473)).

If there are any further questions, please feel free to call on me.

Very truly yours,

ALEXIS T. CHOLIS,
Area Rent Attorney.

[Stamp of issuing office]

(Concerning 520 Cedar Street, Niles, Mich.)

UNITED STATES OF AMERICA, OFFICE OF THE HOUSING EXPEDITER

NOTICE OF PROCEEDINGS BY RENT DIRECTOR

OFFICE OF THE HOUSING EXPEDITER,
AREA RENT OFFICE,
South Bend, Ind.

TO ROLLIN R. WINSLOW,
Guardian, 17 Shepard and Benning Building, St. Joseph, Mich.:

A preliminary investigation by the rent director indicates that the maximum rent for the above-described accommodations should be decreased.

(XX) On the grounds stated in section(s) 5 (c) 1 of the rent regulation. Therefore, the rent director proposes to decrease the maximum rent from $70 per month to $45 per month.

(XX) The rent director further proposes that the order decreasing the maximum rent shall be effective to reduce the rent from April 1, 1949, for the reason(s) stated in section(s) 4 (e) of the rent regulations.

In the event you wish to file a reply to this proposed action, such reply must be filed within 10 days from the date of this notice.

Written evidence supporting your reply must also be filed. Your statements and supporting evidence should be typed or legibly written. The address of the above

housing accommodations and the docket number appearing on this notice should be placed on each document filed.

If no reply and supporting evidence are filed within the above period, the rent director may enter an order decreasing the maximum rent without further notice.

R. L. JACKSON,
Rent Director.

JANUARY 31, 1950.

Washington and Lee University

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 14 (legislative day of Wednesday, January 4), 1950

Mr. ROBERTSON. Mr. President, last June, pursuant to a Senate joint resolution, a congressional committee, including members designated by the President of the United States, attended the bicentennial celebration of a relatively small but highly distinguished southern college. In view of the contribution of Washington and Lee University through the years to the training of men from all States in the Union for public leadership, I ask unanimous consent to have inserted in the Appendix of the RECORD the account of the bicentennial of Washington and Lee written by the editor of the Iron Worker, E. A. Watson, and reprinted in the twentieth anniversary edition of Dixie Business—The Voice of Southern Progress, as its article of the year from a company magazine.

There being no objection, the article was ordered to printed in the RECORD, as follows:

ARTICLE OF THE YEAR FROM COMPANY MAGAZINE

(By E. A. Watson, editor, the Iron Worker)

WASHINGTON AND LEE UNIVERSITY AND ITS BICENTENNIAL CELEBRATION

(EDITOR'S NOTE.—The editor of the Iron Worker, E. A. Watson, has written for his spring 1949 issue a notable account of the bicentennial of Washington and Lee. The editors of Dixie Business have selected it as the finest feature in any company magazine published in 1949. The Iron Worker is published by the Lynchburg Foundry Co., Lynchburg, Va.)

Events marking the bicentennial observance of Washington and Lee University have focused national attention on the institution throughout the school year and will be climaxed in special programs scheduled for April, May, and June. When its first two centuries come to an official close on June 18, 1949, a celebration in keeping with its history and traditions will have ended, and plans for a future befitting the faith and ideals of its founding fathers will have been outlined and inaugurated.

An impressive opening convocation in September started the celebration, with an address by Chief Justice of the United States Fred M. Vinson. Its formal academic procession, led by the Chief Justice and the university's thirteenth president, Francis Pendleton Gaines, included regional bicentennial chairmen from all over America and the school's 1,250 male students, among whom are numbered the distinguished two sons: James and Fred M. Vinson, Jr. Each month since that time has brought additional features to the bicentennial calendar.

President Harry S. Truman, who heads the official commission established by joint congressional resolution to represent the Government and the people of the United States, has stated his expectation of participating in the grand finale of the official national bicentennial celebration. A delegation from the United States Senate and House of Representatives will be present also, and a special State commission created by the Virginia General Assembly and headed by two Washington and Lee graduates, Gov. William Tuck and Lt. Gov. Preston Collins. For the round of final events planned for June 16–18, several thousand of the university's 11,000 alumni have indicated their intention to return to the campus.

Prior to the culminating exercises will be the observance on April 12 of Washington-Cincinnati Day, and on May 10–11 the centennial celebration of the Washington and Lee School of Law. Set for the April date also is the first-day sale in Lexington of the 3-cent bicentennial stamp, the first United States postal issue honoring a college or university.

The contributions of George Washington and the Virginia Society of the Cincinnati to the school in its early days of struggle are commemorated annually by Washington and Lee, and the 1949 date has been set aside for special emphasis. President Harold Willis Dodds, of Princeton University, has been selected as the principal speaker for this occasion, in recognition of Princeton's influence on Washington and Lee's history. Other arrangements for the strictly academic program include awards of honorary degrees to Americans of scholarly endeavor, and a procession of presidents and faculty representatives of leading colleges and universities, national sponsors of the bicentennial, the university's trustees and faculty, the board of directors of Alumni Inc. and student representatives.

In the celebration of the hundredth birthday of the Washington and Lee School of Law, scheduled for May 10–11, the annual series of John Randolph Tucker lectures will be inaugurated with one of the university's most distinguished graduates, the Honorable John W. Davis, as lecturer, Mr. Davis (A. B. 1892; LL. B. 1895; LL. D. 1915), is national chairman of the bicentennial committee and a member of the university board of trustees. He is a former Solicitor General of the United States, one time Ambassador to Great Britain, and was the Democratic nominee for President of the United States in 1924.

The Tucker lectures hereafter to be offered yearly and published by the university, memoralize the contributions of the late Judge John Randolph Tucker, for many years dean of the law school. Subject of one of the initial lectures will be Dr. Tucker's foremost study, constitutional law, viewed in the light of recent trends in that field. A convocation of law students and lawyers in Lee Chapel will further signalize the founding of the Lexington Law School, a private institution started in 1849 by Judge John Brockenbrough, and incorporated into the university during Gen. Robert E. Lee's presidency of Washington College. Faculties of nearby law schools are being invited to join in the observance, which will include also the award of honorary degrees to a group of distinguished American jurists.

In all the planning for the bicentennial year and the development of its program Washington and Lee's heritage has been kept dominant, without any sign of willingness to rest on its laurels. Its noble past has been reviewed in a spirit of natural pride in its enviable traditions, but the beckoning future has been its main theme. The motto on the university's official coat of arms, "Non in cautus futuri," in free translation: "Not unmindful of the future," expresses aptly the feeling that pervades the entire bicentennial observance. When the funds sought for Washington and Lee's advancement are in hand the university may be expected to enter its third century with confident stride. In planning its future it has accepted the obligation of its past. No better pattern could guide it in the years ahead.

Little eighteenth-century Augusta Academy, named for the Virginia county in which it was founded in 1749, was the modest beginning from which has developed the present Washington and Lee University. This progenitor described as "a tiny mathematical and classical school" in the Shenandoah Valley some 15 miles southwest of the town of Staunton, was established by Robert Alexander, who continued as its head for 11 years, and was followed by his close associate, the Reverend John Brown. The academy, said to have been the first of its kind west of the Blue Ridge, drew its pupils from the families of the Scotch-Irish settlers of that section, many of whose descendants have been prominent in the making of America.

John Brown, who became the second rector of Augusta Academy, was a 1749 graduate of Nassau Hall, New Jersey. He was succeeded in 1776 by another Princetonian, William Graham, who took over his duties shortly before the trustees of the school on May 6 of that year, almost 2 months before the signing of the Declaration of Independence, registered their zeal for the cause of the colonists by changing the name of the academy to Liberty Hall. Augusta Academy of the British Colony thus became Liberty Hall Academy of the new independent nation.

The Reverend William Graham, said to have been "a man of extensive acquirements, great originality of thought, warm patriotism, and indomitable energy," is credited with having made possible Liberty Hall's continuance "during the troublous times of our Revolutionary struggle." The academy, reestablished in 1776 at Timber Ridge, near the village of Fairfield, has been described as a log structure in which some 30 youths gathered from their boarding schools in the neighborhood, carrying their dinner with them, to study and recite "Latin, Greek, algebra, geometry, and such like scholastic mysteries." These were still pioneers days and instead of broadcloth coats, the students generally wore a far more graceful garment, the hunting shirt, homespun, home-woven, and home-made, by the industrious wives and daughters of the land. "In this rustic seminary a considerable number of young men began their education, who afterwards bore a distinguished part in the civil and ecclesiastical affairs of the country."

In 1782, Liberty Hall Academy, which meantime had moved to the location where its ruins now stand, received its charter from the Legislature of Virginia granting it authority "to confer literary degrees" and "to appoint professors, as well as masters and tutors." The new site was in Rockridge County, formed in 1778 from Augusta and Botetourt, at Lexington, the county seat, so called after Lexington, Mass., where "the embattled farmers stood and fired the shot heard round the world." At its first commencement exercises, on September 14, 1785, 12 graduates received the bachelor of arts degree. It was that same year that the State of Virginia voted Gen. George Washington the stock in the James River Company that he afterwards presented to the school, giving it the stimulus that kept it alive after the Revolution and is still felt to this day.

Since his engineering days, Washington had dreamed of the project to link the Atlantic Ocean with the Ohio River by a navigable waterway. It was therefore a happy expression of appreciation for the general's service to the State and country when the Virginia Legislature awarded him stock in the newly formed canal enterprise, the James River Co. Washington was not willing to accept the gift for his own personal

benefit but agreed to hold securities valued at $50,000, until they began to show profits, and then turn them over to some worthy purpose. In 1796, when revenue began accruing to the company, President Washington, feeling uninformed on Virginia institutions because of his long absorption in national affairs, asked the legislature to designate a recipient. This it preferred not to do, but offered the suggestion that he might select a seminary in the "upper country."

Upon learning how the matter stood, Gen. Andrew Moore of Rockbridge County and Gen. Francis Preston of Washington County, Representatives in Congress from the "upper country" called to Washington's attention the merits of Liberty Hall Academy. To press its cause further, General Moore wrote the Reverend William Graham, the school's rector, suggesting that the academy apply for the gift. Mr. Graham and the board of trustees prepared an address which they forwarded to the President along with a map of the "upper country."

After giving consideration to other possible beneficiaries, Washington decided to bestow the endowment on Liberty Hall because, he said, he wanted to help a school that was helping itself. In reply to a letter from the trustees informing him that in appreciation of his donation the name of the institution had been changed to Washington Academy, he wrote on June 17, 1798, that "to promote literature in this rising empire and to encourage the arts have ever been amongst the warmest wishes of my heart, and if the donation which the generosity of the Legislature of the Commonwealth of Virginia has enabled me to bestow on Liberty Hall—now by your politeness called Washington Academy—is likely to prove a means to accomplish these ends, it will contribute to the gratification of my desires."

Through reinvestment the gift is still a part of Washington and Lee's endowment, the State of Virginia having taken over the corporate powers of the James River Canal Co. in 1818, and at a later date replaced the stock with certificates of indebtedness which were in time redeemed. Additional funds came to the school in 1802 from the Virginia Society of the Cincinnati, the organization formed at the close of the Revolution by General Washington's officers in the Continental Army. Inspired by their leader's gift, the group bestowed upon Washington Academy their total holdings valued at $25,000, accumulated through the contribution by each member of a month's military pay. This donation likewise continues to bring income to the university.

The third gift in those early years was the bequest of John Robinson, native of Ireland, a soldier under Washington and afterwards a trustee of the college, who left his entire estate to the school. This brought the endowment up to a little more than a hundred thousand dollars, which was the financial foundation for its operation during most of the nineteenth century.

On Christmas eve, 1802, the stone building that housed Liberty Hall was destroyed by fire, the complete devastation of which may be judged by the masonry that has been left standing on the spot. This loss was a staggering blow, but George Baxter, who shortly before had succeeded William Graham as rector, felt that Washington's gift carried with it the obligation to continue the school regardless of setbacks. Classes were therefore held in rented buildings in Lexington until, upon the purchase of a portion of today's campus and the erection on it of another school, in 1804, Washington Academy was again ready to go forward. With the authorization of the legislature, in 1813, the name became Washington College.

Construction of Washington Hall, center building of the present colonnade known as the Washington College group, was begun in 1824, with elaborate ceremonies marking the laying of its cornerstone. The development of the college from that time to the outbreak of the War Between the States was gradual but progressive. By the time of the presidency of the Reverend Henry Ruffner, who was inaugurated in 1837, the number of students ranged from 80 to 100, which was the maximum that could be accommodated. Upon the completion of additional buildings in the 1840's the college increased its capacity to 150 students.

In Henry Howe's History of Virginia, published in 1845, is an interesting drawing of the ante bellum buildings and campus and an account of the school that includes a statement of the cost of higher learning of that day: "The bill of expenses in the college are: Treasurer's bill for tuition, room rent, deposit, and matriculation, $42 per annum; board $7½ to $8 per month; washing, fuel, candles, bed, etc., about $3 per month. Total per session."

Soon after the outbreak of the War Between the States the students of Washington College formed the Liberty Hall Volunteers, a military company which fought with distinction in the Confederate Army. So few were left in the college as the tragic conflict wore on that classes at first were curtailed and eventually had to be discontinued entirely. When the Federal forces driving down the valley under command of Gen. David Hunter entered Lexington in June 1864 and destroyed the Virginia Military Institute barracks and other buildings, Washington College also was damaged, though not so extensively as its neighbor. Local tradition has it that ladies of the town, pointing out the wooden statue of Washington atop of the college's main building and explaining its endowment from the "Father of His Country," persuaded the Northern officers to spare the property.

Although Washington College was never officially closed during the War Between the States, it was on the verge of financial collapse when hostilities ceased. Only by borrowing on their personal credit were the trustees able to reorganize the institution and begin the work of repairing the buildings and bringing about its general rehabilitation. When the matter of the presidency of the war-torn college came up for consideration, the name of Gen. Robert E. Lee was proposed. The trustees knew that the beloved leader of the Confederate forces had already refused offers carrying large salaries, but they had heard that he favored a connection with an institution of learning. Some thought it "unmingled impudence to tender to General Lee the head of an institution which had nothing then and must start at the bottom rung of the collegiate education ladder." Others reminded those who hesitated that if the college had nothing, then General Lee's acceptance would immediately correct that condition. The vote to extend him an invitation to the office was unanimous.

In a letter dated August 5, 1865, and delivered in person by Judge John W. Brockenbrough, the rector, General Lee was told that Washington College, though a great sufferer from havoc and desolation was still blessed with a vigorous vitality, and needed only the aid of his illustrious character and transcendent attainments to reanimate her drooping fortunes and restore her to more than pristine usefulness and prosperity. General Lee considered the matter thoughtfully for days and then wrote the treasured letter of August 24, 1865, in which he stated his willingness to accept, but his fear that it might draw upon the college a feeling of hostility because of his being excluded from the terms of amnesty in the proclamation of the President of the United States, and an object of censure to a portion of the country. The trustees, casting aside his objections, adopted resolutions asking him to enter upon the duties of the presidency of the college at his earliest convenience. Rejecting offers that would have paid him as much as $50,000, General Lee on October 2, 1865, was formally installed as head of Washington College at a salary of $1,500 a year.

In the biography, General Lee, by Fitzhugh Lee, his nephew and cavalry commander, it is said that one of the professors of Virginia Military Institute termed the offer that brought the idol of the South to Lexington the happy audacity. The same book describes his arrival. Traveller, the famous gray which had borne him so faithfully amid the flying bolts of battle, now carried him to peaceful pursuits. Unheralded and unattended, having ridden from Powhatan County in 4 days, he drew rein in front of the village hotel, an old soldier recognized him, gave the military salute, placed one hand upon the bridle, the other upon the stirrup, and stood, waiting for him to dismount.

Through the "happy audacity" of its trustees the college was soon back on its feet. In the academic year of 1859–60 there had been 95 students, all except 1 from the State of Virginia. In 1867–68 there were 410 students enrolled from 20 States and 1 foreign country, with 68 percent from outside Virginia. The University's present cosmopolitanism—it is one of the most cosmopolitan in America—derives from General Lee's regime as its president. General Lee was president until his death on October 12, 1870, and in his 5 years' administration of the college's affairs its growth was phenomenal.

Under General Lee came not only this greatly increased enrollment but also many changes in the curriculum. During his first year, five new departments in liberal arts were added and a limited elective system of study was introduced. In 1866, through affiliation with the Lexington Law School, a private institution founded in 1849, a department of law and equity was established. A school of civil and mining engineering was organized that same year, and the students' business school set up the following year, laid the foundations for the present School of Commerce and Business Administration. From General Lee's proposal in 1869 to establish instruction journalism, the first program of training in journalism on the collegiate level in the world, eventually came the present Lee Journalism Foundation.

The greatest development of this postwar period, however, came in "the drama of reconciliation * * * unfolded first in the heart of Lee and then on the campus of his school. From every section great benefactors joined hands with him in strengthening an institution that was to be as broad as his own inclusive loyalty: Cyrus McCormick, of Chicago; and George Peabody, of Massachusetts; and W. W. Corcoran, of Washington; and Warren Newcomb, of New Orleans; and Thomas A. Scott, of Philadelphia—he had been Mr. Lincoln's Assistant Secretary of War; and Henry Ward Beecher, of Brooklyn, even a distinguished group of English admirers, and hundreds more who wanted a part in Lee's work." Through General Lee's leadership nationalism replaced sectionalism in the school.

Upon the death of General Lee the college trustees, noting that the two most celebrated influences in their respective centuries were Washington and Lee, resolved that they be hereafter associated indissolubly as founder and restorer of the school. Gen. G. W. Curtis Lee succeeded his father as president in 1871, and that same year the name of the institution was changed to Washington and Lee University.

Through succeeding administrations, each marked by its particular adjustment to social and economic conditions and educational needs, the university has continued to press on despite occasional discouragements. William Lyne Wilson, Member of Congress and

UNIVERSITY OF VIRGINIA LIBRARY

Postmaster General under President Cleveland, became head of the school in 1897. Dr. George H. Denney, who followed him in 1901, was succeeded in 1912 by Dr. Henry Louis Smith, Dr. Francis P. Gaines has been president since 1930.

Washington and Lee University, loving both church and State, has never received from either a dollar of its support or a suggestion of its policies. Through its two centuries it has remained a small school, a personal school, a school of accepted tradition. Its students maintain manners that are apparent to even the most casual visitor, dress like gentlemen, and accustom themselves to the better conventions, as befits the memory of its founders and the columnal dignity of its academic buildings. Here they speak to each other and to strangers with courtesy and the sincerity of friendship.

Institutions of learning elect for varied motives the title they bear; tribute to a personage revered, suggestion of locality, declaration of identity with a group.

But the name of Washington and Lee is history and testimony and creed.

Farley Appeals to the People To Force Curb on Spending

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1950

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks, I am including herewith an article from the Buffalo (N. Y.) Evening News of February 11, 1950, entitled "Farley Appeals to the People To Force Curb on Spending":

FARLEY APPEALS TO THE PEOPLE TO FORCE CURB ON SPENDING

SYRACUSE, February 11.—Checking Government costs is not a political issue but an American issue and true Americans had better do something about it at once.

This was the blunt advice Friday night of James A. Farley, former national chairman of the Democratic Party, in a hard-hitting endorsement of the Hoover Commission recommendations on Government spending. Mr. Farley, board chairman of the Coca-Cola Export Corp., addressed the convention banquet of the New York State Press Association in Hotel Syracuse.

The speaker minced no words in supporting most of the Hoover report: "It is the solemn duty of every American citizen to take this report with the utmost seriousness and to cooperate, as the years pass, in bringing about the adoption of its helpful and excellent recommendations."

SIX TIMES THE NATIONAL INCOME

If Government costs increase for the next 50 years as they did from 1900 to 1950, said Mr. Farley, the Government by the year 2000 will cost $6,000,000,000,000, or six times the whole national income. On that basis, he said, 20,000,000 employees would be on the pay roll at the time.

"The lesson of these simple figures," said the executive, "is that unless we find some way of reducing the cost of Government it will soon grow so great as to consume not only everything that we all earn, but everything that all have saved, and ultimately everything that we call property, which is owned by all of us.

"This is a very sobering situation. It is to the interest of every citizen to impress upon those whom he has elected to office the necessity that this increase in the burden of Government be checked, or we shall find ourselves living under a form of government which is utterly different from that in which we were born and under which our forefathers built a great country."

AN AMERICAN ISSUE

The problem, declared the former postmaster general, "is an American issue and every true American, regardless of party, owes it to himself to study it, understand it and do something about it."

The former Democratic chairman lauded former President Herbert Hoover and the members of his Commission for the tremendous investigative and detailed accomplishments they performed. Mr. Farley sketched several of their recommendations designed to reduce expenses and expedite services by streamlining Government functions and agencies. He continued:

"One of the most startling things in this report is the fact that it proves pretty conclusively, I believe, that Government, as now constituted, has grown so fast, so great, with such haphazard methods, that it is actually out of control of the very people conducting its affairs.

"That means that, with things as they are, Congress lacks the real means of controlling its own expenditures, and the President himself lacks the means of controlling the very departments over which he has the constitutional responsibility of direction."

ASKS ACCOUNTING OF PROPERTY

Especially needed in the Federal set-up, said Mr. Farley, are separate auditing and accounting systems as well as a "real accounting of the property" the Government owns. Such advances, he said, would place the Government in the pattern set up by modern business administration methods.

Mr. Farley emphasized that the extent to which the Federal Government, through grants-in-aid, is absorbing obligations and responsibilities of State governments is "one of the most serious tendencies in our Federal system."

"The way to stop this trend," he advised, "is to restore to the States some of the sources of taxation that the Federal Government has taken over. Here again the Hoover Commission has some very constructive and important recommendations."

It's easy to recommend things as the Hoover group did, said Mr. Farley, but it's another thing to get the recommendations accepted.

URGES PRESSURE TO RETRENCH

"Congress is under so many demands for the expenditure of funds that it finds it almost impossible to resist them," he declared. "What is needed is that Americans be organized to put just as much pressure on Congress to save as various pressure groups have put on it to spend.

"We must make a decision as to what should come first in the way of Government expenditures and then stop the increase."

The former Democratic chieftain told his listeners:

"We have got to have men in Congress who look to the need for a sound national economy with a balanced budget, and a little less concern for what certain communities and particular departments are demanding. This is a national cause and it requires a national point-of-view.

"We cannot, if we expect to remain a great and growing nation, indulge in an extension of the practice of deficit spending in times of great prosperity such as these. Our tax burden now is about all that we can support. An increase in our income taxes would probably yield less, rather than more revenue.

"We must reduce our cost of government, and we must reduce it even if some people get hurt in the process."

Rebuilding the Philippines

EXTENSION OF REMARKS
OF
HON. GEORGE W. ANDREWS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1950

Mr. ANDREWS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Frank A. Waring, Chairman, United States Philippine War Damage Commission, before the Women's National Democratic Club, Washington, D. C., Monday, February 13, 1950:

Madam Chairman, members of the Women's National Democratic Club, and guests, I am delighted to have this opportunity to discuss with you the Philippines and its problem of reconstruction—delighted because the United States Philippine War Damage Commission has had a part in this work since 1946, and it is a subject which lies very close to our hearts.

Recently I had the privilege of appearing before the Appropriations Committee of the House of Representatives in connection with the Commission's last budgetary request. To the members of that committee I was able to say, "Gentlemen, this Commission is one agency of the Government which will finish its job before Congress said it must, and for less administrative expense than the Congress authorized." Every member of the Commission's staff is proud of that record. I do not suppose that many of you realize that today, in Manila and throughout the Philippines, a staff of approximately 100 Americans and 900 Filipinos is engaged in paying the war-damage claims of the Philippine Government and of individual Filipinos and Americans. The members of that staff, involved in a great and unprecedented task, are working diligently, at the rate of 2,000 to 3,000 claims each working day, to terminate their own employment.

In 1946 the Congress passed the Philippine Rehabilitation Act which authorized the appropriation of $400,000,000 for the payment of private property claims for war damages in the Philippines. It also established the United States Philippine War Damage Commission which was assigned the task of adjudicating these claims and distributing the funds. Under the terms of the law, the Commission is required to assess the damage on the basis of prewar values less depreciation. Such values are obviously very much less than current costs. The law further provides that the Commission must pay in full all claims approved for $500 or less. On larger approved claims the Commission must pay $500, and then make a pro rata distribution insofar as its funds permit. On these larger approved claims the Commission is currently paying $500 plus 30 percent of the remainder. It expects that the funds authorized will be sufficient to permit a final liquidating payment of 15 percent. Thus, on the large approved claims, the total payment will be $500 plus 45 percent of the remainder, whereas approved claims not exceeding $500 will be paid in full.

When the statutory filing period of 12 months closed on February 29, 1948, the Commission had received 1,250,000 claims, valued by the claimants at more than $1,200,000,000 and 1,000,000 of these claims, or 80 percent, were for $500 or less in claimed amount. By January 31, 1950, 1,205,000 of these claims had been liquidated and $269,000,000 paid into the Philippine economy. Claimants had valued these processed claims at $938,000,000, and the Commission had approved them for $417,000,000. Thus, with more than 95 percent of the task completed,

the average rate of disallowance has exceeded 55 percent. On the average, therefore, the Commission has approved approximately 45 percent of the amount claimed. This does not mean that all claims were approved for 45 percent of their face value; 82,000 claims, valued at more than $107,000,000, have been disallowed in their entirety. Others, because they were well-prepared and adequately supported, were given a higher-than-average allowance.

Despite this rigorous and business-like policy of adjudication, the Philippine people appear to feel that they have received fair and equitable treatment. Under the law claimants are granted the opportunity to appeal to the Commission for reconsideration of their claims if they feel that an injustice has been done. Thus far, however, appeals have averaged less than 2 percent of the claims liquidated. We believe this to be a very real testimonial to the Commission's record of integrity and equity.

The Commission plans to conclude its work by December 31 of this year, 4 months ahead of the termination date fixed by Congress. We will finish the adjudication of all claims by June 30. Then, when the exact amount of the total authorization remaining for distribution has been determined, we will be in a position to make the final liquidating payment to those with approved claims in excess of $500. Such payments will be made to about 120,000 firms and individuals. At the rate of 2,000 payments each working day, this task alone will require 3 months. Thereafter, we will dispose of the Commission's assets, close our doors, and arrange for the return to the United States of the American members of the staff. You may be interested to know that, in this calendar year, we will pay into the Philippine economy approximately $150,000,000. And this aid comes at a time when it is sorely needed.

There is one impression which has gained some attention that I should like to dispel. It has been said that these funds, paid to small and large claimants alike, have been squandered on luxuries. The statement is simply not true. The Commission has conducted impartial surveys to ascertain the facts. As a result we know that the funds distributed by the Commission have gone where they were intended to go—to rehabilitate the Philippines. A very few exceptions there may be, but they do not constitute 1 percent of the total.

The small claimant has reconstructed or repaired his home, purchased land, or bought work animals, farm implements, tools, and essential clothing for his family. Thus he has become a more productive, and hence mor useful, member of society. The large claimant has taken his war damage funds and, of necessity, added new capital to advance the rehabilitation of his business. On December 31, 1949, claimants with claims in excess of $50,000 had received $39,000,000 from the Commission, but they had invested a total of $116,000,000, or more than three times the amount received from the Commission; thus the effective aid granted by the Commission has been trebled.

The task of investigating and appraising 1,250,000 claims has not been easy. Scattered from one end of the Philippines to the other, property under claim had to be visited for on-site inspections. This travel has involved personal inconvenience and often hazard. All possible means of transportation have been employed, from planes to shoe leather. Several investigations required extended trips in dugout canoes on crocodile-infested streams. An airplane, landing on an infrequently used airstrip, narrowly missed a water buffalo. A Philippine revenue cutter was pressed into service for several weeks to visit isolated islands not connected by commercial services. One assignment necessitated a week's journey on foot, blazing a trail through tropical jungles to reach a mine site accessible before the war only by aerial tram now destroyed. The days of the pioneer are not past, or if so, they have been revived in the work of the Commission.

In addition to the $400,000,000 authorized for the payment of damaged private property, the Congress, as a gesture of good will to the Philippine people, authorized the appropriation of $120,000,000 to assist the Philippine Government in repairing the tremendous damage to its public structures and facilities. For purposes of administration these funds were allocated to four agencies of the United States Government: $57,000,000 was allotted to the War Damage Commission for the reconstruction of hospitals, schools, and Government buildings; $40,000,000 went to the Bureau of Public Roads for the reconstruction of roads and bridges; $18,000,000 to the United States Army Corps of Engineers for the rehabilitation of ports and harbors; and $5,000,000 to the Public Health Service for the restoration of that vital service. I cannot overemphasize the importance of this last activity. Disease has caused an appalling loss of manpower and, hence, production in the Philippines. Malaria is still a chief cause of illness and death, and the incidence of tuberculosis is 10 percent as compared with less than 1 percent in the United States. The Public Health Service, under the able direction of Gen. Howard Smith, has made an invaluable contribution to the welfare of the Philippine people. Filipinos owe General Smith a tremendous debt of gratitude, and the American people should be proud of his accomplishments.

Because of the importance of health, the War Damage Commission gave first priority to the construction of hospitals and municipal waterworks. Second priority was assigned to schools, and, third, to Government buildings, national, provincial, and municipal. All of the Commission's funds have now been awarded, and construction has either been completed or is in process on all approved projects. It is expected that these projects will be completed by June 30, and this phase of the Commission's work will then be terminated.

The funds available to the Commission have been inadequate to restore more than a fraction of the damaged public property. The Philippine Government presented the Commission with claims aggregating $190,000,000. It has therefore been necessary to undertake only the most urgent projects. Yet, the Commission is proud that the American people have made it possible to restore, for the benefit of our Philippine friends, hospitals with accommodations for 3,000 bed patients, schools for 3,000,000 pupils, and water facilities to care for the needs of 6,700,000 persons. Moreover, the accomplishment of these tasks has provided labor for more than 16,000 workmen. We can be proud, too, that we have restored the legislative building where the Philippine Congress meets, that we have provided a home for the supreme court, and two excellent office buildings for the executive branch of the Government. In addition, we have restored all of the provincial capitol buildings throughout the country, and the city halls of chartered cities. The supervision of this work has been arduous, but it has also been gratifying because of the essential facilities which were restored to a people whose land was laid waste in a common cause.

The extent of war damage in the Philippines defies description, and even imagination. Manila, now a city of 1,200,000 inhabitants, was more than 50 percent destroyed. General Eisenhower is quoted as saying it was "the worst damaged city in the world with the possible exception of Warsaw." But destruction was not confined to Manila. It was spread with lavish impartiality from one end of the land to the other. Other principal cities, such as Iloilo, Cebu, Zamboanga, Davao, and Baguio, the summer capital, were laid waste. Factories were bombed, burned, and looted. Major businesses were destroyed, and some of the agricultural land damaged. Many of the people were driven from their homes; farmers lost work animals and tools; thousands were practically penniless, lacking the bare essentials of food and clothing. Sources of employment vanished. The physical damage to property has been variously estimated as ranging from $800,000,000 to $1,250,000,000, the latter figure having been submitted by a reputable American engineering firm.

But despite this damage, some have said, and perhaps some of you are thinking, that other lands have also been damaged by the war. Why then should the United States take this unprecedented action for the benefit of the Philippines? The Philippine Rehabilitation Act was an effort by Congress to fulfill promises made to the Philippine people during the dark days of the occupation. It represented the generous gesture of the United States to aid in the rehabilitation of the war-torn economy of the Philippines at a time when that country was about to embark on a new course as an independent republic. It represented, also, a recognition by the United States of the valiant aid which countless Filipinos had rendered to the allied cause.

But more than that, I would call your attention to the special and peculiar relationship of the United States to the Philippines during the last half century. In that period we labored as best we could to assist the Filipinos in their education and development so that they might be able independently to sustain democratic self-government. I submit to you that our prestige in the Far East is inextricably bound in the success of the Philippine experiment. Equally important and significant is the fact that the cause of democracy in southeast Asia is directly involved in the Philippine success, for southeast Asia, today in a fluid state, has its attention focused on the Philippines and how democracy functions there. Also, I need not remind you that, with recent developments in China, the Philippines has assumed an increased strategic importance. Secretary Acheson, not long ago, referred to the line of defense stretching from Japan, through Okinawa, to the Philippines. Moreover, the Philippines has been a significant factor in the foreign trade of the United States, serving as a major market for American products and a source of essential commodities such as sugar, copra, manila hemp, and hardwoods. For all of these reasons, some more important than others, the United States, in my opinion, cannot afford a failure in the Philippines. If the investments now being made help to insure success, they are investments which will pay dividends in the future.

You may ask, "What are current economic conditions in the Philippines, and what is the outlook for the future?" First let me say that the Philippines is rich in natural resources. Fertile agricultural land combined with a tropical climate will grow many products, such as rice, corn, sugar, coconuts, fibers, fruits, and tobacco. In addition, great stands of timber, including some of the finest hardwoods in the world, are awaiting a market. Production could be doubled or trebled without exceeding the natural rate of forest growth. Although a comprehensive geological survey has never been made, known mineral resources are extensive and sources of water power abundant. Significantly, there is no pressure of population, now estimated at 20,000,000 persons, upon the land; this is not true in other major Asiatic countries. With adequate capital, efficient management, and technical skill, the Philippines could well become one of the world's favored lands, a garden spot in the Far East.

But what are conditions today? Since the war, imports of consumers' goods have been abnormally large because, for more than 3 years of enemy occupation, the Philippines was isolated and its people had exhausted completely their supplies of basic necessities. It is true that some of these imports consisted of nonessentials, such as cigarettes and cosmetics. But I suspect that you ladies realize how important these things can become, especially if they had been denied to you for 3 years. In addition, imports of building materials, machinery, and equipment have also been large because they were required in the work of reconstruction. Without them, industries could not be rebuilt and production resumed. Rehabilitation, of course, was, and is, essential to provide exports, employment, and governmental revenue for the new Republic.

The rehabilitation of agriculture and industry has been a tremendous task, necessarily time consuming. As a result exports have failed to keep pace with the demand for imports, and the Philippines has experienced sizable import balances since liberation. In 1949 the United States paid into the Philippine economy more than $200,000,000 in war-damage payments, veterans' benefits, and other disbursements. These receipts, however, were insufficient to offset a trade deficit of approximately $300,000,000 and reserves, the dollar deposits of the Philippines in the United States, declined.

To strengthen its financial and economic position, the Philippine Government, in recent months, has taken positive action. It has imposed quota controls to curtail sharply the importation of luxuries and nonessentials, and the Central Bank has followed with credit restrictions designed to accomplish the same purpose. Finally, in December, the Government, operating through the Central Bank, imposed exchange controls to provide a mechanism for the protection of its dollar reserves. Steps are also being taken to increase agricultural production, with special emphasis on sugar and manila fiber for export, and on rice to eliminate the necessity of importing it. Moreover, the Philippine administration is presenting to the Philippine Congress a balanced budget for the fiscal year 1950–51. This they propose to accomplish by the introduction of economies, the increase of certain taxes to offset the anticipated decline in customs revenue caused by import controls, and the improvement of their tax-collection procedures.

In 1946 President Manuel Roxas made a hurried trip to the United States to seek a loan so that the Philippine Government might, in those early days, have funds with which to operate. At that time I asked my old friend whether the damage and destruction could be repaired in 5 years. He shook his head sadly and said, "No, Frank, it will take at least 10." One-half of that period is now gone, and much has been accomplished. But the task remaining is very great. For this new Republic, troubled with grave economic problems, I bespeak the continued interest and sympathetic consideration of the people of the United States.

Hon. Eugene O'Sullivan, of Nebraska

EXTENSION OF REMARKS

OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 14 (legislative day of Wednesday, January 4), 1950

Mr. WHERRY. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an editorial entitled "O'SULLIVAN's Oratory," which appeared in the Kearney Daily Hub, of Kearney, Nebr., on Friday, February 3, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

O'SULLIVAN'S ORATORY

Nebraska's Representative EUGENE O'SULLIVAN, of Omaha, apparently is making quite a splash in Washington—particularly in the field of verbose, unnecessary, and downright silly oratory.

Mr. O'SULLIVAN, who represents the Second Congressional District, apparently has decided that a freshman in the House must be noted for something in order to get into the public eye, so he has launched into speeches on the floor of Congress, a sample of which follows:

"Political reactionaries today may advertise haughtily their venal verdure, personally and through equally venal media, spread themselves like the Biblical green bay tree—Larus Nobilis—and claim that the power of gold is supreme, but what doth it avail them; it, too, shall pass away like a drunkard's disturbing dream and be lost forever in fathomless nothingness long before their life's bad book shall have found its last resting place in oblivion's uncataloged library."

In trying times such as these, with the future of the world resting on the shoulders of America's Congress and the people who elected them their delegates, the above-quoted remarks leave one perturbed as to the ability of a nation to survive.

George Dixon, a Washington columnist, after reading the passage quoted, was moved to call Mr. O'SULLIVAN's remarks as "undiluted bilge poured forth without any apparent reason by that great reservoir of hogwash, Representative EUGENE DANIEL O'SULLIVAN, of Nebraska."

It rather makes a Nebraskan blush—even a nonresident of the Second District.

Second-Class Mail Subsidies

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1950

Mr. BIEMILLER. Mr. Speaker, I want to correct what may have been an erroneous impression from my remarks on the postal-rate bill on the floor of the House Wednesday, February 8.

I was pointing out that the Chicago Tribune is the beneficiary of certain second-class mail subsidies which give it advantages over local newspapers in the so-called Chicagoland area. The advantages admittedly exist.

I did not mean to infer that the Tribune favored those subsidies. It is a repeated matter of record that the Tribune's editorial columns have stated the paper's willingness to give up such subsidies if and when Congress should remove them from other newspaper and magazine mailings.

In the issue of April 16, 1948, the Tribune declared editorially:

The Tribune repeatedly has stated that it does not want a free ride in the mail cars. A publisher has no more right than any other manufacturer to a Government subsidy in the distribution of his product.

The newspaper also makes the valid point on several occasions that magazines benefit more from the subsidies than do newspapers.

In June 1942 the Tribune expressed itself thus:

Consistently over the years the Tribune has argued against the use of the second-class mail privilege as a concealed subsidy. That was our position, it is our position, and it will continue to be our position.

I make special note of this situation on the floor of the House because it marks a very special occasion, the first approximate agreement between Colonel McCormick and myself that I can remember. I want to make perfectly clear that I disagree with many of the other conclusions and some of the statements made in the rest of the editorials here quoted in part.

J. Edgar Hoover

EXTENSION OF REMARKS

OF

HON. HAROLD H. VELDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1950

Mr. VELDE. Mr. Speaker, I have received a great many letters from people all over the country asking that I use my utmost efforts to back Mr. J. Edgar Hoover and to oppose the traitorous efforts of those who would seek an investigation of his activities or cause his dismissal as FBI Director. Two of the letters I have received follow:

CREVE COEUR, ILL., *February 11, 1950.*

To Our CONGRESSMAN:

I am of the opinion that those who talk of firing Edgar Hoover, because of wire tapping, or any other means used in order to catch spies and traitors and Communists in our country must have a very guilty conscience. Any means used to catch these people should be used. It looks to me as if Hoover is a better patriot than those that say fire him. I think the Government and lawmakers are entirely too easy on traitors to our country. If you are a true American and loyal to our country, would you object to FBI tapping your wires, if they had any suspicion that you were doing wrong? Of course you wouldn't. I for one say, let Edgar Hoover use his own judgment, just so he catches our spies and criminals. Keep him on the FBI force. He is a wonderful man, worthy of all the respect given him. If it were not for him, Fuchs would still be a free man helping enemies to this country.

Respectfully,

BERTHA WITTEN.

PEORIA, ILL., *February 10, 1950.*

Congressman HAROLD VELDE,
House of Representatives,
Washington, D. C.

DEAR MR. VELDE: I have read in the paper that there is a move being made to get President Truman to fire John Edgar Hoover because the G-men used wire-taps on Russian agents in this country.

If this be so, I urge you to support Mr. Hoover, the most capable head of the best run Government agency we have. He has served his country loyally for 25 years and deserves every true American's support.

Sincerely,

Mrs. ERNEST C. MAGNUSON.

Falling Prices of Farm Commodities

EXTENSION OF REMARKS
OF
HON. PAT SUTTON
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1950

Mr. SUTTON. Mr. Speaker, for the past several weeks much disgust has been expressed over our potato mess.

It must not be overlooked that potatoes are not the only sore spot, because, as of a few days ago, the Government had invested in dried eggs, $89,317,233; in butter, $59,518,797; and in dried milk, $27,399,460. In fact, the surplus-commodity purchases by the Department of Agriculture has been so extensive that it has necessitated a request by the Department to the Congress that an additional $2,000,000,000 be made available for price support.

In this connection, I commend the following editorial which appeared in the Nashville Tennessean on Friday, February 10, 1950, entitled "Eggs for Mr. Kline." Another very timely article is likewise set out below and was published in the February edition of the Southern Farmer, which, by the way, has over 1,000,000 subscribers. The article is entitled "Farmers Threatened With 1920–28 Prices."

[From the Nashville Tennessean of February 10, 1950]

EGGS FOR MR. KLINE

The latest statistics from the United States Department of Agriculture on the results of the Farm Bureau's price-support program should serve to stir even the board of directors of the American Farm Bureau Federation. The reports show that the Department has stock piled now, and available free to public and private welfare agencies for relief distribution, enough of several foods to supply a million Americans in these quantities:

One powdered egg a day for 7 years, 2 pounds of potatoes a day for more than 2 years, and 1 quart of skim milk a day for more than 2 years.

The proportions of the agricultural program sponsored by Mr. Allen Kline, president of the American Farm Bureau Federation, and Governor Dewey's secretary of agriculture if the New Yorker had made the grade, mount with each monthly report. Its absurdities and contradictions multiply. All the relief agencies in America could not consume such surpluses even if the Government would agree to add to its expenses the cost of freight haul and distribution to the relief client.

Such a program seeks to stifle the productive genius of American agriculture by making a mockery of its achievements. Such a program, deliberately plowing under the constructive effort of the American farmer, and at the same time hijacking the urban food consumer is defended by a few self-designated "realistic" farm leaders as an expression of the American way.

Secretary Brannan's program that would allow the farmers a parity price and pass on to the consumer the benefits of high production, they condemn as "a socialistic interference with the basic economic law of supply and demand." What an odd and elastic set of labels the times have brought us.

[From the Southern Farmer, Montgomery, Ala., for February 1950]

FARMERS THREATENED WITH 1920–28 PRICES

There is no longer any point in farmers refusing to face what is happening. For over a year now prices of everything farmers have to sell have been falling. During the last 12 months prices have dropped 22 percent. We are warned by the Department of Agriculture that they probably will fall 12 percent to 15 percent during 1950.

PRICES HEADED FOR FURTHER DROP

In some parts of the country eggs are selling as low as 15 cents; hogs as low as 13 cents; cream as low as 45 cents a hundredweight; poultry has skidded to as low as 21 cents. Dollar income of farmers has been clipped $3,000,000,000. If present prices are allowed to continue farmers will be nicked another $2,500,000,000. If the expected further drop in prices happens—and there is nothing in the present picture to stop them from falling—farmers' income will be sliced by more than one-third, or seven to eight billion dollars.

This means only one thing to thousands of farm families—it means bankruptcy and ruin. It means hunger for lack of enough food, it means sickness for lack of a doctor and medicine. It means debts, and for many it means foreclosure—loss of their farms.

Is there nothing that can be done to head off this ruin? Must farmers sit and watch all that they have labored and sweated to accumulate destroyed before their very eyes?

GORE-ANDERSON ACT CAUSES FALLING PRICES

Farmers can stop falling prices if they will act. First they will have to spot the people who have caused the drop in prices. And that is going to be a painful business for a lot of farmers. The ugly truth is that the people most responsible for the floor falling out from under farmers' prices are their own leaders. The hard truth is that the leaders of both the Farm Bureau and the Grange opposed the bills in the last session of Congress which would have put price supports under falling prices. They opposed the Pace-Brannan bill and supported the Gore-Anderson bill. The Pace-Brannan bill had price supports for hogs, poultry, fruits, beans, tomatoes, legumes of all sorts, milk, and dairy products, etc. The Gore-Anderson bill left out all of these.

Farmers must face up to the fact that present price supports only cover about 25 percent of what farmers have to sell. They must face the fact that 75 percent of what they grow and take to market is out in the cold.

ONLY 25 PERCENT OF CROPS COVERED

If farmers are going to stop their falling income they have got to demand and secure a fair price for all of their labor and not just that labor and work which they put into so-called basic crops. They are just kidding themselves or being kidded by somebody when they allow themselves to be hoodwinked by any scheme which includes only 25 percent of their labor and crops.

It is now all too clear that farmers are going to have to go around the leaders of the Farm Bureau and the Grange if they are going to get anywhere with Congress in stopping falling prices. The only national leaders who are supporting fair prices for all crops are the leaders of the Farmers Union. The leaders of the Farm Bureau and the Grange are all actively lobbying against including perishables, etc.

FARMERS SHOULD WRITE

What ought to be done now, immediately, is for every farmer to write his Congressman and the two Senators from his State and demand that price supports be revised to include all perishables. Name all that you grow and demand that each of the things you grow be put in. Congressmen pay more attention to letters from the folks back home than most people realize. They are all up for election this year. If farmers don't get action to stop falling prices, it will really be their own fault.

Now you can't fight something with nothing. The farm leaders who are responsible for the present law say they mean to stick by their guns and not permit any changes. It is clear that the only way you can beat these fellows is by being for some other plan or bill.

PACE-BRANNAN COVERS PERISHABLES

The Pace bill of last year is the answer. This bill provided for a trial run on 10 perishable commodities along lines suggested by Secretary Charles Brannan. By this means if there are some bugs in the Brannan plan, they can be found and eliminated.

But whether you agree with us about the Brannan plan, you must agree that something should be done to include the 75 percent of what farmers grow, now left out, and that Congress is the body that must be convinced.

Coyote Valley Dam Needed To Prevent Bad Floods

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1950

Mr. SCUDDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I enclose the following editorial from the Press-Democrat of Santa Rosa, Calif., for Tuesday, February 7, 1950:

COYOTE DAM WOULD CUT FLOOD DAMAGE ON RIVER

Nature gave an unanswerable argument last week for the earliest possible construction of Coyote Valley Dam. Flood damage, happily, wasn't great. Some basements were flooded and a relatively few homes had water lapping around their foundations.

A look back over recent years shows that flood damage could have been far worse. A little more rain, a few more feet of water added to the flood crest and it would have been a much different story.

In 1937, for instance, 40 feet of water rolled down the Russian River causing a million dollars damage in Sonoma County and a similar amount in Mendocino County.

In 1940 a 54-foot-peak crest caused damage in the two counties estimated at $3,000,000 by present values. These are figures given by the Army Corps of Engineers.

In the past 70 years there have been 11 floods on the Russian River causing appreciable damage. Thus, they have occurred more often than once every 7 years.

Future damage, according to the Army engineers, will amount to more than $600,000 per year. This means that, unless checked, floods will cost the two counties more than $30,000,000 over a 50-year period. Besides, rich topsoil will be washed to sea.

It is estimated the proposed Russian River flood-control and water-conservation project will cut flood damage by at least 60 percent.

The Coyote Valley Dam is now before Congress for authorization. Its merits warrant congressional approval and speedy allocation of funds to get it started.

Gen. Thaddeus Kosciusko

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1950

Mr. TAURIELLO. Mr. Speaker, I want to join with the millions of Americans in paying tribute to the memory of Gen. Thaddeus Kosciusko, that great Polish patriot, whose birthday we celebrate each year on February 12.

There is no need for me to recite the deeds of valor and the life of honor of this splendid patriot-soldier. The magnificent contribution he made to the cause of American freedom is indelibly etched upon the memories of all of us as well as on the pages of history and he merits the continued gratitude and undying respect of not only all Americans of all generations but of all freedom-loving peoples everywhere.

Poland was always a champion of freedom and the people of Poland in 1776 were no exception. When they heard about America's struggle, they became greatly concerned and it was the universal wish of all the people of Poland that sent Thaddeus Kosciusko to America to help us gain the freedom for which Poland on many occasions bled and died.

General Kosciusko came to America in order to help our revolutionary leaders achieve independence and he succeeded in his efforts. However, his attempt to free his own people from the Russian yoke met with defeat. He struggled in Poland for the same ideals for which he fought here, but he was defeated by an overwhelming force.

During World War II, the war which started in Poland for Poland's freedom, words of encouragement and praise were given to the Polish Nation from all quarters. Our soldiers were fighting alongside their comrades in arms of the Polish Army. Nations everywhere pledged support to the valiant Poles. As everyone knows, the Polish Nation kept on fighting and suffering. While we achieved victory in our struggle, Poland found herself still under an oppressor's heel even though she had been praised throughout the war as a most faithful member of a victorious team.

There is no difference between the ideals which America and Poland are seeking today and those for which they fought in the war of 1776.

There is no more fitting date to review our moral obligations toward the people of Poland than the anniversary of General Kosciusko's birth. That great heart would be saddened by the plight of his own country today. If he were alive at present, he would be fighting his country's cause with the same intensity of spirit with which he fought our cause and certainly we could do no less than render all possible assistance to him.

We must dedicate ourselves to Poland's cause and assure her of our full support. We must prevail upon the United Nations to exert every possible effort in her behalf. We must insist that she be liberated from the forces of totalitarianism and regain her full independence. In doing so, we shall keep faith with General Kosciusko and the other Polish patriots who gave their all so that our Nation might live. Poland must be free.

Forty-fifth Anniversary, Brooklyn Real Estate Board

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1950

Mr. KEOGH. Mr. Speaker, while at home during a recent week end, it was my pleasure to attend the meeting of more than 1,000 members and friends of the Brooklyn Real Estate Board, who were celebrating the forty-fifth anniversary of the founding of that board. It was also my privilege to listen to an inspiring address by John A. Kervick, director of the New York field office of the Public Housing Administration.

While the speaker's address was directed primarily to the problems of Brooklyn, the explanation of the Housing Act of 1949, in its breath of scope, made it national in its application. I have, therefore, included a summary of it in the CONGRESSIONAL RECORD.

I respectfully commend the reading of it by all. It follows:

The modern city of this era is far more than a mere political subdivision. It is a civic entity which has for its purpose, among other things, the furnishing of a design for good living and proper facilities for business growth. Only if it succeeds in both of these respects, will it have a chance for continued growth and development in this period of a $255,000,000,000 national income. Brooklyn must compete with the other great industrial areas and highly developed ports of this country and Europe if it is to move forward.

The tools of government, under the Housing Act of 1949, provided the necessary plans and wherewithal for pooling the powers and resources of the Federal Government with the initiative of localities and the know-how of private enterprise, to achieve the essential widespread rehabilitation and redevelopment of our cities, so drastically needed, so that they can provide those facilities for living and business expansion, without which they cannot grow and prosper.

The realtors of Brooklyn can well afford to examine closely the provisions of this Housing Act. It seems to be tailored for the use of "Brooklyns" all over the country where there is a crying need for, not only slum prevention, but slum eradication and the rebuilding of good housing and the opening of new vistas for commercial and industrial expansion in the downtown areas.

The tools are here. The Federal Government provides the funds through which the city can acquire the land and remove the blighted and substandard buildings. The Federal Government provides the funds to meet two-thirds of the write-down cost which, everyone agrees, is the only scheme through which rebuilding of vast areas can be accomplished. The city must, in turn, pay one-third of the same write-down. The city is then free to resell the land for private housing development, commercial expansion, low-rent housing use, or may utilize the land for a civic purpose or as an aid to the downtown business area, by way of the establishment of municipal parking lots. If the realtors are to take advantage of any part of the Housing Act of 1949, they must certainly recognize the advantages to them and to their city in this redevelopment provision.

The low-rent, public-housing program, which is also provided for in this act, is expected to play a vital part in the replanning and remaking of our cities. In all legislative history, no other piece of social legislation has ever been enacted with more careful attention to the protection of private enterprise from unfair competition, and with due regard for all segments of the housing and real estate field, than the public housing section of this act.

1. It respects the established American tradition of home rule in all its provisions. It is a local program with Federal assistance.
2. It is restricted to the assistance of families of low income, with veterans of World War II receiving first preference.
3. There is no outright local cash contribution, and the local taxpayers' pocketbook is hit only through the tax exemption granted this program, which is necessary to achieve the housing of low-income families.
4. Sites are acquired and developments are designed, constructed, and financed through private facilities, including, in a very generous measure, the real estate profession.

The constructive interest of the Brooklyn Real Estate Board is vitally needed for this community endeavor. I am sure that the board will have a sympathetic ear at city hall and at the New York City Housing Authority, which has done such an outstanding job under the able direction of Gen. Thomas F. Farrell. This display of leadership, in positive support of a worth-while program, will help rebuild New York City.

Campaign of Lies—Hoover Report Versus Veterans

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Globe-Democrat of February 12, 1950:

CAMPAIGN OF LIES

Thousands of jittery Federal job holders are moving swiftly and silently to sabotage, in advance of congressional debate, the efficiency recommendations of the Hoover Commission. A favorite device is misrepresentation of those recommendations to pressure groups so that Congressmen, fearing political reprisals, will vote to pigeonhole them.

An example is the current propaganda seeking to convince war veterans that the Hoover reorganization plans for the Veterans' Administration would reduce the benefits available to them. The fact is the benefits are set by law and can be changed only by separate act of Congress. This the Hoover report specifically stressed in detailing how common-sense office efficiency could save $70,000,000 a year in VA without the slightest decrease in service to veterans.

The Hoover Commission's VA task force, which incidentally included several leaders of veterans' organizations, found at least

that sum could be saved by eliminating excess VA personnel, overlapping duties, useless red tape.

It found VA employees are handling only one-fourth the policy load handled by private life-insurance companies. It found VA issues 88 different manuals, 665 varieties of technical bulletins, and 400 circulars of various kinds. It found more than 50 percent of all replies on insurance matters were delayed or improperly handled.

It found VA takes 80 days to pay a widow's claim, compared to 15 days for private insurance companies. It found VA had expanded two laws of 8½ pages into 994 pages of explanations.

It found one VA office had 24 supervisory employees for 25 persons being supervised. It found VA was letting bids for a $25,000,000 hospital almost immediately adjacent to a similar Navy hospital less than half full.

It found the per-bed construction cost for private hospitals was $16,000, and for VA hospitals $20,000 to $51,000.

This is the kind of gross waste of taxpayers' money the Commission proposed to wipe out in VA and other Government departments. But the jobholders are distorting the facts to suggest veterans will be the victims—even though most veterans themselves are well aware of VA's extravagant inefficiency.

It is a self-seeking campaign of falsehoods, and ex-servicemen should join the public in slapping them down. They have nothing to lose in benefits and everything to gain in lower tax rates.

Israeli: Arab War Looms Again Unless We Act

EXTENSION OF REMARKS
OF

HON. SIDNEY R. YATES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1950

Mr. YATES. Mr. Speaker, on innumerable occasions our Government has announced that our foreign policy is dedicated to furnishing assistance to the people of all democratic nations so that they may live in peace and prosperity free from the threat of aggression by outside powers. If that truly be our aim, it is extremely difficult to account for the complete and deliberate failure by our Government to note the threat of aggression to the nation of Israel as a result of the arming by Great Britain of the Arab nations with whom Israel now has a temporary truce.

For a number of months, dispatches from the Associated Press have reported statements appearing in newspapers of the Arab countries which indicate they are looking to the next round of their war with the Israeli. They assert that the conflict temporarily concluded was but a preliminary skirmish and that there will be no doubt of the outcome of the next engagement. The receipt of vast quantities of arms from England adds fuel to their flame and gives substance to their threat.

When I was in England last December, I visited the office of the American Ambassador and called his attention to the fact that war fever was again rising with the shipment of more and more weapons, including American Sherman tanks. When I asked for an explanation, I was sought to be assured by the statement that the arms were being delivered in accordance with the Anglo-Egyptian Treaty and that at no time would the supply of arms be sufficient to permit another war. I was also informed that the Arab papers printed propaganda for internal consumption and that the stories were not to be taken seriously. I was told I was unduly disturbed.

Since then, the situation has steadily deteriorated. The arming of the Arabs has continued at a steady pace. Apparently, Egypt has made available to other Arab nations a portion of the weapons she received from Britain. In the meantime our State Department has steadfastly looked in other directions, making no protest to England and totally ignoring the alarming developments in the Middle East.

If our aim is to preserve peace, we must use our influence before it is too late. The time for action is not after the shooting has started.

The Christian Science Monitor is no scare-mongering or headline-seeking newspaper. Its reporting is characterized by fact and objectivity. That is why significance must be attached to its report on the Israeli-Arab situation, which appeared on its front page on January 31, 1950. Note the arms that are being supplied:

MIDEAST ARMS RACE BREWS AS ISRAELIS LASH "AID TO EGYPT"

(By Francis Ofner)

TEL AVIV, ISRAEL.—Through the steady shipment of British arms Egypt rapidly is becoming the center of a Middle East arms race which may have tragic consequences in this strategically important corner of the world, according to the official view of Israel.

The Egyptian efforts, as understood here, aim in three directions:

First, substantial purchases of modern war equipment for Egypt and the other Arab states; second, an increased training of new officers; and, third, the reorganization of Egypt's army based on the lessons of last year's defeat.

Israel's military command charges that since last summer Egypt's shattered ground forces are being rapidly transformed into a mechanized, mobile, and modernly equipped army, with its four combat brigades, which were heavily damaged in the war against Israel, already reequipped and modernized.

ARMORED BRIGADE REPORTED

In addition, one new armored brigade has been formed recently and equipped with British supplies, according to the Israelis, which include American-made Sherman tanks. An agreement for the purchase of 40 heavy Centurin-type tanks armed with powerful 25-pound cannon was concluded last month, it is reported.

Egypt's navy has been enriched also. Six frigates built between 1941 and 1943 have been supplied by Britain during the past 3 months. These frigates are equipped with 4-inch guns, 20-millimeter antiaircraft cannon, and torpedoes.

Egypt's air force also has undergone a very substantial change. Until last fall it had only Spitfires. Recently, however, one squadron of De Havilland Vampire jet fighters, one squadron of Venom jet fighters, and an unspecified formation of Meteor jet-propelled night fighter-bombers have been purchased in Britain by Egypt, according to the Israelis.

A part of these orders already has been delivered, the Israelis say. Negotiations are going on now for the purchase of a number of American Liberators, also to be delivered by Britain, the same sources declare.

NOT DENIED IN BRITAIN

[In London, a Foreign Office spokesman turned down the Israeli assertion that heavy sale of British arms to Arab countries will lead to a middle eastern arms race and possibly to a renewal of the Palestinian war.

[Although claiming that these sales were made in order to carry out existing treaties with the Arab nations, this spokesman did not deny that such extremely powerful weapons as destroyers, submarines, jet aircraft, heavy tanks, and heavy artillery were going to countries which are still technically at war with Israel.

[The spokesman confined himself to saying that Britain's commitments in western Europe and to the British Commonwealth of Nations limited its flow of arms to the Arabs.]

Egypt also serves as a transit area to supply Syria, which has no arms agreement with Britain. Since Syria's last governmental overthrow by Col. Adis Shishakli, Egypt has been ceding its own surplus to Syria. Twenty fighter planes supplied by Egypt have already reportedly reached an airport near Damascus.

PACT WITH RAF REPORTED

An agreement to train 2,000 Egyptians at Royal Air Force bases was reached last month. Although the place has not been fixed, it is most likely to be Cyprus or Cyrenaica.

A school for training civil pilots recently is reported to have been opened at Ambabs, near Cairo. Besides Egyptians, the pupils are said to include Syrians, Saudi Arabians, and Iranians.

The intention to send 2,000 Egyptians into the factories of France, Belgium, and Sweden was announced last month by the Egyptian Government as the first step to open an arms factory in Egypt.

Egypt seems to have learned the military lessons from its defeats between October 1948 and January 1949. Last year's lack of armored forces, mobility, and reserves is unlikely to occur again.

While most Arab countries are only now starting the reorganization of their armies, Egypt reportedly began these efforts immediately after the armistice with Israel, signed 11 months ago.

Since the Wafd Party gained power at the beginning of this year, these efforts have continued. The new War Minister, Mustafa Nusrad Bey, already has announced that Egypt is to become the strongest mideast army.

IRAQ BUILDS UP ARMS

Arms efforts are going ahead in Iraq, too. Last November, Britain concluded an unusually generous currency agreement with Iraq, releasing £1,000,000 a month to Iraq's account in hard currencies, instead of half this amount, as hitherto. The Israelis charge that this is connected with Britain's earlier decision to supply arms to Iraq.

The Arab Legion of the Hashemite Kingdom of Jordan, which suffered only unsubstantial damage in the war with Israel, has already been reequipped by Britain. The effort is being made now to lay the foundations of Hashemite Jordan's air force. Two Arab Legion captains, Ali Abu Newar and Mohammed Bey Ruisan, were sent the end of last year to Britain's staff college.

This arms situation, coupled with the fact that no peace settlement has been concluded yet with any Arab states, makes Israel feel more isolated than ever. This is forcing Israel to increase its own defense capacity to the maximum of its ability, is officially stated here.

The Dishonest Attack on the Welfare State

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1950

Mr. BIEMILLER. Mr. Speaker, the Capital Times of Madison, Wis., a fearless liberal newspaper edited by a great progressive, William T. Evjue, carried an interesting article by Mr. Evjue in its issue of February 6. Mr. Evjue broadcasts over a number of Wisconsin radio stations every Sunday, and his speeches are carried the following day in the Capital Times.

His strictures on Republican leaders whom he characterizes as men who are preaching hate and distrust of government are particularly interesting. His address, The Dishonest Attack on the Welfare State, follows:

Hello, Wisconsin. During the coming week end the American people, over the radio and through the press, must go through the annual ordeal of listening to Republican spellbinders as they use Abraham Lincoln's birthday as the springboard from which to launch the current Republican propaganda at their Lincoln Day dinners. We shall be told again with great eloquence that Lincoln is the patron saint of the Republican Party and that today he is the personification of Republican ideals.

If it becomes necessary to distort some of the things that Lincoln said in order to fit the Republican ideology of today, the Republican orators will not be above taking liberties with the pronouncement of the Great Emancipator on such subjects as freedom, human welfare, and a good life for all our people. Have not some good Republicans only recently been convicted of misquoting Lincoln in order to shore up the campaign being now carried on by the Republican Party against the so-called welfare state?

Recently Representative BOLTON of Ohio introduced into the CONGRESSIONAL RECORD a list of 10 sayings which were attributed to Lincoln. Look magazine picked up these sayings and used them in a big splash article in the Cowles publication against the welfare state. Then Time magazine challenged the authenticity of these statements and said they were never uttered by Lincoln. Here is one of the statements attributed to Lincoln and which was to be used as propaganda against the welfare state: "You cannot help men permanently by doing for them what they could do for themselves." When an effort was made to trace the source of the 10 statements, Representative BOLTON said that she had gotten them from a friend who had heard them on a broadcast by a radio commentator named Galen Drake. Drake in turn couldn't remember where he had picked them up, but he said he thought he had seen them in a house organ of a New Jersey machine manufacturer. These fake Lincoln sayings were traced as far back as 1942 when they were distributed in a leaflet by the Committee for Constitutional Government, the well-heeled, reactionary Washington lobby backed by Frank Gannett, the publisher of a chain of newspapers in New York.

I can't conceive that, if Lincoln were alive today, he would be joining the smug reactionary spokesmen of the Republican Party who are denouncing the welfare state. The men who are today trying to use the words "welfare state" as a term of opprobrium are men who are more concerned with property and profit than they are with human welfare. Who will deny that Lincoln was always more concerned with human beings, irrespective of race, creed, or color, than he was of dollars and cents? Isn't it always the Republican who tells the American people that what we need in Government today is the businessman's point of view; that we need the type of man who has met a pay roll and knows how to meet responsibilities? Abraham Lincoln hardly met those specifications. He was an impecunious lawyer who wouldn't have rated very high in any Dun & Bradstreet of his day. He challenged the property and economic interests of his day by branding the institution of slavery as loathesome. The property-minded Republicans of the Civil War wanted to ditch Lincoln near the end of his first term. Carl Sandburg, the Lincoln historian, said that early in 1864, near the end of his first term, not a single Member of the United States Senate and only one Member of the House would stand up and speak out in support of Lincoln. My guess is that if Lincoln were here today he would spurn the selfish, big-business philosophy of the Republican Party and aline himself with the second bill of rights enunciated by President Franklin D. Roosevelt when he said in 1944 that these rights should be: "The right to a useful and remunerative job in the industries or shops or mines of the Nation; the right to earn enough to provide adequate food and clothing and recreation; the right of every farmer to raise and sell his products at a return which will give him and his family a decent living; the right of every businessman, large and small, to trade in an atmosphere of freedom from unfair competition and combination by monopolies; the right of every family to a decent home; the right to adequate medical care and the opportunity to achieve and enjoy good health; the right to adequate protection from the economic fears of old age, sickness, accident, and unemployment; the right to a good education."

No; Abraham Lincoln would not be alining himself today with the men who are preaching hate and distrust of government. He believed in a government responsive to the needs and wishes of the people rather than one owned and manipulated by and for the special privileged few. Lincoln gave a pretty good definition of the "welfare state" when he said, "The legitimate object of government is to do for the people what needs to be done, but which they cannot by individual effort do at all or do so well themselves." When the Republican spellbinders mount the rostrums this week to convince the American people that modern-day Republicanism is in any way related to the humanitarianism of Lincoln they should remember another famous Lincoln quotation: "You can fool all of the people some of the time and some of the people all the time, but can't fool all the people all the time."

The fraudulent use of quotations attributed to Lincoln by the conservative orators is typical of the insincerity with which the whole attack against the so-called welfare state is being carried on. The men who cry loudest against the welfare state will never tell you what welfare services they would cut off if given control of the Government. Would they abolish social security, aid to agriculture, subsidies to the newspapers, shipping interests, or the air lines? Would they cut out veterans aids, the school-lunch program, rural electrification? When pressed they will never be specific. Like Governor Dewey in the 1948 campaign, they will merely say that they can do better what has already been done. This same insincerity was evident a few weeks ago when the news hit America that the labor government in New Zealand had been defeated by the conservatives. The news was hailed in the press of this Nation as repudiation of the welfare state in New Zealand. It wasn't until weeks later that we learned that the welfare state was not even an issue in the New Zealand election. The conservatives had adopted the social reforms of the Labor Party and campaigned on a platform promising no interference with the gains made by the Labor Party. The same thing happened in the Australian election where the conservatives were victorious on a platform of continuing the welfare services inaugurated by the Labor Party in that country.

We are now hearing the same refrain about the election to be held in Great Britain. The press and reactionary politicians, hoping for a defeat of the Labor government, are hailing the election as one between the welfare state and free enterprise. It is obviously anything but that, if one can judge from the manifesto issued by the British Conservative Party and the conservative British press. Commenting on the manifesto of the Conservative Party, the London Times, one of Great Britain's most noted conservative papers, said: "The so-called welfare state with food, homes, work, social security for all is to be preserved and improved. To many conservatives not very long ago, this manifesto would have seemed a socialist tract itself. Its conservatism appears in the claim to put these collective arrangements on a sounder economic foundation by better and more thrifty management." The election in Great Britain does not involve the issue of the welfare state, for British Conservatives, unlike our Republicans and Dixicrats, have come to recognize the Government's obligation to provide people with safeguards against unemployment, hunger, homelessness, and sickness. The forces of the right in Britain are demonstrating a more honest attitude. There is none of this clamor about the welfare state. They frankly accept it and promise only that they will administer it more efficiently. Our conservatives in this country, however, try to travel in both directions at once. They denounce the welfare services on the one hand and declare that they will administer them better on the other hand.

Isn't it about time that our conservatives in this country recognized that the people see through this kind of duplicity. The people are not going to condone any retreat from the welfare gains that have been made. The Republicans tried such a retreat in the Eightieth Congress and the result was the stunning upset election of 1948. For all his "me-tooing," Governor Dewey could not convince the American people that his party was not trying to take the country back to the days of McKinley. But the dishonesty and insincerity of the attacks on the welfare state will continue even if it requires putting words in the mouth of the dead Lincoln.

Civilian Control Over Military Procurement and Related Activities

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 15, 1950

Mr. HOLIFIELD. Mr. Speaker, the legislative framework for performing efficiently the so-called housekeeping activities of the Federal Government, including procurement and other aspects of property management, is provided in Public Law 152 of the Eighty-first Congress, first session, the Federal Property and Administrative Services Act of 1949.

In developing this legislation we gave careful attention to the problem of the relationship between the military and civilian aspects of procurement and related functions. I believe it was the intent of Congress that, to the maximum degree possible, these activities should be under the control of the General Services Administration as the civilian agency charged with certain duties and responsibilities in Federal procurement and property management under Public Law 152. That law contained a proviso permitting the Secretary of Defense, from time to time and unless the President should otherwise direct, to exempt the military services from action taken by the General Services Administrator in the field of procurement and property management whenever he determines such exemptions to be in the best interests of national security.

I wish to stress, Mr. Speaker, that the proviso exempting the military from control by the General Services Administrator is strictly limited. The Secretary of Defense may exempt only one, from time to time; two, subject to Presidential approval; three, when a matter of national security is patently involved. The President also has authority in Public Law 152 to prescribe to the executive departments and agencies such policies and directives as he deems necessary to effectuate the provisions of the act. Pursuant to this authority, the President has issued a directive to the Director of the Bureau of the Budget, the Secretary of Defense, and the Administrator of General Services defining the relationship between military and civilian procurement to be presently maintained and instructing these agency heads to work out areas of understanding on what military supply activities might be appropriately exempted from or included in the jurisdiction of the civilian administrator. Until further order, the Secretary of Defense is specifically directed not to make any exemptions under the proviso mentioned above, without the prior approval of the President. I believe, Mr. Speaker, that this directive of the President comports with the spirit of Public Law 152 that military exemptions from civilian control shall be held to a minimum.

Following the issuance of the Presidential directive on July 1, 1949, the Secretary of Defense, the Administrator of General Services, and the Director of the Bureau of the Budget signed a statement expressing certain general policies and their determination to expedite the development of areas of understanding within the framework of those policies.

I recognize, Mr. Speaker, that many delicate and difficult matters are involved here. The military have always been jealous of their bailiwick; they tend to operate as a self-sufficient entity unto themselves. Because national security and defense now involve the whole economy, the whole population, this kind of military self-sufficiency in the making of policy can no longer be accepted as a matter of course. For example, I am not prepared to accept the clause in the General Policy Statement signed by the heads of the three agencies which reads "while it is recognized that the great bulk of military procurement in both peacetime and wartime will continue to be handled by the military departments themselves."

That is recognizing too much, Mr. Speaker. I do not believe that it was the intent of Congress in Public Law 152 to put the "great bulk" of military property outside the purview of the Administrator of General Services and to leave only the small remainder within the "areas of understanding." It may be that in the interests of national security, dire necessity or some sudden emergency may compel us to recognize that the bulk of military procurement should be handled by the military. But let us not start with that as a general policy; let us have resort to that only if there is no alternative.

If, as the general policy statement further asserts, it is desirable to consider "all phases of Federal Government supply as a part of an over-all supply management concept," this is an argument for less and less, rather than more and more, military exemptions from civilian control. Otherwise we are forced into a degree of military control of the civilian economy, under the impact of present-day security needs, that is inimical to American traditions and dangerous to democracy.

For the information of the Members, I include with these remarks the President's directive to the Director of the Bureau of the Budget, the Secretary of Defense, and the Administrator of General Services, and the general policy statement signed by those officials:

THE WHITE HOUSE,
Washington, July 1, 1949.

To the DIRECTOR OF THE BUREAU OF THE BUDGET, THE SECRETARY OF DEFENSE, THE ADMINISTRATOR OF GENERAL SERVICES:

By virtue of the authority vested in me by section 205 (a) of the act entitled "An act to simplify the procurement, utilization, and disposal of Government property, to reorganize certain agencies of the Government, and for other purposes," approved June 30, 1949 (the Federal Property and Administrative Services Act of 1949) it is hereby directed that:

1. Pending determinations made in the course of the studies hereinafter directed to be instituted, the several departments and agencies constituting the National Military Establishment shall continue to procure through the Administrator of General Services such supplies, materials, equipment, and other personal property, and have performed by the Administrator such related functions of the types specified in section 201 (a) (1) of the Federal Property and Administrative Services Act of 1949 as were customarily procured or performed for the departments and agencies of the National Military Establishment by the Bureau of Federal Supply prior to the taking effect of said act. Until further order of the President, the Secretary of Defense shall not, without the prior approval of the President, issue any order or directive exempting the National Military Establishment in accordance with the proviso in section 201 (a) of the Federal Property and Administrative Services Act of 1949, from action taken or to be taken by the Administrator of General Services under said section.

2. The Administrator of General Services, the Secretary of Defense, and the Director of the Bureau of the Budget (1) shall forthwith undertake, and diligently pursue, studies aimed at developing areas of understanding with respect to the extent to which the National Military Establishment should be exempt from the jurisdiction of the Administrator under sections 201 and 206 of the Federal Property and Administrative Services Act of 1949, and (2) shall present any appropriate recommendations to the President.

HARRY S. TRUMAN.

GENERAL POLICY STATEMENT ON DEVELOPMENT OF AREAS OF UNDERSTANDING BETWEEN GENERAL SERVICES ADMINISTRATION AND DEPARTMENT OF DEFENSE PURSUANT TO PUBLIC LAW 152, EIGHTY-FIRST CONGRESS

The President's memorandum of July 1, 1949, to the Secretary of Defense, Administrator of General Services, and the Director of the Bureau of the Budget, directed that areas of understanding be developed between the General Services Administration and the Department of Defense with respect to the application of the Federal Property and Administrative Services Act of 1949 (Public Law 152, 81st Cong.). Considerable progress has been made in certain areas. Completion of the task will be expedited by acceptance of basic principles.

It is a necessary part of our national defense to keep appropriations within bounds. Our economy requires it, the President and the Congress rightfully expect it consistent with the fulfillment of primary missions. The preservation of our nonrenewable resources from unnecessary exploitation in our time will mean that future generations may also have the substance of defense.

Modern war is total war involving all agencies and segments of our economy—farmers, factory workers, professional groups, as well as the traditional military forces. Within the Government, many, if not all, civilian agencies have wartime functions, and a careful planning and providing for their needs is essential to a consideration of the whole problem.

The accomplishment of this task requires detailed examination of many areas of effort and assignment of tasks to both military and nonmilitary agencies. While it is recognized that the great bulk of military procurement in both peacetime and wartime will continue to be handled by the military departments themselves, nevertheless there are certain procurement areas and other areas of effort, such as certain parts of surplus property disposal, real property management, traffic management, etc., where it will be important during peace and war for the military departments to continue to depend upon the General Services Administration. Because effective military supply planning covers both current peacetime operations and wartime functions, it appears essential that if sound planning is to be done the military departments must have assurance that the General Services Administration will continue in existence in wartime and will be protected against undue inroads by selective service. To develop "areas of understanding" for peacetime use only would greatly complicate the problem.

In a war economy, especially, each item should be considered as being a scarce item. Transportation, storage, manpower, and other scarce components are involved in producing items which may be fabricated from abundant basic materials. We are a have-not nation with respect to some materials and are fast reaching that status with respect to some once-abundant materials.

All agency requirements in peace and in war should be coordinated so as to constitute a minimum impact upon the Nation's economy.

The military and nonmilitary supply systems must be coordinated at both the policy and operation levels so that the constituent agencies will not compete against each other for their requirements thus creating artificial scarcities and inflationary prices. This

objective can best be attained by considering all phases of Federal Government supply as a part of an over-all supply-management concept, rather than by isolating the segments and making each the object of special administrative or statutory attention. To accomplish this end there will be required wholehearted cooperation between the military and the civilian agencies.

Every effort will be made by the undersigned to expedite the development of areas of understanding within the framework of the above policies.

LOUIS JOHNSON,
Secretary of Defense.
JESS LARSON,
Administrator, General Services.
FRANK PACE, JR.,
Director, Bureau of the Budget.

Congress Should Act Now!

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. REED of New York. Mr. Speaker, as a matter of national security, is it not imperative that less time be spent on discussing the atom bomb and H-bomb and that immediate action be taken by the Congress to protect the people from the insidious and subversive enemies located in the key positions of our Government? Is there any assurance that the infiltration of spies into Government departments is not being aided and abetted by administration officials right now?

To suffer and permit it to aid and abet in the wholesale betrayal of our Government through failure to act on available information by those clothed with constitutional power and responsibility to protect and defend the Government raises a question of duty of the first magnitude. Has the power of impeachment also gone with the wind?

Under leave to extend my remarks, heretofore granted, I am inserting an editorial entitled "The Spies' Best Friend," which appeared in the Washington Times-Herald under date of Tuesday, February 14, 1950:

THE SPIES' BEST FRIEND

The point of Mr. Willard Edwards' remarkable series of articles about Russian spies in this country is not that the Russians have spies here. There is nothing extraordinary about that. No doubt other countries have spies here, too, trying to get their hands on secret information.

The more important a country becomes in world affairs, the more likely that spies of foreign governments will seek to ferret out its diplomatic and military secrets.

NOT ALL TRIED TO STEAL SECRETS

To be sure, the Russian spies were not all engaged in trying to snatch our secrets. Some of them were under orders to gain control of trade-unions, especially in vital industries like transportation and communications. The purpose there was to hamper industrial production, promote discontent, and establish a fifth column to disorganize the country from within in preparation for the moment when Russia might attack it from without.

What is chiefly noteworthy about these activities is that anyone as late as 1933 should have accepted at face value Stalin's pledge not to engage in them.

What is genuinely remarkable about the Russian spying and what Mr. Roosevelt, Mr. Truman, and their friends have never been able to explain is why the spies were allowed to continue at work after our Government not only had proof that hundreds of them were entrenched in Washington offices but knew who they were and what they were doing.

The information reached our highest officials from many sources. Whittaker Chambers told all he knew to Adolf Berle 10 years ago. The FBI had accumulated a great mass of damning evidence. Later the Canadian investigation revealed much more of the same sort, all of it placed at the disposal of our administration. The House Committee on un-American activities had accumulated a mass of evidence. And there was much more beside.

With all of this information at its disposal, all of it telling the same story, Mr. Roosevelt and Mr. Truman and their Attorneys General sat tight and did next to nothing.

The Department of Justice was all set to forget even about Hiss and would have done so except for the persistence of the House committee in pursuing the matter and Hiss' own foolhardiness in bringing his suit for slander against Chambers.

F. D. GAVE THEM JOBS THEY WANTED

There is no honorable explanation of the administration's conduct. The only theory which fits the facts is that Mr. Roosevelt was himself sympathetic with the aims of the Communists.

Certainly they were his stanch political allies and were immensely useful to him, especially in carrying elections in New York. In return for their help he gave them all the jobs they wanted in Washington, even in the State and Defense Departments. He knew what he was doing, and why.

He wasn't gullible. He was the willing partner in a conspiracy directed against his own country.

United States Chamber of Commerce Distorts CVA Issues

EXTENSION OF REMARKS
OF
HON. HUGH B. MITCHELL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1950

Mr. MITCHELL. Mr. Speaker, it is no secret that the United States Chamber of Commerce is opposed to the establishment of a Columbia Valley Administration. As I have pointed out many times, this attitude of opposition is not shared by those forward-looking businessmen of the Pacific Northwest who are willing to analyze the issues on their merits. As an example I cite the following letter from Mr. Lloyd B. Dysart, a member of the Centralia (Wash.) Chamber of Commerce, who points out the distorted and misleading statements made by the United States Chamber of Commerce on CVA. I also include an article from the Labor News, Seattle, Wash., of February 8, 1950, which also deals with the United States Chamber of Commerce stand on CVA.

JANUARY 25, 1950.

Mr. CLARENCE R. MILES,
Manager, Department of Government Affairs, Chamber of Commerce of the United States, Washington, D. C.

DEAR MR. MILES: I am a member of the Centralia Chamber of Commerce, which is affiliated with the Chamber of Commerce of the United States. Your office has just mailed me a copy of Governmental Affairs Legislative Daily, being volume 7, No. 6, under date of Tuesday, January 10, 1950. This copy is subheaded Special Number, and is devoted to valley authorities, particularly to CVA.

Under the heading The Issues you state: "The Chamber of Commerce of the United States is strongly opposed to regional authorities. * * * The valley-authority idea should be rejected for the following principal reasons."

You then list six reasons for which you claim the valley-authority idea should be rejected, and I will discuss them in the order in which you have set them out.

As reason No. 1, you state, "The carefully developed and coordinated planning for resource development that has aided the Pacific Northwest over the years would be abandoned in favor of a three-man board of political appointees responsible only to the President." You then, in the same reason, state the fact that 4 years ago Federal and State agencies formed the Columbia Basin Interagency Committee to coordinate development of the area.

You do not call attention to the fact that the present existing agencies, and in particular the Columbia Basin Interagency Committee, have been severely condemned as being inadequate by the Hoover Committee. I quote briefly from its report:

"The difficulty is that no effective method has been found for reconciling conflicting opinions and programs. The Federal Interagency Basin Committee and its two field subsidiaries, the Missouri and Columbia Basin Interagency Committees, have not performed this function to any appreciable extent. * * * In virtually no instance has the Committee been able to resolve a major interagency conflict."

Your second reason is that under the valley authority "States' rights could be obliterated." You apparently have overlooked the tenth amendment to the Federal Constitution. If your statement is correct, then Congress, by the simple process of passing a valley authority act, could amend the Constitution of the United States. You surely do not expect your readers to believe this.

For reason No. 4 you say, "An authority in the form of a Federal corporation having substantial autonomy would be free of many of the legal and congressional checks and restraints.

"Projects probably could be initiated at the will of the authority directors. Their purpose could be that of the directors only."

I assume that you have read the bill, and, if you have, you must know that this statement is either untrue or badly distorted. The bill, and you must well know, is replete with provisions for congressional checks and restraints. I will not attempt to enumerate them all, but will quote from only one:

"The Administration shall not initiate construction of any major water control or electric generating projects or major transmission line into a new service area, or undertake any major new type of activity authorized by this act, unless such project or activity has been included in the annual budget program or amendment thereto approved by the Congress" (sec. 12–c, lines 18 to 24).

Since the last of the bill is so plain that "he who runs may read" you surely do not expect any of your readers to be mislead by your so-called reason No. 4.

For reason No. 5 you state, "Untold new billions of dollars in taxes would have to be

raised." Now, this statement is very misleading to say the least. You surely do not mean that the bill itself provides for any such thing. Manifestly, if the development of the Columbia River is to go ahead under the authority, or otherwise, many dollars in taxes in the course of years ahead will have to be raised; but you must be fully aware of the fact that the bill itself does not require the addition of a single dollar in taxes. On the contrary, the plan, if effective at all, should greatly reduce taxes by the elimination of waste and duplication of effort which is going on under the present system.

For your sixth objection you seem to advance the conflict between flood control and power development as a reason why the plan should be rejected. You overlook the fact that the Hoover Commission has specifically pointed out this conflict as one of the strongest arguments for remedying the present situation. In this respect I quote the following from the Hoover report:

"There are glaring defects in the organization of these services of government * * *. (c) There is an inherent conflict between the most efficient operation of storage dams for the purpose of flood control and of dams used for the generation of hydroelectric power."

The above statements were made by the Hoover Commission under the general heading, "Defects in organization of water development and use." The Commission was referring, of course, to the present set-up, which you say would be abandoned as your No. 1 reason for opposing the valley authority.

Now, the Chamber of Commerce of the United States has, I presume, the right to support or oppose the valley-authority idea, or the CVA bill in particular. In my opinion, as a member of an affiliated body of your organization, you have no right to circularize your membership with false, distorted, or misleading propaganda. You must feel that the grounds upon which you oppose the valley authority, or the CVA in particular, are so unstable that you must abandon cold logic and resort to the type of propaganda published in your January 10 issue.

As a member of a chamber of commerce located in the region directly affected by the CVA bill I want to place myself on record as being unalterably opposed to the tactics adopted by the Chamber of Commerce of the United States in its opposition to this bill.

Very truly yours,

LLOYD B. DYSART.

[From Seattle (Wash.) Labor News of February 8, 1950]

WESTON AND CARSTENSEN HIT UNITED STATES CHAMBER OF COMMERCE FOR DISTORTING CVA FACTS

Leaders of Washington's two largest labor and farm organizations this week accused the United States Chamber of Commerce of a serious distortion of fact in its recent attack on the proposed Columbia Valley Administration.

The charge was made in a letter to the chamber from E. M. Weston, Washington State Federation of Labor chieftain, and Henry P. Carstensen, State grange master.

They attacked the United States Chamber's statement that the idea for creation of a CVA had no support in the Pacific Northwest except from some locals of the CIO and from the farmer's union.

Carstensen and Weston pointed out that every organization that represents the people is on record for CVA. This includes, they said, the Washington, Oregon, and Idaho Federations of Labor; the Washington and Oregon State Granges, the CIO, the farmers' unions, railway brotherhoods, International Association of Machinists, as well as many smaller chambers of commerce and civic organizations.

These groups represent more than 1,500,000 people in the Pacific Northwest.

"The idea that the people don't want CVA is a fiction that the anti-CVA lobby persists in perpetuating despite the fact that organizations representing less than 50,000 of our area's people are on record against CVA," they added.

"Sure, nobody wants CVA," Weston added. "Nobody at all—just the people."

CHAMBER OF COMMERCE HIT

The two leaders also charged the United States Chamber of Commerce with ignoring the Hoover Commission's findings on the present system of resource development in the Pacific Northwest and elsewhere in the Nation.

"It is inconceivable to us," they said, "how the United States Chamber of Commerce, which recently fully endorsed the Hoover Commission recommendations, can ignore its findings on resource development which clearly point out the inefficiency of the present system, which has cost the United States taxpayer $1,250,000,000 more than it should.

Meanwhile, the league has challenged the principal anti-CVA front group, the Pacific Northwest Development Association, to make public its 1949 financial statement. The proposal was made in a letter from Joe Miller, league executive secretary to Daniel Noble, secretary-manager of the so-called development group.

PROPAGANDA

The letter declared that the development association had distributed hundreds of thousands of anti-CVA pamphlets and other material, circulated many anti-CVA speakers throughout the region and taken every possible step to block this legislation, so vital to the best interests of the Pacific Northwest.

Declaring that such a campaign obviously takes huge sums of money, the CVA league spokesman said, "We believe that the public of the Pacific Northwest is entitled to know where this money came from.

To date, Mr. Noble and the Northwest Development Association have not answered this challenge.

The Future of Free Enterprise

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1950

Mr. DONDERO. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I wish to include an article which appeared in the Synchroscope magazine of February 1950, written by Mr. James W. Parker, president of the Detroit Edison Co., of Detroit, Mich. This magazine is the publication of the Detroit Edison Co. The article traces free enterprise in the United States and outlines what the future means to us. Mr. Parker points out many things not evident to the general public because of his experience and knowledge in the field of free enterprise. The article follows:

THE FUTURE OF FREE ENTERPRISE

(By James W. Parker)

When I happen to be the speaker at the annual meeting of the Power Club I usually try to give something of an account of how things have been going in the last 12 months. It has all been very well reported, I think, in the articles that have appeared in Synchroscope. The annual report will soon be in your hands and I hope you will read it—there's some exceedingly cheering information.

Fellows, I think we've got a good team. I think we've got a good company, and it's giving the kind of service that people want and appreciate. I think they set us down as a good citizen although we are a corporation and a big one. After all, it's a corporation made up of a lot of individuals. We have managed to keep contact and friendship with the people in our service area. That is what makes this company a good place to work and a good company for the community.

You and I and most Americans, as we've grown up in this country, have come to take some things for granted. I think all of us have been inclined to believe ourselves forward-looking and liberal-minded. We have believed in a fair deal, a fair chance for every man. We Americans haven't attained this by a long shot, but still we've come a long way toward it.

A LOOK AT HISTORY

After the Civil War, when the country was consolidating itself, big business began to grow and get rather powerful. Some of it was corrupt. And so the people of the United States, through Congress, set themselves against this sort of thing and, about 60 years ago, passed the Sherman Antitrust Act and 10 years later the Clayton Act.

The people made up their minds that they would break these great concentrations of economic and industrial power. They feared them the way the founders of our Republic feared royalty and the old monarchy of England when it controlled us.

Down the years since the founding of the Republic there has gone that same spirit, the belief that men themselves are the best judges of their own welfare, that they want to keep things reasonably in their own hands. This is the effort, the ideal of the men I call liberal. Sometimes one political party has led the fight, sometimes another.

CENTRALIZED GERMANY

There was no antitrust legislation in Germany before the war, none in Europe nor, for that matter, in England. It was in 1848 that liberal thought failed in Germany. From then on the idea of running the show from the top, controlling every last move that every man made, prevailed and went on growing. It ended in terrible disaster for that nation and for the world.

Do we have a free competitive system in America? I've asked and looked around and the answer, by and large, is yes. I don't mean everywhere in every industry. We have a competitive economy because for 60 years, with antitrust legislation, the American people have been determined to have it. They haven't always succeeded, and so it's been necessary to bring suit after suit to break up some of the practices that keep cropping up.

I don't approve of the methods that the Antitrust Division in Washington has employed. I think they have done it unfairly. But it has never hurt my feelings when they made some big corporation stop a monopolistic practice. I hope that every time unfairness shows its head they'll crack it. We should stick to our principle.

Americans are now faced by two new growths of power. I don't think anyone of us is very happy about the manifestation of centralized power that has developed in the United Mine Workers under John Lewis. The men who mine coal need unions, but I don't think it is to their advantage, any more than it is to the advantage of the people of the United States, to have a czar with the power that Lewis has.

Fortunately, all this is being aired very well in the newspapers and in people's discussions. I have enough confidence in the

American people and in the fact that they still have the political power to tell their Congress what they want, to believe that in the long run this problem is going to be straightened out.

But I want to talk in more detail about the growth of another great centralized industrial power. This is the tendency to concentrate power in the Federal Government.

Let's talk about it in terms of our own industry. We who have made it our business to see what is going on, to talk to the heads of other companies, can see things that aren't evident to the general public or to most businessmen. The story appears in patches in the newspapers, but until you put it all together you don't realize how far this thing is going.

HOW ABOUT REA?

The idea of subsidizing the building of electric power lines to farmers where companies couldn't economically serve them was, in principle I suppose, all right. Of course, the Rural Electrification Administration was, say, levying taxes in Michigan to build lines in Arkansas. If, in the wisdom of Congress, that was a good thing to do, I can find no fault with it. But here's what happened:

The report (from Statistical Bulletin, Electric Light and Power Industry) is just out that 97½ percent of the occupied dwellings in the United States now have electricity available to them. That includes cities, villages, and agricultural areas alike. In our service area electricity is available to 100 percent. We don't serve every house because some folks haven't wired them. But it wouldn't cost any of them one penny for extensions to have Detroit Edison bring the current to them and put a meter on the house and start serving them.

The Rural Electrification Administration did its part in many sections of the country. It helped do the job, and with that I have no quarrel.

But with the farm job well over 85 percent accomplished, can anybody tell me why on earth the Rural Electrification Administration should still have unexpended appropriations of $1,250,000,000 at their disposal? Money like that never goes back unspent into the Treasury; it gets spent for something.

And I'll tell you what they are trying to spend it on. They are going into the transmission business and coming up with the super co-op. It's cropping up in two places in Michigan right now. This is just plain competing with money that is already invested, with lines that are already in existence.

I remember very well when Harry Snow, our one-time controller who has since passed away, gave us, at the luncheon table, his analysis of the Rural Electrification Cooperative in our own territory at Ubly. You will recall that this got started at just about the time we began serving the Thumb and building lines up there.

Harry Snow said, "There's a million dollars of Government money that need never have been expended. Detroit Edison would have spread its service to that area at its own expense—that is, at its own investors' expense, using money voluntarily put into the business, not taken by the tax collector from the public in the form of forced investment."

Has this been a good investment for the United States of America? Has this even been a profitable thing for the people in that rural cooperative? We know that they pay higher rates than Detroit Edison would charge them—and they don't get Detroit Edison service.

Why it's good for the people of Ubly and that area to have a cooperative is more than I can tell you. Why it's good for the people in western Michigan to build a super co-op I can't say either. But I do know there is $1,250,000,000 of unexpended appropriation and that the REA is out to spend it. And they'll spend it for purposes that weren't contemplated when the thing was started. Once these things get started they keep growing.

An ambitious scheme was put before Congress to create valley authorities practically all over the United States, dividing the whole country into districts. Congress hasn't swallowed it. But Congress did appropriate for the Tennessee Valley Authority, the Southwestern Power Administration, and a lot of others.

WHAT IT COSTS

Although the Tennessee Valley Authority estimated that the annual damage caused by Tennessee River floods amounted to $12,500,000 a year, they have admittedly spent $149,000,000 on flood control projects charged to that account. Yet even this won't control all the floods, they admit, and Chattanooga and nearby towns will have to put up another $20,000,000 for their own flood-control works. And of course there's going to be maintenance cost on all these projects, too.

Figure out what it has cost to save that $12,500,000 flood loss and you'll find the Nation's taxpayers are spending several times that every year * * * just to save that estimated loss in the first place.

And if you talk about the flood lands that are now usable, the joker there is that they have permanently flooded with their dams just about as much rich bottom land as used to be flooded once in a while. And by their own estimate, that "once in a while" is once in 500 years.

The plan to extend these valley authorities is being pushed steadily. They are persistent—and do you know who "they" are? Not Cabinet members. It wasn't Cap Krug, Secretary of the Interior. Rather, it's the staff in behind—obscure people the public has never heard of, men who are bent on making this thing grow.

LOCAL OPPOSITION

They are now proposing a Columbia Valley Authority and running into the solid opposition of local boards of commerce and all the business associations of the Northwest. They say, "We don't want it. This isn't a backward, undeveloped part of the country. We don't want the Federal Government in here telling us how to plant and reap. We've done a good job developing this great and lovely country, and we think we local folks can continue to do it well."

But the staffers in the departments at Washington don't want it that way. So you hear a great deal about a power shortage in the Northwest. The Federal Government itself has caused that shortage by insisting on making aluminum, in peacetime, with underpriced power subsidized at public expense.

The Government fellows just made up their mind that it would be a good thing for the Northwest to have an aluminum industry there. The people didn't want it because aluminum plants don't employ very many. This jumble of power project, aluminum, shortage, and local dismay is just a sample of what happens when you centralize industrial power in Washington.

You can't run the industry of the United States from Washington. Nevertheless, that's what these men whom no one elects are trying to do. And that's why a number of us in the light and power industry are trying to tell the story. I honestly believe that if the real facts get understood there will be no question about the outcome.

When the affairs of a private business enterprise go wrong, the company gets a new management or goes out of business, letting other sound enterprises carry on the work of the Nation. But what happens when a Government project goes wrong? A deficit doesn't put them out of business; they just go back to Congress for a larger appropriation next time.

I think a nation's enterprise must be based on making ends meet. Its industrial life should seek money in the open market, where people entrust capital to enterprises that are well managed and can pay a reasonable interest or dividend on investment.

That is what makes Detroit Edison sound. And when the light and power industry of our whole country is made up of a lot of Detroit Edisons, all of them sound, then that much of the Nation's economy is sound.

FUNDAMENTAL DANGER

But once you put half of that industry into the hands of Government—and that is what some departments are planning—once half of the industry doesn't have to meet budgets and stay sound, then that much of the American economy has an unsound basis. Something very much like that threatens our country.

I'm not at all downhearted about this. It's good having a hand in trying to see to it that the public gets wise, and that's what we are out to do. I think we and other freedom-loving Americans are going to win.

Can We Preserve Our American Free Enterprise System?

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 15, 1950

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me before the Electrical Engineers Association at Baltimore, Md., February 14, 1950:

Fellow Americans, I am glad to speak here in your great city of Baltimore tonight. It has been almost 86 years ago that Abraham Lincoln spoke in this city at the Sanitary Fair on April 8, 1864, to be exact, at which time Lincoln said, "The world has never had a good definition of the word 'liberty.' We all declare for liberty; but in using the same word we do not all mean the same thing. With some the word liberty may mean for each man to do as he pleases with himself and the products of his labor; while with others the same word may mean for some men to do as they please with other men and the products of other men's labor."

I am sure if "Honest Abe" could talk here tonight he would say, "I have the definition for the word liberty now." But in his absence you and I must define the word and shout it from the house tops. Liberty means the exact opposite of Nazi or Communist tyranny, and British socialism, all of which most any American school child can define today. Of course, in Lincoln's time that type of tyranny had not yet raised its ugly head. Today, this very hour, most of the people in this world have taken a stand for liberty or tyranny. The fight is on, my friends, and make no mistake about it. Yes, the fight is on right here in your America this very minute, and the hour is late to enlist, a lot later than some folks think.

Can we save our liberties?

Can we preserve free private enterprise for America, the keystone of our liberties? That is the question we face today.

My answer is yes, if we are worthy of it in your sight and it be the will of God to save us from our own folly at this late hour. Where do we start, you ask? First, we must take stock of our debits and credits in order to ascertain about where America now stands as a going concern, and what is most needed to keep America in business. As you know,

there are three sure roads to national suicide—bankruptcy, dictatorship, and starvation. Is it necessary to remind the American people that every nation in the wide world that has traveled the full length of the wasteful, reckless spending route we are now traveling at breakneck speed has come to utter ruin and tyranny. Look at old Germany. A great people who enjoyed their best times when the wage earner made 50 marks a week, but they, too, followed the siren call of Utopia of a wasteful, national spending program, which finally brought a bogus high national income and uncontrollable inflation. Then the wage earner received an armful of marks each week, but it took almost all of it to buy bread. Sure, we can have a $300,000,000,000 national income. Germany had a billion trillion mark income, just as Red China has today, and just as America will have unless we stop this mad rush to financial national suicide.

Think this one over for a minute and please remember it. If everyone in the United States cashed in all their life-insurance policies, the total would amount to about $44,000,000,000, which is less than it will take to run your Government just for the year 1950. Or if every farmer in America sold all his farm land, all his farming equipment, and all his livestock, the total would amount to around $43,000,000,000. Again this would not run your Government a full year. Do those figures mean anything to you? I'm sure they do, but not to a lot of fellows in Washington who I could name. Facts are those fellows simply don't care so long as they get theirs. Now you may ask, How can we stop it? The answer is, When America thinks and speaks up America is safe. So speak up, Americans.

Since it is a known fact, and these are figures which cannot be disputed, the white-collar workers, of which you engineers are a part, plus the blue-denim workers, plus our retired elderly folks, represent about 60 percent of our consuming public; our farmers, who consume 1½ times more on an average than the rest of us, represent about 30 percent of our consuming public; and the employers in business and industry, and a few more of us, make up the balance of around 10 percent. The consumer pays all taxes in the final analysis, so I'll leave it to you as to just who is paying our tax bill, and should be most vigorously opposing wasteful spending. You folks are paying your share in income taxes, withholding taxes, and hidden taxes. Maybe you can stand it now, but the end is not in sight.

I presume that most of you engineers are now employed by private industry, tax-paying industry, which is the whipping boy among the great economic planners headquartered in Washington. And they are honeycombing throughout our country, planning and scheming ways to drive free, private, tax-paying industry to the wall. I know what I am talking about, for I have been fighting that gang ever since coming to Congress, and have really been in the thick of the fighting for the past 8 years.

As a member of the House Interior Subcommittee of Appropriations, one of those who hear and pass on all requests for funds for the Bureau of Reclamation. That Bureau is in the Federal electric power producing and distributing business up to their necks. There is no end it seems to the length they want to go to finally get control of all the electric energy and distribution of power in our Nation. They have well-developed plans to cover our entire country with hydroelectric power and steam plants and a complete network of distribution systems, such as they now have in operation in the TVA, and Bonneville areas in Washington and Oregon, where the private utilities are already on their knees. This is especially true in the State of Washington where a State law permits private utility facilities to be taken over by public utility districts by condemnation proceedings, and many private electric utility distribution lines have already been condemned and taken over by the public utility districts, which works hand and glove with the Bonneville power officials and the Socialists in the Interior Department.

Time will not permit me to tell you even a small part of the story, but I will give you an inkling of how this scheme is worked. There is a promoter running loose in the Northwest by the name of Myers. He went there after doing a job on the people of the great State of Nebraska, which is now a 100-percent public power State, to the peoples' sorrow, as it is today one of the darkest States in the Union so far as electric lighting is concerned. But Myers walked away with a pocket full of money. Now he is really going to town in the State of Washington with the help of a group of Wall Street money brokers. Myers will say to the folks in a certain area, "You are paying too much for your electric energy. I will help you take over under public utility district State laws with the blessing of the officials in the Department of Interior, and with money from Wall Street, this section of the private power companies' facilities. The minute you take it over you will have no Federal income tax to pay, hence we can pay the company a good price for it. The Wall Street boys will be happy for the business, and you will get cheap power." So, the deal is made and carried out. Myers gets a nice fat drag, the Wall Street money barons get a nice money take over a long period of years, the Socialists have cut the heart out of taxpaying free enterprise, and thus another mighty blow has been struck for socialism and national suicide at the expense of every American taxpayer, the people of the State of Washington included. How do you like it?

Now about the same kind of business is being carried on by the Bureau of Reclamation, with White House blessing, all over the 17 Western States, and spreading fast to other sections of our Nation. Folks, I have not $1 invested in any private utility company, but I cannot sit idly by and see this kind of business going on in America without speaking up and telling the truth so that all may hear.

Dictatorship. I am sure it is not necessary for us to look behind Stalin's iron curtain to know the sad story of follow the leader and his promises of security. All people who have done that now have neither liberty nor security. That we do know, at least.

Starvation. Thank God the farmers of America are solving that problem for all of us by good soil-conservation practices and crop rotation and other scientific farming methods. But there is yet much to be done. Let us never forget that every nation in this world that neglected to take proper care of their priceless top soil are now at our doors crying for bread.

Also, do not forget that our national income is always about seven times our farm income, and that for every dollar of farm income, the businessman sells $4.20 worth of goods and labor collects over $4 in wages for each dollar of farm income. All wealth springs from mother earth, she is our only economic generating plant. We must never again turn off that kind of power in America. Remember also that we have never had a depression with good farm prices, but have always had a depression with poor farm prices.

"If destruction be our lot, we must ourselves be the author and finisher," Abe Lincoln said that almost 90 years ago. I believe that admonition to be just as weighty and true today as then.

It was Lincoln who said, "The principles of Jefferson are the definitions and axioms of free society." Jefferson also expounded a preachment of millions of Americans today when he said, "When all government, in little as in great things, shall be drawn to Washington as the center of all power, it will become oppressive."

Today, millions of us are fighting the battles to preserve our American concept of life as laid down in the principles of both those great Americans, Lincoln and Jefferson. We are fighting for the economic system of America, which is as much a part of America as is our tradition of Bunker Hill and Valley Forge—as much as is our industry, our people and our countryside.

The paramount over-all issue that confronts us is: Do we believe in the principles of our Republic as it has been operated for 170 years? Do we believe in our American way of life, the private enterprise system, as opposed to socialism?

On this question, there can be no compromise. One stands for the dignity of the individual, his inalienable rights and freedoms, and his sovereignty over public servants. The other, socialism, stands for an all-power state, directing the lives, the activities, and the affairs of the people. The preservation of our American way of life and our private enterprise system depends entirely on how well you and I discharge our duties as Americans. Americanism and socialism do not mix. One or the other will be destroyed. America cannot survive half free.

A true American is one who believes in the right of every American to work and prosper—to establish his own security by industry and thrift—to make a better life for himself and his children through his own initiative and energy. Lincoln said, "You cannot help men permanently by doing for them what they could and should do for themselves."

Let me quote a few more pertinent words of Abraham Lincoln. He said, "You cannot bring about prosperity by discouraging thrift; you cannot strengthen the weak by weakening the strong; you cannot help strong men by tearing down big men; you cannot help the wage earner by pulling down the wage payer; you cannot further the brotherhood of man by encouraging class hatred; you cannot help the poor by destroying the rich; you cannot establish sound security on borrowed money; you cannot keep out of trouble by spending more than you earn."

Do any of these precepts have a familiar sound today?

In recent years, we have seen the extent to which Government has interfered in the lives of its citizens. We have been led into a time of great danger by oppressive taxation, extravagant and wasteful spending by Government, deficit financing and a staggering national debt. And the end is not yet in sight.

Whose fault is it? We have allowed the cost of Government to grow and grow, year by year, until we are consuming nearly one-third of our income just to govern ourselves.

What is the reason? Have the American people lost their capacity for self-government? Must the cost of Government be so great as to endanger our national existence? Lenin, the great Communist leader, said shortly before he died just a few years ago, "We will force America into bankruptcy then we will take her over."

Must peacetime taxation placed upon our people be so burdensome as to destroy all incentive for industrial growth and economic progress?

Must the people give up to Government such a large share of their earnings that they are deprived of all opportunity to get ahead? Will Lenin's prediction come true?

The greatness of America was not built by Government spending. It was not created in legislative halls. It was not produced by the enactment of laws which led people to believe that they were getting something for nothing.

The greatness of America is ours because of the toil and sweat, and the inventive genius of generations of courageous, industrious, self-reliant Americans. They were willing to work and sacrifice and save to build economic security for themselves, for their families, for their communities, and for their country.

And they did not export jobs as we are doing today under a system of tariff reductions that permit the importation of cheap foreign goods through a so-called reciprocal-trade agreement at the discretion of one man which has caused whole industries in our country to be shut down and our workers thrown out of work. We now have not only a national socialist philosophy at work in our country, but a global concept of this system. This, in spite of the fact that those governments which have tried socialism over a period of years have turned their backs on it.

How else can we recognize the Trojan horse of socialism which is being offered to the American people? We have been told that we can produce a $300,000,000 economy, providing jobs for everyone without any large increase in taxes. It sounds good, doesn't it? And it is good, provided our liberties, as we know them, are not sacrificed in its achievement.

But we are presented a 5-year plan. Where have we heard of 5-year plans before? Russia had a series of them. Germany had them. Italy had them. They all ended the same way—starvation, misery, dictatorship, and inflation. Yes; they had a high national income, but it was a bogus income. Their currency was not worth the paper it was written on. A basketful of bills was needed to buy bread. That was not so good. Sure those folks were all promised utopia. All that was required was for them to bow to wasteful spending by the leaders. Does that song sound familiar to you?

What else did these three dictatorships have in common? They are all socialistic states. Socialism and communism are sisters under the skin. Remember the official name of Russia is the Union of Soviet Socialist Republics.

How did all of this start? Let's take a brief look at how the Trojan horse of socialism took over in England and then show the deadly peril here. First they took over all banking, then all electric power—the people were then told to be good or you get neither money nor electric power—the rest was easy. Remember this, few Socialists of modern times will admit that they are a Socialist. The large majority of American Socialists abhor the name while doing the deed. They call themselves economic planners and other high-sounding titles. But their objectives are all the same—the regimentation of the people into robots to obey the commands of the big brains fastened onto the pay rolls of the Government.

In England the Socialists masking under the name of the Labor Party were a small group at first. They fastened themselves onto the larger Liberal Party and bored from within. They worked slowly and began to take more and more power over the Liberal Party until in the last election several years ago the Liberal Party was practically out of existence. They came into power with catch slogans such as "jobs for all," "security from the cradle to the grave," and other vote bait. Then the real planners of the so-called welfare state got to work. I need not go into any details as to what has happened to once mighty England. You know she is bankrupt and living off the dole of the United States, the last and most powerful free-enterprise country in the world. How long can we take it? But you say it couldn't happen here. Listen to this: There is a bill called the Spence bill, H. R. 2756, called the Economic Stability Act of 1949. It is part of the 5-year American Socialist plan. It sounds good, doesn't it? Everyone wants economic stability. But this bill gives the President the right to go into any business with Government funds to compete with any private business. Last year they wanted to put the Government into the steel business. Under this Spence bill, the President can also channel scarce materials and facilities into what he may deem essential production and uses. If the Socialist planners feel that your business is not essential, they can put you out of business by simply refusing you materials or plant facilities. You could also be subpenaed in person with your records and books and, if you refused, be in contempt of court and suffer the penalty. This bill permits the President to fix prices. I have not time to go into all phases of this Spence bill, but these are a few examples to show you how far down the road to socialism a powerful, well-organized clique are determined to take America.

The Brannan farm bill is another example. High prices to farmers and low prices to consumers also sounds good. But even the author himself or his experts either cannot or dare not estimate the cost to the taxpayers of this one. And my advice to all young men planning to be farmers is to learn accountancy good to keep the numerous records and reports which are necessary if this plan ever went through, in order to keep himself out of jail—for there is a jail penalty in the 15 pages of penalties written in this bill which would regiment farmers beyond anything Americans ever dreamed would happen here. Farming is the greatest private enterprise in our land. I am happy to report to you that only a very small percent of our farmers are falling for the Brannan scheme.

The time has come when we must abandon our easy-going attitude toward regimentation and needless and wasteful Government spending. We have been presented this year with the largest peacetime budget in our history, plus the fact that we will have a 1950 fiscal deficit of at least $6,000,000,000, according to my figures.

What are we going to do about it?

We must give the people a clear-cut choice of the issues confronting us today. Let those who are for a Socialist state get into their corner. Those who are for our free-enterprise competitive system get over in our corner. Let's fight it out on clear-cut issues. Anyone who can think and read and who has followed the goings on in Washington for a long, long time, can have no doubt as to where the road ahead will lead.

We must stand for a republic in which the elected representatives and public officials are servants of the people and not their masters.

Public opinion, when aroused, is yet the strongest force in this land. It is your job to see to it that the people understand the truth; understand that eternal vigilance is still the price of liberty.

We must stand up fearlessly against the folly of a domestic program that teaches people to depend upon Government for all good things in life remembering that Lincoln said: "You cannot build character and courage by taking away a man's initiative and independence."

We must constantly warn against the dangers of a Federal policy that deceives the sane of mind and strong of body into thinking that they get something for nothing. But we must ever remember our duty and responsibility as Americans to the aged and infirm, to the widows and orphans, and our disabled veterans who are paying the greatest price for our wars. This we must do and can do unless we spend all America into bankruptcy needlessly.

We must place where it properly belongs, full responsibility for secret agreements which betrayed free governments into socialistic and communistic enslavement.

And we must fight here against the drift into a socialistic pattern of government because that system has brought death and destruction to every country where it has been attempted.

Let us plan courageously and well. And let us work diligently. Let us carry the truth to the people.

Let us again dedicate ourselves to the proposition "that this country, under God, shall have a new birth of freedom."

A Tribute to Susan B. Anthony, a Woman of Consecrated Purpose

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 15, 1950

Mr. KEATING. Mr. Speaker, today is the birthday of Susan B. Anthony. Although 130 years have elapsed since her birth and nearly half a century since her death, her influence is still a powerful force in the promotion of an improved status for women and of enlightened government.

Miss Anthony was a zealous and valiant campaigner for any cause to which she devoted her unusual talents. Halfway measures she spurned. She is best remembered, of course, for her pioneer work in obtaining suffrage for women, which, unfortunately, did not become a reality until 14 years after her death. But her activities in furthering the advancement of women and in other worthwhile causes were by no means limited to this single field.

I am proud the women of the party which gained the allegiance and loyalty of this distinguished woman have formed in my community a flourishing organization known as the Susan B. Anthony Republican Club, thus perpetuating the memory of a great woman leader and furthering those principles of government which she espoused. This daughter of Rochester belongs to the ages. Let us who follow profit by her example through clinging steadfastly and, if necessary, militantly to the ideals and principles which conscience, rather than expediency, dictates.

Recommendations of the Hoover Commission Report on Veterans' Affairs

EXTENSION OF REMARKS
OF
HON. M. G. BURNSIDE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 15, 1950

Mr. BURNSIDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting a letter from Mr. Joe H. Tonahill, a division commander of the American Legion in the State of Texas. It seems to me to be a very fine statement, and the million other veterans of his State stand on that part of the Hoover Commission report concerning veterans' affairs.

The letter follows:

THE AMERICAN LEGION,
DEPARTMENT OF TEXAS,
Jasper, Tex., February 3, 1950.

Hon. M. G. BURNSIDE,
Member of Congress,
Washington, D. C.

MY DEAR CONGRESSMAN BURNSIDE: The purpose of this letter is to commend you for the very intelligent and patriotic stand you are taking relative to the recommendations of the Hoover Commission Report on Veterans' Affairs. I refer to your speech in the House February 1, 1950, which is printed on page 1330 of the CONGRESSIONAL RECORD.

Your statement that any change in the Veterans' Administration program of hospitalization must be viewed from the standpoint of better service to our disabled, and that the Hoover Commission proposal of the consolidation of hospital care for veterans with all other hospital programs of the Government is a complete reversal of our national policy of special treatment for veterans, meets squarely with the conscientious and considered belief, in my earnest opinion, of the 1,000,000 veterans of Texas, their families, as well as their leaders, the 100,049 paid-up members of the American Legion, Department of Texas.

We Legionnaires are for real economy in the Government's discharge of the Nation's obligations to its 19,000,000 veterans. As a matter of fact, the American Legion has always abhorred wastes in Government effort. We likewise recognize that improvements can be achieved in the operations of the Veterans' Administration. However, we of the Legion believe very strongly that such improvements in services and savings in costs can best be made within the existing framework of the Veterans' Administration.

In considering the Hoover Commission report one must naturally look to the nature and character of the research and investigation that was conducted by the Hoover task forces. It, of course, is no absolute disqualification of that report in connection with veterans' affairs that Hoover himself in 1929 told the Nation that efficiency, economy, and more uniform administration required consolidation of the three separate agencies then handling veterans' affairs, for instance, (a) Veterans' Bureau, (b) Pension Bureau, and (c) National Homes for Volunteer Soldiers, and that Congress responded by placing those three agencies under the Veterans' Administration; yet now, though 20 years later, statesman Hoover tells us that for the same reasons of economy and efficiency the Veterans' Administration must be carved up into not just three agencies but five agencies. We are wondering whether Mr. Hoover was wrong in 1929 or whether his Commission is wrong now.

Nor is it an absolute disqualification of the report that there is no existing defect that cannot and should not be corrected within the four walls of the Veterans' Administration. Neither is the report disqualified by virtue of the fact that the Hoover task forces completely ignored the American Legion in reaching its findings, originated, conducted, and prepared and discussed their investigations for 2 years into the matter from offices located just four doors removed from the American Legion headquarters in Washington, D. C.; nor either for the fact that the American Legion asked to be heard to present the side of the veteran on four occasions and that their request went unheeded; and likewise neither is it a disqualification that Chairman JOHN RANKIN, Veterans' Affairs Committee, were not consulted.

Though those observations do not vitiate the structure and credibility of the Commission's recommendations, yet one cannot ignore the unmistakable fact that had the Commission sought the benefit of the experience, the lessons gleaned from a long period of trial and error of those more familiar with the veterans', their dependents', widows', and orphans' problems, that virtually that report would have contained an entirely different approach to the economy aspect of administering veterans' affairs and the problems in connection therewith. Failing to consider the valuable information at its disposal, the unbiased mind cannot consider that the Hoover task forces went about their business with open minds.

You, of course, know that the American Legion contends that the cost of rehabilitating the human wreckage of war is as much a part of the cost of waging war as is the building of battleships, tanks, planes, and guns. Those weapons are paid for in cash on the barrel head. The Government leans over backward to see that every wartime contractor gets a square deal. But the human costs of war are put on the cuff. They constitute a sacred obligation of the Nation. This debt cannot be honorably discounted or evaded by simply writing it off as a so-called economy measure.

We want you to know, Congressman BURNSIDE, that we down here in Texas truly hope and feel that your veteran population there in West Virginia, your home State, will not let the intelligent and patriotic stand you are taking on this highly important matter go unnoticed when you ask for retention in office. Our hats are off to you and to your concluding statement, "I am opposed to transferring from the Veterans' Administration any of its duties or responsibilities to our disabled."

With best wishes for your continued success, and as one of millions who has asked for no benefits and as one of the 100,049 legionnaires of Texas who are receiving no benefits, and ask none for themselves, my highest compliments and great admiration are to you extended.

Very respectfully yours,
JOE H. TONAHILL,
Second Division Commander.

Traffic Management in the Federal Government

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 15, 1950

Mr. HOLIFIELD. Mr. Speaker, the Federal Government expends approximately $1,000,000,000 a year for the transportation of public property. A task force of the Hoover Commission and other investigators have called attention to the huge potential savings to be derived from improving the traffic management functions of the Government. The Subcommittee on Executive and Legislative Reorganization, of which I am chairman, is considering the need for legislation in this field.

On January 10 the Washington Chapter of the Society for the Advancement of Management held an important meeting to discuss traffic management problems in the Federal Government. This was one of a series of round-table discussions on Federal property management under the able direction of Mr. Ray Ward, chief, Property Management Group of the Bureau of the Budget. It was my privilege to attend and participate in this discussion as did Congressman BURNSIDE, of West Virginia, a member of the subcommittee, and Congressman MACK, of Illinois. The magazine Traffic World in its issue of January 14 carried a very full account of the traffic management meeting. I believe the Members will find this article of interest in view of legislation about to be proposed:

UNPROGRAMED CALL FOR REDUCED FARES FOR CIVILIANS IN GOVERNMENT STIRS MEETING—MANAGEMENT GROUP HEARS SUGGESTIONS THAT REDUCED FARES FOR MILITARY PERSONNEL APPLY TO CIVILIAN EMPLOYEES OF FEDERAL GOVERNMENT—CALL FOR WIDER APPLICATION OF REDUCED RATES ON PROPERTY ALSO VOICED

There were two developments at a meeting of the Washington chapter of the Society for Advancement of Management round table on property management, the evening of January 10, that were not on the official program.

Maj. Gen. William O. Reeder, deputy director of the logistics division of the Army, General Staff, drew a round of applause when he responded to a request for comment on what had been said about centralization of traffic-management functions in the Federal Government and a current program of the General Services Administration for coordinated Federal traffic management. Said the general:

"When you have everyone with a good traffic manager, and you have the rates all down, and your purpose has been achieved, it seems to me the rates would have to go up to keep the carriers going."

The other development came when Stanley Crosthwaite, of the Division of Supply, Bureau of Reclamation, asked Col. E. B. Gray, of the Office of the Chief of Transportation, Department of the Army, how the Army had obtained a 10-percent reduction in passenger fares for military personnel from the railroads and the air lines, and a 5-percent reduction from the bus lines. The resulting discussion brought a suggestion that civilian employees of the Government ought to enjoy the same reductions and eventually the subject broadened out into expressions of opinion that the property of Government departments moving in transportation should be considered the property of Uncle Sam and special rates made to one department of the Government should apply to the movement of all similar Government property.

TRAFFIC MANAGEMENT AS A PROFESSION

Dr. John H. Frederick, professor of transportation, University of Maryland, was the first speaker of the evening. His subject was Professional Aspects of Traffic Management.

"No one who has observed the development of business in this country can avoid being impressed with the fact that, gradually and over a period of years, the various vocations or subdivisions of industry have tended to become professionalized," said Dr. Frederick. "This has been true not only in the fields of law, medicine, and insurance, which are not directly connected, but in the fields of industry, management, purchasing, accounting, and other activities which at one time were considered to be but part of the day-to-day work of any businessman.

"The word 'professional' is one that is very easily misunderstood. It does not mean that a smug group considers the work it does as something better or more difficult than the work other people do. But it does mean that certain criteria of judgment have been applied to a vocation. It means (a) there is a reasonable compensation paid to those who work in the field; (b) there is a reasonable opportunity for advancement based upon professional efficiency, commensurate with talent and devotion to the work; (c)

there is a high degree of attraction to the work; (d) there are high ethical standards applied, and (e) there is a firm belief that the work is related to public service.

"Professionalization may be brought about in several ways. One is to prevent, by law, anyone from practicing a profession until certain educational and ethical standards have been complied with. This is the case with physicians, lawyers, pharmacists, and other professional men who render such a personal service to their clients that they must meet certain standards before being permitted to practice. Another way is followed by engineers, architects, and the like who serve the public in a semi-personal way and practice their professions without having complied with such rigid standards but still with general rules prescribed by professional societies or even by law.

"All of the numerous reasons which have influenced any group to organize for professional, promotional, and educational work are present in the field of traffic management. However, the basic reason why professionalization is needed in traffic management is that it will establish and then maintain essential and uniform standards of practice. It will be another important step toward better standards and more efficient and economical transportation.

"If the profession of traffic management is ever to amount to anything several things must be done by individuals and groups. (1) The public must be told of the importance of traffic management. (2) Employers must be sold more and more on traffic management. (3) Traffic managers must broaden their horizons and extend their knowledge of transport practice, the economics of transportation and general management in order to prepare themselves for larger fields of service. (4) A high standard of ethics must be established and maintained.

"Traffic management has already developed a group consciousness which facilitates further and stronger organization. A number of able men have achieved positions of prominence in the field through their efforts and opportunities they have grasped, and many of these men are willing and eager to assist others for the good of the profession. Much has been done, but not enough. The foundation has been laid, now the building must be erected.

"If professional status is to be brought about it will be necessary for someone or some group to suggest what the professional standards should be. This is a delicate point. No one has yet done this with any exactness. Perhaps no one is ready to do it, but it merits early attention.

"No one can deny the fact that traffic management is not and cannot ever be a profession such as medicine, law, and the like. It does, however, have much in common with what might be termed professions such as engineering, architecture, accounting, and the others, and it is certainly affected with the public interest. It is time that steps toward professionalization be taken."

TRAFFIC CONSULTANT SPEAKS

E. B. Ussery, a traffic consultant of the firm of Bell & Ussery, Washington, D. C., in his talk on the increasing need for centralization of traffic management functions in the government, after reviewing studies of alleged payment of excess rates on Government traffic in the two world wars, and an investigation his firm made for the Committee on the Reorganization of the Government, headed by former President Hoover, asserted that the problem of rates on Government shipments could not be solved unless there was centralization of the top-flight functions of traffic management. He observed that Public Law 152, Eighty-first Congress, the Federal Property and Administrative Services Act of 1949, gave the new General Services Administration centralized authority insofar as civilian agencies of the Government were concerned, with provision for the Administrator to perform the function of negotiating rates for the military unless his decision was vetoed by the Secretary of Defense.

There was now a clear-cut line of authority, power, and duty, he said, and that, when the agency could obtain the necessary personnel, it must first perform the basic task necessary to obtain information on whether or not charges were reasonable or unreasonable. He said it was now very easy to determine what traffic of the Government moved on class rates, on exceptions rates, or on commodity rates.

Among other things, Mr. Ussery asserted that, if the basic scale prescribed by the Commission in its class-rate case was prescribed in the light of costs in the various territories, it could not be assumed that the redistribution of the burden among commodities now moving under exceptions would not, under the uniform classification and the elimination of exceptions, move under rates also to be made in relation to the cost of rendering the service.

Col. E. B. Gray, Chief of the Movements Division, Office of the Chief of Transportation of the Army, described the Department of Defense land traffic program. After reviewing the development of military traffic management during and after the war, Colonel Gray said recently a central military land traffic office was established in the Department of Defense by an order of the Munitions Board. He said the order stated that the Munitions Board would establish policies of traffic management and would assure compliance with those poliices with a view to developing the most efficient and economic operation of those functions in the Department of Defense. He listed 10 duties of the central military land traffic office, which he said was being shaped up in the Office of the Chief of Transportation. Those duties were, he said: Negotiation of certain rates and charges, including classifications and exceptions ratings; negotiation of fares and charges for passenger traffic; issuance of billing guides; negotiation of weight and average demurrage agreements; negotiations incident to loss and damage claims and related investigations, including technical review and recommendations concerning the prevention of damage; issuance of export rules for war or emergency only; promotion of maximum use of service-owned equipment; operation of freight consolidating and distributing stations if established; development of proposed regulations pertaining to traffic management; administration of centralized statistics. Colonel Gray then gave a brief explanation of each of the duties.

GSA PROGRAM

William E. Hayghe, Acting Chief, Division of Traffic and Utilities, Federal Supply Service, General Services Administration, read a paper on "The current program for coordinated Federal traffic management." Under the act setting up GSA, he said, the function of traffic management was created as an integral phase of personal-property management, the GSA Administrator having been given the duty of prescribing policies and methods relating to transportation and traffic management. He said GSA, because of the ineffectiveness of previous attempts at traffic management, found itself without any reliable index of the nature, volume, and channels of freight moving for Government agencies. He asserted that those best fitted to analyze the Government's transportation policy knew that from 2 percent to 10 percent of the amounts paid annually for the transportation of property represented excessive charges. The object of GSA's plan, he said, was centralization of policy establishment and decentralization of operations.

Mr. Hayghe said GSA had developed a plan for attacking the Government's freight traffic management problem on four broad fronts: Establishment of policies and methods of shipping to insure that the fullest advantage is taken of benefits available under published tariffs; examination and study of existing and proposed rates, classifications, rules, and regulations to determine to what extent they may be, or become for the future, unreasonable or unlawful on movements of public property; attempt by direct negotiation to effect voluntary adjustment of rates, following up as to items that cannot be so adjusted by petition or complaint to Federal or State regulatory bodies; and establishment of direct personal contact with Government shipping personnel throughout the country, to insure compliance with policies and methods centrally developed, and to improve such policies and measures.

Mr. Hayghe developed each of the proposed measures in a brief way. In the course of his remarks he said, in developing the described plans, no facility of government that was functioning efficiently and effectively to reduce costs of transportation would be destroyed simply for the purpose of substituting something else, but that the purpose would be to develop such a facility so that it would function for the future on a more comprehensive basis than in the past. He said that, underlying the whole structure of the system of traffic management covered by the plan, would be the object of furnishing all agencies the maximum of service at the minimum of cost, to the end that payments by Federal agencies of excessive transportation costs will be eventually eliminated or reduced to a negligible quantity.

QUESTION PERIOD

Ray Ward, Chief, property-management group, Bureau of the Budget, who is chairman of the property management round table, and who conducted the meeting, called for questions.

Carleton Shugg, Deputy General Manager, Atomic Energy Commission, asked Mr. Ussery what part of the excessive charges for transportation to which the latter had referred came about because of an unusual demand put on a transportation agency, and in clarifying his question indicated he meant the charges on shipments that did not move when they should have moved, but before or after that time. Mr. Ussery spoke of two areas of rates—those that could be adjusted because the proper rate was published in tariff form or subject to section 22 quotations; lower rates quoted the Government under section 22 of the Interstate Commerce Act—and those that were legal rates but unlawful under the act. Mr. Hayghe said the Government must first determine what was moving, how much was moving, and where it was moving, because, he repeated, no one in government had a reliable index of those facts.

Col. Frank H. Dryden, Assistant Administrator of the Veterans' Administration, said 87.3 percent of that agency's traffic moved in carload or truckload lots, which, he said, showed the agency was planning its shipments, which he said moved to several major depots out of which between seven and eight hundred installations were served.

SPECIAL RATES TO GOVERNMENT

It was here that Mr. Crosthwaite, of the Reclamation Bureau, asked Colonel Gray how the reduction in fares for military personnel was obtained when "we can't get it for the rest of Uncle Sam's employees." Colonel Gray said it was "because we went after it, I presume." He observed that reductions had been in effect for a long time, going back to land-grant days, with the present reductions negotiated since the Land-Grant Act was repealed. He said the railroads and busses had agreed to the reductions in fares for travel on transportation requests if the

military services would distribute traffic on an equal basis among the individual carriers.

Mr. Ussery said Mr. Crosthwaite had "put his finger on an evil I think is abominable." He asked why one agency of the Government should have preferred treatment, adding he thought all the transportation contracts should be made in the name of the United States Government. He said that if contracts had been negotiated for the Government it could have used the bargaining power of the military services for the benefit of all departments of the Government. Mr. Crosthwaite expressed the view that the civilian agencies were using transportation, in the aggregate, to a greater extent than the military agencies, and said he thought the civilian agencies should "take whatever action we can to get in on this gravy train." Mr. Hayghe said that there had been a movement about 2 years ago for the other Government agencies to obtain the same agreements as the military, but that it was felt then that if all the agencies of Government followed that course it might jeopardize the advantages the military had gained, and the matter was dropped. He said he thought it perfectly proper for the railroads to give to an agency having volume movement, such as troop movements, rates comparable to those for excursion movements.

CENTRALIZATION OF PLANNING

After General Reeder had made his remark concerning the ultimate effect of rate reductions, Mr. Crosthwaite said it was not believed that the entire determination of Government transportation policy could be consolidated in Washington because, he said, "it's too big." He said there were transportation management problems "down at the level where you are doing the ordering and receiving of your supplies," and that "if we are going to accomplish the maximum benefit," it would be necessary to "push down to those levels" the principles and doctrines established in Washington.

Representative HOLIFIELD, of California, a member of the subcommittee of the House Committee on Expenditures in the Executive Departments which handled the bill that became the Administrative Services Act, asked if the things planned by GSA could be done without further legislation to give GSA power to go into the matter a little more thoroughly. He said he looked on the act as a basic act on which could be developed several facets of Government economy and efficiency.

Representative BURNSIDE, of West Virginia, also a member of the afore-mentioned subcommittee, called on by Mr. Ward for comment, said he was sorry the newspapers throughout the country did not carry stories that Government employees gave their evenings to such conferences without overtime pay.

SPECIAL RATES TO GOVERNMENT

Russell Forbes, Deputy Administrator of the GSA, said the Government should be getting around to the point of view of considering Uncle Sam as a shipper of property and get away from the idea that departmental property transportation was a separate proposition. In the past, he said, special rates granted under section 22 had, in a great many cases, been considered a secret within one agency that secured that rate. He said he thought the Administrative Services Act opened the field for that type of consideration, that all Government property is viewed as owned by the taxpayer and the shipper is the United States Government. If the civilian shipping requirements were combined with those of the military, he said, he did not see how it could help benefiting all around and that the ultimate beneficiary would be the taxpayer.

He continued by saying that although GSA did not contemplate in its set-up going into the matter of passenger rates, he thought it would be proper to accept the challenge Mr. Crosthwaite has thrown out and see what could be done through GSA to make available to the employees of civilian agencies the same rate or a comparable rate to that given the Military Establishment. He said travel of Government servants was at the expense of the taxpayer and should be subject to discount. He said he did not think the effort to obtain reduced fares for civilian employees would jeopardize the arrangement the military group had made.

DECENTRALIZATION IN DEPARTMENT OF AGRICULTURE

Jack Somers, of the Department of Agriculture, said the Commodity Credit Corporation had had an opportunity in the past few years to compare experience under two methods of operation, that is, with shipments moving on Government bills of lading on a centralized basis, and with those moving on commercial bills of lading on a decentralized basis. He said experience, as far as efficiency was concerned, showed that the decentralized operation on commercial bills of lading, shipping wheat and other products, with the settlement of transportation bills at regional area levels, was far more satisfactory than under the centralized operation, where all the bills of lading came into Washington. He said one of the reasons for overpayment was that Government bills of lading were not audited before they were paid. Under decentralization, he said, the bills were audited before they were paid.

He agreed that the negotiation of rates was centralized in Washington, and that procedures and rules were also set up in Washington.

SECTION 22 DISCRIMINATION

At this point Mr. Hayghe expressed the view that a section 22 quotation for one agency of the Government was in violation of section 3 of the Interstate Commerce Act, because it was a discrimination against other agencies. However, he added, "the lawyers do not agree with that." He said the same rate should apply for all departments for the same transportation services. In answer to a written question sent up to Mr. Ward, Mr. Hayghe said there would be bulletins, circulars, and other educational matter sent to clerks in the field offices until such time as GSA had personnel sufficient to maintain direct contact with such employees.

Homer S. Paul, of the Office of the Chief of Transportation, Department of the Army, described the work of a voluntary interdepartmental committee formed about 3 years ago. He said rate information had been exchanged between its members so that, when a rate had been obtained by negotiation for one department, the others would request that the rate be made to cover their transportation, with the assurance that the agency that had obtained the rate in the first place would assist other agencies to obtain it.

Mr. Ward, in closing the meeting, said the subject of the next conference would be records management.

Prepaid Health Care

EXTENSION OF REMARKS

OF

HON. JACK Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 15, 1950

Mr. ANDERSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including a self-explanatory communication and enclosures from the California Physicians' Service. In my opinion it is a program like this that answers the continual cry for socialized medicine in this country:

CALIFORNIA PHYSICIANS' SERVICE,
San Francisco, February 9, 1950.

Hon. JACK Z. ANDERSON,
United States Representative, House Office Building, Washington, D. C.

DEAR MR. ANDERSON: California Physicians' Service—one of the largest of the many voluntary blue shield health plans established in the United States by the medical profession—is announcing today another major improvement in its system of prepaid health care for the public.

California Physicians' Service is aware of the great financial shock of many of the prolonged illnesses and in an endeavor to protect the public against the shock of such illnesses it is now making available catastrophic coverage which offers protection against the heavy and prolonged costs connected with some of mankind's most feared diseases. The list includes 23 illnesses such as cancer, infantile paralysis, tuberculosis, etc., and for these it offers complete medical care.

The cost of this extremely valuable protection is quite modest. It will range from 70 cents per month per individual to a maximum of $2.20 per family no matter how large.

We are sure, Mr. ANDERSON, that you are giving very serious consideration to public discussions regarding the Nation's health and the various types of health insurance which may protect it. We feel that the announcement of our catastrophic-coverage plan has an important bearing upon this whole problem and we are sure that you will wish to refer to the enclosed material which contain rather full information about catastrophic coverage.

Sincerely yours,

LOWELL S. GOIN, M. D.,
President, Board of Trustees.

The following concise account of the founding and growth of California Physicians' Service may be useful as background material to supplement the accompanying news release, regarding the offering of catastrophic coverage by CPS. It may also be useful for editorial writers who may wish to comment editorially on the CPS record of service and achievement since 1939.

WHY IS THERE A CPS?

The objective of CPS is to provide Californians with a prepaid membership plan by which they can budget for serious illness and injury, thereby removing as much as possible the financial burden of health care. In addition, the basic philosophy behind CPS is to provide this plan on a cooperative, voluntary, and nonprofit basis under sponsorship of the medical profession. In this way it is possible to maintain the vital, personal relationship between doctor and patient—as well as to uphold the high standards of American medical practice.

HOW DID CPS GET STARTED?

For many years prior to the beginning of CPS, the medical profession had recognized that the amazing discoveries in medical science had raised the costs of providing modern medical care to the public. In 1927 a national committee on the costs of medical care was formed with the late Dr. Ray Lyman Wilbur as chairman. The committee's 5-year study, published in 1932, included among its specific recommendations the establishment by the medical profession of a voluntary health security plan on a group, prepayment basis.

In December 1938 the California Medical Association took a great pioneering step when it decided to sponsor the formation of California Physicians' Service. Shortly after, on February 2, 1939, CPS opened its doors—the first State-wide, medically sponsored health plan in the United States. Now 11

years old, CPS has had the added distinction of being a model for similar plans organized throughout the country. It has also been instrumental in causing health insurance to be offered by commercial carriers.

HOW DOES CPS OPERATE?

CPS functions under the direction of a 15-man board of trustees—11 doctors and 4 laymen—all of whom serve voluntarily and without remuneration. The late Dr. Ray Lyman Wilbur, who also played a leading role in the founding of CPS, served as president of the board of trustees from 1939 to 1945. He was succeeded by the current president, Dr. Lowell S. Goin.

CPS is a nonprofit corporation, and its funds are received in the form of dues paid by beneficiary members. Approximately 85 percent of the money thus received is paid out for claims made by the beneficiary members. The remaining 15 percent is used for administrative expense and for building a reserve fund.

HOW LARGE IS CPS?

CPS has had a remarkable growth which reflects the wisdom that was responsible for its founding. Today, approximately 900,000 Californians are beneficiary members and 10,300 of the State's leading physicians and surgeons are physician members. Approximately 27,000 new beneficiaries enroll monthly, and approximately 50,000 claims are paid each month.

WHAT HAS CPS ACCOMPLISHED?

As the pioneer in the previously uncharted field of prepaid, voluntary health plans on a State-wide basis, CPS had no precedent or previous experience to guide it. The early formative years were difficult; as a nonprofit organization, CPS had to adjust dues to cover actual costs for services rendered to beneficiaries; there was no yardstick to indicate the rate of utilization by beneficiaries of their prepaid health protection.

Necessarily, therefore, there were frequent adjustments through hard experience. However, there was also the determination of California doctors to evolve a workable solution to voluntary, prepaid medical care on a large scale, even at their own expense. Almost from the start, doctors have willingly accepted reduced fees in order to assure the ultimate success of the program. For the same reason, CPS doctors are still accepting less-than-normal fees for services rendered. In this spirit, most problems have been successfully overcome—a fact which is largely attributable to the flexibility of CPS and its administration by those best qualified to serve the health needs of the public, the doctors themselves.

Not only did CPS work out its problems; it also constantly enlarged the scope of its coverage and benefits.

1942: Membership extended to dependents of employees.

1943: CPS the first health plan in the Nation to cover conditions existing at the time of joining.

1944: Diagnostic and hospital care increased to provide additional services not formerly covered.

1945: Employed persons over 65 eligible for group membership.

1946: First complete rural health program established in cooperation with California State Grange.

1946: Veterans' program for home-town medical care of veterans with service-connected disabilities established in cooperation with Federal Government.

1948: All age limits withdrawn throughout California for dependents as well as employee members of group enrollment.

1949: CPS individual memberships, designed for persons not able to join through group enrollments, available throughout northern California. (Soon to be offered in southern California.)

1949: New plan inaugurated to provide equal medical services in the hospital for all family members, plus hospital and surgical benefits.

1949: Greater protection for lower- and middle-income groups provided by raising of income ceiling to $3,600 annually.

1950: Vast extension in coverage for more than a score of catastrophic ailments, including cancer and tuberculosis.

California Physicians' Service led in the formation of the Associated Medical Care Plans in 1947, a national organization of medically sponsored, voluntary, prepayment health plans in the United States. While each plan is independent, all carry the same emblem of the blue shield and each is known as a Blue Shield Plan. Altogether there are 64 Blue Shield Plans, in virtually every part of the country, and total membership is approximately 11,000,000.

NOTE.—In northern California CPS writes complete membership contracts—for medical, surgical, and hospital benefits. In southern California the Hospital Service of Southern California Blue Cross provides the hospitalization in a joint offer with CPS.

Oconomowoc Scholarships

EXTENSION OF REMARKS

OF

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 15, 1950

Mr. DAVIS of Wisconsin. Mr. Speaker, a unique scholarship plan whereby an entire community can assist the education of some of its young people who otherwise might be denied a chance to attend a college or university has attracted much attention to the city of Oconomowoc, in my district of Wisconsin.

Some time ago, in order that I might call this Oconomowoc idea to the attention of my colleagues and to other sections of the country where similar plans might be established, I sought to obtain details of the plan's operation from Editor C. W. Brown, of the Oconomowoc Enterprise. I fear he has been too modest about his accomplishments to supply that information. While the fine generosity of the people of Oconomowoc has made this plan an annual success, it took the initiative and directing enthusiasm of Editor Brown to make it possible. I am glad to note that the current issue of Publishers' Auxiliary, a newspaper trade journal, pays deserved credit to Editor Brown and the Oconomowoc Scholarship Fund, Inc.

Under permission to extend my remarks, I wish to include that story from Publishers Auxiliary:

SCHOLARSHIP PROGRAM SCORES FOR WISCONSIN WEEKLY EDITOR

OCONOMOWOC, WIS.—With seven students attending universities and colleges as the result of the successful operation of the Oconomowoc Scholarship Fund, Inc., the past 2 years, the Oconomowoc Enterprise which originated and sponsors the scholarship project, now is raising funds for the third year of scholarships with the hope that the amount of money subscribed the past 2 years will be equaled or surpassed.

The fund is an example of community service which can be adopted by any newspaper in the United States.

Speaking before editors of the State at a press conference at the University of Wisconsin at Madison last fall, E. B. Fred, president of the school, said, "It is my belief that nowhere in the country is there a finer example of public service than this educational plan sponsored by the Oconomowoc Enterprise."

The fund grants $1,000 in 4-year scholarships or $250 per year. The scholarships are outright gifts, not loans.

The Enterprise itself raises the money each year for the scholarships through its news columns by asking for voluntary donations from residents of the city and area. There is no direct solicitation. The first year more than $3,000 was raised; last year a total of more than $3,400 was contributed. Raising of funds for the 1950 scholarships, which will be granted at the end of the school year in June, was started December 15. A total of $1,150.50 was in by January 10, showing the raising of funds running ahead of the other 2 years for the same period of time. To start the fund-raising campaign each year, the Enterprise donates $250.

The student must make application for the scholarship. Once having been granted a scholarship he may attend any accredited school—university, college, technical, or trade school. He may also be attending one of these schools when he applies for scholarship which may be granted for the number of years remaining in his university or college studies. The awards are based on scholastic standing, character, desire of the student to continue his or her education and the benefit to society in general.

Once having been granted a 4-year scholarship, the student's work is reviewed each year by the board to determine whether the grant should be continued.

When the Oconomowoc Scholarship Fund, Inc., a nonprofit organization, was organized, the Enterprise sought the aid of prominent local people, a cross section of the area, to launch the program. The corporation has 21 members, elected for 3 years. It is operated by an executive committee of five.

"Newspapers have the instrument with which to do a job such as this," declares C. W. Brown, publisher of the Enterprise. "The good accomplished, which affects the entire life of the student, is so much greater than the effort required by the sponsoring newspaper, that we urge other newspapers to inaugurate such projects for the benefit of their own communities.

"We are really amazed at the amount of interest shown in this project throughout the State and Nation," Brown emphasizes.

More on the Shubert Inquiry

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 13, 1950

Mr. CELLER. Mr. Speaker, the attorney for the Shuberts, Mr. Milton Weir, has said that I do not know about conditions as they exist in the theater. I do not care to enter into an alley-cat fight with Mr. Weir, who is a good lawyer,

and naturally wants to protect his clients, but even the most uninitiated in the ways of the theater knows that unwholesome practices abound therein.

Perhaps Mr. Weir, or his principals, would be able to tell us something about the following:

First. In productions like South Pacific, the Shuberts insist on taking, and receive, 50 tickets a performance—the best seats in the first rows. This totals 400 tickets a week for 8 performances, for 52 weeks a year, making a total of 20,800 tickets for that one smash hit. These tickets are presumably for the friends of the Shuberts. The public is clamoring to see this play, but it does not have any opportunity to buy these 20,800 tickets at the regular box office.

Who gets these tickets? Do favored brokers procure them? Is there any accounting of them? What is paid for most of them? Who gets the proceeds? Is the admission tax paid? Is the income tax paid on the profits from their sale? What do the favored brokers pay for the privilege of disposing of these tickets? What are the kick-backs?

Second. For Kiss Me Kate, the Shuberts demand, and receive, 40 choice tickets a performance, or 320 per week, totaling 16,640 per year.

Third. For Happy Time, another hit show, the Shuberts take 25 tickets a performance, or 200 tickets a week, totaling 10,400 tickets per year.

Fourth. This practice is in operation in every theater under Shubert control. I make a rough guess that the gains taken in by these tickets run into millions of dollars a year. How long must an abused public continue to suffer?

I am sending this information to the Commissioner of Internal Revenue, whose duty it is to insure proper collection of the revenues in the United States, and to bring to book evaders of the revenue laws. I am asking him, furthermore, to check carefully all the records of the disposal of these so-called free tickets.

Fifth. Mr. Weir, in addition to being the attorney for the Shuberts is also the attorney for the League of New York Theatres, which in turn is dominated by the Shuberts, who own and control 60 percent of all New York theaters. The League of New York Theatres insists that 75 percent of the remaining orchestra tickets for each performance go to brokers.

The league was organized to protect the interests of the theater owners, and also to enhance the public's interest in the art of the theater. Apparently, the league has merely become the fulcrum to hoist the interests of the Shuberts.

Sixth. Mr. Weir, aside from acting as attorney for the Shuberts and the League of New York Theatres, was, by some mysterious maneuvering, appointed to the committee created by the municipal authorities, to investigate the theater ticket scandal. Thus the investigated became the investigator. Shubert investigates Shubert.

What a hoax. Perhaps Mr. Weir will make answer.

Taxes With Trouble

EXTENSION OF REMARKS

OF

HON. BOYD TACKETT

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 15, 1950

Mr. TACKETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

TAXES WITH TROUBLE

(By Hugh Park)

Not many seasons back, the financially elect of every community were a distinguished crowd, made known by the posting of their names on the billboard in the local postoffice.

How time has changed the things of life. No longer does Uncle Sam rent an ordinary building at some $50 per month and therein house the custodian of mails. Now Uncle Sam owns the best building, right in the best part of town, and if it's any kind of a postoffice at all, there are almost as many caretakers as there are rural mail carriers. And we all like it—and point to it with pride—while cussing the Government for raising rates and losing money handling the mails.

No longer does the postmaster solemnly walk out each spring and proclaim to the community the payers of Federal income taxes by posting their names on the bulletin board. Today the lobby is decorated with pictures of gangsters wanted by the FBI and signs advertising air-mail stamps and savings bonds. The list of taxpayers then could be printed in big type on a postcard; now it would take a whole ream of paper to publish the names. For it's a pretty poor citizen, or a pretty prolific papa, who doesn't pay an income tax these days. It would take much less room and time to just post the names of those who are exempt from the tax.

Far be it from me to vilify the collection of taxes. We people here in America have asked for it, and if we didn't ask for it, we let it be pounded upon us, piece by piece. While we decry the continued rise in taxes on the one hand, we yelp louder and louder for more assistance on the other. We shake our heads in fearful disdain against communism in Russia, against socialism in England, and we hold up the merits of our own democracy. And all of us know that we are simply whistling in the dark, for the road we are traveling is nothing less than government autocracy under another name.

If that is what the people of America want, we have no complaint to make. But do we want it? Are we being led, bit by bit, into some kind of a situation which we all despise? Can we be happy in a state where every person is told what to do, when to do, and how to do it? Do farmers want to be regimented, like miners under John L. Lewis, and have no freedom to use their own ingenuity?

The last week has been taxpaying time around the Argus office. And it's had us in a nervous frenzy—for it is time for us to make our annual report as an unofficial but real, nevertheless, tax collector for Uncle Sam. They don't get any pay for it, but every businessman in America today is a tax collector. And the chances for error are so great, and the whole set-up is so complicated, and the penalty in fine and imprisonment so fearful, that no businessman will venture to hire more than one or two helpers until he has one trained person to take care of the tax records.

The power to tax is the power to destroy. Business labors under the tax burden. On Monday, our own little county newspaper turned over to the Federal Government nearly $500 ($499.87 to be exact) as taxes it had collected from employees and customers during the last 3 months of 1949. Our business didn't pay those taxes, we collected it from our employees and our customers. Out of every pay check there came a tax. Onto the price of every bit of paper there went a tax!

Like most manufacturing business firms, we have had during the last year an undesirable but yet stupendous turn-over in personnel. Labor itself is restless under the yoke. Our bookkeeper made a report on 14 different employees during the year. A strict personal record is kept on each one—as to their Government number (social security), the size of their family, the hours they worked at straight time, the hours they worked at overtime, their rate of pay, the amount they earned in each category of time, the deductions the Government allowed them for having a family, the amount we took out of their check as they paid for old-age assistance, the amount we took out of their check each week for the Government income tax, and the balance that was their due. Then at the end of the year a detailed report on each item must be made.

Our normal staff is eight employees. You can see, then, the necessity of having one trained employee to look after all these items. That is her first and major responsibility. And several hours each week of her time is donated to Government tax collection. Last week when year-end reports were made, she gave the Government a lot of time, including some night work of overtime and a half. Last week she gave the Government more than she gave the business which maintains her salary.

It's not to fuss, or to find fault, that we discuss this situation. We really believe that few people know just how many tax collectors we do have in this country; few people stop to think how far we are drifting. For instance, we doubt very much, if the key employees in our own little publishing business know that last year all but one man, father of five children, practically tithed for the Government. Several chipped into the Federal Treasury more than $1 out of every $10 they were due in pay for their work.

It slipped by them, because their tax was hidden from them. They never handled it at all—it was taken from them by the girl tax collector at the bookkeeper's desk, before they ever saw it. She gave them a report on it, of course; but you don't miss a dollar until you have to reach down and pull it out of your own pocket, where you had been keeping it to spend it on something you wanted.

No, labor has no idea just how much it does pay in hidden taxes that go into a higher cost for homes, cars, and washing machines. There's a tax on everything from cradles to coffins. And, above all, the entire structure is so complicated that it is actually nerve-wrecking. We had such an example this week right here in our own office.

There is a tax the Government levies on a man who hires more than seven persons to help him in a business. In 1948 our bookkeeper figured that the Press-Argus had to pay $73.24 for having that honor. This year a new bookkeeper, confronted with that tax for the first time, turned in a report that we owed the Government $193.21 for excise tax on eight employees. It was a blow to us, chiefly because we had notes at the bank which demanded our immediate attention. We didn't have $193.21 to spare. We thought something surely was wrong, so we began to dig into the demand.

We turned to "Instructions for form 940, United States annual return of excise tax on employers of eight or more individuals under the Federal Unemployment Tax Act." Four big solid pages of small type flashed an ominous warning to us to be cautious, and go careful. And we did.

Sentence by sentence, and section by section, we went through the small type. We noted on page 1 that if the return was not filed on time, there was a penalty of interest at 6 percent, plus a delinquency assessment of 5 percent to 25 percent of the tax. We had no time to lose. In detail we read every sentence, every paragraph. We went through page 1, we went through page 2, we went through page 3.

Down in the lower one-half of page 4 we found what we were looking for:

"How to prepare schedule B—computation of credit."

We are tempted to reprint that section just to show you how complicated these tax reports can become. But you wouldn't read it unless, like us, you were forced to.

It took us a whole day to find the error, but it was worth it. Our bookkeeper, tired and confused, had passed over a sentence following the word "Important." It so happened that our experience rate for taxes on employees during the year was changed from 1.5 percent in the first quarter to 0.5 percent for the other three quarters. Our bookkeeper had lumped the whole pay roll together for the year, and had not taken credit for our experience rate. We did what the "Important" said, and divided the pay roll up by quarters. Our tax was not $193.21 for the year; it was $54.99 paid by us for the privilege of giving employment to eight instead of seven employees.

And now we repeat—it's not to fuss or find fault; it's a sincere desire to help our country that we write. We know taxes are always necessary to preserve our Government. High taxes are necessary right now. There is no way to get around them. We pay them willingly and cheerfully. We hope we never get to the point that we growl about the privilege of paying a reasonable tax to build our Nation.

But we do say this: The people who levy the taxes these days don't have to collect them. They force a businessman to do that. It is an onerous task; an expensive item; and most unpopular system. It's especially hard on little firms such as this small group of people who print your county newspaper here every week.

I sincerely believe that the whole thing can be simplified, and much expense saved. Think of the printing bill, for instance, on the set of instructions that goes with that excise tax. Think of the loss in time and money that our own little business had in trying to figure out that tax.

Today every person is allowed by the Government to make a certain amount of money before he pays an income tax. If you are single, it's $50 a month; if you're married the Government allows you another $50 a month to support your wife; and then you also are allowed another $50 for each child. Well, when you earn more than your allowance, the tax collector takes out 20 percent of the balance—or one out of every $5 goes to the Government. That's simple—and efficient,—but the Government doesn't stop at that—as I have told you—and there isn't a small-business man in America who isn't confused, angry, and disheartened over the details that he has to study and interpret to do his part as a citizen.

The small-business man is the forgotten man in America today—he is actually harassed on every side. If you don't believe it, ask one, any one, of them.

Depletion and Oil for National Security

EXTENSION OF REMARKS
OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 15, 1950

Mr. MONRONEY. Mr. Speaker, because of the great importance of adequate petroleum reserves for national defense, because of its importance to our national economy and for continuing development of national resources, I am unalterably opposed to the Treasury's proposals of reducing the 27½ percent depletion allowance for oil and gas production.

Yesterday I appeared before the Ways and Means Committee to give my views, and also those of our distinguished Oklahoma Governor, Hon. Roy J. Turner.

Because of the importance of this issue to all groups, producers, laborers, and farmers in the 22 oil-producing States, as well as to the Nation to have a dependable supply of oil, for peace and war alike, I would like to insert here the testimony presented at the hearings:

STATEMENT OF HON. ROY J. TURNER, GOVERNOR OF OKLAHOMA

We are unalterably opposed to any change of policy in connection with oil and gas depletion allowance, and I wish to submit to you the following information in support of our stand:

Oklahoma, as an oil-producing State, depends heavily upon the taxation of that industry to support its State government. Depending entirely upon special and excise taxes, a reduction from this source of revenue would seriously affect the entire State financial structure.

For the fiscal year ending June 30, 1949, the total received from all State taxes, exclusive of the unemployment-compensation taxes, was approximately $138,000,000. Approximately 60 percent of this total was from either a direct tax on the oil industry or on services depending upon the products of that industry. A loss in this revenue would place a direct burden on the individual taxpayer, either in the form of income or sales taxes, or upon the local ad valorem taxpayer, to replace that loss.

Ad valorem taxation in this State is for local purposes only.

For the year 1949, the total assessed property of personal and public utility properties was $725,000,000, of which approximately 20 percent was on the properties of the oil industry. Local units of government share in the taxes collected on this industry by the State. Of the total 60 percent thereof was returned to the local units of government to help pay the costs of those governments. I repeat, it would mean a complete breakdown of the tax structure that supports Oklahoma government, and I am of the opinion that all other oil-producing States would be likewise affected.

The depletion allowance has been of basic consideration of operators from its inception. Also States and local governments have given consideration to this allowance in determining equitable taxation.

This allowance is now a basic factor that any change made at this time would materially affect consumer prices, employment by thousands of independent operators, suppliers of materials used in the oil industry, and State and local government revenues to the point of jeopardy in many States. But of the greatest importance of all, the reserves needed for national defense. Such an action would have greater and more far-reaching effect than first meets the eye.

I can think of no congressional action that would do more to cripple the economy and safety of the Nation as a whole.

STATEMENT OF HON. MIKE MONRONEY BEFORE HOUSE WAYS AND MEANS COMMITTEE, FEBRUARY 14, 1950

Mr. Chairman and members of the Ways and Means Committee, I appreciate the opportunity of appearing before you on the matter of reduction of the 27½-percent depletion allowance which has been a vital part of the development of our oil industry for more than 25 years.

Four points seem to me to be vital in your consideration of the Treasury's recommendation for such a revolutionary change as the cutting almost in half of this historic pattern of allowance for exhaustion of capital wealth in natural resources.

These four points are:

1. The misleading and prejudicial claim that this depletion allowance, investigated, studied, and written into law by this committee many times, is a tax loophole.

2. The fallacious claim that this change will result in more revenue to the Treasury. By crippling the exploration for oil, the Treasury will have far fewer new oil fortunes to tax and will lose far more in the course of years than it can gain by this ill-advised action. State revenues, geared to gross production and excise taxes on oil and its products also will suffer.

3. The oversimplification by inexperienced Treasury experts that only big corporations and the very wealthy benefit from depletion. Actually, it is the one feature that keeps the wildcatter, the small-lease men, the farmer and the small royalty owner investing in the hazardous search for more production.

4. The completely misleading claim that oil exploration enjoys tax advantages not available to other segments of our economy. Many far safer fields, such as stock-market profits, business-property development, and even industrials enjoy long-range tax advantages far superior to the uncertain investments in oil developments.

(1) The misleading label of tax loophole is not borne out by facts. Since 1918 this committee has recognized the equity of discovery depletion. In 1926, this committee enacted percentage depleton and I am sure knew what it was doing. Countless times it has been studied and each time the Congress has sustained it intentionally, not accidentally, on the basis of facts. This committee and Congress are not in the habit of approving any loopholes over a period of 25 years.

If the Treasury wants to make one single industry make up the major share of the $700,000,000 loss of excise-tax revenues, they should be honest enough to advocate singling out petroleum as their sacrificial lamb instead of using this fallacious loophole claim.

As further evidence of shifting this burden to oil, even the Treasury experts advocate and endorse the percentage depletion allowance and intangible drilling costs in principal, but want to cut it about in half and place it at 15 percent, an arbitrary figure picked out of thin air without relation as to its effect on whether it will cripple our present development of domestic oil resources.

The present rate of 27½ percent was the result of careful study and determination by the House and Senate. Its soundness has proven itself by the large amount of taxes it has raised and the steady, expanding discoveries of petroleum that it has helped to encourage. It has proven itself by test and is in no way an arbitrary figure but a foundation on which the industry rests.

(2) The second point that the Treasury needs the revenue and that this would add $200,000,000 of those needed dollars to the till is equally fallacious. If you don't make money—you don't pay taxes. If oil exploration is crippled—or even drastically curtailed—less money in the long run will come into the Treasury.

Your big tax take comes in the discovery and development of new oil fields and the creation of new wealth. If you are satisfied to tax only the fields you now have—it won't be long until you will find one-half of your big revenue gone—then two-thirds gone. Without new fields, new tax sources, you'll be in a stripper operation yourself before long—as you'll learn the real meaning of depletion.

If you have a good cow that gives lots of milk, you can't get production without adequate feed. Cut her feed in half and your milk supply dwindles. You can butcher the cow and put her in a deep freezer and live on steaks for a while, but in the long run you're depleting your assets.

But if you are a prudent operator you'll see that the cow produces the maximum amount of income—enough feed to produce more milk. Then you'll probably get more cows and more milk and more income.

The same rule applies. Government revenue depends on American business, all of it, being a going and expanding concern, and any tax policy that restricts expansion means revenue losses in the long run.

By the same token, the decline of development of new oil sources—and consequently new taxable wealth—will strike a severe blow at State revenues. Big portions of State budgets in our oil-producing States are dependent not on a static but on an expanding oil industry. If exploration were stopped—or drastically curtailed—my own State would suffer tremendously—as would every other oil-producing State, all of which tax oil heavily.

(3) The third point involves the naive assumption by the Treasury experts that each segment of the widespread oil industry operates in a carefully cataloged, hermetically sealed specialty. I know the oil industry and know of no operators who fit into the neat little packages the statisticians have worked out in their testimony.

All of them are producers, lease buyers, royalty owners—most are wildcatters or work on submarginal lands—and even the big refiners lease, wildcat, produce and even operate stripper wells. It is completely fallacious to think that you can divide the industry up into individual segments, for it isn't that kind of a divisible business.

For example, the statistically minded experts assume that all operators of "stripper wells" operate only wells of extremely small production. Actually, most all oil men and all big operating companies, producing and refining as well, have much stripper production. The 27½-percent depletion keeps them working the submarginal fields and recovering millions of barrels of oil that would otherwise be lost forever.

The 27½-percent depletion makes it possible for them, big and little, to go in for expensive "secondary recovery programs" which will result in the production of at least 4,000,000,000—I repeat 4,000,000,000 barrels more oil from these depleted fields than we would otherwise recover. Secondary recovery is expensive and hazardous—as expensive and hazardous in many instances as original drilling—and without the 27½-percent depletion allowance, I fear it will be largely discontinued.

Further, the Treasury claimed major oil companies get the lion's share of the benefits of depletion allowances. This is again over-simplification. Most of the fields, it is true, are found and developed by individuals or smaller companies. But it is the reward for taking the big risk that keeps them drilling. Their price for a proven acreage—in other words, the value of their discovery—is dependent upon the present tax structure. To drastically change it now would lower these values of the small operator and the independent producer tremendously.

The financing of independent oil operations in every bank and in every oil State is based on the 27½-percent depletion allowance. Directors calculate the engineering of an oil field or lease, its probable production, and estimate its worth for drilling loans. Without the 27½-percent depletion allowance, I know of few banks which would continue this financing of drilling operations. With it reduced by half, credit for independent operators would be frozen.

Already in my State, and I have just returned for these hearings, drilling has been stopped to see whether Congress takes this ill-advised step or not. If the incentive to small business is not there—there'll be little new exploration or development of new "pimple" fields where the risk of striking oil is tremendously great.

If the depletion allowance is taken by the big integrated corporations, it's only on the exhaustion of the production some independent operator has found and sold to them. And the high sales value of the production is based on the 27½ percent depletion allowance. Cut this allowance in half and the major companies will drastically cut their purchase prices to the independent wildcatters and producers.

Tens of thousands of small farmers and small investors today draw royalty checks. Standard royalty payments to the owner of the subsurface oil equals one-eighth of the value of the oil produced from that property. Cutting depletion in half will collapse the value of their properties by about one-half. The farmer and the royalty owner would find that not only their income would be severely reduced, but the sales value of the owner's rights to the soil would go down to a depression level. Far more than the $200,000,000 in revenue would be lost immediately on the value of these owners' oil rights.

The claim that oil enjoys special or unusual tax advantages is completely fallacious. Compared with the risk taken—four dry holes to every five wells drilled—the advantages are far smaller than that accorded stock-market gains where only a 25 percent capital gains tax is paid on securities held for 6 months.

The single individual who makes a million net on the stock market pays only a 25 percent capital gains tax, or $250,000. If he makes a million net operating revenue in oil, he'll pay $755,570. He would have used up $275,000 of his capital worth and his actual profit would be only $67,320 out of a million net operating income.

This committee and Congress passed that stock-market law to get more revenue on the theory that a more rapid turn-over of stocks would result in more revenue. By the same token of more business and more taxes, greater revenue results from oil.

It is fallacious to compare depletion with depreciation. Tens of thousands of business buildings today, almost fully depreciated over the years, are bringing in from 10 to 100 times more revenue because of their advantageous location on Main Street than they did when built in 1905 or 1910.

Yet everyone knows that an oil well, after its first few years of production is almost a dead duck. It will never again produce as much oil as it did the first year and is on a rapid and steady downgrade from that time on.

Much has been made of the charge-offs for development costs by the Treasury experts. Yet in the same breath, they admit frankly that four out of every five wells drilled are dry and nonproductive. Some way, somehow, the inference is left that the oil industry is avoiding taxes because of these exploration losses and that there is some special advantage in drilling dry holes.

Holes in the ground have little value—you can't pull them up and sell them for post holes—yet from the Treasury testimony you would think these losses had some special value. Almost any building, railroad, factory, utility, or machinery has some value once the development is completed. Dry holes have none.

That one out of five is a producer furnished income, which after depletion is taxable at our present high rates during its few years of flush production. After that it is a stripper well and the capital wealth from its discovery has been fully dissipated.

In closing let me say that I think it would be foolhardy to sabotage a system that has given us an abundance of essential oil under free, competitive enterprise in two world wars. Oil is an absolute essential in today's mechanized warfare, and without an expanding and abundant domestic supply our entire defense effort would collapse.

The major targets of bombing both in Germany and in Japan were their oil and when they had been knocked out, their war machines on land, sea, and in the air were unable to move.

While the Treasury has supplied your committee with ample tables on alleged excessive depletion and development costs, they have failed to furnish you with the amount that the industry does pay. The corporate tax total, your Joint Committee on Revenue and Taxation advises, came to $512,000,000 in 1947. Add to this the hundreds of millions (the total amount not available from the Treasury) from individual stockholders of these corporations. Add also the tens of millions from individual oil operators, the farmers who own the oil lands, the oil-machinery men and you have a staggering amount of Federal revenue produced by this industry.

Obviously, the purpose of this drastic change is to make up a part of the loss of $700,000,000 in excise taxes on furs, jewelry, transportation, light bulbs, etc. May I respectfully call your attention to the fact that the oil industry has long paid heavy excise taxes, and is not here asking that these be removed or reduced.

The best estimate I can get shows that more than $2,000,000,000 is paid by oil products in excise taxes—$1,453,000,000 in State gasoline-excise taxes; $500,000,000 in Federal gasoline taxes, and $83,000,000 in lubricating-oil taxes. In many States, these excise taxes on gasoline will run as high as 35 percent or 7 cents per gallon.

The total taxes paid other than Federal will run between two and a half billion and three billion dollars. I ask leave to insert here the list of taxes and their estimated amounts. It is by no means complete as it does not and cannot reflect the hundreds of millions paid by individuals.

I sincerely hope that this committee, in the light of all the dangers for such a drastic change will not single out this already heavily taxed industry to make it the goat in the removal of small excise taxes from other items.

Petroleum tax bill

	1948	[1] 1949
State gasoline tax	$1,342,975,000	$1,453,000,000
Federal gasoline tax	498,363,000	500,000,000
Real and personal property	217,000,000	200,000,000
Federal and State income tax	932,000,000	600,000,000
Severance taxes and drilling permits	164,000,000	164,000,000
Lubricating-oil taxes	81,883,000	83,000,000
Pipe-line taxes	19,643,000	20,000,000
Import taxes	15,006,000	15,000,000
State inspection fees	8,550,000	9,000,000
Local gasoline taxes	7,884,000	8,000,000
Other taxes	76,000,000	75,000,000
Total	3,363,304,000	3,100,000,000

[1] APIC estimates.

The Late Francis W. Durbin

EXTENSION OF REMARKS
OF
HON. JOHN McSWEENEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 15, 1950

Mr. McSWEENEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions adopted by the Allen County (Ohio) Bar Association on the life and services of Francis W. Durbin, late of Lima, Ohio:

Francis W. Durbin of Lima, Ohio, died of pneumonia on December 10.

He was born in Kenton, Ohio, on December 8, 1891. He entered Notre Dame University from which he was graduated in 1913 with the degree of LL. B.

In 1913 he was admitted to the bar of Ohio and immediately embarked upon the practice of his profession in Lima.

He is survived by his widow, three daughters, his mother, and a brother.

William W. Durbin, father of Francis, was examiner of claims in the Treasury Department from 1866 to 1890, and for several years thereafter was law partner with Phil M. Crow at Kenton. William W. Durbin showed unwearied devotion to the Democratic Party, beginning in that long period when that party was seldom victorious in local or State elections. He held the chairmanship of the Ohio State Democratic Committee longer than any other man, his first work as chairman being in the Bryan campaign of 1896. He went to more Democratic National Conventions than any of his contemporaries either as district delegate or delegate at large, attending those of 1900, 1912, 1920, 1924, 1928, 1932, and 1936. He became register of the United States Treasury in 1933.

Francis W. Durbin was a powerful and colorful figure in the councils of his party for 40 years. During that period not a campaign in the county or State was conducted without his active participation. Yet, strange to say, he was never elected to public office. In fact, he tried only on one or two occasions. However, he received many appointments during his career to boards and commissions, among which were the Civil Service Commission and the Allen County Board of Elections.

In politics Francis was possessed of that indispensable trait found in all great political leaders—a remarkable memory. It was said of him that he knew, and could call by name, as many prominent Democrats not only in Ohio but in the Nation as any one with the exception of James Farley.

One of the outstanding achievements of his career which many have forgotten was his leadership in the fight for the adoption of the Ohio old-age-pension plan when he was president of the Ohio State Association of Eagles.

Francis W. Durbin was a devout Catholic, being a member of St. John's Church.

Fraternal affiliations were Elks Lodge, Knights of Columbus, and the Eagles, of which he was past president.

Francis loved his home and was a loving, faithful husband and a kind and exemplary father.

As a lawyer he was able, faithful, honest, dependable, and diligent.

Both as a lawyer and in politics he was fair, honorable, courteous, respectful, and gentlemanly.

Perhaps the trait we loved the best about our brother was his affability and his inability to hold a grudge. He was quick to forgive and after the heat of a courtroom battle or a political campaign he was the first to insist that "bygones be bygones."

Serving on the memorial committee were Leslie Reid, John L. Cable, Howard Everett, Paul T. Landis, Melvin C. Light, E. T. Lippincott, L. E. Ludwig, Harry R. Meredith, and B. F. Welty.

Resolutions Adopted by the American Coalition and Remarks of Its Retiring President

EXTENSION OF REMARKS
OF
HON. JOHN PHILLIPS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 15, 1950

Mr. PHILLIPS of California. Mr. Speaker, the American Coalition is a vigorous and patriotic group of fraternal, civic, and similar societies, with a joint membership of some 3,000,000 men and women in the United States. It was founded 25 years ago, in New York, by Capt. John B. Trevor, who has been its president from that time until the 26th of last month when, of his own desire, he relinquished that office, and was succeeded by Mr. John W. Finger, a businessman of New York and Georgia, and president-general of the National Society of the Sons of the American Revolution.

Among the constituent members of the American Coalition are the Sons of the American Revolution, National Society; the Daughters of the Revolution, National Society; the Military Order of the World Wars; American War Mothers; General Society of the War of 1812; National Society, Sons and Daughters of the Pilgrims; National Society of New England Women; Society of Old Plymouth Colony Descendants; the Federation of Huguenot Societies in America; Congress of State Societies in America; Grand Army of the Republic; Military Order of the Loyal Legion of the United States, Commander in Chief; National Constitution Day Committee; National Society for Constitutional Security; Regular Veterans Association; Sons and Daughters of Liberty, National Council; the Wheel of Progress; and the Women of Army and Navy Legion of Valor, United States of America.

It is a particular pleasure to me, as a member of one of these constituent organizations, to include in this extension of my remarks, the pertinent and timely address of the retiring president and founder, Captain Trevor, and the resolution adopted at the January meeting. The address and resolutions follow:

ADDRESS OF JOHN B. TREVOR AT ANNUAL MEETING OF THE AMERICAN COALITION, MAYFLOWER HOTEL, WASHINGTON, D. C., JANUARY 26, 1950

Ladies and gentlemen, this is my farewell speech as President of the American Coalition. Today I retire. I understand that the nominating committee is going to present for your consideration the name of a man for whom I have the greatest admiration—admiration not only for his patriotism, his business ability, and his gift of speech, but above all, for his aggressive courage in defense of our traditional institutions.

I cannot, however, leave the position which I have occupied for so many years without thanking my old friends, and my new friends, representing the societies which make up the American Coalition, for their loyalty and helpfulness in the performance of my duties. I am inclined to think such loyalty must be unique; certainly, it has been outstanding.

As for the American Coalition itself, I believe that it has potentialities which are of transcendent importance in this time of crisis. They should be developed. I, therefore, am particularly glad that the nominating committee has selected a young man as its candidate for the presidency who is able to travel, and make contact with the societies which you represent, without having to consider the difficulties which have hampered me for many years.

Our organization is dedicated to the preservation of American institutions without partisanship in any form whatsoever. I have never known, or considered, how the members of the constituent societies are politically divided. They were patriots, and that was all that mattered.

Unfortunately, it has seemed to me that President Truman's predecessor opened wide the gates of the executive branch of our Government to people who have had ideas and ideals which are the antithesis of those held by all the members of the constituent societies of the American Coalition. As a consequence, we have had the Marzani case, the Coplon scandal, the Hiss trial, and we are being pushed down the road to socialism at a terrifying speed. I need hardly to say to you that socialism is the negation of liberty. I am not original when I say to you today that the search for security and its promotion by the Federal Government can have in reality but one result—slavery.

Beveridge, in England, admitted quite frankly that his universal plan was utterly dependent upon compulsory labor. That means the complete subordination of the individual to the state.

It has always seemed to me that the founders of the Republic, and, for over a hundred years, their successors, planned the Government of the United States to be solely an agency to be operated for the benefit of the citizens of our country. Now, under the present holders of high office, we see advocated the support of Socialist regimes based on Marxian principles. These governments seem unable to remain in power unless they receive subsidies from the economic system still extant in the United States.

We were taken into a war for purposes, I venture to say, which were quite contrary to our national traditions. Do not forget that Winston Churchill called it the unnecessary war. Because of a dramatic gesture calling for unconditional surrender, probably 100,000 Americans had to die upon the battlefields of the world. What is worse, I suggest, that we thereby had to utterly destroy two great barriers against bolshevism. These barriers might have been saved in some form to fortify our present position in the appalling situation which now confronts us.

I have had left at your place at the table a reprint of a letter which I addressed to a Senator of the State of New York who sponsored a resolution advocating a constitutional convention for the purpose of integrating the United States in a federal union of all nations. I have taken the liberty on the basis of resolutions adopted by the American Coalition to oppose what seems to me a wholly fantastic and dangerous policy.

At the moment, Senator MCCARRAN, chairman of the Judiciary Committee of the Senate, is fighting a great battle to prevent this country being inundated by immigrants from central Europe, who cannot legitimately be classed as displaced persons actually displaced as a result of military operations during the war. Some of you have probably read what I have written about this matter, and I hope that you have read what Senator

McCARRAN has set forth in his statement about this problem. Throughout the discussion on Capitol Hill, Senator McCARRAN has been facing a majority in his committee which seems to be more sympathetic to the requirements of alien blocs and left-wingers than to the desires of the great unorganized mass of the American people. However, we are greatly indebted to the Senator for his successful effort in securing the inclusion in the amended bill of certain safeguards which have been lacking in the Celler bill. For this reason, I suggest that every member of the American coalition and their friends stand foursquare behind Senator McCARRAN in his efforts to block passage of the iniquitous measure which is now before the Senate, even though, for parliamentary reasons, the Senator may be recorded as voting for the bill reported by his committee. It seems to me that everybody present, and those of you who meet in the Women's Patriotic Conference, have a duty to perform, and, that is to go to the Capitol and call upon every Senator to defeat the amended Celler bill in whatever form it may reach the floor of the Senate.

Approximately a million dollars have been spent by our opponents to put this measure through the House, and through the Senate; and, as you know, we have never had the means to purchase the radio, to hire speakers, and to flood the country with propaganda, as has been done by the other side.

Once more, I thank you, my friends, for supporting my efforts with such extraordinary loyalty, and I want you to understand, that I deeply appreciate the wonderful friendships which have been built up between us, and between some of the splendid men on Capitol Hill, who have been and who are now carrying on our fight in their official capacity.

RESOLUTIONS ADOPTED BY THE AMERICAN COALITION AT ITS ANNUAL CONVENTION IN WASHINGTON, D. C., JANUARY 26, 1950

As the fundamental purpose of the American Coalition is to keep America American, it is hoped that each participating organization will exert every effort to bring the information contained in these resolutions to its members, and through them to mobilize activity in their communities on these vitally important subjects.

GRACE L. H. BROSSEAU,
Chairman, Committee on Resolutions.

IMMIGRATION

Whereas the debate in the Senate on October 13, 14, and 15, 1949, on the merits of the Celler bill (H. R. 4567) revealed deplorable facts relating to the admission of displaced persons into the United States, and a recent statement since his return from a study of conditions on the spot in Europe, by Senator McCarran, reinforces the comments therein made relating to the administration of the law: Be it

Resolved, That the American Coalition in annual convention assembled, urges Congress to suspend all immigration into the United States so long as more than 1,000,000 persons in the United States are unemployed, except for the admission of husbands, wives, and minor children of citizens or aliens lawfully admitted as permanent residents in the United States; and be it further

Resolved, That pending such suspension of all immigration into the United States, the Displaced Persons Commission be abolished and its functions be transferred to the Immigration and Naturalization Bureau of the Department of Justice; and be it further

Resolved, That insofar as the so-called displaced persons are to be admitted into the United States, the cut-off date established by the Displaced Persons Act of 1948, shall be maintained in force, and in addition, screening boards be established abroad, whose members shall be composed of a single delegate from the Immigration and Naturalization Service of the United States, the State Department, the Federal Bureau of Investigation and the Department of Defense. The approval of admission of any person shall be by unanimous vote and the rejection of an applicant for admission shall be final and not subject to review; and be it further

Resolved, That the American coalition expresses its deep appreciation of the gallant efforts of Senator PAT McCARRAN, of Nevada, to uphold our immigration barriers in the face of outrageous assaults from minority groups upon his character and his motives, and be it further

Resolved, That the American Coalition in annual convention assembled earnestly entreats its constituent societies and the individual members thereof to urge their State legislators to oppose this infamous and dangerous scheme to destroy the United States of America.

SOCIALIZED MEDICINE

Whereas great pressure is being exerted on Congress to pass legislation which would place under Government control the health and medical care of the people of the United States; and

Whereas such action would destroy, or at least impair, the personal interest, initiative, and private research on the part of the medical profession, and put that profession under the control of a paternalistic bureaucracy with direct socialization as a result: Therefore, be it

Resolved, That the American Coalition, in annual convention assembled, expresses its emphatic opposition to the establishment of socialized medicine and thereby the expansion of a parasitical and paternalistic bureaucracy in the United States.

FEDERAL AID TO EDUCATION

Whereas the American Coalition has consistently opposed over a long period of years the enactment of legislation which would place in the power of the Federal Government the right to intervene in local systems of education either directly or indirectly through the imposition of restrictions or conditions as to the expenditure of Federal appropriations: Be it therefore

Resolved, That the American Coalition, in annual convention, assembled reiterates its opposition to all legislation in whatsoever guise to place the control of education under any department or bureau of the Federal Government.

OPPOSING WORLD GOVERNMENT

Whereas there are now active organizations and individuals in our country which endeavor to establish a world government, a world federation, or any other international organization which would abrogate any of our national sovereignty; and

Whereas it has been openly admitted by advocates of such a world government, by whatever name it be called, that no secession would be permitted to any nation which joined such a world government and which later wanted to withdraw; and

Whereas the voting strength of the United States of America in any such World Government would be overwhelmingly outnumbered by the vast populations and geographical areas of Asia, and by the uncounted millions of Africa; and

Whereas world government law would be enforced directly upon individuals in our country, and world government taxing power would directly tax our citizens independently and in addition to our own national taxation, and the world government would take over the gold reserves of the United States and of all member nations, thus rendering our own currency worthless; and

Whereas the power to tax is the power to destroy, and if the United States of America should join such a world government, it would cease to be a free nation, its people would lose their precious liberties and become the slaves of a world superstate founded on the philosophy that the individual is not the master of his government but its servant: Therefore be it

Resolved, That the American coalition in annual convention assembled declares itself as uncompromisingly opposed to a world government or any other international organization with supreme authority over all national governments; and be it further

Resolved, That the individual members of this convention most earnestly urge their Representatives in the Congress of the United States and their State legislatures to oppose this infamous and dangerous scheme to destroy the United States of America.

BILL OF RIGHTS DAY

Resolved, That the American Coalition, in annual convention assembled, earnestly urges upon the Congress of the United States the adoption of a joint resolution authorizing and requesting the President to issue annually a proclamation designating December 15 as Bill of Rights Day and calling upon officials of the Government to display the flag of the United States on all Government buildings and inviting the people of the United States to observe the day with appropriate ceremonies and prayers.

UN-AMERICAN ACTIVITIES

Whereas the American Coalition is deeply appreciative of the superb service rendered to the country by the Committee on Un-American Activities of the House of Representatives, in exposing to public view the activities of individuals and organizations who are, or have been, engaged in efforts to bring about a change in the form of Government in the United States; and

Whereas it is all too evident from subversive literature and other propaganda emanating from innumerable agencies of varied affiliations that our free institutions and our constitutional form of government are in real peril: Be it therefore

Resolved, That the American Coalition, in annual convention assembled, urges upon the Congress to appropriate such funds as will enable the committee to function effectively; and be it further

Resolved, That the American Coalition urges upon the committee not to relax its efforts to expose the operations of all subversive activities in the country or its dependencies.

ARMED FORCES

Whereas strife and contention are still very much in existence today, and the peace of the world is in jeopardy; and

Whereas our philosophy of life and the rights of the individual as well as our productive industry are precious possessions which we must at all times be prepared to defend against invasion or subversion: Therefore be it

Resolved, That the American Coalition in annual convention assembled, urges Congress to provide for the maintenance of an armed force sufficient in strength and equipment to meet any attack by land, sea, or air of any aggressor, until the Reserve forces are made ready to meet the emergency; and be it further

Resolved, That the American Coalition further supports continued research and technical development in all branches of the armed services.

OFFICERS' RESERVE CORPS AND RESERVE OFFICERS' TRAINING CORPS

Whereas, historically, the security of the United States has rested upon a strong civilian army; and

Whereas in the opinion of the patriotic leaders of the country, some form of military training is essential; and

Whereas it seems apparent that universal military training is not going to be put into effect; and

Whereas a reasonably satisfactory means of physical and military training can be effected through a system of military training in the colleges and secondary schools; and

Whereas such training could effectively be carried on by Reserve officers on inactive duty: Therefore be it

Resolved, That the American Coalition in annual convention assembled, earnestly requests that the Department of Defense and the Congress of the United States, in cooperation with State and local authorities, provide for training the youth of the country through establishment of a form of military training in colleges and secondary schools.

UNITED STATES MARINE CORPS

Whereas the United States Marine Corps always has been an integral part of the fighting forces of the United States and its record and inspiration to the American people: Therefore be it

Resolved, That the American Coalition, in annual convention assembled, urges upon Congress that the personnel strength of the United States Marine Corps always be maintained at not less than 6 percent of the combined strength of the armed forces of the United States, and be it further

Resolved, That we urge that the commandant of the Marine Corps be made an ex officio member of the Joint Chiefs of Staff to sit in with the staff on all matters pertaining to amphibious operations and/or the Marine Corps.

ESSENTIAL MATERIALS

Whereas the encouragement by the Government of the United States of foreign production of raw and manufactured materials, which can be found in, or manufactured in, American Territory, is a direct assault on American labor and the business institutions of the United States; and

Whereas the Soviet Government is reported to be constructing a gigantic fleet of submarines, which, in the event of war, might deprive the United States of access to foreign sources of essential materials: Now, therefore, be it

Resolved, That the American Coalition, in annual convention assembled, opposes any Government policy or legislation which threatens the economic independence of the United States; and be it further

Resolved, That the American coalition favors any Government policy or legislation which will promote the economic independence of the United States.

WASHINGTON SESQUICENTENNIAL

Resolved, That the American coalition in annual convention assembled, endorses the celebration of the sequicentennial of the founding of Washington, D. C., as the Capital of the United States, as authorized by Congress; and be it further

Resolved, That every patriotic organization be called upon to participate in making this a national event of first importance.

ANTARCTICA

Whereas the Antarctic continent was discovered and explored in large measure by American citizens; and

Whereas extensive outcroppings of valuable mineral deposits in Antartica have been frequently reported; and

Whereas foreign nations which are in debt to us are now claiming sovereignty over large portions of this territory; and

Whereas the United Sates has gravely depleted its natural resources in coming to the rescue of present claimants to this territory: Be it, therefore

Resolved, That the American coalition, in annual convention assembled, urges Congress to make it a condition precedent to the extension of any economic aid to any nation, that that nation shall cede to the United States all claims to sovereignty in this region.

JUDGE MEDINA

Resolved, That the American coalition in annual convention assembled, desires to express its sincere appreciation of the marvelous patience and completely judicial attitude assumed by Judge Medina under great provocation occasioned by a very trying situation in the Communist trial in New York.

TRAITOROUS CITIZENS

Whereas at long last there is being made successful prosecution of some of those charged with disloyalty to the people and Government of the United States, and with service in behalf of foreign powers: Be it therefore

Resolved, That the American Coalition, in annual convention assembled, hereby commends the action of all those, in and out of Congress, who have contributed to the work of investigation and prosecution of those thus charged; and condemns and deplores the action of those who, in positions of authority, have shown themselves to be unsympathetic with, or scornful of, the efforts thus made to bring to the bar of justice those who have been engaged in such treasonable conduct; and be it further

Resolved, That the American Coalition here and now urges the Congress and the law-enforcing agencies of the Federal Government to continue, and to broaden, the scope of such investigations, and to make speedy and fearless prosecution of all such offenders, whoever they may be and wherever situated.

TRIBUTE TO MR. TREVOR

Whereas over a period of 25 years the destinies of the American Coalition of Patriotic Societies have been wisely guided by Mr. John B. Trevor, as president; and

Whereas he not only founded it but has sustained and developed it into a power; and because of his ability, courageous heart, gentleness of spirit, and honesty of purpose has won the respect, affection, and complete confidence of his officers and coworkers; and

Whereas he has with great discretion done valuable work for his country and for the American Coalition in legislative matters affecting the welfare of the Nation; and

Whereas Mr. Trevor feels it necessary to relinquish his active leadership: Now, therefore, be it

Resolved, That the American Coalition in annual convention assembled signifies not only its keen regret but its appreciation of his rare ability and unselfish service by a rising vote of thanks and at the same time wishing him many years of health and happiness.

Let There Be Peace

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 7, 1950

Mr. KLEIN. Mr. Speaker, under leave I am inserting in the RECORD the broken-hearted plea of a young mother in my district for peace—peace in our time and in all time to come, not by surrender to totalitarian forces and aggression, but by refusing to surrender to hysteria and fear.

As you read this letter, you may say that it is theatrical and melodramatic; perhaps it is.

But the whole theme of peace and war is theatrical and melodramatic. It runs the gamut of all human hopes and emotions, and the prize to those of us in this dreary world who find the answer to the international riddle is preservation of human civilization.

This letter was written to me, Mr. Speaker, by Mrs. Ben Bernstein, of 384 Madison Street, New York. It is only one of scores that I have received in recent weeks. I hope that some of our colleagues who are ready to plunge the world into war for nothing will read it and ponder, and perhaps think of their own children who may be maimed or killed in a new holocaust.

NEW YORK, N. Y.,
Monday, February 13, 1950.

Hon. ARTHUR G. KLEIN,
Washington, D. C.

DEAR SIR: I have just tucked my three little girls into bed and kissed them good night. They are only 5 years old, 2½, and 10 months old, and I love them very much.

As far as it is within my humanly power to do so, I protect them, I feed them, I clothe them, I bathe them. When they are sick I worry over them, until, with the doctor's help, they are well again.

And, in turn, my children love me. They need me, they depend on me, they trust me.

But now a very real and terrible threat hovers over us all. My little girls are too little to understand, so their world is still safe. Happy, lucky little girls. But not so lucky am I. Not so safe is my world.

The atomic age has come and released upon the earth a fury more deadly than the mind of man could ever dream possible. And men have lost their reason.

What is man, or who is man that he dares use the mighty brain God gave him to conspire with the devil and plot chaos, fear, and impending violent death upon His beautiful, wonderful world?

I am a simple person. I was not ordained by fate to help shape the destiny of our world, nor to carve myself a niche in its hall of fame.

No, I leave the making of history to our able and honorable statesmen, financiers, and politicians. For myself, I want only to be free to fulfill my own duties as wife and mother—an old and noble profession.

But I must have peace of mind in order to build and plan a future for myself and my children. I want to see growing bodies and happy faces. I want to see graduations, weddings, and grandchildren.

My voice is a small one, but its message is mighty, for my sentiments are universal. Every mother, every father everywhere shares these hopes for a bright tomorrow.

I am not a deeply religious woman, but if it were possible I would have written this letter to God Himself.

Instead, I am writing to you, as a member of the human race, as a father, and as my elected voice in Congress.

I beseech you to rise before that body and speak as you have never spoken before, and tell them what I have said.

Perhaps as a little person I am not too well informed as to what goes on in the inner sanctums and private circles of our Government. But this I know:

There is no time for false pride. There must be active, genuine attempts made to iron out our difficulties with Russia, since she seems to be the reason for all our atomic research.

We must bend over backward, if necessary, to find a common meeting ground with her. For Russian mothers, too, love children, and they, too, have their dreams.

There can be no point of difference so great that world destruction, as an alternative, would be justified.

And, if need be, let's shout across the rooftops until our voices pierce the iron curtain, and we can make them understand that, despite our differences, we are all as brothers and that we have a common destiny.

Let there be talk of peace and work for peace and peacetime spending. Not talk of war and work on atom bombs and billions for defense.

This, then, is the sworn duty of our elected Congressmen: To secure the peace and to maintain the blessings of liberty to ourselves and our posterity.

And if our Congress feels itself inadequate to cope with world affairs, then let the American people subscribe to a world government that will have the vision and the authority to set the world right again.

Surely, civilization has not emerged from the dark ages to the magnificent heights of modern times only to face annihilation at the hands of its own monster.

People's hearts the world over are united in a prayer for permanent peace.

From this common denominator we can build new hope, slowly perhaps, but surely, and may Almighty God lead us back to a saner, safer, and happier life.

Amen.

Sincerely yours,

CORINNE BERNSTEIN
(Mrs. Ben Bernstein).

Gen. H. H. Arnold: "A Man To Match Our Mountains"

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 15, 1950

Mr. JOHNSON. Mr. Speaker, at the entrance of one of our State capitol buildings in Sacramento, Calif., is an inscription that reads, "Give us men to match our mountains." Gen. Henry H. Arnold was undoubtedly the type of man that the author of this statement was thinking about. General Arnold was not a native Californian but he spent a good part of his adult life in our State. When he retired from active service, he went to California to make a home in the beautiful Sonoma Valley, christened by Jack London as "The Valley of the Moon."

Unfortunately, God called him recently and those of us who had known him were deprived of his friendship, comradeship, and leadership. He will go down in history as one of our great military leaders. In times of crisis, the Lord seems to produce the types of men that are needed to bring us the victory. General Arnold's work as head of the Air Forces during the Second World War was one of the most stupendous jobs ever performed by a military man. He built an air force, starting with practically nothing, to the greatest air armada and striking force that the world had ever known. It contributed mightily to our victory in every theater of the war. He was the last one to proclaim that his particular group deserved any more credit than the other two groups composing our armed forces, namely the Navy and the Army.

After he retired to California he took part in public affairs and at the request of Gov. Earl Warren he served as a member of the State Fish and Game Commission. He took part in the affairs of his local community and became a member of the Kiwanis Club of the little city of Sonoma. One of its members, A. R. Grinstead, wrote a poem about him when he was conferred an honorary membership of the Kiwanis Club of Sonoma. I believe that it describes General Arnold and his work very well.

Under leave to extend my remarks, I am including the poem which reads as follows:

"A MAN TO MATCH OUR MOUNTAINS"

"Give us men to match our mountains,"
Every city, town, and State
Long has yearned for men gigantic
Who in thoughts and deeds are great
So, within our tiny valley,
We have wished for men who share
The dignity and grandeur
Which our rugged mountains bear.
And now our wish is answered
And our yearnings satisfied,
Since General Henry Arnold
Has come here to reside.

But this vale is not his measure,
Our small mountains not the test,
Nay, compare him with the grandeur
Of the nation's highest crest.
He's a match for any mountain,
Aye, more than a match is he;
He's o'ercome the highest ridges
As he's spanned the widest sea.
For the far-flung operations
Of his Air Force in its might,
O'er this world's loftiest ranges
Carried victory in its flight.

Yea, for men who match our mountains—
There's a need throughout the land,
For men of giant stature,
Who'll in war and peace command.
May that need ne'er be unanswered;
Let their strong arms e'er insure
The success of every venture,
That this nation may indure,
May there e'er be stalwart leaders,
Who'll protect in direst plights,
May there always be "Hap" Arnolds
To guarantee our rights.

—*A. R. G.*

Bad Bugs in Bed With REA

EXTENSION OF REMARKS
OF
HON. BOYD TACKETT
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 15, 1950

Mr. TACKETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

BAD BUGS IN BED WITH REA

(By the Country Editor)

If the United States Government has ever done one good thing, and it has, that thing is the rural electric program, the REA.

No newspaper in America has given more space to the REA than has the Press-Argus. The daddy of REA in this part of Arkansas has been John H. Hobbs. We freely turned over our columns to him to espouse the cause. And he has used it—hundreds of columns—more space, we suspect, than was given to the REA by all the other weekly newspapers in Arkansas, all put together.

Several times we have personally spoken a good word for REA, for we like the set-up. It's simple. The Government, through the REA congressional act, simply gives a group of rural people the privilege of forming a business corporation, and such corporation can borrow sufficient money from the Government at low, long-term rates. With this money, the farmer-owned, farmer-managed corporation can build power plants, can build electric lines, and can within its own discretion sell electricity to farmers and to all small communities that cannot be profitably served by other privately owned power companies.

It's a sensible set-up. We've said so several times. But of late we have had a feeling, a hunch, that all was not above the board in REA. We noted they had expanded their pay rolls to take in public-relations employees. We noted that money was not available for extension of lines. We had no time or inclination to dig into the situation; but we had a feeling that the fellows back home who have been on the front line fighting for better service for REA have not been told all the things that were going on in brass-hat circles.

Last week our hunch was proven true. In a sensational disclosure, our own Congressman BOYD TACKETT flushed the covey from the bushes—and there it was: the blackbirds of the SPA had gone to roost with the REA. The bureaucrats of the Southwest Power Administration, evidently in cahoots with the higher-ups in REA, had concocted a clever plan to set up a giant power empire here in the Southwest—in positive defiance of the decision of Congress.

TACKETT deserves a vote of thanks for his fearless disclosure. He did some immediate good—loans that had been held up for months upon months were immediately allowed by the REA. Many farmers can soon get the electric service they had been promised for month after month.

But it's not all thanks that he's getting. TACKETT is catching criticism for his stand in the matter. The "public relations" men supported by tax funds have sent out the word that he is "ruining REA." There's not a word of truth in it. TACKETT is the best friend REA ever had. In fact, we believe that he has saved REA as we have known and admired it.

We know that talks on Government are dull things; but, honestly, if the people don't awaken to their dangers, it is going to be too late to claim there is freedom in our democracy.

This SPA-REA combine is a fair example of what is going on right under our noses under the guise of "good government." Let's study it a minute.

The SPA is a Government bureau, created by Congress. Its task was simple. Its job was to take control and to sell electricity generated by water power at dams along the streams here in the Southwest. The SPA was to do nothing more than hook all this electricity together and to sell it—to REA first, to other companies second.

But SPA seems to be made up of a remnant of a mob of schemers once quite popular in Washington under the name of "Brain Trust." They want more than just electricity to sell. They must want to operate with tax money the same kind of "big business" which they denounce as "dangerous to democracy." Their idea is to have the Government set up a power empire to drive the privately owned companies out of business. So they asked Congress for more money. And Congress said "No." SPA was not to be a Government manufacturing business.

Well, now, the REA has money for power plants. In fact, one is to be built down here at Ozark. Congress, which has always been friendly to REA, told REA to buy their electric power from private companies such as the O. G. & E. and the Arkansas Power & Light, or to buy from SPA. And if the two agencies, one privately owned, the other owned by the Government, couldn't supply REA with electricity at a fair rate, Congress

gave REA authority, and funds, to build its own power plants.

It was that last item that the SPA schemers grabbed onto. TACKETT charged, and we have heard no denials, that SPA seduced the REA in Washington to borrow the money to build the power plants. And when REA completed the plants, they were to lease them to SPA on a long-term basis. Eventually SPA, without authority by law, would acquire the plants that were owned by the farmers who borrowed the money to build them.

It was a slick scheme to circumvent the will of Congress, and might have succeeded, and may succeed yet, if folks don't wake up to the fact that some big lumps of their tax money are being used to put taxpayers out of business.

We don't like it—and we are pretty sure that farmers around here like John Hobbs and others who have put their money and time in REA don't like it either. I know these men and their ideals. They are not socialistic planners. They don't want the Government to take over private business. I know they are not in harmony with the idea of these bureaucrats who have such schemes.

Well, as one little small-town editor who has fought for REA all the way through, we say: "Thanks to BOYD TACKETT." His courage will be appreciated some day—we hope it's not too late—as it was in England, to stop the drift toward absolute slavery of all citizenship—through bureaus who are administering so-called good government.

The trouble with bureaus is that they are dictators before the people know it. Once entrenched with authority, the bureau can rule with an iron hand that subdues by the power of the purse. Those who disagree with them are punished by withholding funds, denial of projects, and other methods to beat into line those who disagree. Those are the evils of bureaucratic government. We marvel at the political fortitude of BOYD TACKETT. He has attacked a pretty big tiger.

H. P.

Anti-Semitism in Germany

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 15, 1950

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following article which appeared in the February 1950 issue of the Jewish Layman, together with the remarks of our high commissioner, Hon. John J. McCloy:

ON THE RISE AGAIN—ANTI-SEMITISM IN GERMANY

(By Harry Greenstein)

To get an authentic account of the alarming undercurrents in postwar Germany, the Jewish Layman asked Harry Greenstein, former adviser on Jewish affairs to the United States occupation authorities, to comment on the restoration of anti-Semitism and the future of Jewish life in Germany. In reply he sent us a copy of his report to the Secretary of the Army on his observations in Germany and Austria from February to October 1949. The following article contains excerpts of that significant document. Mr. Greenstein recently returned to the United States to resume his position as executive director of the Jewish Charities and Jewish Welfare Fund of Baltimore.

During my tour of duty I found relatively little in Germany of what might be termed overt forms of anti-Semitism. In an occupied country, where basic attitudes are necessarily repressed, this fact is no gauge of the intensity of the anti-Semitism that still exists. No one can work in Germany for even a brief period without being conscious of the deep, underlying hatred and hostility against the Jews. It will take years, perhaps generations, before the virulent form of anti-Semitism will have spent itself.

All competent observers agree that militant nationalism in one form or another has been on the rise in Germany since early 1948. There is a reason to believe that with the creation of the Federal Republic of Germany, it will, in all likelihood, increase. This nationalism which expressed itself without restraint in the speeches of the political candidates of all parties in the recent German elections, is a danger signal which no one can afford to ignore. It is true that the Bonn constitution is democratic in concept and provides for many safeguards for the protection of the basic rights of man. However, constitutions are not self-executing. From the standpoint of the future, what counts is the spirit in which Germany will be governed.

It is highly significant that in the recent elections no party, competing for the votes of the German electorate, found it politically expedient to denounce Hitlerism and its vicious anti-Jewish complex. The generation which grew up during Hitler's regime has been schooled in the leader principle and unless there is decisive rejection of Hitlerism by those elected to high public office, the German masses will continue to nurture the hatreds planted in them by their former leaders.

Chancellor Adenauer and President Heuss took a step in the right direction when, in extending New Year's greetings to the Jews of western Germany and in inviting them to take part in the intellectual, social, and political reconstruction of Germany, they said, "The Jews will not forget—the loyal Germans must not—but together we must overcome our evil inheritance." While these sentiments will be appreciated by people with democratic instincts, wherever they may reside, they will remain hollow words unless the new German Republic takes positive steps to combat anti-Semitism and to disassociate itself from its evil inheritance by a concrete program of action.

On the basis of my observations and work in Germany, I have formed the following conclusions:

1. It is imperative that the occupying powers recognize in anti-Semitism the rejection of the democratic principle and as the unmistakable sign of the resurgence of German nationalism in its most vicious form.

2. It is imperative that those entrusted with authority in Germany be ever vigilant against any manifestations of anti-Semitism and that they deal with it in vigorous and militant fashion.

3. It is imperative that the powers reserved by the authorities in the occupation statute be so exercised as to guide the press and other media of communication in bringing about a genuine regeneration of the German people.

4. From a long-range point of view it is of the utmost importance to develop a positive, democratic program which will reach into the governmental circles, into the church, the family, the schools, and into the daily lives of the German people.

There is no single cure for anti-Semitism. This is true of any country where the disease thrives. It is doubly true of Germany, where, sanctioned by law and dinned into the ears of the old and the young, it had become a national fetish whose validity few people questioned, and fewer had the courage to challenge. It will take at least as much time and effort to destroy the virus of hate as it took the Nazis to implant it in the hearts of the German people. It will be a long and uphill fight, to which all the liberal and enlightened elements, in and out of Germany, will have to apply themselves if any perceptible dent is to be made in meeting this problem.

A conference on the future of the Jews in Germany, conducted at Heidelberg by Mr. Greenstein last September, brought together for the first time in 16 years the major local and international Jewish organizations operating in Germany, and laid the ground work for coordinating efforts of every element in Germany interested in the welfare of Jews.

Facts brought out included:

In 1939, there were approximately 550,000 Jews in Germany; by the end of 1949, the number had been reduced to approximately 30,000.

The remaining community of Jews is over 50 percent intermarried, and in an overwhelming majority of the cases the children of these intermarriages are being raised in the Christian faith.

Hitler and his National Socialists, especially certain SS units, killed in a very short period of time at least 5,000,000 Jews; that is, most of the Jewish people in Europe, including more than four-fifths of the Jews of Germany.

Jewish religious services and education are still carried on in Germany, but there is a shortage of rabbis and schools. In fact, in all of continental Europe today there are only a few Jewish seminaries.

From his experience, Mr. Greenstein concluded:

1. For all practical purposes, the DP chapter in Germany has come to an end.

2. There will continue to be a Jewish community in Germany. Its ultimate size will depend upon such factors as world conditions, economic stability, the duration of our armed occupation of Germany, and the extent to which the German Government makes it possible for all minority groups to feel secure in Germany.

3. Nothing must be permitted to take place which will in any way weaken the restitution law. It is impossible to restore the lives of the millions who were murdered under the Nazi regime. It is, however, possible in some measure to effect a restitution of property of which the dead and the handful of survivors were robbed. The power to render the final decision in restitution cases must rest with an American tribunal and the United States authorities must be vigilant that the restitution cases which reach the courts are expeditiously handled.

4. It is imperative that no person with a Nazi background and record be permitted to hold any position of public responsibility in Germany.

5. The Jews of the world have an important stake in what happens in Germany. In our fast shrinking world every spot on the globe is important. A land which could very well become the rallying point and a source of strength for the reactionary forces of the world is of special importance to the Jew. It is already abundantly clear that Germany will strive to regain its former status in the family of nations and will make every effort to become an important factor in world affairs. The future attitude of Germany toward its Jews, regardless of how large or how small the number may be, will have a profound effect and influence on Jews everywhere.

6. For these reasons I feel it is important that the local Jewish organizations in Germany, specifically the Kultus Gemeinde and the Central Committee of Liberated Jews develop a coordinated program in meeting common Jewish problems.

7. I feel it is equally important that the international Jewish organizations, functioning in Germany, coordinate their efforts and work closely together in safeguarding Jewish rights and in helping create a truly democratic regime in Germany.

It will take many years before we can have an atmosphere of tolerance and breadth of view in Germany. I hope those years will be fewer than some people fear. The attitude of the Jew who remains in Germany will probably have a great deal to do with it. He will be laboring under a strain and will be moving against the current. However, I cannot but believe that with the tenacity, persistence, courage, and vigor of the race and with the habit of honest and fair dealing, the Jew in Germany will be restored to a position which he occupied in the past in this community and will reach even higher levels.

JOHN J. McCLOY,
High Commissioner,
United States Zone, Germany.

Problems of the Aging

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1950

Mrs. DOUGLAS. Mr. Speaker, I would like to call to the attention of the Members a resolution I am introducing today which would create a select committee to be known as the Select Committee on the Problems of the Aging, which would be authorized and directed to conduct a full and complete investigation and study of the employment problems of persons who, by reason of their age, are faced with difficulties in securing suitable and adequate employment.

The United States Bureau of Employment Security found in a special survey of six cities in May 1949, that in all six areas studied employers had significant restrictions against the hiring of older workers. The proportion of employers in each city who would hire no one over 44 ranged from 32 percent in Denver, to 79 percent in Birmingham, Ala.

In all six areas older workers remained listed in the active file of the local employment offices longer than younger workers. In one city where a special study was made of a lay-off wave that hit the area at the end of 1948, it was found that workers over 40 were most sharply affected, that employers became increasingly reluctant to hire older workers as unemployment increased the supply from which they could choose, and that where opportunities were available, they were in service industries where the wages and conditions of work were not attractive to younger workers.

Prospects for the future point to an extension and deepening of this problem.

America is aging. One-third of the people of voting age in 1945 were 50 or more years of age; by the year 2000 this proportion will be over 45 percent.

People 65 and over were 4 percent of the total in 1900; today they are 7.5 percent; by 1960 they will be over 9 percent. This is the fastest-growing section of our population.

On the other hand the youngest section is declining. Children under 5 were over 12 percent of the population in 1900. Today they are less than 8 percent.

Every age group below 40 is decreasing in relative size, while every one over 40 is increasing.

The hearings on social security that are now being held by the Senate Committee on Finance have thrown a piercing light on a problem that all of us face.

It is not a new problem.

It has been with us as long as man.

In other times and other civilizations, when people grew old, they were taken to a cave or igloo and left there to die, or otherwise neatly disposed of. We have not done that, at least not quite as openly.

Where a man is a Senator or a Congressman, or even a President, we the people of America, have recognized the contribution he can make from experience. Witness the fact that one-third of our Senators are over 60 years, and almost one-fourth of our Congressmen. To put it more forcefully, more than three-fourths of our entire Congress is over 45 years—an age beyond which most workers seeking employment find the doors closed.

Where a man is a doctor, or a lawyer, or a teacher, or an entrepreneur if you will, age has been recognized as adding to his ability, his experience, his know-how. But for the vast majority of America, the workers, the prospect is indeed dark.

Several hundred years ago, a worker could count on his trade and his skill remaining substantially static. He would live and die a skilled cobbler, a tailor, or blacksmith.

But the modern industrial system is one of rapid and frequent change. No man starting out in one occupation can be certain that it will remain unchanged long enough for him to die in it. On the contrary, the likelihood is that he and it will change many times in the course of his life.

While industry changes more and more rapidly, the working population grows older and older.

There is no doubt that physical and physiological changes occur in the older worker—the worker over 45 years. His strength, his agility, his sight, his speed may be lessened. At the same time his sense of responsibility, his lack of absenteeism, his ability to supervise and train younger workers, his concentration, his stick-to-it-iveness may increase—a fact which employment of older workers during World War II so clearly showed.

As Ewan Clague, commissioner of the Bureau of Labor Statistics so clearly pointed out in his article in the December 1947 issue of the Monthly Labor Review entitled "Employment of the Older Worker":

> Under ideal conditions, the worker would be graduated at about this time into more responsible work, perhaps into some form of supervision or direction of the training of young workers, or "paper" work of some kind which capitalizes his knowledge. If this were the normal outcome, no social or economic problem would arise.

But that is not the normal outcome at the present time.

The common notion is to retire a man or woman of 65, to make them comfortable—not in a cave perhaps, but certainly apart from the steady stream of activity to which they may long to contribute and to which they are capable of contributing in good measure. A man may retire, that is, if he has been able and lucky enough to hold onto one job long enough to derive pension benefits from long employment.

But where a worker is not yet aged, where he is what we call near old—over 45 years of age, like the vast majority of Congress, and looking for a job, then what?

Remember, he is not yet eligible for old-age or retirement assistance, yet he finds employers increasingly reluctant to hire him. He is classed as too old to work. Then what?

The problem as I see it is twofold:

First. What to do with the aging worker, the worker over 65 years who is able, willing, and seeking work, who has some productive years before him, and much experience behind, and

Second. What to do with the near-old worker, the man or woman over 45, who has at least 20 or 25 years, productive years, ahead, and yet whom industry, as it is now developing, finds it increasingly difficult to use?

There is need, therefore, to know the full extent of these employment difficulties: What basis there is in fact, if any—medically, physically, psychologically—for employer opposition to the hiring of workers over 40, what may be done to prolong useful employment opportunities for such workers, and what greater measure of security can be afforded for those who are genuinely beyond working age.

Some governmental and private agencies have already begun to think and work on the problem of an increased aged population in the United States.

I feel that Congress could assist in throwing further and very much needed light on the problem. For that reason I have drawn the following resolution:

> Resolution creating a select committee to conduct an investigation and study of the problems of the aging
>
> Whereas today many of our people are being forced to recognize that their age has become a block to their further employment; and
>
> Whereas this is a drain upon their own and the national welfare and tends to obstruct commerce; and
>
> Whereas prospects for the future point to an extension and deepening of this problem: Therefore be it
>
> *Resolved*, That there is hereby created a select committee to be known as the Select Committee on Problems of the Aging to be composed of seven Members of the House of Representatives to be appointed by the Speaker, one of whom he shall designate as chairman. Any vacancy occurring in the membership of the committee shall be filled in the same manner in which the original appointment was made.
>
> The committee is authorized and directed to conduct a full and complete investigation and study of the employment problems of

persons who, by reason of their age, are faced with difficulties in securing suitable and adequate employment.

The committee shall report to the House (or to the Clerk of the House if the House is not in session) as soon as practicable during the present Congress the results of its investigation and study, together with such recommendations as it deems advisable.

For the purpose of carrying out this resolution the committee, or any subcommittee thereof authorized by the committee to hold hearings, is authorized to sit and act during the present Congress at such times and places within the United States, whether the House is in session, has recessed, or has adjourned, to hold such hearings, and to require, by subpena or otherwise, the attendance and testimony of such witnesses and the production of books, records, correspondence, memoranda, papers, and documents, as it deems necessary. Subpenas may be issued under the signature of the chairman of the committee or any member of the committee designated by him, and may be served by any person designated by such chairman or member.

Freedom Versus Socialism

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 15, 1950

Mr. SHAFER. Mr. Speaker, the events of recent days have proved that it is possible for the Republicans to become an effective, united party of intelligent opposition to the Fair Deal if the issues are pointed up in such a way as to inspire the more thoughtful people to work for political action.

Adoption of the slogan "Socialism or freedom" is a forward step. Every American who can put two and two together and come up with four as the answer knows that these are the alternatives facing this Nation today. Ten years from now we shall be either a socialistic nation or we shall be a free nation.

It is possible that we still will have a mixed economy, of the type in which many of our people now are suffering, but the odds are against the continuance of the mixed economy. When a nation has gone as far along the road to totalitarianism as this Nation has gone, the time comes when the admixture of freedom and slavery either must become separated or the whole thing becomes slavery.

What we have had for some years is a mixture of wheat and chaff. The time has come when the wheat must be separated from the chaff, or else the whole "shebang" will become polluted.

It is easy enough for any intelligent person to sit down and understand clearly why the present policies of this Administration are leading us to socialism, which is just another name for the controlled state, totalitarianism, or communism.

As millions of our citizens become more and more dependent upon the Federal Government for hand-outs, more and more of them are afraid to speak for fear of jeopardizing the hand-outs. As millions of our citizens become tied up in labor unions dominated by racketeers and goons, there is less and less freedom of speech. A coal miner in a Pennsylvania town spoke out against John L. Lewis the other day. He shortly was run out of town, his name erased from union rolls, and he lost his right to work in that town forever. He swore that he never would go back for fear of his life.

We are losing freedom in these—and hundreds of other—ways, through the steady, unremitting growth of the Federal Government. As Federal expenditures go up, taxes rise. As taxes rise, you and I have less and less left of our income to invest as we please. The Federal Government has more money to invest. It uses the money to start power companies, to build steam plants, to go into various businesses.

Whatever else this may be called, it actually is socialism, under any definitions found in the dictionary. Also, it represents a contraction of the areas of economic freedom. If the Federal Government takes over hotels, naturally the number of privately owned and privately operated hotels shrinks. This is true in the field of electric power and in dozens of other fields possible to name.

The loss of freedom is so gradual, so subtle, that many citizens do not understand what is happening to them. The outward forms of government do not change, perceptibly, but the spirit of government becomes just the opposite of what it has been. It is like a man who is affected with a dread disease that affects his bones, or certain vital portions of his body. He looks the same, but actually his health and vitality are sapped and eaten away. That is what has been happening, is happening, and will continue to happen to our precious freedoms so long as a majority of the people vote for the Fair Deal.

Every one of us should devote all of our available time, effort, ability, and money to fighting against socialism. For, in so doing, we are fighting for nothing less than freedom itself, for ourselves, for our children, and for generations yet unborn.

The Lincoln Day box supper held in Washington was a rousing success because it brought together 12,000 persons who were united for freedom. If every such affair throughout the Nation will emphasize again this fight for freedom against tyranny of a very subtle kind, we can start building the kind of America for which all men of good will yearn.

Abraham Lincoln said that a nation could not exist half slave and half free. He proved in his day that when freedom was an issue the people would not falter, they would not fail. Let us prove it in our day.

Smoking Mice Live Normal Span

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 15, 1950

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from United States News and World Report for February 3, 1950:

SMOKING MICE LIVE NORMAL SPAN—UNITED STATES EXPERIMENTS FAIL TO PROVE CANCER RISE

Cigarette-smoking mice show this about tobacco:

Cancer—it is just as common among nonsmoking mice as it is among the smokers.

General health—mice who smoke half their lives reach the same ripe age as nonsmokers, none the worse for cigarettes.

Tests of the effect of cigarette smoking on health, conducted by the United States Public Health Service and others, result in these conclusions:

Cigarettes, so far as proof can be established, are not a cause of cancer of the lungs, lips, throat, or other parts of the "smoke tract." There is no clear evidence that smoking tends to shorten life. Digestion, however, does appear to be affected by excessive smoking. Cigarettes probably are harmful for people with some types of heart disorder. Smoking is not, so far as proof goes, a limiting factor in reproduction.

A sharp rise in the incidence of lung cancer—at a time when smoking has increased greatly—has led to the theory that cigarettes are the cause of the lung-cancer rise. To answer that theory, cancer experts of Public Health Service are reporting the results of experiments that they have conducted, using mice for men. Mice were induced to take up smoking, and keep at it for half their normal lives.

Specifically, for 4 hours daily, except Sunday, and for as long as 800 days, these mice were exposed to an automatic cigarette-smoking machine "which closely imitated human smoking habits." The mice used by Dr. Egon Lorenz, Chief of the Government's National Cancer Institute Biophysics Unit, were of the strain most susceptible to lung cancer.

Yet smokers among the mice showed no special tendency to develop lung cancer. In fact, they developed no more cancers in any part of the body than the "control" mice—the nonsmokers.

Dr. W. C. Hueper, Chief of the Institute's Cancer Studies Section, on the basis of these experiments with smoking and nonsmoking mice, makes this observation to United States News and World Report:

"No lung tumors among the mice were induced by smoking. Since other chemical agents can induce lung tumors in this strain of mice within a few months, the conclusion was reached that, under conditions simulating human smoking habits as closely as possible, tobacco smoke is not a cancer-causing agent, at least so far as the lungs of this strain of mice are concerned."

To explore further into the theory of smoke-induced cancers, the research workers repeatedly painted mice in one group with tobacco tar—supposedly a cancer-causing agent. Tobacco tar was injected under the skin of another group. Still another group had tobacco tar suspended in its drinking water. In addition, a tobacco-tar suspension was injected repeatedly into the blood stream of still another group of mice so that tar particles would be lodged in the lungs.

Results, again, were purely negative.

Still another approach was used in the effort to learn whether smoking is a cause of lung cancer. Research scientists reasoned that, if smoking is a cause of cancer, then a spectacular rise should be appearing in the incidence of lung cancer among women, who have taken up the habit in a big way in recent years. Young people, too, should be developing more lung cancers, since cigarette addicts are found more and more among the young. Also, cancer of the lip, tongue, and throat should be on the rise.

Yet there is no evidence that the rise of lung cancer among women is more noticeable than the increase among men, or that any other of these developments have occurred.

Dr. Hueper says, in this regard, "Certainly there is insufficient evidence to support the claim that the recent spectacular rise in the incidence of lung cancer is due to an increase in the smoking habit."

Cancer experts also have an answer for the physicians who report that they have found more lung cancer among smokers than among nonsmokers. Research workers point to proof that the average income of heart patients is far below that of the average person. But that doesn't prove that poverty causes heart trouble. The fact is, as has been shown, that many heart patients have low incomes because their ailment handicaps them.

As Dr. Hueper puts it, "The smoking habit may play a role in the production of human cancer, but the available evidence is in no way conclusive."

Other effects claimed for smoking arouse even more argument among physicians and scientists than the cancer claims. The research scientists, it seems, are less convinced than most physicians and writers on this subject. They are not willing to make dogmatic statements. But on the basis of their judgment, this can be said:

Digestion can be hindered by smoking, especially excessive smoking. Nicotine, in some tests, has stepped up secretion of stomach juices: acid, bile. That could be good. But, if it is overdone, it could be bad. Most experts doubt, for example, that an acid condition from smoking causes stomach ulcer. But they feel that, for the individual who already has an ulcer, smoking, at least excessive smoking, can serve to aggravate the condition. Few physicians fail to order their stomach-ulcer clients to stop smoking cigarettes.

Length of life, it appears, could be shortened by too much smoking, or by any smoking, but nobody seems to know for sure. Some sets of statistics indicate that heavy smokers tend to die at an earlier age than nonsmokers. But, say the experts, a man who is careless about his smoking habits is likely to be careless about his other health habits. Besides, who knows whether a heavy smoker dies at an earlier age from smoking or from the fact that the heavy smoker is likely to be a high-strung individual who wears himself out quickly, anyway?

The mice, again, provide a clue. The Lorenz tests showed that the normal mouse of the type used could look forward to an active life of better than a year and a half whether he took up smoking or not.

There is another clue. Some tests show that smoking increases the individual's blood-sugar level. What that indicates is that the smoker is putting a strain on his central nervous system, is producing energy unnecessarily. Logically, the individual who overdoes that sort of thing should expect to age more rapidly. Whether he actually does is something that has not been proved.

Heart troubles of various types are popularly connected with cigarette smoking. The evidence depends on the type of disorder. For the common angina pectoris, for example, most physicians play it safe and order their patients to reduce their smoking or, for more severe cases, to swear off entirely. Reason is that angina results from an insufficient flow of blood to the heart. And smoking can constrict the blood vessels and reduce that flow still further. But, again, most experts believe that smoking does not cause angina in the first place.

As for high blood pressure, the picture drawn by the experts is hazy. Individuals who are not used to smoking usually get a brief rise in blood pressure by smoking a cigarette. But there is evidence that smoking does not cause permanently high blood pressure. For example, rats subjected to much the same tests as used by Dr. Lorenz showed the same temporary rise in blood pressure. But they developed no permanent condition.

Actually, most physicians—and other scientists—are not much worried about tobacco effects on any but the most severe cases of high blood pressure where complications are present. That goes, too, for arteriosclerosis—hardening and narrowing of the arteries.

Local irritations, it is agreed, can be a result of smoking for some persons. Still, few people develop what might be called a cigarette cough, and these are not always attributable to smoking.

Reproductive processes seem unaffected by tobacco. Smokers among the mice, for example, were just as prolific as their nonsmoking friends.

What seems indicated, in sum, is that the ordinarily healthy individual can get by without serious effects if he smokes in moderation, if he stays within the limits he has established as his tolerance. But individuals who have heart pains, ulcers, or other conditions that seem affected by smoking will do well to take it easy on smoking, or to swear off.

Prospect, however, is that more and more people will take up smoking and complain about how harmful it is. Already, people spend more on smoking than they pay all physicians and dentists together. And, a Government study just out shows, people whose incomes decline cut their spending on tobacco far less than they trim spending on food and doctors.

Has America's Strength Been Sacrificed for So-Called Economies?

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 15, 1950

Mr. SHAFER. Mr. Speaker, under leave to extend my remarks, I include a very timely article by Joseph and Stewart Alsop which appeared in the Washington Post and other newspapers. It is an article that I believed should be read by every Member of Congress:

HAS STRENGTH BEEN SACRIFICED FOR JOHNSON'S ECONOMIES?

(By Joseph and Stewart Alsop)

WASHINGTON, February 13.—It is a grave act to charge a high official with deliberately misinforming the Nation. But it is graver still for the Nation to be grossly and persistently misled about vital matters, as we are now being misled by Secretary of Defense Louis A. Johnson's many misrepresentations. The time has come to call a spade a spade. Johnson has not been telling the truth about the national defense.

Specifically, on December 7, Johnson told the National Association of Manufacturers that his savings in the defense budget were being made without any reduction in our state of preparedness. He then reiterated this claim in his official annual report, stating that we are obtaining greater national security at less expense. All precautions are being taken, he said, to increase rather than diminish the over-all combat capabilities of the armed forces. Many other similar statements of the Secretary of Defense might also be cited.

Only a few of the facts that flatly and utterly refute these claims of Johnson's can be compressed into the space of a newspaper column. Yet even these few facts are sufficient to prove that the Secretary of Defense has been practicing what amounts to a confidence trick upon the Nation.

As between the services, the Navy is, of course, the heaviest sufferer from Johnsonian "economy." Taking the 1949 strength as the base, and the new budget as the comparison, the fleets at sea are being reduced from 18 cruisers to 13; from 8 heavy carriers to 6; from 5 light and escort carriers to 3; from 155 destroyers to 140; from 79 submarines to 70; and from 439 other active ships to 414. Naval manpower is being drastically cut, and the strength of the Marine Corps, never noted for its overhead, is being reduced by nearly the equivalent of a division, down to 72,000 men.

In the air, the Navy's attack carrier groups are being cut from 14 to 9, with further weakening of the fighting strength of each group.

Nor is this the worst. Johnson has also taken his axe to the vital replacement of obsolescent and obsolete aircraft. The 1951 budget will give the Navy only about 60 percent of the new planes which are needed to keep even the shrunken naval and marine air arms continuously provided with fully modern types.

The case of the Air Force is less dramatic, but hardly less grave. As everyone knows, all competent authorities, including the Joint Chiefs of Staff, have established an Air Force of 70 groups as the minimum needed to provide adequate offensive striking power, reasonable air support for our ground armies, and minimum air defense. Working toward this goal, the Air Force had activated (but not equipped) more than 54 groups. Then came the cut-back to 48 groups. The 15 activated heavy-bomber groups were maintained. But tactical groups, including light bomber and fighter, were reduced from 32 to 27, and troop-carrier groups were cut from 7 to 6.

The Air Force retains as many planes as in 1949. But the Air Force, like the naval air arm, is not being permitted to keep its group continuously provided with modern aircraft. For this purpose more than $1,700,000,000 was requested when the budget was being prepared. The figure allowed under the Johnsonian "economy" program is $1,300,000,000.

This means that the Air Force replacement rate has been cut approximately 25 percent below what is thought necessary to keep the 48 authorized air groups fully ready for modern war.

In the Army alone genuine economies have been made without cuts in combat strength. By the firm insistence of Secretary of the Army Gordon Gray, the fighting units of the ground forces remain what they were. Even so, with our ground force strength stationary, and our naval and air power being continuously impaired, our net loss of strength is already very great. And the loss will be far greater still if this process goes on.

Johnson has, to be sure, succeeded in paring something from the outrageously swollen overheads of the services. He has also saved funds by eliminating such foolishly competitive enterprises as the giant carrier. Yet the facts cited above add up to only one possible conclusion—outright sacrifices of strength account for the vast bulk of Johnson's economies.

This Johnson has repeatedly denied. One must take one's choice, therefore, between two views—either the Secretary of Defense is too hopelessly incompetent to recognize a cut in combat capabilities when he makes it or he stands convicted of untruth in detail as charged.

Repeal the Wartime Excise Taxes Now

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 15, 1950

Mr. MULTER. Mr. Speaker, following is a statement which I submitted to the Ways and Means Committee today. I commend it to the attention of my colleagues:

Mr. Chairman, I want to take this opportunity to express my thanks and appreciation to you and the members of this committee for allowing me to present my statement.

It is my earnest conviction that the wartime excise taxes very definitely constitute a case of taxation without justification. The sooner we repeal these burdensome taxes which are stifling business activity in our country, the sooner we shall help bolster the general economy and maintain our high level of employment.

Ever since I have been a Member of Congress I have advocated the repeal of all wartime excise taxes. I have introduced bills, both in the Eightieth and Eighty-first Congress, calling for the termination of these wartime excise taxes, including the tax on retail sales of furs, jewelry, cosmetics, and luggage; the tax on admissions to movies, theaters, and other forms of amusement; the manufacturers' excise tax on electric, gas, and oil appliances; the manufacturers' tax on electric light bulbs and tubes; the tax on electrical energy which is sold for domestic or commercial consumption; the tax on transportation of persons and property; the tax on communications, including telegraph, telephone, radio, and cable facilities, the tax on photographic equipment, and others.

In fact, I was so fearful of a serious setback to certain of the trades and industries affected, that last July, I initiated a petition to bring out of committee one of my bills calling for elimination of the retail excise taxes in order to obtain action on it on the floor of the House of Representatives. Unfortunately, my fears were verified by subsequent developments in several of these industries. The fur industry, for example, recorded a drop in sales last year of 30 percent as compared with 1946 and a drop in employment of 60 percent. Something similar has happened in the jewelry industry.

Today I am even more firmly convinced of how detrimental the excise taxes are on our economic life. In fact, I would urge the committee to eliminate the taxes not only on the items I mentioned above, covered by the bill referred to in my discharge petition, but to extend that list considerably to include many more items, before additional industries are just as badly affected and our whole economy seriously undermined.

In the case of transportation of persons, we have in effect a 15-percent tax. During the war the railroads were operating at full capacity and it was therefore important to discourage unnecessary travel, which the tax did. Now we hear of a reduction in travel of between 25 and 40 percent. Instead of encouraging business we are still following our wartime policy of discouragement.

The tax on theater admissions is 20 percent. We have all heard of the terrific crisis in the theater and movie industries which have been hard-hit by the admissions tax. I mean the little people, the owners of the thousands of movie houses and theaters throughout the country and the many thousands of people who depend on them for a livelihood. Relaxation is recognized by medical authorities today as a necessity not a luxury. Yet the admissions tax deprives thousands of our lowest- and middle-income earners of this vital and often only means of relaxation.

The tax on photographic equipment is one of the highest—25 percent. During the war the excise tax imposed on cameras and photographic materials was justified on the ground it helped to discourage civilian consumption of these articles in order that they might be available for wartime purposes. There is no longer any justification for this tax, particularly since the demand for these articles has been considerably reduced due to the high prices still in effect because of the tax.

Similarly high is the tax on communications: 25 percent on telegraph, cable, radio, and long-distance telephone, and 15 percent on local telephone service. In our modern system of living these services no longer constitute a luxury, but are a vital and essential part of our daily life. This tax should be entirely eliminated or drastically reduced.

Take a little item like electric-light bulbs, on which there is a 20-percent tax. Are electric-light bulbs a luxury item today? Is electrical energy for our homes and business establishments to be regarded a luxury? Or appliances for the preparation of food, whether gas, electric, or oil fueled? The tax on these items serves only to discourage homeowners and hotel and restaurant operators from purchasing necessary equipment to replace some of the obsolete equipment of prewar days.

I could go on in this fashion and cite other instances as to how excise taxes are affecting conditions in many industries. The examples cited, I believe, are sufficient to indicate the seriousness of the situation and the need for speedy action. The excise taxes, as you well know, were imposed during the war not so much for the purpose of raising revenue, but to restrict consumer purchases of these items and to preserve basic raw materials which were in short supply at the time. It was universally understood by our people that as soon as the war was over, these war measures would be repealed and the excise taxes would be removed. The Congress promised as much.

Here we are in the fifth year since the end of the war and to date we have failed to keep our promise to the American people. But while there may have been some justification for continuing these taxes in the early postwar years until the supply caught up with the the demand and while business activity remained at an all-time high, there is certainly no justification for it today.

No valid reason exists now for retaining such burdensome taxes, which are properly called nuisance taxes. To continue such taxes in normal times is to undermine the economic foundation of many important industries in this country and to destroy the confidence of the people in the legislative branch of our Government.

In the fiscal year which ended June 30, 1948, the United States Treasury obtained $470,000,000 from retail excise taxes. In the fiscal year ending June 30, 1949, the total income obtained by our Treasury from this source was $449,000,000, a decrease of $21,000,000 in one year. I am certain that at the end of the present fiscal year it will be still less. This in itself, the steady decline of revenue from these excise taxes, is the best proof of the effect it is having on our industries and how it is paralyzing economic activity in these trades. This alone justifies the repeal of the retail taxes.

None of the raw materials used in the manufacture of these items, which we sometimes label erroneously as luxury items, is today in short supply. Supply has long ago caught up with demand, so that now these industries need incentives and inducements to consumers in order to maintain in a sufficiently high level of production and sales which will prove profitable. All of these industries are suffering from consumer resistance which is bound to increase in the coming year if restrictions on retail sales continue as heretofore.

I am also fearful of the effect this will have in the near future on the employment situation, not only in the industries affected by the excise taxes where already considerable unemployment is being reported, but even in other fields beginning with the production of basic raw materials and continuing through each successive step of manufacture and wholesaling of the component parts, as well as the retailing of the finished articles.

It is now generally conceded that the Government is losing almost as much, if not more, in potential income-tax revenues as it has been collecting from luxury taxes. By the repeal of the excise taxes we shall make possible the release of some $400,000,000 annually into consumer purchases. The overall sales resulting from this release will bring increased income tax and profits tax to make up this loss.

Governor Driscoll's Speech

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 15, 1950

Mr. CANFIELD. Mr. Speaker, the New York Herald Tribune today editorializes as follows on the speech of Governor Driscoll before the National Republican Club at the annual Lincoln Day dinner in New York last Monday night:

GOVERNOR DRISCOLL'S SPEECH

The annual Lincoln Day dinner of the National Republican Club in New York found upon the platform two Republican governors who share the merit of having faced and dealt with the most pressing problems of the modern State. Governor Dewey spoke briefly, introducing Governor Driscoll as the chief executive of a State government that is clean, solvent, and progressive. Mr. Driscoll has aroused much interest since he won reelection last fall, the first New Jersey Governor to succeed himself and the only Republican to win high office in the scattered elections of that time. Not well known to his neighbors, New Yorkers had an opportunity on Monday night to hear him speak on the broadest of national problems.

The Governor revealed himself a man of prudent speech and of liberal ideas. He took his stand squarely with that wing of the party which demands something more than obstruction and negations: "Let us not divide our house against itself," he said, "by our inability to say 'Yes'." "The Republican Party," he continued, recalling the progressive tradition of Lincoln, "is committed to a government fully conscious of the needs of our industrial age, ready and willing to take care of its casualties whenever and wherever they may occur." But at the same time Mr. Driscoll warned against the extravagances, the waste, and the defeatest reliance upon big government which marks the opposition. "The real issues of today," he summed up, "are essentially of method rather than objective."

To emphasize method, to insist that the way a thing is done is no less important than the doing, takes the courage of lucidity and clear purpose. Finding that the Democrats led the country into a dissipation of its resources and a debasement of its ideals, the easy way is to condemn their goals, root, and branch. But that can be a fatal way for a great party, bent on recapturing national power. The harder, but

in the end the more hopeful course is to maintain, as Governor Driscoll did, that the goals of a stable and progressive society can be pursued by means compatible with individual judgment, initiative, and responsibility. As Governor of an industrial State, Governor Driscoll has a chance to exemplify what he teaches; and the party could scarcely do better than to search both his words and his deeds for light upon the path ahead.

Great Caution Should Be Used in Filling Vacancies on Federal Reserve Board

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 15, 1950

Mr. SHAFER. Mr. Speaker, President Truman will soon be called upon to fill two vacancies on the Federal Reserve Board. This will be a great responsibility for the Chief Executive. The importance of his action is well stated in a press release which appeared in Washington newspapers over the week end. The release, I understand, was issued by a highly respected Member of the other body and should be available to every Member of Congress. Therefore, under permission to extend my remarks, I include this statement which I commend to all Members:

FEDERAL RESERVE VACANCIES

There are two vacancies to be filled on the present Federal Reserve Board. This Board, as you know, was set up to act as an independent regulator of the country's financial policies and was never designed to be a tool of the executive branch. It is supposed to be nonpolitical and nonpartisan. The Board is designed to serve as a traffic light in national fiscal policy.

It is important for the American people and our democratic institutions that these very fine and important positions, paying $15,000 a year for 14-year terms, should be filled by men of independence and caution. The credit of the Nation is nothing to be trifled with. We must be strong financially to stand the strains from within and without nowadays.

There has been a tendency of late on the part of the Board to move closer to the orbit of the White House. That is against the spirit of the law which created the Board. This Board could very well be packed to agree to the fiscal policies laid down by the White House and the Treasury. There are reports in Washington that this is a possibility. Let me point out that the line of control from the White House to the Treasury to the Board could well have as its ultimate result the control of the banks through the Board's credit policies and through the banks to the industries of the country.

The Board has embarked in recent years on some radical actions which are more or less questionable. If we do not get independent men as new appointees these questionable actions might well become rules of future action. The subject of the consumer's dollar is a precious one in this country. I am sure the President will realize that a strong, independent Federal Reserve Board, acting according to the intent of Congress and not moving in the White House orbit at all, is an asset which the American people cannot well afford to lose.

Object Lesson in Race Relations

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 15, 1950

Mr. MULTER. Mr. Speaker, the following article appeared in the New York Times magazine of February 12, 1950. It is extremely apropos as well as most enlightening. The author of the article, Gen. Thomas F. Farrell, is chairman of the New York City Housing Authority, a position which he took up after the end of the war. During the war he served with distinction as a major general in the Engineers and as Deputy Commander of the atom bomb project. His article follows:

OBJECT LESSON IN RACE RELATIONS—NEW YORK CITY'S PUBLIC HOUSING PROJECTS DEMONSTRATE THAT NEGROES AND WHITES CAN LIVE TOGETHER AS GOOD NEIGHBORS

(By Thomas F. Farrell)

"Therefore be at peace henceforward
And as brothers live together."
—*Longfellow.*

This week the new nondiscrimination policy of the Federal Housing Administration and Veterans' Administration will be put into effect. There is no crystal-ball answer on how well these policies will work, but it may be helpful to look at the experience of New York City's public housing projects where Negro and white families have lived side by side as neighbors for the last 10 years.

While the results may be less than are demanded by those who want full race equality at once, in New York City there has been definite and increasing progress in the serious problem of getting people of different races to live together in peace with mutual respect and trust.

The New York City Housing Authority first adopted nonsegregated housing as a policy with the opening of Red Hook Houses in 1939, the first project in New York City completed under the Federal Housing Act of 1937. In its previous public housing projects—two built under the Public Works Administration and a small group of rehabilitated buildings—the tenants with one or two exceptions had been completely segregated, with the Negroes selected for Harlem and the whites for Brooklyn and the lower East Side. The management staff for each project was largely selected in the same way. At the start of Harlem River Houses in 1936 it was apparently assumed that all tenants would be Negroes.

It is interesting to speculate on the reasons why, only 3 years later, nonsegregation was not only possible at Red Hook Houses but was a declared policy of the people of New York State in the then new public housing law which required that no person shall, because of race, creed, color, or national origin, be subjected to any discrimination.

Perhaps widespread interest in public housing explains such a major change in public opinion, although there is no question that Negroes made gains in other fields at the time. Whatever the reasons for the law, Negro and white families were assigned to their apartments in the same building and on the same floor at Red Hook Houses, perhaps with some reservation about the outcome.

In those early days the number of Negroes was kept small—24 families out of 2,545. At that time a delegation of white women tenants visited the manager to suggest that all Negroes be moved to one all-Negro building. The manager pointed out the logical conclusion to that proposal—an all-Italian building, an all-Irish building, an all-German building, and since there were 38 nationalities and only 25 buildings, under their plan some tenants would have to get out. He then offered for their consideration another way of doing it—all-Catholic, all-Jewish, all-Lutheran buildings. They were intelligent enough to get the point.

Although there were objections to Red Hook's new Negro tenants from the neighborhood and, of course, occasional arguments between tenants, no serious trouble developed.

At stair-hall meetings, tenants and staff discussed their problems and gradually got acquainted, although, on the whole, the first tenants treated each other with considerable reserve. In the sitting areas on the grounds, white mothers grouped themselves and their baby carriages together, and Negro mothers wheeled their carriages to a place apart. After some weeks a white mother asked a Negro mother to keep an eye on her child while she went to her apartment. The Negro woman gladly agreed and the ice was broken.

Soon white women were performing the same favor. Then came a rotation plan, with each mother taking her turn in looking after all the children. Later there was some visiting of each other's apartments and shopping together. The barriers were gradually lowered within the limits of the project. But outside the project there was a difference in their relationship. On the whole, families did not go to Coney Island together, nor visit each other's friends on the outside, nor go to the movies together.

The situation remains much the same today at Red Hook Houses. The families may feel that their friendship would not be understood by outsiders; it is a project affair. Or, more likely, the relationship which develops between two families living in one building—whether they are both white, both Negro, or mixed—is merely a neighborly one, as it is in private housing, and the instance when a solid and lasting friendship ripens is unusual. Negro and white families have the same tolerance and consideration for each other as other apartment dwellers. One white woman, a grandmother baby-sitting with her two grandchildren at Amsterdam Houses, summed it up to an inquiring sidewalk sociologist: "They're no different. They mind their own business and I mind mine. When people mind their own business they get along."

Since 1939 all public housing projects have been nonsegregated, and more Negro families have moved into Red Hook Houses and into the almost all-white Williamsburg Houses as vacancies occurred.

It may be pointed out that most public housing projects were built in areas already occupied by many racial groups. There were several reasons why a project would be likely to have among its tenants the same kind of people already in the neighborhood. Families moving from the site to make way for the project were given first preference in the new apartments if they met the eligibility standards. A heavy percentage of applications came from the neighborhood families who had watched the buildings rise. People want to remain in their own neighborhood. Negroes and whites alike want to be near the stores, churches, clubs, and movies which they use and are used by people they know. Applicants were allowed to express a preference among the projects, which was honored whenever possible. As a result there have been no drastic upheavals of populations, no great moving of large numbers of Negroes into areas predominantly white, no great moving of large numbers of whites into areas predominantly Negro.

These conditions may have helped the nonsegregation policy to succeed, but the atti-

tude of the manager and his staff, who are thoroughly "briefed" before being charged with carrying out the policy, has always been an important factor. Since staff members are assigned, like tenants, without regard to race, the tenant expects fair treatment. Although some families may feel they have the hardest-hearted landlord in the city, complaints about race discrimination are rare. Meetings with tenants whenever they ask for them, and a conscious effort to see that normal arguments do not develop into racial issues, are helpful.

When a project is built in an area where there are no Negro families, as in the case of the postwar projects built on vacant land, there is sometimes a more difficult experience with the neighborhood. Taxpayers' organizations and civic associations may object to the project because, they say, and very likely believe, it would "tend to depreciate realty values." They are often quite vocal, suggesting that the project would be filled with "undesirables." While such groups rarely become specific, they sometimes refer to the "intrusion of the Negro."

At the ground-breaking ceremony for Woodside Houses in Queens, a group of objectors picketed the ceremony with signs accusing the authority of communism. At earlier public hearings, the small group of protesting citizens warned of dire results to the neighborhood if the project was approved. Now that Woodside Houses has been completed and fully occupied, including about 8 percent Negro families, the furor has died down, and the surrounding area is being built up with business properties.

Instead of depreciating realty values, there is evidence that they have been increased, as anyone who drives around the project can see. Once a large vacant tract, the construction of new shops kept pace with the project, and when the tenants moved in, the stores were ready for business. The Negro tenants have met no hostility in the community. A Negro tenant was amazed to learn of objections from the neighborhood before Woodside houses was built. "Why, the shopkeepers are just grand to us," she insisted.

Administering this policy of nondiscrimination and nonsegregation is not left to luck and good will. We must be sure that tenants are selected on their need alone, and once a project is open its business must be conducted smoothly. Although much of the problem is one of human relations and justice, there are two objective measures used as safeguards.

In the selection of tenants, based on need, with priority for former site residents and veterans, the following things are done to assure equal treatment: Preliminary registrations, on which there is no information about race, are filed by mail. The information is translated into code numbers and the name into a serial number, and punched on International Business Machine cards. Families are called for interviews as they are sorted by machines, according to their need and priority.

The second measure is to require that all public facilities in a project, such as nursery schools and recreation programs, are operated on an interracial and interfaith basis. Many an otherwise worthy organization has been refused space because its interest is limited to the members of one faith or one race. In contrast, the Urban League has adopted an interracial program in opperating one of our nursery schools, and several Catholic and Jewish groups have adopted interfaith recreation and child-care programs in our projects.

Hewing a middle course, we often make a target for so-called public-interest groups representing both points of view on nondiscrimination. Once we got caught in a crossfire between two special interest groups, both supporting nondiscrimination wholeheartedly. One group suspected that we must be discriminating, since we kept records of the tenant's race; they had frequently asked for the statistics but thought it discriminating to keep records to provide these statistics. The other group suggested that we should maintain definite proportions of minority groups, including Negroes; they objected to calling it a "quota" system but said that a "conscious effort should be made to secure heterogeneity in occupancy"—whatever that may mean.

One group says we should have a leavening of religions as well as races. Others say we should waive the veterans' preference, required by law, in order to avoid a monotony of relatively young families in a development. Some who preach nondiscrimination urge us to check on a person's race before assignment to a particular project in a particular section of the city, so that a proper distribution can be made. To these critics our director of management answers: "There is only one way to carry out our policy of nondiscrimination, and that is not to discriminate." It's as simple as that.

Children play a big part in welding the white and Negro families together. One is reminded of the South Pacific lyric, Ycu've Got To Be Taught To Hate. A lot of the business of living centers around the care, schooling, and play of the children. The attitude of the children toward their neighbor children is carried into the home of the parents. Our chief of community activities finds that the 2-to-5-year-olds seem completely unaware of adult racial prejudices, though they notice and point out the fact that you're black or you're white.

She tells the story of two 4-year-old girls, one Negro and one white, in a preschool center, who were fast friends. One day they had a fight which ended with each child screaming at the other. The next day the white girl came in with a bag of candy and told her friend of the day before that she couldn't have any because she was black. She then gave candy to all the other children, Negro and white, and said to the Negro teacher, "Of course, you'll have to get some because I love you."

Three years ago a staff writer from a national magazine made an investigation of Kingsborough Houses with the aim of debunking a news story reporting on how well the Negroes and whites lived together. After interviewing many people he finally found a white tenant with a bitter complaint about her Negro neighbor. She delivered a long oration, relating in all its details a housewife's argument over a borrowed tray of ice cubes, and ended with, "And it makes my blood boil when I think of the soup I used to make for that woman when she was sick!"

How do the tenants feel about nonsegregated housing? A veteran of World War II, now a policeman, summed it up this way: "Well, I was sort of worried when I came to Amsterdam, but, you know, I've learned a lot. They're just like the whites. When people are decent their color doesn't count." Or, as the manager of Amsterdam Houses reports, if some trace of prejudice remains they may say, "The Negroes in the project are O. K.; it's the ones across the street that we don't like."

The effect of housing projects on neighborhoods has been generally good. There has been no tendency for neighborhood people to move away because of the projects. The projects are well built and are well maintained. Business in the neighborhood improves. With rare exceptions the tenants are good neighbors.

Just how far has nondiscrimination gone and what does it mean? It would not be right to claim too much.

All white families in public housing have not immediately become friends of the Negro race, nor is the reverse true. Conditions vary between projects; in general, the older the projects and the longer families live together the better friends and neighbors they become.

The effects of nonsegregation are largely limited to the families within the project boundaries, although as far as the commerce of the neighborhood is concerned Negro families are generally welcome.

Racial intermarriage is not involved, nor are the problems of discrimination in employment, places of amusement, hotels, and in other activities. Human nature has not changed and some strife between persons of the same race or of different races will continue as before.

Within the projects, the results have been solid and enduring. In the business of raising families, of children playing together, of lending a hand in emergencies, of living side by side in peace, much has been done. In caring for each other's children, helping in sickness, working together in tenants' organizations and social and athletic events; in practicing tolerance in the best sense of the word, the tenants have raised a little the iron curtain between races.

Race prejudice dies hard—and often comes to life when seemingly dead. It has taken a long time and required great effort to get this far ahead and there is a long way to go. There are many to whom nondiscrimination is largely an abstract ideal to talk about, but in New York City's public housing it is a reality. It can work; it is working.

The President's Address at the Law Enforcement Conference

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Thursday, February 16 (legislative day of Wednesday, January 4), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the thoughtful address delivered by President Truman in Washington on February 14 at the Law Enforcement Officers' Conference, which was called by Attorney General McGrath.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Attorney General and gentlemen of the conference, when the Attorney General told me of his plan to hold this conference, I welcomed the idea. It seemed to me that it would be most useful for Federal, State, and local officials concerned with law-enforcement problems to gather together to devise ways and means of making law enforcement better and more effective.

There has been a substantial postwar increase in crime in this country, particularly in crimes of violence. This is disturbing, but it is one of the inevitable results of war, and the dislocations which spring from war. It is one of the many reasons why we must work with other nations for a permanent peace.

I might remind you that after every war this country has ever been engaged in, we have had exactly the same problems to face. After the Revolutionary War, we had almost exactly the same problems with which we are faced now, out of which came the alien and sedition laws, which we finally had to repeal because they did not agree with the Bill of Rights.

Then, after the War Between the States, or the Civil War, we had all sorts of banditry. My State was famous for some of the great bandits of that time, if you recall. We had

the same situation after World War I. We had a terrible time then with the increase in crimes of violence. We managed to handle the situation, and I am just as sure as I stand here that we will do it again.

This postwar increase in crime has been accompanied by a resurgence of underworld forces—forces which thrive on vice and greed. This underworld has used its resources to corrupt the moral fiber of some of our citizens and some of our communities. It carries a large share of the responsibility for the general increase in crime in the last few years.

This is a problem that, in one degree or another, affects every community in the country, and every level of government. Our rural areas as well as our cities are involved in this.

MUST AID GENTLER FORCES

It is important, therefore, that we work together in combating organized crime in all its forms. We must use our courts and our law-enforcement agencies and the moral forces of our people to put down organized crime wherever it appears.

At the same time we must aid and encourage gentler forces to do their work of prevention and cure. These forces include education, religion, and home training, family and child guidance, and wholesome recreation.

The most important business in this Nation—or any nation, for that matter—is raising and training children. If those children have the proper environment at home and educationally, very, very few of them ever turn out wrong. I don't think we put enough stress on the necessity of implanting in the child's mind the moral code under which we live.

The fundamental basis of this Nation's law was given to Moses on the Mount. The fundamental basis of our Bill of Rights comes from the teachings which we get from Exodus and St. Matthew, from Isaiah and St. Paul. I don't think we emphasize that enough these days.

If we don't have the proper fundamental moral background, we will finally wind up with a totalitarian government which does not believe in rights for anybody except the state.

Above all, we must recognize that human misery breeds most of our crime. We must wipe out our slums, improve the health of our citizens, and eliminate the inequalities of opportunities which embitter men and women and turn them toward lawlessness. In the long run these programs represent the greatest of all anticrime measures.

And I want to emphasize particularly equality of opportunity. I think every child in the Nation, regardless of his race, creed, or color, should have the right to a proper education. And when he has finished that education, he ought to have the right in industry to fair treatment in employment. If he is able and willing to do the job, he ought to be given a chance to do that job, no matter what his religious connections are, or what his color is.

I am particularly anxious that we should do everything within our power to protect the minds and hearts of our children from the moral corruption that accompanies organized crime. Our children are our greatest resource, and our greatest asset—the hope of our future and the future of the world.

STRESS ON IDEALISM URGED

We must not permit the existence of conditions which cause our children to believe that crime is inevitable and normal. We must teach idealism—honor, ethics, decency, the moral law. We must teach that we should do right because it is right, and not in the hope of any material reward.

That is what our moral code is based on: Do to the other fellow as you would have him do to you. If we would continue that all through our lives, we wouldn't have organized crime—if everybody would do that.

Our local, State, and Federal law-enforcement agencies have a major role to play in this whole task of crime suppression.

As law enforcement officers, you have great powers. At the same time, you must never forget that hand in hand with those powers go great responsibilities. You must make certain that these powers are not used for personal gain, or from any personal motive. Too often organized crime is made possible by corruption of law-enforcement officials.

But, far more than that, we must always remember that you are officers of the law in a great democratic Nation which owes its birth to the indignation of its citizens against the encroachment of police and governmental powers against their individual freedoms.

Now there isn't any difference, so far as I can see, in the manner in which totalitarian states treat individuals than there is in the racketeers' handling of these lawless rackets with which we are sometimes faced. And the reason that our Government is strong, and the greatest democracy in the world, is because we have a Bill of Rights.

You should be vigilant to enforce the laws which protect our citizens from violence or intimidation in the exercise of their constitutional and legal rights. The strength of our institutions depends in large measure upon the vigorous efforts to prevent mob violence and other forms of interference with basic rights—the right to a fair trial, the right to vote, and the right to exercise freedom of speech, assembly, and petition.

It is just as much your duty to protect the innocent as it is to prosecute the guilty. The friendless, the weak, the victims of prejudice and public excitement are entitled to the same quality of justice and fair play that the rich, the powerful, the well-connected, and the fellow with pull thinks he can get.

Moreover, the guilty as well as the innocent are entitled to due process of law. They are entitled to a fair trial. They are entitled to counsel. They are entitled to fair treatment from the police. The law-enforcement officer has the same duty as the citizen—indeed, he has a higher duty—to abide by the letter and spirit of our Constitution and laws. You yourselves must be careful to obey the letter of the law. You yourselves must be intellectually honest in the enforcement of the law.

THE RESPONSIBILITY OF OFFICE

Now, as President of the United States, I have the most honorable and the greatest job in the world—the greatest position that can come to any man on earth. I am invested with certain great powers by the Constitution of the United States in the operation of the Government of the United States.

But, I was put into this place by the people of the United States. I am the servant of the people. And in the first place, I am a citizen of this great country. And as a citizen it is my duty as President of the United States to be exceedingly careful in obedience to the Constitution and the laws of this great Nation.

I believe that as President it is necessary for me to be more careful in obeying the laws than for any other person to be careful. I never infringe a traffic rule. I never exercise the prerogatives which I sometimes have of going through red lights. I never exercise the prerogative of taking advantage of my position as President of the United States, because I believe, first, that I am a citizen, and that as a citizen I ought to obey the laws first and foremost.

And every one of you has that same responsibility. You yourselves, as I said, must be intellectually honest in the enforcement of the Constitution and the laws of the United States. And if you are not, you are not a good public official.

I know that it would be easier to catch and jail criminals if we did not have a Bill of Rights in our Federal and State Constitutions, but I thank God every day that it is there, that that Bill of Rights is a fundamental law. That is what distinguishes us from the totalitarian powers. I am confident that you share these convictions with me, and that you will not lose sight of them in your efforts to wipe out organized crime and reduce lawlessness.

I know that your discussions here will be fruitful. I hope that you develop a sound plan by means of which the cooperative efforts of every American law-enforcement agency will be effectively brought to bear upon organized crime.

Your task does not end with today's meeting. It only begins with today's meeting. The spade work must be done in the communities where you live and work. It will be your task to mobilize local opinion and resources against organized crime and the conditions which create it.

In this task I pledge my wholehearted support.

Thank you very much.

Amendment of the Antitrust Laws

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, February 16 (legislative day of Wednesday, January 4), 1950

Mr. ROBERTSON. Mr. President, on January 23 I introduced Senate bill 2912 to amend the antitrust laws so as to protect trade and commerce against unreasonable restraints by labor organizations. This morning I testified on behalf of that measure before a subcommittee of the Senate Judiciary Committee. Since the issue involved is one of national importance and inasmuch as my statement before the subcommittee is not unduly long, I ask unanimous consent that it may be printed in the Appendix of the RECORD, for the information of Members of the Congress.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR A. WILLIS ROBERTSON (DEMOCRAT OF VIRGINIA) BEFORE A SUBCOMMITTEE OF THE SENATE JUDICIARY COMMITTEE CONSIDERING HIS BILL (S. 2912) TO PROTECT TRADE AND COMMERCE AGAINST UNREASONABLE RESTRAINTS BY LABOR ORGANIZATIONS

Mr. Chairman, I appreciate this opportunity to discuss with you my bill S. 2912 which is intended to protect trade and commerce against unreasonable restraint by labor organizations.

This bill was written following hearings which I conducted on behalf of the Banking and Currency Committee. The committee report, following these hearings, concluded that, "The order of the United Mine Workers imposing a 3-day workweek is the very antithesis of collective bargaining. If this usurpation and abuse of the power to control production and price is tolerated by the Congress, its unbridled use will quickly spread from union to union, from industry to industry, and the Congress will never regain its own narrowly circumscribed power to control the economy of the Nation con-

sistently with the Constitution of the United States."

My bill was predicated upon these findings in the belief that labor leaders and labor unions have the power, and will continue to have the power until Congress acts, to unreasonably restrain trade to any extent their whims dictate, including control of production and prices by unlawful means as well as lawful means.

At this point I would like to offer for the files of your committee, the printed hearings upon the Economic Power of Labor Organizations which were held by the Senate Banking and Currency Committee from July 25 to August 26, 1949.

I also should like to offer, as part of your record, Senate Report No. 1234, Eighty-first Congress, second session, which resulted from these hearings and, as an exhibit, a topical digest of the testimony.

I might point out here that although these hearings were held, at my suggestion, because of an acute situation which existed with regard to the coal industry, our inquiry was not confined to that industry but covered the whole industrial field. At these hearings we asked witnesses to tell us whether or not labor unions were using monopolistic powers in an effort to control prices or production in a manner that was adverse to the public interest in any industry and we also asked those concurring in this view to suggest possible remedies.

Witnesses heard by the Banking and Currency Committee told us that labor monopolies exist in various stages of the process of making numerous commodities. Detailed information was given as to how this monopoly power has been exercised by the United Mine Workers Union and the direct and indirect effect of this on transportation, manufacturing and other industries, on commercial enterprises and on private individuals.

It was testified, for example, that John L. Lewis first proposed to the coal mine operators that a 3-day workweek be instituted on a voluntary basis. If the operators had consented, of course they would have been subject to action under the antitrust laws for entering into a conspiracy with the union to control production. The possibility of such prosecution was clearly shown by the action in the case of *Allen Bradley* v. *Local Union No. 3, International Brotherhood of Electrical Workers* (325 U. S. 797).

But when the operators refused to join in such a conspiracy, Mr. Lewis, on June 30, 1949, addressed a letter to all of his local unions in which he advised and instructed the miners as follows: "All members in all mines heretofore under contract will return to work Tuesday, July 5, and produce coal 3 days, namely, Tuesday, Wednesday, and Thursday. Each following week thereafter, until you are further advised, the workdays will be Monday, Tuesday, and Wednesday, on which days coal will be produced. All other work except the production of coal may be performed without restrictions in accordance with the usual practice."

Note that statement, if you please. Here was a Nation-wide industry which is basic to our industrial system and which is essential to the health and welfare of the people of our Nation. Yet, one individual writes a letter and says that hereafter Monday, Tuesday, and Wednesday are the only days on which coal will be produced.

I do not have to tell you that this order was effective and for most of the time since it was issued coal has been produced only on those 3 days in each week.

At the end of his letter Mr. Lewis said: "The cooperation of each member with this policy is requested." He did not have to remind the miners of what might happen to anyone who failed to cooperate.

But to let the coal operators know where they stood in the matter he also said in this circular letter: "Operators of all mines will be expected under this policy to maintain the same terms, wages, hours, and conditions of employment heretofore existing under the agreement expiring June 30. Local unions will immediately report to their proper district the identity of any coal company refusing to cooperate with this policy."

Here, then, in this country which boasts it is the home of free enterprise, we have a spokesman for labor, who is vested with monopolistic powers, able to use and using that power to tell the owners of the coal mines when and how they can operate their businesses and use their property.

Of course, if the union can say coal will be mined only 3 days a week it can say coal will be mined only 2 days or 1 day, and it might just as logically say that coal shall not be mined unless it is to be sold for a certain price. It is a clear-cut case of the use of union power not to increase wages or to improve working conditions but to control prices and production.

The future of small companies was jeopardized because they could not operate profitably on a 3-day-week basis or were unable to meet their commitments to fill orders. Much coal was lost permanently because of cave-ins where supports were not adequate during the lay-off periods. The coal industry as a whole lost to competitors such as gas and oil because industries were unable to get or were afraid to depend on their accustomed source of fuel.

Employment figures and pay rolls dropped sharply because 60 percent of the cost of producing coal is labor cost as compared with 8 percent for the oil to which many plants shifted. Railroad traffic and railroad employment were reduced. Communities dependent on mining operations had general business depressions.

The effects of allowing this labor organization to control the production and prices of coal were not limited to the coal industry. They spread to other allied industries and had a serious impact upon our whole economy. The country has refused to accept monopolistic dictation by industrial leaders and it should not be required to accept any such dictation by a labor leader.

It is true that Congress has given certain immunity to labor unions and the interpretation of the law by the Supreme Court has also contributed to making all labor and pseudo labor activities safe from any corrective action by any court. Rightness or wrongness, wisdom or unwisdom, selfishness or unselfishness, and the gravity of the effect on the national welfare and security have now become factors which labor unions can, if they desire, disregard.

Not only do we here have an example of monopoly by a labor leader over business but I call your attention to an editorial of the Washington Evening Star commenting upon the monopoly exercised by this same leader in suspending from the union for 6 months one of its members who spoke out in disagreement to the actions of this leader. In this connection I also call your attention to a letter printed by the Philadelphia Inquirer, February 3, in their column The Voice of the People. (Editorials offered for record.)

This monopoly power in all of its ramifications and arrogance has, since the close of our hearings and the introduction of my bill, been exercised and abused daily. I need not detail for your committee the manner in which this monopoly, accompanied with utter defiance and disregard of public needs, rights, and interests, has aroused our entire Nation to a recognition and demand for some corrective legislation. In any contest for power between the public represented by the Government and any group, large or small, there should no longer be any doubt as to which contestant must win. This country cannot afford dictators—government or private.

I shall not at this time go into the testimony offered as to the potentiality, at least, of something similar happening in other basic industries, but you will find it in the hearings. And there are numerous such instances.

The evidence at our hearings, in general, gave point to the warning of another Member of the Senate, the Honorable JAMES E. MURRAY, who cannot by any stretch of the imagination be regarded as biased against labor. On January 1947 this colleague aptly said: "If democracy is to survive, it must be vigilant, strong, and constantly able to defend itself against any force or organization which sets itself up to dictate to the Government. When rulers of industrial empires, when rulers of big unions, when any economic power grows so big and becomes so arrogant as to threaten the state, then indeed is the people's government in jeopardy. This has become such a time."

If then, action is required against a condition which jeopardizes the people's government, the next question is: Where shall we find the remedy?

The objective of my bill is to restore to the Sherman Act the meaning which Congress always intended it to have. In fact the Supreme Court accepted that meaning until in 1941 five members of the Court gave it a new interpretation. They then declared that the Norris-LaGuardia Act (29 U. S. C.) had modified the antimonopoly laws so as to give immunity to all labor activities. Up to that decision in 1941 the Supreme Court had previously said, time after time, that this had never been intended by Congress.

Under Justice Frankfurter's decision in the Hutcheson case of 1941 (*United States* v. *Hutcheson*, 312 U. S. 219) no injunction can be issued and nothing can be a criminal offense or the subject of a suit if it arises out of any kind of a labor dispute. This state of the law gives labor an unlimited license to do anything it chooses, by unlawful as well as lawful means, and still be safe from prosecution, injunction, or liability under the Sherman Act.

My bill would modify the ruling in the Hutcheson case (supra) to the extent that when a labor union or its members have unreasonably restrained trade in commodities or services essential to the national economy, health or safety, they cannot use the cloak of the Norris-LaGuardia Act to escape a criminal prosecution or injunction.

The public can be hurt just as badly when restraints are imposed by a labor union as it can when these restraints are imposed by business combinations. In fact, no business combination of which I have ever heard has achieved the kind of arbitrary power and control that John L. Lewis now possesses and wields.

In the case of coal, John L. Lewis has been dictating to the industry in such a way as to govern production and prices. If this continues, the whole industry will be run at the discretion of one man. That tends to drive out small business and put the remaining big business under the control of a monopolist. My interest is in the general public and the health of the national economy. I am also interested in the mine workers. They, too, have been hurt.

In the Supreme Court decision in the Allen Bradley case (supra) in 1945, Mr. Justice Black, speaking for the court, acknowledged the inconsistency of a law which allows labor unions to destroy competition provided they act alone. He said: "This, it is argued, brings about a wholly undesirable result—one which leaves labor unions free to engage in conduct which restrains trade. But the desirability of such an exemption of labor unions is a question for the determination of Congress."

Let us see, then, briefly, how labor obtained its exemption from application of the antitrust laws when it restrains trade in a manner which is prohibited to the managers of industry.

Generally speaking, until 1842, organizations of wage earners were held to be criminal conspiracies in restraint of trade. In that year, in the case of *Commonwealth* v. *Hunt* (45 Mass. (4 Metcalf) 111), Massachusetts held to the contrary and thereafter peaceful combinations of workers to better working conditions were generally recognized as lawful. As we developed more complicated processes of manufacture calling for greater capital investments than any one man could command, or any partnership could conveniently handle, we developed of economic necessity, the corporate form by which sufficient capital could be assembled to construct the large plants and acquire complicated and expensive machinery. The growth of unions followed, on the correct theory that the individual could not bargain on terms of equality with employers.

Because industrial units became larger and more powerful and some tended to engage in monopolistic practices, the Congress, in 1890 passed the Sherman Act (26 Stat. 209; 15 U. S. C.) which declared unlawful "every contract, combination, in the form of trust or otherwise, or conspiracy in restraint of trade or commerce among the several States." Enforcement of the Sherman Act has varied from time to time, but generally speaking, it has succeeded in preventing any single corporation or combination of capital (excluding labor organizations) from gaining a throttlehold on any section of the economy and has prevented any business group from exercising the same autocratic powers now possessed by unions.

In 1908, the Supreme Court of the United States, in the Danbury Hatters case, *Loewe* v. *Lawler* (208 U. S. 274) held that the Sherman Act applied to labor unions as well as to business organizations. The Court stated in its opinion that the act "made no distinction between classes. It provided that every contract, combination, or conspiracy in restraint of trade was illegal."

The records of Congress show that several efforts were made to exempt, by legislation, organizations of farmers and laborers from the operation of the act and that all such efforts failed.

Then, in 1914, Congress passed the Clayton Act (38 Stat. 731), and section 6 of that act stated that the labor of a human being is not a commodity or article of commerce. It goes on to say:

"Nothing contained in the antitrust laws shall be construed to forbid the existence and operation of labor, agricultural, or horticultural organizations, instituted for the purpose of mutual help, and not having capital stock or conducted for profit, or to forbid or restrain individual members of such organizations from lawfully carrying out the legitimate objects thereof."

That act, however, did not have the effect, according to decisions of the Supreme Court, of exempting unions from the prohibitions of sections 1 and 2 of the Sherman Antitrust Act, dealing with restraints of trade and mnopolies. Historically, the Supreme Court has taken the position that labor was subject to the antitrust laws as evidenced by *Loewe* v. *Lawler* (208 U. S. 274); *Duplex Printing Press Co.* v. *Deering* (254 U. S. 443); *Coronado Coal Co.* v. *United Mine Workers of America* (268 U. S. 295); *United States* v. *Brims* (272 U. S. 549); *Bedford Cut Stone Co.* v. *Journeyman Stone Cutters' Association* (274 U. S. 37).

The jurisdiction of the Federal courts in labor-relations cases was further restricted in 1932 when Congress passed the Norris-LaGuardia Act, which was in name an anti-injunction act.

The public generally, and I am sure most Members of Congress, regarded that law merely as a law regulating court procedure and greatly limiting the use of injunctions in labor cases. Actually, however, it has been construed as an amendment of the Sherman Act and Clayton Act and has resulted, through its interpretation, in giving unions almost complete exemption from the antitrust laws.

Reverting from a long line of decisions that labor was subject to the antitrust laws, the Supreme Court, in the Apex case (*Apex Hosiery* v. *Leader* (310 U. S. 469)), concluded that labor is not liable under the antitrust acts where its conduct did not result in controlling price and restraining competition.

The Court justified its position by holding that:

"The congressional end was the prevention of restraints of free competition in business and commercial transactions which tended to restrict production, raise prices, or otherwise control the market to the detriment of purchasers or consumers of goods and services, all of which had come to be regarded as a special form of public injury."

The Court developed the "price and competition" test from the legislative history and reviewed earlier decisions only to find that the activities "affecting interstate commerce were directed at control of the markets and were so widespread as substantially to affect it."

Shortly thereafter in the case of *United States* v. *Hutcheson* (312 U. S. 219) the court asserted the legality of a union's conduct even when directed against interstate sales and customers, so long as it is peaceful and otherwise within the Clayton and Norris-LaGuardia Acts.

Against this reasoning, Mr. Justice Roberts vigorously dissented saying:

"By a process of construction never, as I think, heretofore indulged by this court, it is now found that because Congress forbade the issuing of injunctions to restrain certain conduct, it intended to repeal the provisions of the Sherman Act authorizing actions at law and criminal prosecutions for the commission of torts and crimes defined by the antitrust laws. The doctrine now announced seems to be that an indication of a change of policy in an act as respects one specific item in a general field of law, covered by an earlier act, justifies this court in spelling out an implied repeal of the whole of the earlier statute as applied to conduct of the sort here involved. I venture to say that no court has ever undertaken so radically to legislate where Congress has refused to do so."

As Mr. Thurman Arnold put it, the Supreme Court in the Hutcheson case (supra), read the words "legitimate objects" right out of the Clayton Act and left the union free from either injunction or criminal indictment regardless of the objectives which it sought to obtain.

The Hutcheson case, as some of you may recall, grew out of a dispute between machinists and carpenters over who should install machinery for a brewing company in St. Louis. The carpenters attempted to boycott the brewery's products all over the United States, and they practically stopped all building operations in St. Louis because of their dispute with another union, yet the court refused to uphold an indictment against them under the Clayton Act.

In another case that originated in New Orleans the teamsters' union prevented a group of truckers from entering the city because the truckers were dealing with a CIO union which had been certified as the proper bargaining agent by the National Labor Relations Board but the Supreme Court refused to hear and affirmed, without opinion, a dismissal of the indictment against the teamsters (*United States* v. *Building and Construction Trades Council of New Orleans et al.* (313 U. S. 539)).

In a third case arising in Chicago, the hod carriers insisted that ready-mixed concrete should not be used; that concrete should be mixed by the old puddle method, or, if the employer chose to use these concrete mixers, then he should have enough people standing around to fill the complement which would be necessary if the puddle method had been used. That prevented the importation of concrete mixers in Chicago. It raised the cost of building and lowered the quality of building materials. Thurman Arnold thought surely that was not a legitimate union purpose. However, a dismissal of the indictment in that case was affirmed by the court without opinion and without even the opportunity of filing briefs. (*United States* v. *International Hod Carriers and Common Laborers District Council of Chicago and Vicinity* et al. (313 U. S. 539).)

Thurman Arnold then took the cue from the Court and concluded that it seemed there was no limitation whatever upon the power of a labor union to engage in any activities whatever.

Even the Anti-Racketeering Act of 1934, which makes criminal the use of force, violence, or coercion to obtain money or other valuable consideration was incapable of halting featherbedding by unions. The Supreme Court (*U. S.* v. *Local 807* (315 U. S. 521)) held that the exemption in this statute for "the payment of wages by a bona fide employer to a bona fide employee applied to instances where members of the teamsters forced payment of wages from employers of nonunion truck drivers to members who tendered their services by riding in trucks."

The Supreme Court said this exemption may be applied to a union which uses or threatens violence to find employment for its members, though the offer to work is rejected and payment is made for protection rather than for services rendered. After that case had been decided, Congress patched the loopholes by repealing this exemption in the Hobbs bill (60 Stat. 420, 18 U. S. C. 1951 Sup. 1948).

Again, in *Hunt* v. *Crunboch* (325 U. S. 821), decided in 1945, a union refused to permit members to work for one employer and refused to permit his employees to join the union. So they completely destroyed his business in revenge for his previous hostility. The majority of the Supreme Court held that such a conspiracy to punish an employer was a legitimate exercise of the rights of concerted action with which labor organizations have been endowed by Federal law. Four Justices of the Supreme Court dissented in that case, holding that the conspiracy was within the prohibition of the Sherman Act and not within any immunity conferred by the Clayton Act. Mr. Justice Jackson, in one of the dissenting opinions, made the following trenchant observation:

"With this decision, the labor movement has come full circle."

After pointing out how the workers had struggled long for their freedom from economic oppression, he continued:

"This Court now sustains the claim of a union to the right to deny participation in the economic world to an employer simply because the union dislikes him. This Court permits to employees the same arbitrary dominance over the economic sphere which they control that labor so long, so bitterly, and so rightly asserted should belong to no man."

As a result of these decisions we find ourselves with no protection against the abuse of labor's power except the limited declaration in the Allen Bradley Co. case (supra) that the antitrust laws apply to labor unions when, and only when, they conspire with business organizations to restrain trade.

It is this inconsistency that I wish to correct through S. 2912. I wish to put an end to this unlimited license granted to the union to do anything it chooses by unlawful

as well as by lawful means, and still be safe from prosecution, injunction, or liability under the antitrust laws. I am convinced that Congress never intended such a result.

The text of the bill which I have offered is an amendment to section 1 of the Sherman Act (15 U. S. C., sec. 1), as follows:

"Section 1 of the act of July 2, 1890, entitled 'An act to protect trade and commerce against unlawful restraints and monopolies,' as amended (U. S. C., title 15, sec. 1), is amended by inserting before the period at the end thereof the following: '*Provided further*, That when a labor organization or the members thereof have unreasonably restrained trade or commerce among the several States, or with foreign nations, in articles, commodities, or services essential to the maintenance of the national economy, health, or safety, or any substantial segment thereof, such conduct shall not be made lawful, and the jurisdiction of any court of the United States to issue an injunction against any such conduct shall not be restricted or removed, by the act of October 15, 1914, entitled "An act to supplement existing laws against unlawful restraints and monopolies, and for other purposes," as amended, or the act of March 23, 1932, entitled "An act to amend the judicial code and to define and limit the jurisdiction of courts sitting in equity, and for other purposes".' "

There is a second section identical in language to what I have just read amending section 3 of the Sherman Act, which deals with trade and commerce involving the District of Columbia and the Territories of the United States, as distinguished from commerce among the several States and with foreign nations. This second section of the amendment merely conforms section 3 to section 1.

The objective of the bill is not to change the Sherman Act itself in any way, but to restore to the Sherman Act the meaning which Congress always intended it to have, and which the Supreme Court had always said it had, until five members of that Court, speaking through Mr. Justice Frankfurter in the *Hutcheson case* (312 U. S. 219), declared in 1941 that the Norris-LaGuardia Act, an act purporting to deal, and intended by Congress to deal, solely with the availability of injunctive relief, was interpreted by the Court to have modified both the Sherman Act and the Clayton Act, so as to immunize all labor activities from the Sherman Act, a result which the Supreme Court had previously said, time after time, had never been intended by Congress.

The amendment I have proposed would overrule the Hutcheson case, to the extent that when a labor union or its members have unreasonably restrained trade in commodities or services essential to the maintenance of the national economy, health, or safety, they cannot use the cloak of the Norris-LaGuardia Act or the Clayton Act to escape a criminal prosecution or injunction which Congress in the Sherman Act itself declared were the appropriate and necessary methods for dealing with unlawful activity of this kind.

In the course of our subcommittee hearings, a number of other kinds of legislation were proposed for dealing with this situation. One proposed method was to outlaw union activity on a Nation-wide basis. An extreme measure of that kind cannot enlist my sympathy or support. Another method proposed was to define especially and to spell out the particular kinds of labor-union activities which are legal, and those which are illegal. Such a task has seemed to me, after studying all the proposals that were made, an almost impossible objective. The difficulty is that once a list is made of the specific activities which are declared to be unlawful, the list must always be qualified by some sort of an exemption of activities of these kinds when they are clearly pursued with the primary purpose of furthering a legitimate union objective. Once such a qualification is introduced, the whole matter of intention and purpose, i. e., whether the primary purpose is in furtherance of legitimate union objectives like bettering working conditions, or whether the primary purpose is to control production or prices, becomes controlling. Thus the final decision of whether the conduct is lawful or unlawful again comes back to a finding by the court to which the matter is submitted, and I believe that the better approach is to let the original, general language of the Sherman Act itself stand, making no attempt to spell out particular kinds of conduct which are lawful or unlawful, but merely prohibiting unreasonable restraints of trade and monopolies.

Some suggestions have been made of modifying the Sherman Act by outlawing labor monopolies rather than by attacking unreasonable restraints of trade by labor. In other words, such a proposal would amend section 2 of the Sherman Act, dealing with monopolies, rather than section 1, which deals with restraints of trade. However, although either business or labor can engage in restraints of trade which to any fair-minded court would seem to be unreasonable obstructions to the free flow of commerce and the free play of competition, the monopoly provisions of the Sherman Act cannot be said to have the same sort of application to labor unions as they have to business combinations. Every labor union is seeking to monopolize the supply of labor either on a comparatively limited scale or on a national scale. That kind of monopolization is the avowed objective of labor unions, and it has been approved as a matter of public policy by Congress not only in the Wagner Act but also in the Taft-Hartley law. I have no intention or desire of asking that Congress outlaw that type of labor monopolization, strongly as I do feel that restraints of trade by labor can be as vicious and far-reaching as any restraint of trade ever attempted by a business combination.

The original purpose of the Sherman Act was to prevent restraints of trade and monopolizations intended to restrict production, fix prices, or otherwise control the market to the detriment of the consuming public. The public can be hurt just as badly when these restraints are imposed by business combinations, and in fact no business combination of which I have ever heard has achieved the kind of arbitrary power and control that John L. Lewis now possesses and wields. My bill will not abolish, or even threaten, the existence of Nation-wide unions or their right to strike. It will not destroy industry-wide bargaining, as will be obvious to anyone who reads cases like *United Mine Workers* v. *Coronado Coal Co.* (259 U. S. 344 (1922); 268 U. S. 295 (1925)). Nor will my bill undertake to police interstate commerce or to regulate the internal affairs of unions. Under the doctrine of the Apex Hosiery Co. case (supra), decided less than a year before the Hutcheson case, the Supreme Court declared that the regulation of union affairs is not governed by the Sherman Act, but is to be controlled by the acts dealing with labor such as the Wagner Act.

My bill would overrule the Hutcheson case. It would not overrule the Apex case or any of the other cases through which, over a period of 50 years, the Supreme Court of the United States had forged the Sherman Act, pursuant to the will of Congress, into a vital and potent force in keeping our economy a free one—free not only from the unreasonable restraints imposed by business combinations but also free from the unreasonable restraints which labor had imposed and might seek to impose. The Apex case shows that buried beneath the artificial veneer with which Mr. Justice Frankfurter in the Hutcheson case had coated the Clayton and Norris-LaGuardia Acts, the Sherman Act still condemns restraints of trade, by labor as well as by business, in the same forceful language this Congress enacted in 1890. Labor unions today are immune only because of what I believe was a completely erroneous interpretation by the Supreme Court in the Hutcheson case of these two subsequent acts of Congress. The control of production and the fixing of prices by union action in commodities or services essential to the public welfare of the United States seems to me just as objectionable from the standpoint of the ultimate effect on our economy as similar action by employer groups. The bill which I have offered would in plain and simple language remove the immunizing effect of the Clayton and Norris-LaGuardia Acts from conduct which up until 1941 had been almost universally branded as illegal and against the public interest, and which had always been regarded as outlawed by the Sherman Act. It would leave the Government free to go into a court and it would leave the court free to put a stop to labor-union practices which are so detrimental to the national welfare that some remedy beyond the temporary stop-gap remedy of the Taft-Hartley Act is essential to protect the people of this country. The Sherman Act would then again serve, as it originally served, as a brake on unions which seek to put their own activities ahead of the national welfare.

Lincoln Day Address by Hon. Leverett Saltonstall, of Massachusetts

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Thursday, February 16 (legislative day of Wednesday, January 4), 1950

Mr. SALTONSTALL. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an address delivered by me in Knoxville, Tenn., on February 12, at a dinner celebrating the one hundred and forty-first anniversary of the birth of Abraham Lincoln.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Republicans, we are here tonight to celebrate the one hundred and forty-first birthday anniversary of Abraham Lincoln. Abe was born on Sunday, February 12, 1809. I dug out the other day what the Senate was debating in February 1809. I found it was a problem of foreign relations. They were discussing with much bitterness the interference of Great Britain with our trade. That interference 3 years later led to the War of 1812. I found too that the Senate was discussing with minute care the expenditures of our Government—but how differently from today. Then the United States Government had a cash balance in the Treasury of over $13,800,000. The total appropriations proposed for the fiscal year 1809 were $13,000,000. Eight million of that $13,000,000 appropriation was to reduce the Government debt which amounted to $56,000,000. Today we know only too well our debt stands at $256,000,000,000, and we are finding difficulty in balancing our budget—let alone any reduction in our debt.

We are now commencing the second half of the twentieth century. Again, what was Congress debating when the century opened in 1900?

I found that Congress then was wondering how to distribute the surplus in the Treasury. Bankers were worried in 1900—not by inflation—but from the heavy withdrawals from the banks by the Government in distributing this surplus. Now we have only a deficit to distribute after 18 years of a Democratic administration.

On the morning of February 12, 1900, the Boston Herald had a lead, "China's New Policy"—just as today, a question of our relations with China. This article then says, "Those acquainted with Chinese affairs are supposed to regard the decrees as significant of the beliefs of the Empress and her advisors that China is sufficiently prepared to resist by force of arms all further aggressions of foreign powers on Chinese territory and that future policy will be in line with this view."

Problems over the years remain very similar.

A proper determination of the Chinese problem is surely a headache today.

Government spending, government debt, taxation are very much in the news. They too are the subject of daily debate on Capitol Hill in Washington.

Today while we have the largest production this country has ever known, we live in an uncertain world. We have just fought and won the most destructive war in the world's history. We have devised weapons capable of terrific destruction. Now we are to devise one immensely more destructive. The battles are over, but no peace treaties, except for those with Italy, Hungary, Rumania, and Bulgaria are yet signed. And the last three countries are satellites of Moscow. We have found ourselves up against many road blocks, literally and figuratively speaking, on our road to peace. We live in a period of a cold war. We live in a period where there is a fierce desire on the part of peoples in many different parts of the world to be the rulers of their own fortunes. Indonesia, Pakistan, Burma, India are countries which have set up their own governments. Germany is split. China has been overrun. Russia is governed by an ideology that is hostile to our way of life. In the last year and a half there have been many sudden changes of government among our neighbors in South America. While peoples have this fierce desire to be rulers of their own fortunes, they are still hungry, miserable, and uneducated.

Today peace and security are the No. 1 objectives of all of us. But we must remember we cannot have peace by mere wishful thinking. There is no easy road to peace. Don't ever be fooled by a quack panacea that promises it. We must never lose faith in our ability to secure peace. If we lose faith we will lose the peace. Too many people today are trying to find reasons to give up many of the things we are doing to obtain a peaceful world. Let us examine carefully their motives. Are they in every case patriotic American citizens or are they playing the game that Moscow desires? We simply cannot afford to settle back once again into a state of isolationism and happy complacency.

If Lincoln were alive today, he certainly would work for a world at peace with the greatest possible security here in our own country. We cannot go ahead to better standards of living, more happiness, greater contentment; we cannot long invent better automobiles, radios, airplanes, electrical appliances, and electronic gadgets that bring us that higher standard of life without the feeling of security that goes with a world at peace. Our Republican Party today stands for peace in the world. It also stands for the United States of America having sufficient armed strength to maintain our responsibilities throughout the world and our defense at home.

To help insure our security we must maintain our military forces adequately. President Truman has reported that today we have 1,506,000 men in uniform and 725,000 civilians in our armed services. Pay allowances, subsistence, and clothing for these men costs you and me $7,600,000,000 a year. But, pay allowances and subsistence are not enough. We must give them the best of modern equipment in order that, if they must fight, they can do so efficiently and with as much safety to themselves as possible. So, we are planning in the next 2 years the building of 5,100 airplanes of the most modern type. These planes cost money. A B–36 costs over double the amount of its predecessor, the B–29. A modern jet fighter costs many times that which a fighter plane cost during the World War. We know, too, that the weapons of another war will be far different. The atom bomb, the possibility of the H-bomb, the lengthening range and accuracy of a guided missile, the importance of a radar screen are all developments that now enter into our problem of security.

Call it bipartisan, or nonpartisan, the Republican Party is composed of patriotic American citizens who, knowing only too well the meaning of a world conflict, pray and work for a world at peace. I only wish the present administration would understand this and take greater advantage of the brains, experience, and knowledge of Republican leaders in reaching their decisions on foreign relations.

In this 1950 world that has grown so much smaller than it used to be through the use of airplanes and modern communication systems, we know that we must have friends in other countries. I have seen much of that devastation and know how they must be strengthened. We want those friends in this period of a cold war to have their economic and industrial strength built up. We want, in short, to help them to help themselves, as we need their strength. If they can trade with us and other countries they will build up their own security to a far greater degree. So, we devised the Marshall plan for economic aid. That plan is now in operation. We know that it has already cost us many billion dollars. We know it will cost us more billions. But we are spending that money for our own security. We are spending that money in order that those friendly nations in other parts of the world may be economically strong, have more confidence in their own security in this cold war and thus be a greater aid to our security.

Likewise the Republicans in Congress by a large majority have voted to consummate a military-assistance pact—within the framework of the United Nations—with 12 European nations. I know I voted for the pact because I believed it gave a better opportunity to those people in those countries to help our boys in our country to maintain peace in the world. By a great show of strength in many free countries we make any nation that wants to start trouble think and think carefully before it comes to grips with the mighty strength of our own country and her friends.

But no one of us wants to build up our strength for imperialistic purposes. Will we be considered imperialists if we send a mission to Formosa? Will we lose face in Asia because of our continued support of Chiang Kai-shek? Should we recognize the Communist government of China? These questions ultimately come before the Congress which has to appropriate the money with which the administration carries out our Government's relations with China and the other nations of Asia. Today we see the great change that has come over China. We read of the foment in Asia. The problem of Formosa has been debated at length in the present session of Congress. How to adjust these problems? How to prevent the spread of an ideology which is hostile to us requires patience, tact, diplomacy, firmness, and an everlasting vigilance on our part today. We must exercise to the best of our ability these qualities in order that our security may be maintained and the peace of the world obtained. Then and only then can we go forward with greater opportunities here at home.

Tonight when we celebrate Lincoln's Birthday and think for a few moments of the strength of his character, the soundness of his philosophy of government, and his deep understanding of the needs and problems of the individual man, we can soliloquize as to how he would think and act today on some of the questions that are so troubling us within our great country.

He was the leader of the Republican Party. His views became the principles upon which the Republican Party was built and on which it governed our country for so many years.

Let me ask you some of these questions. Let me give you my answers and see whether we agree. Many of our problems boil down to the answers that you as citizens make to these questions.

1. How much service do you people expect of your Government?

Answer. When Abraham Lincoln was asked how long should a man's legs be, he replied, "Long enough to reach the ground." The Government should be big enough to do the job you expect of it and no more. It should never be big for bigness' sake.

2. How do you want your Government to perform those services you require of it?

Answer. You want it to perform them for your benefit without dictatorship and without undue direction. You want them performed economically and without undue bureaucracy.

3. How much leadership do you people expect from your Government?

Answer. In the question of foreign affairs the Government must be the leader. In the domestic field the Government should act in behalf of the individual in order to give him opportunity and freedom and liberty. He should be independent, not the servant of government.

4. Do you want to maintain freedom, independence, and opportunity for yourself?

Answer. Of course you do.

5. How much of your earnings are you willing to have taken in the form of taxes to pay for government, local, State, and National?

Answer. The answer is, just as little as is consistent with our national security and our national welfare.

Let me discuss for a few minutes some of the problems concerned with these answers:

Since 1900 we have had a Republican President for 24 years and a Democratic one for 26 years. The total appropriations for 24 years under a Republican amounted to about $59,000,000,000. The appropriations of the Eightieth Congress, second session, and the Eighty-first Congress, first session, amounted to about $88,000,000,000. I would hate to tell you the total figure that has been spent in 26 years by Democratic Presidents. True, most of it was for war. The aftermaths of war are always expensive, but today spending is going on in many directions all at once. The Government is like a railroad train running loose on a straight track. Everything is fine until it hits the curve where the red warning light is flashing. That curve is still ahead. But, the light is on. Will we heed the lessons of the past to guide us in the future before the train goes off the track and our bubble of prosperity bursts?

The Republican Party stands for the principle of the balanced budget because we all know that if our budget in peacetime remains unbalanced over the years, then the dollar in our pockets will buy less and less. In the terminology of 100 cents in 1938 the dollar today is worth only 60 cents yet in 1900 that same dollar of 1938 would buy $1.95

worth of goods at retail. Certainly today we are paying more to run our Government in peacetime than ever before in our history. It takes over 25 cents out of every dollar you and I earn, to pay for our Government. Over $7,000,000,000 of Federal Government receipts today come from excise taxes. Many are wartime taxes. When we buy baby powder, a ticket on the railroad, or go to the movies, we pay the Federal Government a tax. These were not intended to be peacetime taxes. I believe, as does the great majority of Republicans in Congress today, that many of these taxes should be reduced this year, and some of them repealed. This means two things: First, that we must either find some more revenue to help make up for these taxes in order not to increase the deficit or else reduce expenditures. I want to see us make an honest, sincere effort to reduce expenditures before talking about new taxes. That is the No. 1 fiscal problem.

Here is one suggestion for reducing expenses. We have heard a great deal of discussion about the total number of civilian employees working for your Government. The latest figure is 2,000,000. The turn-over is around 500,000 a year, some 25 percent. At a time when we are running a deficit, the President is still asking for additional employees. If you were running a business in the red and found you could drop employees by simply adopting a policy of not replacing anybody who voluntarily leaves your service, wouldn't you do it? I certainly believe it is time—unless Government service is seriously interfered with—or unless a very specialized purpose is involved—to adopt a nonhiring policy. Let me say this however. I have heard and read a great deal of abuse about Federal employees. I do not doubt there are those, as in any other business, who do not do their fair share, but I have dealt with a great many individuals in a great many departments, and I have found them almost without exception conscientious and thoughtful citizens who are trying to do their job to the best of their ability. I believe a policy of nonhiring might save the Government as much as a billion dollars a year without sacrifice of anyone who wants to continue to work.

Another way to get economy is to do all that we can to stimulate our Government to secure more efficient operation. The Hoover Commission has made 288 recommendations. One hundred and twenty-four of these require legislation. Thirty-six of this one hundred and twenty-four are already law. I hope Congress will go forward with enacting into law more of these recommendations.

But, unless there is the will on the part of the administration to improve the business methods of our Government, Congress alone can accomplish little. I have yet to see this will.

Today we hear much talk of statism and welfare state. To me essentially they signify concentration of power in our Government in Washington. They purport bureaucracy and regimentation. Republicans are not opposed to welfare. As a matter of record Republicans started many of our social-security laws. Our Constitution calls on our Government to promote the general welfare. The essential opposition of Republicans in Congress today to the present administration of our Government is based fundamentally—not on giving service of a personal nature to our individual citizen—but on the manner and method by which that service is rendered. Our Government essentially begins at home. It begins in the fashion of the old town meeting where every citizen is able to once a year express himself. It begins there because the people at home have common problems, understand each other, and know their own individual needs. Your individual needs can never be as well understood by bureaucrats in Washington as they can be by the local administrator in your home town. I believe we can help our friends at home who need the help of our Government, more by assisting his local government to help him, than by trying to do it directly through growing bureaucracies headed by an appointive official in Washington. That, in my opinion, is the difference between the general welfare and the welfare state. That is my opposition to the constantly increasing bureaucracy under Democratic administration.

Government must give not only efficient service if it is to promote our social security, but it must give honest service. It cannot give honest service if it spends beyond its ability to pay for that service. So, essentially, we Republicans feel that we must not develop the services of government beyond our willingness to pay for those services; otherwise, we are not honest with those whom we are helping.

I am opposed, as you are, to regimentation. Let me give you two recommendations of the present administration that, in my opinion, lead to regimentation and directly to the domination by government over our individual lives—domination to such an extent that opportunity for advancement becomes essentially limited. I have in mind socialized medicine, so-called, and the regimentation of farmers—the Brannan plan. But that does not mean that government should not develop ways to help us with those problems. Today government is helping to build hospitals. It is promoting research to eliminate the scourges of cancer, tuberculosis, and the ills of the heart and mind. Today we are more conscious of our health and of the cost of staying healthy.

So we want our Government to assist us to stay healthy but that does not mean we favor the regimentation of our doctors. We want the incentives that provide for greater knowledge of scientific methods that will make us more healthy. We don't want that research for greater knowledge to become stagnant through lack of initiative. Likewise, we realize that there must be support of our farm products at proper levels, if our agricultural and industrial economy are to go forward together. But, the Brannan plan would have it that if when the farmer sells his products at a loss, the consumer—even though he may get his food cheaper—must pay other taxes to make up the farmer's loss. Ultimately that plan will put our farmers completely under regimentation by the Government. So, in determining how government is to help us be healthy, housed, or get assistance in social security, we want to remember that the average American citizen is moderate. He wants his Government to help, but he does not want his Government to regiment his life or to socialize the natural resources of this great country of ours.

Today we hear much of another "ism"—communism. That word indicates an ideology absolutely contradictory to our ideology. The best way to eliminate it from our lives is to convince our people that our opportunities for education, for advancement in life through freedom and opportunity, with a government of service to help us but not to lead us, is the best method of attack. A strong offense is always the best defense in any game of sport or experience of life. In the words of Vannevar Bush in his new book, Modern Arms and Free Men, "If we lose our liberties it will be because we abandon them."

The Republican Party today is the minority party in Congress. Its platform and principles can only be put into effect by endeavoring to incorporate them where it is wise to do so in legislative proposals of the majority party. The responsibility of a minority party is to look critically at the recommendations of the majority party. It is the duty of the minority party to make these recommendations more workable and more practical, to make sure that the ultimate composite result of the conflicting views will be for the best interests of the country as far as the strength of the minority will allow. In this connection we hear much discussion of the relation of government to the problems of industry and labor. Certainly, the Republican Party believes in collective bargaining. Certainly, the Republican Party wants to fashion our laws to be of the greatest possible assistance to those who work in industry and to those who manage industry, but always with an eye to protecting the public interest. I have always felt that the best labor-management relations come from a friendly discussion around the table. Government must set up the principles upon which these discussions are held. We want our laws to be fair to both sides and to make certain that those laws protect the public interest as well.

We are now in the second month of a new half century. Think back over the last 50 years since 1900—and many of us can easily do just that. Would you have considered building a garage in 1900? A hangar or a radio tower or an airfield? Who would then have known how to construct a concrete road or build a boat of plastic or put shatterproof glass in a windshield? Yet today the building of a garage, a radio tower, an airfield, a concrete road, and the use of shatterproof glass and plastic is just too common for even a news item. It is just too common because we have made conveniences out of the inventions which came from the minds of free men of science, of imagination, of courage, and of hard work. We have built up the present-day comforts in our homes through the ingenuity, the imagination, and the hard work of our women folk. Who in 1900 would have believed that this country would have to fight and win two disastrous world wars? We have won two world wars because of the same spirit of inventiveness—independence, and the fighting qualities of our young men. These are facts of our life of which we are proud. These are now part of our heritage, just as Lincoln, Jefferson, Washington, and the lives of other leaders of our country are our heritage.

So tonight when we are thinking of the greatness of Abraham Lincoln, who was called forth in a time of crisis in our national life, we must think well of the challenge that faces us today—perhaps an even greater one than was faced in Lincoln's day. We can recall the principles and traditions which have become a Lincoln legacy. We can recall with gratitude the breadth, the concept of freedom and liberty, the deep confidence that a political party must serve a useful destiny. With those thoughts that always come to us when we think of Abraham Lincoln, we must dedicate ourselves once again to the proposition that "this Nation under God shall have a new birth of freedom." A greater opportunity of service to our people—a rigid upholding of our responsibilities to obtain the peace in the world—and the maintenance of our security and the future of our children and their children, is what we all so fervently pray for today. Let us in the words of Lincoln "here highly resolve" to make it our job.

Wisconsin's Rank in United States Dairying

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1950

Mr. MURRAY of Wisconsin. Mr. Speaker, is it surprising that a State like

Wisconsin, that produces more than one-eighth of the milk of the Nation, is worried about the economic effect of displacing butterfat with highly subsidized vegetable oils in the manufacture of oleo, filled milk, oleo ice cream, and other synthetic dairy products?

The following is from the Wisconsin official report of Mr. Milton H. Button, director of the State department of agriculture:

Wisconsin's rank in United States dairying

	Percent	Rank	Production
			Pounds
Milk production	13	1	14,914,000,000
Munster cheese	94	1	7,989,867
Brick cheese	86	1	15,725,547
Malted milk powder	77	1	23,866,095
Swiss cheese	65	1	43,192,053
Limburger cheese	56	1	3,637,143
American cheese	45	1	386,020,278
Powdered whey	45	1	64,685,687
Powdered whole milk	41	1	73,335,597
Italian cheese	40	1	19,492,282
Condensed whole milk (unsweetened)	28	1	53,840,494
Powdered skim milk	28	1	204,865,972
Evaporated whole milk	27	1	875,122,712
Condensed whole milk (sweetened)	24	1	43,635,642
Cream cheese	24	2	13,339,007
Condensed skim milk (unsweetened)	21	1	88,411,938
Condensed skim milk (sweetened)	11	1	30,946,629
Butter	9	3	99,992,300
Ice cream (gallons)	3	11	16,639,156

Washington Report

EXTENSION OF REMARKS
OF

HON. H. ALEXANDER SMITH

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, February 16 (legislative day of Wednesday, January 4), 1950

Mr. SMITH of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a national broadcast which I delivered on February 12 over Station WMTR, at Morristown, N. J.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

Good afternoon. I am very happy to be able to join in this series of broadcasts. In this talk I think it may be best for me to concentrate on just two or three broad questions which have been asked of me and which appear to be especially important right now. Here is the first question: "Some people say that the program of the present administration will lead to a 'welfare state.' Just what does this mean, and how do you stand on this program?"

That's a very big question and a vitally important one. First of all, let me say as clearly as possible what I mean by the term "welfare state."

The idea of the welfare state is simply that the Federal Government, by assuming new powers and going into new programs, can solve all the perplexing problems of human welfare that we have in our American society—problems of inadequate income for some groups; problems of high prices, poor living conditions, bad health, inadequate education, and so on. In simplest terms, the people who favor the welfare state urge us to give the Federal Government more and more power to deal with all these problems.

Now, there are many of us in Congress, members of both parties, who refuse to go along with this idea. For instance, we refuse to enact a national system of compulsory health insurance which would give a Federal bureau the power to regulate all aspects of medical and hospital care, and to say what the rights and duties of both patients and doctors are throughout the country. As another example, we refuse to enact a Brannan farm plan under which the Department of Agriculture would regulate the daily activities of farmers throughout the country, telling them how much of what crop they may plant and how big an income they may aspire to.

I am one of those who oppose these measures, even though they are urged in the name of welfare. My reason is simply this. I believe that the destiny of the American people lies primarily in their own hands, and not in the bounty of an all-powerful government.

Now, this doesn't mean that the Federal Government should follow a hands-off policy in problems of human welfare. Far from it. In my own experience I have seen that Federal action in problems like the hospital shortage and the matter of public education has been not only useful but necessary if anything effective was to be done. What I am pleading for is a different kind of Federal action. Instead of trying to run the whole show, instead of trying to force a Federal program down the throats of 150,000,000 people, I want to see the Federal Government play a role of partnership in these programs. For years I have been a sponsor of a national health bill whose main principle is just that—a cooperative partnership between the Federal Government, the States, and voluntary groups.

We must put an end to the dangerous idea that Federal domination is the only way to get things done. The idea can be put into effect only at ruinous cost—not only in money and taxes, not only in efficiency, but in the individual and local freedom which we Americans cherish.

To sum up, I believe that the so-called welfare state means in reality the setting up of a centralized monopoly government. It means the abandonment of the freedom and responsibility of the individual citizen. It means the stifling of the free creative energies of the American people. So, instead of the idea of the welfare state, I propose another principle on which Government can help us attain our goals—the principle of a free and equal partnership between the Federal, State, and local governments, and the people generally, in which each does what it is best equipped to do. That, I firmly believe, is the way of progress.

Now I want to turn to a question in the foreign field. One of my constituents has asked me: "Do you think it is worth while for us to continue supporting the European recovery program?"

My answer is that I not only believe it is worth while; I believe it is of the highest importance.

Recently, as you may know, I have been very much concerned with the Communist conquest of China, and the need for a positive American policy in the Far East. But my concern in that field does not for a moment diminish my interest in carrying through our positive policy in Europe.

We embarked on this historic venture with the European nations 2 years ago, when Congress enacted on a bipartisan basis the Economic Cooperation Act of 1948. At that time the free nations of Europe were literally living on a hand-to-mouth basis. The war had devastated many of their productive resources and had disrupted most of their long-established channels of trade. The peoples of Europe were exhausted by the war; they were surviving from day to day with the help of American relief; and they were losing hope for a better future. The Communist Parties, especially in France and Italy, were profiting by all this distress and were growing dangerously powerful.

It was in this situation that the United States proposed a new approach. We said, in effect, to the nations of Europe that we would help them in the gigantic task of recovery if they would get together and help themselves. Immediately this proposal raised the hopes and morale of the European Continent. Sixteen nations took up our challenge and formed an organization to plan their recovery together. After careful congressional study, we embarked on a program of aid to these 16 nations designed to run for 4 years.

We are now approaching the midpoint of that 4-year program. Tremendous problems still face us but I am convinced they are no greater than the problems which have already been overcome. Under the brilliant direction of ECA Administrator Paul Hoffman, we have enabled those nations to get away from the old basis of hand-to-mouth relief and put their energies behind a great program of reconstruction. Production levels have risen dramatically, until now western Europe is producing as much or more than before the war. The extremely difficult task of removing barriers to trade between these countries, and between them and the rest of the world, is one of the toughest problems that we are now endeavoring to cope with. And, step by step with the progress that is being made, the threat of Communist subversion and revolution in all these hard-pressed countries, especially France and Italy, has definitely been checked. I am sure this will go down in history as one of the greatest achievements of the free world in our century.

In the remaining 2 years of the program the political and economic integration of these countries of Europe will be the primary goal of our ECA operations. Let me emphasize here that the cost of this whole program has been a constantly decreasing one. We appropriated approximately $5,000,000,000 in the first year and $4,000,000,000 in the second year. For the third year we are planning about $3,000,000,000 and in the final year approximately $2,000,000,000. This is a very large total expenditure, but it is a relatively small price to pay for the economic recovery of the free nations of Europe and the definite blocking of the disintegrating forces of communism.

In that connection another very important question has been raised with me. Here it is: "Do you think there is a good chance that Germany will cooperate peacefully in a free Europe?"

I think there is an excellent chance. The three western zones of Germany were set up last year as the Federal Republic of Germany, which has since taken its place as the seventeenth member of the Marshall plan group. Recently, as a member of the Senate Foreign Relations Committee, I had an opportunity to talk with Mr. John J. McCloy, our representative on the allied high commission in western Germany, who was back in this country on a short visit. His comments confirmed my belief that steady progress is being made there in both the political and the economic fields.

From the point of view of western Europe, Germany poses both a threat and a promise. The promise lies in the fact that western Germany is still the biggest single industrial unit on the European Continent, and the other countries vitally need her products. The threat lies in the old German tradition of aggressive militarism, which has led three times to an invasion of France and twice to world war.

I think the greatest hope today is that Germany—at least western Germany—can be brought more and more into the society of free European nations as a self-respecting member. If this can be done, Europe will be able to benefit from Germany's economic promise, and at the same time will be able to do away with the German militaristic threat. Fortunately, Chancellor Adenauer, the present head of the German Federal Republic seems to be entirely in accord with this idea.

We hear many reports nowadays of a revival of extreme German nationalism and military spirit. I am confident that this trend can be effectively combated if we concentrate on three goals:

First, we must be sure that Germany makes steady economic progress along with the rest of Europe, because it is economic distress that leads to these extreme political movements.

Second, we must devise some way of guaranteeing the military security of Germany, probably under the provisions of the North Atlantic Pact, so that the Germans will not be driven by fear into demanding an army of their own.

Third, we must step up our efforts, by radio broadcast and every other means of education, to teach the German people the real meaning of democracy, which most of them have never experienced and do not really understand.

This problem of Germany is an important part of the whole problem of Europe. I believe the continuance of our part in the European recovery program for the remaining 2 years is absolutely essential if we are to see this great venture through. The dollar cost to us will be less this year than it was last year, and still less in the final year. It is many times worth the cost, because it means that the free and friendly nations of Europe will once again be able to proceed on their own.

In conclusion, let me emphasize that in this cold-war period we need more than a European policy or a far-eastern policy. Our foreign policy must be world-wide if it is to make sense. As the most powerful free nation in the world, we Americans have a tremendous responsibility. If we are going to stop communism we must travel the long and difficult road of aiding to build peace, freedom, and plenty; and we must do it not only in Europe, not only in the Pacific, but everywhere in the world.

And now my time is up for today. This is Senator H. ALEXANDER SMITH reporting from Washington.

Lincoln Day Address by Hon. Edward Martin, of Pennsylvania

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, February 16 (legislative day of Wednesday, January 4), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at a Lincoln Day dinner sponsored by the Summit County (Ohio) Republican Central and Executive Committees, at Akron, Ohio, on February 11.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a high honor to be invited to speak here tonight.

I am indeed grateful for the privilege of joining this splendid assembly in tribute to one of the most illustrious figures in world history, the Great Emancipator, Abraham Lincoln.

The great State of Ohio is an appropriate place to discuss real Americanism. No State of the Union has produced so many outstanding leaders in government, politics, industry, education, and the church. No State has contributed more to the advancement of American progress and human welfare.

On this birthday anniversary of one of the greatest of all Americans it is a sincere pleasure to tell you how much your Pennsylvania neighbors appreciate your distinguished United States Senators, my colleagues, ROBERT TAFT and JOHN BRICKER.

Ohio and the Nation are indeed fortunate to have in the Senate of the United States two men of such exceptional ability, unquestioned integrity, and fervent patriotism.

Of both of them it may be truthfully said they are fearless champions of liberty, courageous defenders of the Constitution, and ardent protectors of the inalienable rights of free Americans.

Their forthright Republicanism is in accord with the ideals and principles of Abraham Lincoln, whom we honor tonight as one of the founders of the Republican Party and as the first Republican President of the United States.

More than any other man in the history of our Republic, Abraham Lincoln knew the real meaning of Americanism. The story of his humble birth and early struggles are known to all. He suffered extreme poverty and the hardships of pioneer life on the rough frontier. He experienced defeat, disappointment, and discouragement.

But he never lost faith. He held firmly to faith in himself, faith in the people, and faith in God.

Perhaps the outstanding characteristic in Lincoln's make-up was his undeviating faith in the capacity of a free people to govern themselves.

He realized that the people might be led astray for a time by false hopes and deceptive promises. But he was firm in his belief that the good judgment of the American people and their love of freedom would lead them, in the end, to the right decisions.

Today, as in Lincoln's time, America's greatest need is faith in the fundamental truths of the Declaration of Independence, the Constitution, and the Bill of Rights. Under these immortal documents our people have enjoyed a greater measure of individual freedom than any other people since the world began.

Lincoln's great task was the preservation of the Union. The great duty before us is to preserve individual freedom and the God-given right of every American to live in liberty, free from the strangling dictatorship of state socialism.

The dangers that confront us are plainly manifested in the course taken by the present and the preceding administration in Washington.

The grave menace to our free American institutions is clearly indicated in programs and policies that invite national bankruptcy.

We are asked to accept the alien teaching that the concentration of all government power and authority in a gigantic Federal bureaucracy will provide security and prosperity for all the people.

We are told that the more we spend the better off we will be, even though the people are shouldered with taxes that grow more oppressive year after year, with an ever-increasing burden of debt and with inflated prices for food, clothing, housing, and all the other necessities of life.

My fellow Americans, that philosophy of government is the economic road to socialistic ruin and the destruction of American liberty. It has brought us to a time of crisis just as challenging as that in Lincoln's time.

The paramount issue before us is this: Shall we fight for the principles which have made America the last remaining hope of freedom in the world or shall we be led in a Socialist pattern of government that has brought disaster to every country where it has been attempted?

We meet tonight as Republicans, but the great issue I have outlined is so important that it is not bound by party lines.

Distinguished leaders in both parties, Democrats as well as Republicans, are fighting on the side of true Americanism against the creeping paralysis of the socialistic state.

Let me recall to you the words of a great Democratic statesman, former Secretary of State James F. Byrnes, who said, and I quote:

"The Nation is going down the road to statism. Where it will wind up no one can tell, but if some of the new programs seriously proposed should be adopted there is danger that the individual—whether farmer, worker, manufacturer, lawyer, or doctor—will soon be an economic slave pulling an oar in the galley of the state."

Another distinguished Democrat, the senior Senator from Virginia, HARRY F. BYRD, has been equally emphatic in his warnings against the dangers of excessive taxation and reckless squandering of the people's earnings for political purposes.

No American should ever forget the warning sounded by that great patriot, our only living ex-President, Herbert Hoover, when he said, and I quote: "Through governmental spending and taxes our Nation is blissfully driving down the back road to collectivism at high speed.

"Along this road of spending the Government takes over, which is socialism, or dictates institutional and economic life, which is fascism."

Let us turn now to the wisdom of Abraham Lincoln. Nearly 100 years ago he expounded a principle of government to which the Republican Party has adhered ever since.

He said, and I quote:

"The legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all or cannot so well do for themselves in their separate and individual capacities. In all that the people can do as well for themselves government ought not to interfere."

Lincoln recognized that interference by government in the lives of its citizens is an encroachment upon individual liberty and a barrier to opportunity.

If he were with us today and would speak out against the trend toward socialism, I have no doubt he, too, would be called a reactionary. He, too, would be ridiculed as being 150 years behind the times. His principles would be attacked as vicious, representing selfish interests, against the welfare of the people.

The attack would be led by those who call themselves liberals.

They claim Thomas Jefferson and Andrew Jackson as their patron saints. But they pay only lip service to the principles of those American statesmen. They do not follow the teachings of Jefferson and Jackson.

Thomas Jefferson was a great prophet of the evils of government debt and government grown to monstrous size.

It was not a reactionary, not a Republican, it was Thomas Jefferson who cried out in warning:

"We are ruined if we do not overrule the principle that 'the more we owe, the more prosperous we shall be' and that 'a public debt furnishes the means of enterprise.'"

It was Thomas Jefferson again—and I hope they are listening down there in Washington—who said:

"I place economy among the first and most important virtues, and public debt as the greatest of dangers. To preserve our independence we must not let our rulers load us with perpetual debt. We must make our choice between economy and liberty * * * or profusion and servitude."

Yes; that was Thomas Jefferson talking.

And what of that other patron saint, Andrew Jackson? This is what he believed:

"From our past experience, it cannot be doubted that simplicity in the character of the Federal Government and a rigid economy in its administration should be regarded as fundamental and sacred."

Let me remind the socialistic-minded free spenders at Washington that these quotations express the philosophy of Jefferson and Jackson. Let me ask:

Will you brand them as reactionaries and tories because they, too, preached economy and limitations upon the growth of the central bureaucracy?

Let us step forward to the year 1893.

The great Grover Cleveland, first Democratic President after the Civil War, is being inaugurated for his second term. In his inaugural address he said:

"The lessons of paternalism ought to be unlearned and the better lesson taught that while people should patriotically and cheerfully support their government, its functions do not include support of the people."

Will they in Washington sneer at Grover Cleveland and disown his great memory?

Then, in 1913, the next Democratic President occupied the White House—Woodrow Wilson. Let me quote briefly from Mr. Wilson. He said:

"The duty of economy is not debatable. It is manifest and imperative."

I turn now to the Democratic National Convention of 1932. The platform adopted contains this language:

"We advocate an immediate and drastic reduction of governmental expenditures by abolishing useless commissions and offices, consolidating departments and bureaus, and eliminating extravagances, to accomplish a saving of not less than 25 percent in the cost of Federal Government."

May I point out that in that year, the entire cost of operating the Federal Government was less—I repeat, less—than this year's interest on the national debt alone.

Running on that platform was Franklin D. Roosevelt, who declared in a major address:

"Any government—like any family—can for a year spend a little more than it earns. But you and I know that a continuance of that habit means the poorhouse."

Ladies and gentlemen, those are magnificent words. They should be hung in every office in every department and bureau in Washington—and I include the President's own offices in the White House.

Then in 1943 a Democratic Member arises in the United States Senate. He says:

"It seems that when public funds are to be expended no one has any interest in what happens to them, no matter what his responsibilities may be under his oath of office.

"I dislike to make such a statement, but unless this body and the House of Representatives exercise their prerogatives in connection with the purse strings of the Government, much of the money appropriated will be thrown away for no good purpose whatever."

At that time we were engaged in total war. The Senator who made that statement was the chairman of the Special War Investigating Committee. He was Harry S. Truman, then a Senator from Missouri.

And so, when I hear them call those of us who are economy-minded, reactionaries and horse-and-buggy folks, I remember the strong stand of every Democratic President in our history, down to the time of the New Deal and the so-called Fair Deal.

Were they all wrong? Were they all reactionaries? Were they all horse-and-buggy tories?

Were all these great men fools because they feared deficit financing and growing Federal encroachment upon the liberties of the citizens?

Were Roosevelt, the candidate, and Truman, the Senator, reactionaries and tories?

We who are called tories and reactionaries because we fight for economy and solvency are struggling to preserve the greatest blessing given by God to mankind—freedom and opportunity.

Recently I ran across a quotation which impressed me greatly. It was from an English philosopher who lived 200 years ago. It was this:

"The greatest glory of a freeborn people is to transmit that freedom to their children."

Is it not right and proper for us, at this time of crisis, to demand that the great freedoms that freeborn Americans have enjoyed be preserved inviolate for our children and their children?

I say it is not only right and proper but it is our sacred duty.

If we are to retain freedom of the individual for ourselves and for posterity, we must reverse the present socialistic trend.

If America is to survive as a land of liberty and opportunity, we must return to principles of Abraham Lincoln and Thomas Jefferson.

We must preach the gospel of American patriotism—self-reliance, work, thrift, tolerance, and love of God.

We must impress upon all our people that security has no meaning if liberty must be surrendered to get it.

The freedom that was established and preserved by the blood and sacrifice of heroes in every generation is too precious to be lost through indifference or neglect of our responsibilities.

If we are to help save America, we must all interest ourselves in politics, because the kind of government we are to have is decided at the ballot box.

We need a deeper understanding of practical, patriotic politics, the kind of political activity that is based on the highest standards of morality, honesty, sincerity, and love of our country.

With those standards as our guide, with courage and vigilance, we can defeat every attempt to enslave the American people under the tyranny of socialism.

In the immortal words of Lincoln at Gettysburg, let us again dedicate ourselves to the proposition "that this country, under God, shall have a new birth of freedom, and that government of the people, by the people, for the people shall not perish from the earth."

Cheese

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1950

Mr. MURRAY of Wisconsin. Mr. Speaker, the CCC advises that there is 24,000,000 pounds of cheese in storage. The following official letter indicates that there were over 32,000,000 pounds of cheese imported the last calendar year:

Cheese: United States imports for consumption, by types, 1949[1]

Type	Quantity	Value
	Pounds	
Emmentaler or Swiss, with eye formation	5,776,778	$3,732,243
Gruyere process cheese	1,334,474	985,940
Italian-type cheeses:		
Romano, in original loaves	7,981,578	3,977,436
Pecorino, in original loaves	3,335,563	2,150,241
Reggiano, in original loaves	1,369,046	614,379
Parmesano, in original loaves	12,909	10,840
Provoloni, in original loaves	936,373	534,584
Provolette	87,956	21,184
Sbrinz, in original loaves	1,374,949	515,946
Goya, in original loaves	265	137
Total, Italian-type cheeses	15,048,639	7,824,747
Roquefort, in original loaves	1,393,902	1,017,839
Cheddar cheese, whether or not in original loaves, but not including any cheese processed otherwise than by division into pieces	3,136,201	664,494
Blue-mold cheese, in original loaves	1,301,641	570,441
Edam and Gouda cheese:		
Containing 40 percent or more of butterfat	101,147	394,974
Containing less than 40 percent of butterfat	4,794	1,604
Bryndza cheese, in casks, barrels, or hogsheads, weighing with their contents more than 200 pounds	973	446
Other cheese and substitutes for cheese	3,115,771	1,342,646
Total	32,014,42	16,835,374

[1] Preliminary.

Source: Compiled from official statistics of the U. S. Department of Commerce.

Mr. Speaker, this is just one example showing that the products accumulated by the CCC as surplus are partially the result of imports. Is this not another indication of the need of an international agricultural agreement comparable to the International Wheat Agreement?

Minimum-Wage Bill

EXTENSION OF REMARKS

OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Thursday, February 16 (legislative day of Wednesday, January 4), 1950

Mr. TAFT. Mr. President, I ask unanimous consent that there be inserted in the Appendix of the RECORD a statement which I submitted relating to the minimum-wage bill last year, which was ordered to be incorporated in the permanent RECORD. Because of the fact that the permanent RECORD is not available to anyone at this time, I ask that it be inserted in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

On October 18 Senator PEPPER submitted a statement expressing the views of a majority of the Senate conferees as to the intentions of the conference which prepared the conference report on the minimum-wage bill. It seems to me that this report was prepared in the first instance by the attorneys for the

Wage and Hour Division in an effort on their part to retain jurisdiction in various fields which the conference report clearly intended to take away from them. The Wage and Hour Division for years has been trying to extend its jurisdiction beyond the field provided by Congress and is now trying to nullify the present congressional action.

The conference committee never considered this statement, or summary, nor was there ever any meeting of the Senate conferees to consider or discuss it. My own view is that the report and the act finally adopted speaks for itself. I am quite certain that the conclusions of the report submitted by the senior Senator from Florida as to the intentions of the conferees are incorrect in many important particulars, and that the report of the House managers is much closer to their actual intentions.

Since other individual views have been submitted, however, I have prepared a partial discussion of some of the points at issue and submit it herewith.

Considered in its entirety the summary submitted by the senior Senator from Florida does not state what the amendments are intended to accomplish. Its approach is a negative one of pointing out what the amendments are not intended to accomplish. This is especially true with respect to those amendments which were introduced to limit the coverage of the act as interpreted by the Administrator and the courts. For example, the retail and service establishment exemption adopted by the overwhelming vote of the Senate was intended to prevent the Administrator and the courts from asserting coverage over those retail and service businesses on the main streets of America which were never intended to be covered when the original act was written in 1938.

Likewise the conferees agreed to a redefinition of the term "produced" intending to prevent extension of coverage to such operations as window cleaning and grass cutting on the far-fetched theory that such operations are necessary to the production of goods. We specifically authorized Belo type contracts because the Administrator, refusing to accept the decision of the Supreme Court which had held such plans to be in conformity with the act, had made a series of attempts to modify or overrule that case. The summary, prepared in the office of the Administrator, in many instances seeks to confirm those very interpretations of coverage which the conferees were seeking to reverse.

PRODUCED

The conferees in their meetings had before them a memorandum setting forth specific cases showing the extreme lengths to which the Administrator and the courts had gone in interpreting the term "produced." The conferees were in agreement that such cases should be overruled. The cases discussed and the agreement of the conferees are set forth in detail at pages 14–15 of the statement of the managers on the part of the House.

During the meetings of the conference committee the House conferees insisted that the definition of the term contained in the House bill be agreed to. They yielded only to the extent of agreeing to substitute the words "directly essential" for the word "indispensable" in the definition. It was understood by both the House and Senate conferees, however, that the definition as finally agreed to was intended to have a substantially limiting effect upon the coverage of the act as heretofore interpreted by both the Administrator and the courts. Nothing is more clear than that there would never have been any conference agreement on a minimum-wage bill, had the Senate conferees not agreed to such narrowing of the act's coverage.

The summary, however, in effect states that the redefinition of "produced" has not had the effect of cutting down the coverage of the act at all, but has merely provided a more specific guide and created more certainty as to coverage. The summary concedes only that under the redefinition coverage is not to be extended to the following activities or employees:

1. Procurement of land for a new factory.
2. Manufacture of bricks for new factory buildings.
3. Employees of a local real-estate firm renting apartments or dwelling houses to tenants, some of whom are employees of a factory producing goods for interstate commerce.

But no change in the definition was needed to assure that the act would not be extended to such activities or employees, since neither the Administrator nor the courts had ever held or even hinted that such activities or employees were covered.

The summary is chiefly concerned with pointing out that the redefinition of "produced" has done no more than to confirm all outstanding interpretations of such term, both administrative and judicial. For example, it cites *Consolidated Timber Co.* v. *Womack* (132 F. (2d) 101 (C. C. A. 9)), *Hanson* v. *Lagerstrom* (133 F. (2d) 120 (C. C. A. 8)), and *Basik* v. *General Motors Corp.* (311 Mich. 705, 19 N. W. (2d) 142) as authority for the proposition that coverage has not been withdrawn from "employees engaged in operating or maintaining living facilities for employees of a producer of goods for interstate commerce in situations where living facilities such as food and lodging are provided as a means of assuring continued and efficient production." The employees in such cases were cook-house employees in a lumber camp and cafeteria workers in an industrial plant, providing eating facilities for employees engaged in producing goods for interstate commerce. There may be situations where such services are "closely related" and "directly essential," but the conferees never intended to create such broad coverage as the quoted passage indicates.

I am in agreement with the summary that under the redefinition of "produced" the act continues to apply to office workers, plant guards, watchmen, and maintenance workers of the primary employer engaged in producing goods for commerce as well as to production employees of tool and die concerns and public utilities furnishing things without which the primary employer could not conduct his business. Many of the cases the summary cites, however, go far beyond the situations to which I have just referred. For example, it cites:

1. *Roland Electrical Co.* v. *Walling* (326 U. S. 657)—office employees of a firm which made, repaired, or maintained machinery for customers within the State who used same in producing goods for interstate commerce.
2. *Meeker Cooperative* v. *Phillips* (158 F. (2d) 698 (C. C. A. 8))—office employees of an electric power company supplying electrical energy to customers within the State for use by the latter in producing goods for interstate commerce.
3. *Borden* v. *Borella* (325 U. S. 679)—employees maintaining, servicing, and guarding an office building owned by an interstate manufacturing company and occupied primarily by its executive and administrative offices.
4. *Walling* v. *McCrady Construction Co.* (156 F. (2d) 932 (C. C. A. 3))—employees of a construction company some of whom were engaged in constructing new facilities for existing interstate manufacturing plants.
5. *Bozant* v. *Bank of New York* (156 F. (2d) 787 (C. C. A. 2))—custodial and maintenance employees of an office building occupied by lawyers, brokers, and banks. Coverage was asserted as to the custodial and maintenance employees because the banks prepare, execute, or validate bonds, shares of stock, etc., some of which move out of the State.
6. *Tormey* v. *Kiekhafer Corp.* (76 F. Supp. 557 (E. D. Wis.))—employees doing research and experimental work for an interstate manufacturer. Their work was abandoned and no new or improved products were shipped in commerce as a result of their activities.
7. *Walling* v. *Hamner* (64 F. Supp. 690 (W. D. Va.))—employees of a sawmill operator who produced and sold mine props within the State to supply companies, which in turn sold them also within the State to interstate coal companies for use in producing coal for interstate commerce. The employer also made mine props for a coal company within the State which produced coal that it transformed into coke and shipped out of the State.

RETAIL AND SERVICE ESTABLISHMENTS AMENDMENTS

The summary states that the retail and service establishment exemption provided by the amended section 13 (a) (2) is not intended to apply to establishments which are not ordinarily available to the general consuming public, citing *Boutell* v. *Walling* (327 U. S. 463), which involved a repair garage serving exclusively an affiliated interstate motor carrier. I agree that the rule of the Boutell case is not changed by the amendment made to section 13 (a) (2), because the establishment involved in that case is same as the repair department operated by the interstate motor carrier itself and its servicing would not be recognized as retail in the industry. The conferees intended, however, that the exemption should apply to any establishment meeting the tests set forth in the amended section 13 (a) (2) regardless of its location, whether in an industrial plant, an office building, a railroad depot, a Government park, etc., even though arguably establishments so located are not ordinarily available to the general consuming public. See page 25 of the House managers statement which sets forth the agreement of the conferees on this matter.

In its discussion of the 13 (a) (4) amendment the summary states:

"The goods must be made or processed at the establishment in which they are sold in order for the exemption to apply."

This statement appears susceptible of being construed to mean that although an establishment is otherwise exempt under section 13 (a) (4), it might lose its exemption unless all the goods it makes or processes are sold across the counter, dock, or platform of said establishment. Such an interpretation would be inconsistent with the intent of the conferees. Exemption is not to be denied an establishment under section 13 (a) (4) because it sells substantial quantities of goods it makes or processes through driver salesmen rather than across the counter, dock, or platform.

This is only a partial statement of my disagreement with the summary prepared by the Wage and Hour Division.

Criticism of Federal Bureau of Investigation

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, February 16 (legislative day of Wednesday, January 4), 1950

Mr. IVES. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a copy of a telegram addressed to President Truman under date of January 27, 1950, by Charles O. Blaisdell, president, Society of Former Special

Agents of the Federal Bureau of Investigation, Inc., 70 Pine Street, New York, N. Y., together with a copy of an answering telegram to Mr. Blaisdell, by Peyton Ford, the Assistant to the Attorney General, on behalf of the President. I make this request at the instance of this society, believing that it may be of interest to the Members of the Congress and I do so in a completely objective manner.

There being no objection, the telegrams were ordered to be printed in the RECORD, as follows:

President HARRY S. TRUMAN,
White House, Washington, D. C.

DEAR MR. PRESIDENT: We have noted with alarm increased criticism in the public press of the Federal Bureau of Investigation. In the very recent past the National Lawyers Guild, which many responsible persons have stated is a Communist-front organization, has requested you to order an investigation of that Bureau. We respectfully address this communication to you as a completely independent organization of over 1,600 men who formerly served as special agents of the FBI.

Our membership includes men in all walks of life. A substantial percentage of our members are active attorneys and we believe that our views might be of some interest to you.

As average Americans we have a genuine interest in the preservation of civil rights, and as former law-enforcement officers we have a keen appreciation of the constant need of protecting those sacred rights of our fellow Americans. However, we feel that our Government also has the duty of protecting the security of our country. We believe that our Government has the duty to use every moral and proper means authorized by proper authority to combat espionage, treason, and other traitorous subversive activities which imperil the present or future security of this Nation. It is of special interest to note that most of these recent attacks have centered around investigations by the FBI, in loyalty and espionage cases. There is no doubt that many of the critics of the FBI, often unfortunately misinformed, are motivated by a sincere desire to render a public service. However, there are those who, for reasons which do not include a patriotic devotion to American principles, desire to reduce the present effectiveness of the FBI in security investigations.

In recent weeks the FBI has been criticized for the use of wire taps in the conduct of espionage investigations. Many of these critics have left the erroneous impression with the general public that the FBI has been engaged in the unauthorized use of wire taps. That is not a fact. The Attorney General of the United States has very recently stated that the FBI uses wire taps in national defense and kidnaping cases and then only upon his authorization. This policy was approved by the late President Roosevelt in 1941, and has been followed consistently by the Attorneys General since that time. Under these circumstances, when the situation warranted, if the FBI failed to avail itself of this method of obtaining information in either national defense or kidnaping cases, it would be derelict in its public duty. The Joint Congressional Committee on the Investigation of the Pearl Harbor Attack, in its report to the Congress, after pointing out that Japanese diplomatic establishments on our mainland and Hawaii, had uncensored channels of communication with Tokyo up to the time of the attacks on Pearl Harbor, stated: "The situation should never again be permitted whereby the efforts of our Government to combat forces inimical to our national security are hamstrung by restrictions of our own imposition which aid the enemy."

We heartily subscribe to these views of that committee:

We feel that recent criticism of the FBI's wire-tapping activities has led to an entirely distorted conception in some quarters as to the extent of the wire tapping done by that agency. Many persons have been led to believe that the FBI has engaged in indiscriminate wire tapping to the detriment of many innocent persons. That, also, is not a fact. As Mr. J. Edgar Hoover recently stated publicly, the FBI had less than 170 telephone taps in operation and all of these were used in internal security investigations. When it is considered that the FBI has thousands of cases under investigation at all times, that small number of wire taps is indicative of the fact that wire tapping has not been used indiscriminately by that agency.

Today the FBI stands as a symbol of integrity and efficiency in law enforcement. Interstate gangsterism and many types of vicious crimes, including kidnaping and bank robbery, have been sharply reduced as a result of the work of that agency. Through the police-training program of the FBI, police organizations at the State and local level have made unprecedented advances during the past two decades. The war record of the FBI is an excellent one. Not a single act of foreign-inspired sabotage was committed in the United States during the last war, and many espionage agents and others intent upon wrecking our security were uncovered and brought to justice.

We deem it most regrettable that unwarranted attacks are being made on one of the most efficient agencies of our Government. It is not improper to suggest that current criticism is emanating from the same individuals and groups who over many years have sought to undermine the Federal Bureau of Investigation. Such criticism only indicates a complete lack of concern for the fundamental security of this Nation. We believe there never has been a time in the history of this Republic that greater vigilance is required to insure the internal security of America. Internationally we are engaged in a titanic struggle with great totalitarian forces of aggression, and national chaos would result should we be called upon to meet this challenge with an impotent FBI and a public disunited by the influences of subversive propaganda, sabotage, and espionage.

To those of us who have lived and worked in the FBI charges of the character being impressed upon you are not merely unwarranted—they are outright lies. There is today no public servant more vitally concerned in preserving our fundamental civil rights than the Director of the FBI. Our members are proud of their past service with the FBI. We are proud of the fact that we were able to take some part in the relentless fight made against domestic lawlessness and subversive activities. We are proud that we dispatched our duties without resorting to illegal tactics, and we are proud of the genuine confidence which the great bulk of the American people reposes in the FBI.

It is for these reasons that we are constrained to write you in this instance, as well as by reason of the further consideration that the FBI, occupying the position that it does in our governmental structure, is unable to defend itself from the unwarranted and malicious attacks to which it has been repeatedly subjected. It is our sincere conviction that you will not be swayed by the attacks of those whose primary purpose it is to discredit and harass the FBI; nor will you be influenced by the criticism of sincere but misinformed individuals and groups.

Respectfully yours,

CHARLES O. BLAISDELL,
President, Society of Former Special Agents of the FBI, Inc.

CHARLES O. BLAISDELL,
President, Society of Former Special Agents of the FBI, Inc., New York, N. Y.:

Re urtel to the President expressing concern over unjustified criticism of Federal Bureau of Investigation of the Department of Justice. Rest assured that complete Government and public confidence in the Federal Bureau of Investigation will not be weakened in the slightest by unwarranted and malicious attacks. You may also rest assured that the Government will not be swayed adversely to the interest of either the national security or the Federal Bureau of Investigation by the attacks of those whose primary purpose is to weaken our security and discredit the FBI; nor by the criticism of sincere but misinformed individuals and groups. The interest and views of the Society of Former Special Agents of the FBI in this matter are sincerely appreciated.

PEYTON FORD,
The Assistant to the Attorney General.

Summary of Provisions of Senate Joint Resolution 2, Abolishing the Electoral College

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Thursday, February 16 (legislative day of Wednesday, January 4), 1950

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a brief summary which I have prepared of the provisions of Senate Joint Resolution 2.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SUMMARY OF PROVISIONS OF SENATE JOINT RESOLUTION 2

Senate Joint Resolution 2 is a proposed constitutional amendment which was passed by the Senate by a two-thirds vote of 64-27 and which aims to abolish the electoral college; count the electoral vote in proportion to the popular vote; and provide for a vote in the newly elected Congress between the two highest candidates in case no candidate for President receives 40 percent of the electoral vote.

This proposal completely eliminates the present possibility of an election being thrown into the House with each State having only one vote; it establishes the constitutional right of the people to direct vote; it does away with the so-called unit-rule system of counting electoral votes whereby the candidate receiving a plurality of the popular vote in any given State is credited with all the electoral votes of that State regardless of how small the plurality may be; and, finally, by making it impossible for anyone to become President of the United States who has less than 40 percent of the electoral votes, it materially reduces the power of splinter parties.

As all Members know, the present electoral college unit rule system is seriously defective and has been criticized for more than a century.

The dummy office of presidential elector is in effect an inaccurate rubber stamp since on occasion these electors actually vote against the popular will.

Under the present system, the failure of a candidate to obtain a majority of electoral

votes throws the election into the House of Representatives where each State has one vote. This would have happened in January of 1949 if only a few thousand votes in Ohio and Illinois had gone differently. On the first ballot the result would have been: Truman, 21; Dewey, 20; and Thurmond, 4. And 25 would have been necessary to a choice.

The unit-rule method of crediting all other States' electoral votes to the plurality candidate in each State puts a tremendous premium on a few large States, limits the campaign to a minority of States, and restricts political preferment to a man who happens to live in one of a few so-called pivotal States.

The present system has led to the election of a President who actually had a smaller popular vote than the man whom he defeated—Adams over Jackson in 1824, Hayes over Tilden in 1876, and Harrison over Cleveland in 1888. This possibility cannot, of course, be completely eliminated without going to a straight popular election, but the pending proposal very much reduces the danger. The Brookings Institution is authority for the statement that the provisions of Senate Joint Resolution 2 "will practically eliminate" such an occurrence.

Moreover, in pivotal States there are pressure groups which, under the present system, can sway the balance in those States. In the last election, for example, the candidacy of Henry A. Wallace swung all of New York's 47 votes to Dewey in spite of the fact that Truman received 45 percent of the popular vote in that State.

In this respect, Senate Joint Resolution 2 effectively reduces the power and influence of splinter parties. The provision that the newly elected Congress, voting as individuals, would choose between the two highest candidates in the event that no candidate initially received 40 percent of the electoral vote is another deterrent to splinter party growth.

The proposed amendment completely preserves the rights of the small States, who retain their allocation of two electoral votes regardless of population.

It would tend to give a more truly national character to both our major parties and would greatly enhance and invigorate the two-party system in the United States. It neither helps nor hurts either party. It is sponsored by persons from both parties representing all sections of the country. I believe that upon careful study members of both parties will conclude that it simply eliminates restraints on the two-party system as a whole and thus opens up the field for imaginative and courageous political leadership in the future, the ultimate advantage of which none of us can accurately predict.

Let us send it to the legislatures so that the people in the States may have the chance to pass on this constructive reform.

American Industry

EXTENSION OF REMARKS

OF

HON. H. ALEXANDER SMITH

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, February 16 (legislative day of Wednesday, January 4), 1950

Mr. SMITH of New Jersey. Mr. President, recently in my State of New Jersey we again celebrated the anniversary of the birth of great inventor, Thomas A. Edison. In connection with that celebration I have had called to my attention the work of the Thomas Alva Edison Foundation, a nonprofit organization which is attempting to discover "new Edisons" and to sell the principles upon which our way of life was founded.

This important and significant foundation is directed by a distinguished retired naval officer, Vice Adm. Harold G. Bowen, who made an important address on the subject of American industry at a luncheon meeting of the Kiwanis Club in New York City on January 18.

I ask unanimous consent that Vice Admiral Bowen's address be placed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AMERICAN INDUSTRY

(Address delivered by Vice Adm. Harold G. Bowen, U. S. Navy (retired), executive director, Thomas Alva Edison Foundation, before the Kiwanis Club, New York City, January 18, 1950)

We are living in the midst of that phenomenon, which let us call, the modern industrial state.

The modern industrial state depends on several fundamentals, some of which are a patent law which recognizes ownership of ideas as well as ownership of property; mass production which, of course, depends upon a large home market enjoying a sufficiently high scale of living; industrial management relying very heavily on accounting; risk capital; research and development laboratories; marketing; transportation; and inventions. The loss of any one of these fundamentals would be as bad as the loss of a strategic battle.

The grouping of nations in the future will be along industrial and economic and not political lines. The world will be divided into primary industrial states and satellite nations thereof; and the first necessity of a primary industrial state is a large enough home market with a sufficiently high scale of living to support mass production, one of the keystones of the modern industrial state.

The backward condition of England as respects modern industry was plainly apparent during the high-pressure, high-temperature steam fight in our Navy in the late 1930's. England, which had led the navies of the world in innovations and improvements for several centuries, did not follow us in the radical and extensive modernization of our machinery which preceded and was completed before Pearl Harbor. The royal navy lagged with its machinery because England was lagging in industrial research and in that complete mechanization of industry which accompanied the rise of mass production. There is a grave doubt in my mind that England, on account of insufficient home population and insufficient scale of living, can ever again become a primary industrial state, even after she has copied all of our American practices.

Russia, China, and India have sufficient populations for mass production; but whether or not their scale of living can be sufficiently increased over the years for them to become, in the future, serious competitors of our own industrial civilization is something only time can answer.

Remarkable and fascinating as they are, I find no appreciation of the rise of our present industrial civilization in Toynbee's books and articles. I find no recognition of the fact that our present industrial civilization has no parallel in history. Churchill, the glorious and the inimitable, recently ascribed America's rise to ascendency to the fact that we are a union of States. Oh, that life were as simple as that.

Prof. Harold Laski is quoted as having advised the labor unions, during his visit to this country, to organize a labor party like they have in England. He says that would fix everything. That's what I'm afraid of—that it would fix everything. But he forgets to tell us who will support England if we go socialistic.

Toynbee, Churchill, and Laski apparently haven't the faintest conception of the modern industrial state based on those fundamentals which I enumerated earlier. Why pick on Toynbee, Churchill, and Laski? I doubt if such a conception is present in the minds of either the Conservative or Socialist Party.

World War II was won because our allies, and principally ourselves, were able to apply more horsepower per man in our military operations than our enemies and more horsepower per man than had been applied in any previous war. Industry and research won the war; and, right here, let me state that the technology of any armed service cannot rise above the technological ceiling of its national industry.

National defense depends in large measure on the ability to rapidly mobilize a large proportion of industry. Industry, therefore, has the double role of putting bread into the mouths of the multitude and in defending the multitude from aggression.

That, American industry can and will do if it is not pestered to death by an omnipotent state.

Of all the fundamentals of the modern industrial state, certainly the most recent and fundamental ones are mass production, research, and development.

There is a constant battle going on in industry between rising wages, costs of raw materials, increased taxes, and reduction of production costs. Management endeavors to keep down its production costs by such well-known and orthodox methods as increased mechanization, extensive use of more and better labor-saving devices, and improved or new processes. There may come a time when management's only out will be through improved or new processes. Besides constantly improving processes or substituting more and better processes for older ones, it is also the function of research and development continuously to provide new wants and thus build up a bigger market for the concern with which the research laboratory is associated.

When we compare the equipment we had to work with 50 years ago with the equipment we have at our disposal today, we should remember that the unbelievable strides we have made in the mechanical and electrical arts are due to the amazing contributions of scientists, research workers, or development engineers. None of these improvements just naturally happened; they are results of long, hard, and generally disheartening work by many unsung heroes in research and development.

For instance, General Electric acquired the rights to manufacture the Curtis turbine when it was more of an idea than a turbine. The reliable and dependable steam turbine of today—industry's work horse—is the result of many years and millions of dollars' worth of effort.

Radio, before it reached its present efficiency, had to await the development of the vacuum tube and the amplifying circuit. These great components of radio began with Thomas A. Edison's invention of the Edison effect, which was followed by the work of Fleming, deForest, and Armstrong. Hertz, Marconi, and other early pioneers did but set in motion certain forces which development engineers, at a later period, fashioned into that which we now know as radio.

The great Michael Faraday made his discovery that a conductor carrying electricity could be made to move in a magnetic field, but his model of the first electromagnetic machine was of no earthly use as it was. His discovery was followed by the work of

brilliant research engineers, development engineers, and others, who in my opinion, made as great a contribution to technology and all knowledge as Faraday. Certainly Edison, with his invention of the electric light, the central power plant, his rapid and radical improvement of the dynamo, and his development of all the devices necessary for the mass production, distribution, and metering of electrical energy—not to mention the first bulb manufacturing plant and many other details—showed, in a graphic way, the contributions which research workers have made to modern industry.

The story of the invention and development of the phonograph presents, in a neat fashion, the wonderful way in which the material arts have profited by our technological progress. The phonograph could not have been invented by a scientist, nor could it have been brought to its present state of perfection by an inventor.

It has been said that, if Bell and his associates had known of the mass of technological knowledge required before telephony was really possible, they would never have attempted to invent the telephone.

The same is true of Edison and his phonograph.

Edison didn't know that his phonograph should never have worked; and not having this load on his mind, he invented it. That's what makes an inventor.

Edison was the first man in the history of the world to reproduce the voice of man; and this should rank him next to and immediately after Prometheus.

The work of development engineers, after Edison's invention of the phonograph, is fairly well known to us all; but it remained for Bell Laboratories to put the finishing touches on the phonograph. The contributions of Bell Laboratories' research workers in the phonograph development is typical of the work of industrial research laboratories, in innumerable fields, today.

It is interesting to note that the phonograph is an American invention and, further, that its wonderful perfection resulted from years of work by a telephone industry which is a free enterprise. Telephone companies in Europe, which are run by their respective governments, had the same opportunity as Bell laboratories to do this work, and they didn't do it.

There are mouths to be fed in this world—a brutal way of saying that our population must be kept employed if our economy is to succeed.

Research and invention have put more people to work than any element in our civilization, and it will forever be the glory of applied or industrial research that it represents the first time in the history of the world that an art became self-supporting.

It has been my good fortune to have witnessed the rise of many industries and parts thereof, and one of the most inspiring has been the rise of the Diesel engine.

The steady advance in the reliability of the Diesel engine has been perfectly astonishing, and few today remember the trials and tribulations of the Diesel engines in the early 1900's and, as a matter of fact, until quite recently.

The Navy, prior to Pearl Harbor, became convinced that we would never have good submarines until they were powered by engines of the type being manufactured by General Motors and Fairbanks-Morse. About the time the Navy started buying General Motors' engines, as I remember it, General Motors was employing 140 men in building Diesel engines. Today, at the LaGrange plant, they are employing in excess of 14,000. I know of no better example in this day and age which indicates so forcibly the role of the research engineer in helping to feed the multitudes.

I read and hear a great deal about labor and management, collective bargaining, social security, and old-age pensions; but I don't hear enough about the work and contributions of the industrial research workers, and this I object to. I am concerned that such a large proportion of our people don't know that there is something more to industry than labor, management, financing, and marketing.

The Edison Foundation is endeavoring, in various ways, to acquaint the public with the fact that we have attained, in this country, considerable material progress and that material progress requires long and laborious work in the material arts. There is no such thing as push-button progress.

The Edison lecture series is sponsored in cooperation with the Newark Evening News every winter, and such distinguished lecturers as Charles F. Kettering, Dr. Harold G. Moulton, Dwight R. G. Palmer, and Benjamin F. Fairless present addresses on various facets of our modern industrial state. These lectures have set such a high standard in explaining industry's position that they are beginning to attract most favorable attention.

We are publishing booklets describing Mr. Edison's principal inventions. In each story, we are making the point of bringing Mr. Edison's inventions up to date so as to show the almost incredible effect of Mr. Edison's original inventions on today's industry, and also because they provide perfect examples of what happens to fairly simple inventions when they become subjected to modern technological development. The history of the incandescent light has already been published in booklet form, suitable for use in schools and shops, and the story of the invention and development of the phonograph is presently being prepared.

Not enough of our people realize the fundamental fact that American industry is a natural resource. The story of industry, if told at all, has been told by advertising and public relations people who are largely influenced in their natural desire to market a product. The significance of our industry as a fundamental factor in our economy and in our life has never been told, at least successfully.

We are living in a period which is probably best described as Toynbee describes it—the western Christian civilization—and we are all its beneficiaries.

I like to think of our civilization as a great revolving fund, from which, until we mature, we constantly make withdrawals. By the time we reach maturity, therefore, we have incurred a tremendous debt to this fund which we are duty bound to repay.

I have the greatest admiration for American industry. It is one of the pillars of our civilization. If it goes down, down goes America and, with it, western Christian civilization.

Lincoln Day Address by Mr. Talmage Wilcher

EXTENSION OF REMARKS

OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Thursday, February 16 (legislative day of Wednesday, January 4), 1950

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by Mr. Talmage Wilcher, State Republican committeeman from Arlington, Va., on February 12, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The anniversary of the birth of Abraham Lincoln should be a time of rededication of those general principles for which he stood, as applied to present-day problems. We are proud to honor the memory of this great man who was a father of the Republican Party, and one of America's great Presidents.

In simple terms he expressed the relationship between the people and their Government: "In all things which the people can do for themselves as well or better than the Government—the Government should never interfere." For the past 20 years we have had the opposite of this theory of government dinned into our ears from the theorists in Washington. Young people are led to expect security from the cradle to the grave—that the Government will take care of them. This is socialism—it has never been successful in any country in the world—it cannot be successful here. It is a deliberate attempt to lull our younger people into a sense of false security. The Government secures money from its citizens in the form of taxes. When money goes to Washington, where there are 1,154 bureaus, these bureaus take their toll from it—a 15-percent handling charge before any money is returned to us in unproductive charges.

The man who said "Nothing is certain but death and taxes" had something there. The Fair Deal, as do all other socialistic forms of government, appeal to the man of lesser income by appearing to soak the rich in taxes. The catch is that the poor man pays too. The rich man pays in income taxes and the poor man pays in hidden taxes. Newsweek has recently released a report on taxes which should interest every citizen since all of us pay taxes. It tells us that a tax research organization discovered 150 taxes levied on the manufacture and sale of a woman's hat, 116 taxes on a man's suit of clothes, 151 taxes on a loaf of bread, yet we find no reduction in cost of bread even though we have the largest surplus of wheat in our Nation's history—at least 100 taxes on a dozen eggs, yet we have $15,000,000 worth of eggs rotting in caves in this country.

There are 11½ cents in taxes in the cost of a pack of cigarettes, $500 on a $2,000 car, $2,000 tax on a $10,000 home. These are a few of the items used daily by almost every family. It is time we Republicans told the man of moderate income that it is not only the rich who pay taxes. All of us, rich or poor, must have food and clothes, and we must all, therefore, pay the taxes. If business and industry are taxed out of existence, as there is reason to fear they may be, what will happen to our standard of living, the highest in the world. We own more automobiles, radios, television sets, cars, telephones, and other refinements of living than all the other nations put together.

What then have we to gain by adopting state socialism? We know there are people in high places in government who would have us adopt the "isms" which have caused economic disaster wherever they have been accepted. We have the words, placed in the CONGRESSIONAL RECORD, of Senator HOLLAND, of Florida, a southern Democrat, who admits that "There are present on this floor of the Senate public officials representing this Nation who see state socialism as one of the objects for which they are working and to which they think we should soundly go."

The day has come when we Republicans must say, in no uncertain terms: "We are for the free and private competitive-enterprise system. We believe in the ability of people to maintain their homes, their families, their businesses and professions without Government interference. We believe in the pay-as-you-go form of government, and a tax scale that is safely within the bounds of a

democratic system as opposed to socialism. We believe that the individual 48 States are sufficiently able to maintain their governments without benefit of Federal regulation, for which we pay a frightful toll. We believe that curtailment in Government cost is an absolute necessity, in view of the mounting Federal debt—already in excess of two hundred and fifty billion.

We do not believe in national socialized medicine. We do not believe in regimentation. We do not believe in Federal control and regulation in any forms.

Lincoln's philosophy of government should be applied to present-day problems, and what I mean is we cannot ditch all of the social gains—such as grants-in-aid to States. Some of this legislation has real merit, such as care of the aged, Federal aid to education and dependent children. Social-insurance labor laws, which have proven a blessing, and such other legislation, as Federal housing insured loans, Farm Credit loans, but I reiterate that subsidies should be ditched, bureaucratic control should be ditched, and any law that tends to regulate and control large segments of our population should be repealed.

Ladies and gentlemen, it is not an easy thing to tell one's children that there is no Santa Claus; it is not an easy choice to tell the American people that its Democratic-elected Representatives in Government have not been honest in their interpretations to the people. It would be much easier for us to go along the primrose path, outpromising the Fair Dealers, but we cannot do this, we will not do this, and we must not do this. We have reached the crossroads where we must forget political expediency in favor of telling shocking truths. From here on out we are fighting to preserve a mode of life; our battle is not between two major political parties. It is a question of whether Americanism or socialism shall dominate.

The impossibility of socialism has been proven by 4,000 years of failure. The American way of life has proven itself in less than two centuries. Southern Democrats, let me ask you, "Who is kidding whom?"

You know that the Lincoln philosophy of government is the same as the Jeffersonian Democrat. Both of these political philosophies represent equal rights and State rights, freedom of action, free competition and free enterprise, decentralized governments as against centralized governments. You who call yourselves Democrats are not Democrats in the main. You are Republicans in belief, because the national administration is not Jeffersonian democracy—but Fair Dealers, fellow travelers of a socialism which is alien to Americanism. Awake, Southern Democrats and join hands, because our fight is yours also.

This is our country, if we love it, and hope to keep it, and to keep the freedom to be let alone, to pursue our way of life as we wish as individuals, the burden is on us to fight for it. That means work. We must inform ourselves, we must educate others regarding the fallacies, that are being saddled on us every day. The last Presidential election some 45,000,000 people failed to vote. We must see that they cast a vote this year and that it is an informed vote. Begin at home, with your neighbor, the families on your street, the person next to you in the grocery store. There you can mention a few of the items in his grocery basket—cigarettes, bread, and eggs. Tell him about the hidden taxes he is paying there. See that your friends and acquaintances are registered and that they vote. It is a job that must be done individually and one that we must all share—else we fail.

Many of you Virginians attended the Lincoln Day box supper last Monday night in Washington and your morale was boosted by the tremendous crowd there. It was an inspiring and wholesome thing to see. The Fair Deal Democrats say that the Republicans are the party of privilege and of the rich—yet we have a dollar box supper while they have $100-a-plate dinners for the party faithful—and they aren't going to pay a tax on the $100, badly as they need tax money—it will go into the till to elect more good Fair Dealers and fellow travelers to spend more of your money. If you don't like this flagrant insult to your intelligence—there's only one thing to do about it, and that is to join the Republican Party now.

There is a job to do and that job is to tell others over and over again just what socialism means to every man, woman, and child. Let's tell this story in every American home until the dangers of socialism are forever past. If you continue to work and to do this job sincerely and honestly, I feel certain that the future of our Republican Party and the American people will be secure.

Closing of Waltham Watch Co.

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, February 16 (legislative day of Wednesday, January 4), 1950

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Say It Isn't So," published in the Waltham (Mass.) News-Tribune under date of Saturday, February 11. The editorial relates to the tragic closing of the Waltham Watch Co.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SAY IT ISN'T SO

Government officials and leaders of his own party many times have had cause to be disturbed at President Truman's faculty for saying the wrong thing at the wrong time. The latest outbreak of foot-in-mouth disease on the part of the chief executive hit Waltham Watch Co. at a most inopportune moment.

Mr. Truman, it should be pointed out, has promised much to Waltham's precision industry and given less than nothing.

By less than nothing we mean that he has dismissed this vital concern without even waiting for the results of a study he himself had asked for concerning Waltham's essentiality to the national defense.

He has consistently failed to do anything in Waltham's behalf despite his oft-quoted statement that no segment of American industry would be harmed by reciprocal trade.

His off-the-cuff statement that everything possible has been done for Waltham is puzzling indeed. By everything he can't mean tariff or quota relief. Neither the State Department nor the Tariff Commission has acted despite incontrovertible proof the Swiss import flood has strangled the domestic watch industry.

By everything he can't mean RFC assistance. About all the RFC did was to pay off banking indebtedness and enable the firm to capitalize on its inventory—through a half-price sale. That was something to be grateful for, of course. But RFC advanced no reasonable amount of working capital, and is now reluctant to release part of $2,000,000 earmarked for machinery despite the fact that the concern's asset value is far in excess of its debt.

No, Mr. Truman, we don't think everything has been done for Waltham. We believe a tragic disservice is being done the country's security by your casual dismissal, which so ironically came within an hour of the time when the Munitions Board was reaffirming Waltham's vital defense role.

The President's aides say he wouldn't want to be directly responsible for barring the firm from a chance to reopen. Well, Mr. Truman, just say it isn't so. Tell us it really counts to be a 100-percent producer of timing mechanisms during wartime. Tell us that 2,300 jobs mean something.

If Waltham is expendable, won't Elgin or Hamilton be next?

Statement by Hon. Leonard W. Hall, of New York, Relating to Edward Lamb

EXTENSION OF REMARKS

OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Thursday, February 16 (legislative day of Wednesday, January 4), 1950

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a statement by Representative LEONARD W. HALL, of New York, in regard to Mr. Edward Lamb, who seems to be arranging President Truman's trip to Ohio.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY HON. LEONARD W. HALL, OF NEW YORK

It should be of interest to the American people that within a few hours after the New York Times had printed President Truman's reaffirmation of his "red herring" stand, that the President should receive at the White House one Edward Lamb, a man whose association with Communist fronts and Communist causes is a matter of public record.

The official White House calling list issued today, February 15, reads, in part: "12:15, Mayor Lawrence, of Pittsburgh, with Publisher Edward Lamb, of Erie Dispatch."

An hour after Mr. Lamb had visited the White House, the Associated Press carried the following report on the AP wire:

"Edward Lamb, Toledo, Ohio, lawyer and publisher of the Erie (Pa.) Dispatch, told reporters after seeing the President: 'The President said he would wage as aggressive a fight to elect a Democratic Congress this fall as he did to get himself elected in 1948.'

"Another White House visitor, Mayor David L. Lawrence, of Pittsburgh, joined Lamb in making the announcement.

"Mr. Truman is expected to go into other States in a speaking tour for Democratic nominees after the primaries are over, White House aides say.

"The President himself has said that he does not expect to participate in any Democratic primaries outside of his own State of Missouri.

"Lamb said Mr. Truman assured him and Lawrence that after the nominees have been chosen he would be 'free to campaign aggressively in Pennsylvania and Ohio for a Democratic, aggressive Congress.'

"He and Lawrence are here to attend tomorrow night's Jefferson-Jackson Day dinner."

Mr. Lamb's affinity for Red causes has been the subject of debate on the floor of the

House of Representatives on at least five occasions. The discussions are to be found in the CONGRESSIONAL RECORD, volume 93, part 1, page 538; volume 94, part 4, pages 5237 and 6816; volume 94, part 7, pages 9232 and 9233; and in the Appendix of the RECORD, volume 94, part 11, page A3653.

In addition, a special House Committee To Investigate the Federal Communications Commission (80th Cong., 2d sess.), devoted 5½ pages of its final report to the House to publication of Mr. Lamb's record. This document is known as House Report No. 2479, and the pages cited are pages 20, 21, 22, 23, 24, and 25.

I was a member of the special committee investigating the FCC and signed the final report. Congress interested itself in Mr. Lamb's record because Mr. Lamb within the space of 2 weeks in 1948 received five operating licenses from the FCC. Congress considered it a proper matter, and perhaps the President might also, to inquire into the Communist associations of a man who would control the airways of five outlets under Government license.

Here is Mr. Lamb's record in part:

Mr. Lamb was executive vice president of International Labor Defense; he was vice chairman of the American Committee for Protection of Foreign Born; he was a member of the executive committee of the National Federation for Constitutional Liberties. All three of these organizations have been cited in the Attorney General's list, and have been cited by the House Committee on Un-American Activities.

Mr. Lamb was an executive vice president of the National Lawyers' Guild, which is now seeking an investigation of the FBI; he was a member of the National Committee of the International Juridical Association; he was a sponsor of the Civil Rights Congress. All three of these organizations have been cited by the House Committee on Un-American Activities.

Mr. Lamb was the signer of a telegram addressed to the President in 1940 and sent by the Emergency Peace Mobilization condemning military conscription as un-American; he was a signer of the call for the International Action Conference for Civil Rights; he was a signer of a statement addressed to the President of the United States on March 5, 1941, defending the Communist Party; he was a signer of the open letter for closer cooperation with the Soviet Union in September 1939. Mr. Lamb was twice the author of articles appearing in the magazine of the Friends of the Soviet Union; he was a signer of a letter to President Roosevelt protesting attacks on the Veterans of the Abraham Lincoln Brigade and condemning the "war hysteria being whipped up by the Roosevelt administration."

Mr. Lamb acted as counsel for Mrs. Sarah V. Montgomery when she was a witness before the Special Committee on Un-American Activities, and he stated at that time that he was attorney for the American Peace Mobilization; he was an attorney for Alex Balint, a witness called before the Special Committee on Un-American Activities, who was a Communist later ordered deported.

Mr. Lamb also is the author of a book called The Planned Economy in Soviet Russia.

The record cited above dates from 1934 into 1948.

Mr. Lamb has been mentioned favorably on numerous occasions by the Daily Worker and by New Masses. The records of the Special Committee on Un-American Activities list 21 citations involving Mr. Lamb's name.

This is Mr. Lamb's record, and it is appalling that President Truman should summon him to the White House to help make campaign plans for the election of Democratic Congressmen in 1950. In his interview in the New York Times today Mr. Truman asserts that his loyalty board has done much more effective screening of Communist sympathizers and fellow travelers than has Congress through the action of its committees. While this may be questioned by the American public in the light of the Alger Hiss case and numerous other cases, perhaps the American interest would be better served if the President's loyalty board moved over to the White House doorstep and screened the guest list. It is high time that somebody in this administration determined when "herring" ends and "red" begins.

Reestablishment and Maintenance of Free and Competitive Enterprise

EXTENSION OF REMARKS
OF
HON. HARRY DARBY
OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, February 16 (legislative day of Wednesday, January 4), 1950

Mr. DARBY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a resolution adopted by the American National Livestock Association at its fifty-third annual convention at Miami, Fla., on January 5, 1950.

This resolution, which was brought to my attention by a prominent Kansas farmer, cattleman, and businessman, Richard W. Robbins, of Greensburg, Kans., expresses the concern of the members of the association over the present trend toward a socialized state, and deserves the attention of all Members of the Senate.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

There impends today a threat to our country and the freedom of its citizens which so menacingly overshadows the future that we, American cattlemen of all shades of political belief, feel it our duty to speak out in unmistakable terms.

This threat lies in the fact that our country—without conscious choice on the part of its people—is rapidly and unmistakably drifting toward the consummation of a false concept—the socialist state.

Tokens of this danger are everywhere and undeniable. The growing power and expansion of wasteful government; the colossal public debt; the heavy burden of taxation; the malicious attempt to substitute an artificial economy for the natural economy which alone can function in freedom; the gradual assumption by the State of financial responsibility for every hazard incident to life—hazards which should be personally met and borne by every human being who has the instinctive will to survive and the inherent impulse to be free; the arraignment of economic and social groups, one against the other, and numerous other conditions and proposals similarly inspired and equally false.

Government produces nothing and has no means by which to support these false and destructive theories except by exacting from its citizens the fruits of their labors.

The course the Government is now taking, unless it is promptly reversed, must inevitably lead to natural bankruptcy. In a vain effort to prolong a specious sense of security, more similar expedients will be applied until we become mere numbers in a completely socialized state: Therefore, be it

Resolved, That we, the members of the American National Live Stock Association in convention assembled at Miami, Fla., January 5, 1950, reaffirm our solemn conviction that the future health, strength, and prosperity of our country depend on the reestablishment and maintenance of free and competitive enterprise and hereby pledge ourselves as individuals and as an association to diligently and actively work toward this objective and toward the defeat of the fallacious philosophies that are beguiling our country into socialism.

No Security Without National Security

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, February 16 (legislative day of Wednesday, January 4), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "No Security Without National Security," published in the Washington (Pa.) Observer.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NO SECURITY WITHOUT NATIONAL SECURITY

The popular cry of the times is "security" and everybody is clamoring for it, egged on by political leaders who fear to urge caution.

Security is most desirable. All of us want it and we are seeking it.

It was the dream of the men who founded America. They had been oppressed by the centralized government of the British monarchs of the era or other despotic rulers of Europe.

To the founders of our Republic, freedom for the individual was the form of security most desired. They wanted to be freed from the shackles of serfdom.

Time marches on and we are now in an era in which we are turning again to the security promised by a centralized government which is being granted more and more power.

The security of freedom was sufficient for several generations of Americans. They wanted only the opportunity to work and strive for something they could call their own, secure in the conviction that it could not be taken from them by government taxes. Leaders of those generations refused to permit heavy taxation. They knew that the power to tax offered opportunities to gain power. They refused to use it because they had been closely associated with generations of peoples who had been ground down into vassals of the state through imposition of such levies.

Now, a little more than a century and a half later, we seem too far removed from our founding fathers to remember or realize the experiences which so infuriated and inspired them that they fought a bloody revolution to gain the security of freedom.

In this era, for a degree of security in the distant future, we are permitting a revival of centralized government. Home rule of the townships and municipalities is being lost to States and the rights of States are being absorbed by the Federal Government.

What good will this future security be if the Government which pledges it is not built on a firm foundation?

What is the condition of our Government today?

It has a debt of $256,000,000,000 and is entering upon a period of deficit financing to maintain itself.

An individual under such circumstances would be considered hopelessly bankrupt.

Despite this situation there is no serious effort to adopt sensible financial practices.

The Government would not permit an insurance company to collect premiums from individuals if its affairs were being conducted in such a manner because of a lack of security.

To create security for ourselves and those who follow us we should demand a return to normal and sensible financial practices.

Educational Advancement in Mississippi

EXTENSION OF REMARKS
OF
HON. JOHN C. STENNIS
OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Thursday, February 16 (legislative day of Wednesday, January 4), 1950

Mr. STENNIS. Mr. President, my attention has been called to a news item which appeared in the February 11, 1950, issue of the Memphis Press-Scimitar. This news story clearly presents the progress which the great State of Mississippi is making in trying to solve its educational problem and also indicates the good relationship now existing between the white and colored races in our State.

I therefore ask unanimous consent that it be inserted in the Appendix of the RECORD.

There being no objection, the item was ordered to be printed in the RECORD, as follows:

UPON THIS RICH DIRT SHALL GROW A NEW COLLEGE FOR NEGROES—GOVERNOR WRIGHT AND PRESIDENT WHITE SINK SPADES INTO ITTA BENA SITE FOR VOCATIONAL SCHOOL

(By Clark Porteous)

ITTA BENA, MISS., February 11.—Last year's sere cotton stalks, brown and still flecked with bits of white, wave in the wind on 450 fertile acres of Delta dirt near here.

Come September, a college will be ready on the acres, ready to start serving Negro boys and girls of the Delta, and some day of the entire State.

Mississippi Vocational College, a State 4-year institution for Negroes, was started officially at 4:15 p. m. yesterday.

It was then that Gov. Fielding L. Wright, of Mississippi, and Dr. J. W. White, a Negro and the president of the new college, turned the first spadefuls of Delta dirt in a groundbreaking service.

TO KEEP SPADE

The new spade is destined to be kept in the archives of the college as a memento of the ceremony which drew white and Negro leaders from afar and hundreds of just plain people, both white and Negro.

The ground breaking followed more than 2 hours of speeches, music, and ceremony in the jam-packed Leflore County Training School here, a high school for Negroes. More than 1,000 were at the school, and there was standing room only. Hundreds were outside, many listening to the Governor and others at windows. Inside whites and Negroes sat side by side in many cases, and no effort at segregation in seating was made. There were white officials and Negro educators on the speakers' platform.

The ground breaking was to start construction of $300,000 worth of buildings—a classroom building, a shop building and the president's home. The current Mississippi Legislature is being asked for $700,000 to build dormitories and a cafeteria.

Dr. White hopes to have these by September, but he plans to open the college whether or not he has them. He is expecting an enrollment of 500 next fall, and if there are no dormitories, trucks, and school buses will haul the students back and forth.

The long-range plan for the college calls for 40 buildings, 2 barns, and a stadium. It's a 25-year plan, but leaders hope the plans drawn by Raymond Birchett, Jackson architect, can be carried out sooner. MVC eventually will accommodate 2,000 students.

It's part of the plan to give Mississippi equal educational opportunity for Negroes, though the plan still calls for segregated education. Mississippi Vocational College will be the third State-supported 4-year college, the other two being Alcorn A. and M. in Alcorn County, northeast Mississippi, opened in 1820 and a large Negro college since 1871, and Jackson College in the State Capital, center of the State, opened in 1940. There is also one Negro junior college, Coahoma County Agricultural Junior College, which became a 2-year college this year.

Governor Wright promised the audience equal education opportunities for Negroes and equal pay for Negro teachers as soon as the State can afford it, but said he will continue to be for segregated education.

* * * * *

"We will have great advances in Negro education, but there is no use expecting them to happen tomorrow," Governor Wright said. "Insofar as I'm concerned both as a citizen and as Governor, I shall do everything I can to promote progress, development, and betterment of all citizens regardless of race, color, creed, or anything else."

"I said to the teachers in the colored Mississippi Education Association 2 years ago that as Governor of the State I recognize your right to equal facilities in education, opportunities, and advantages, and I still recognize that. I recognized that before I became Governor, or Congress began talking about FEPC or other legislation. That's not what's bringing it into Mississippi. But it's not coming overnight. Let's be realistic.

"DIDN'T GET ENOUGH

"I don't claim credit. The legislature and others are doing it. The educational appropriation was $12,000,000 for common education. You (Negroes) did not—and I have no objection to saying it—get enough. I am going to see before this session of the legislature is over that you get your proportionate share.

"There is a program in the legislature to equalize school teachers' salaries. It's not going to help if you don't like the past, to build a grudge in your heart. If you've been discriminated against—forget it. Think about what is happening today and in the future.

"I have to be careful what I say, speaking as the Governor of the State. What I say, as chief executive, I hope to do my part to carry into effect. Don't expect the great day to be tomorrow. When we turn a spade of dirt and leave, there will just be a hole. In a few months, I hope there will be buildings, in a few years I hope a campus full of buildings.

"The University of Mississippi, Alcorn, Mississippi State, Delta State, MSCI, Jackson, and the rest did not grow overnight. They have been years growing. Maybe we have been backward in furnishing education for your children. It is not altogether my fault, nor the fault of my forefathers or yours. With privileges and opportunities goes responsibility. Through the cooperation of all citizens, white and black, is the only way. If you want to cooperate with me, the men on the board and in the legislature—we will solve the education problem. It's a big one. When you do not have responsibility, it is easy to say what to do. When you have responsibility, there is a limit to what you can do.

"LONG STEP

"I say in all seriousness to this mixed gathering, if we have that cooperation from you, we will take a long step in our program to eventually furnish equal education and equal opportunity with no discrimination."

The Fulbright Program

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, February 16 (legislative day of Wednesday, January 4), 1950

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article on the Fulbright program, by James W. Silver, chairman of the history department of the University of Mississippi.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Jackson (Miss.) Clarion-Ledger of December 20, 1949]

FULBRIGHT PROGRAM IS ONE GOOD THING THAT GREW OUT OF WAR, STATE MAN AVOWS

(By James W. Silver, chairman, history department, University of Mississippi)

ABERDEEN, SCOTLAND, December 19.—Until I saw most of the windows of the Southampton-London boat train plastered with the word "Fulbright," I was not conscious of the size of the movement with which I had become connected. Most of our contingent took up the pronunciation of the dockworker who was curious about the meaning of "Foolbright," but, regardless of how you say it, my guess is that one of these days the word will find its way into the dictionary.

For the Fulbright program is undoubtedly the most comprehensive experiment of its kind yet undertaken. It is one of the few good things that have come out of the war and should be a great force for making American democracy more completely understood by people we like to call our friends.

With his background as Rhodes scholar and as president of the University of Arkansas, it was only natural for Senator J. WILLIAM FULBRIGHT to introduce Public Law 584 which received the President's signature on August 1, 1946. This Fulbright Act, an amendment to the Surplus Property Act of 1944, set in motion the machinery which has already enabled nearly 2,000 students, teachers, and scholars to study and work in lands other than their own. Its basic purpose is an "increase of mutual understanding between the people of the United States and people of other countries."

Administrative responsibility rests with United States Department of State, whose Division of Exchange of Persons initiates with other countries executive agreements under which United States educational commissions are set up abroad. To present time, agreements have been consummated with China, Burma, Belgium, and Luxemburg, France, Greece, Italy, New Zealand, the Philippines, the United Kingdom, the Netherlands, and Norway, and negotiations are well under way with Austria, Australia, Egypt, India, Pakistan, and Turkey.

Financing of the program comes solely from the sale of surplus property abroad which we refused to bring home after the war and which our allies were eager to buy as they were lacking in dollars. For instance, Britain's settlement of lend-lease

brought the United States sterling credits of some $650,000,000. To have withdrawn these would have partially frustrated our whole plan of economic aid to non-Communist countries. In December 1945 Britain agreed to set aside $50,000,000 (in sterling) for educational purposes. Under the Fulbright program, up to one million of these dollars may be used annually for the next 20 years; similar agreement has been made with each of the other nations mentioned.

President Truman has appointed an eminent Board of Foreign Scholarships which approves policies and types of programs and selects both Americans and foreigners for Fulbright awards. Graduate student applicants are certified to the Board by the Institute of International Education, 2 West Forty-fifth Street, New York, N. Y. Secondary teachers who want to swap jobs for a year with foreign pedagogs must first be O. K.'d by the United States Office of Education, Federal Security Agency, Washington, D. C., while those interested in university instruction of advanced research must be recommended to the Board by the Conference Board of Associated Research Councils, 2101 Constitution Avenue NW., Washington 25, D. C.

The American student lucky enough to snag a Fulbright appointment receives tuition, maintenance, and travel allowances. The teacher or research worker does still better with a stipend in addition to travel and maintenance. The foreigner who comes to the United States under the program gets only travel allowances, inasmuch as no dollars are available. Under this condition we hope to have both a professor and a graduate student from Britain at the University of Mississippi in 1950–51.

So far, 562 students, 124 teachers, 68 professors, and 115 research scholars have gone abroad with Fulbright appointments. From foreign lands to America have come 382 students, 11 teachers, 38 professors, and 111 research scholars.

The United States Educational Commission in the United Kingdom, which looks after the Silver family with such painstaking care, was set up by an executive agreement of September 1948, signed by Ambassador Lewis Douglas and Foreign Minister Ernest Bevin. Under its administration there are over 250 Americans working in Britain and a slightly smaller number of Britons in the United States. Another year will see an increase on both sides.

My 3 months' experience in Scotland has convinced me that we would do well to examine carefully the assumption that even our close friends are informed regarding us and our way of life. I know, too, that the average well-informed American is likely to live in blissful ignorance of the real problems and feelings of millions of people abroad. War itself brought a considerable advance in mutual respect and understanding. The Fulbright program may well be another important milestone on the road to international comprehension and good will without which there is small chance of permanent world peace.

A Novel Plan To Raise Revenue

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, February 16 (legislative day of Wednesday, January 4), 1950

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "A Novel Plan To Raise Revenue," written by Arthur Krock in the New York Times of February 10, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN THE NATION—A NOVEL PLAN TO RAISE REVENUE

(By Arthur Krock)

WASHINGTON, February 9.—A suggestion that the Federal Government charge fees for special services, and thus in one move cut down costs and add to revenues, may not get serious attention from the Ways and Means Committee and the Senate Finance Committee, but it should. They are hard at work on proposals affecting taxation, their basic problem, as always, being how to relieve burdens on the industrial economy without reducing the Government's income.

The suggestion was made in some detail by John A. Kennedy in the San Diego Journal, of which he is publisher and editor. In substance, it is to put special Government services "on a cafeteria style or pay-for-what-you-get basis."

Local governments do this regularly; they also make a charge for an automobile driver's permit or a marriage license, which are ordinary and not special services. But Mr. Kennedy gave a number of examples of the second variety which the people get free from Washington and add measurably to the cost of the central Government. Here are some:

A citizen expects to pay, and does, a pro rata share of the expense of a new road or sidewalk in front of his house. He pays gasoline taxes so that roads may be built and maintained. But he pays nothing beyond his regular taxes, or in some instances only a nominal sum, for Federal licensing and inspection of great and direct benefit to him. And as part of a corporation he gets free special services of great business value from the Federal Government.

"Why," asked Mr. Kennedy, "should Uncle Sam not exact a payment for the valuable export licenses the Department of Commerce issues to business men? Or for the certificates of operation, charters, and inspection services given gratis to interstate motor and freight carriers by the Interstate Commerce Commission? Why shouldn't the Civil Aeronautics Administration or the Maritime Commission be reimbursed, at least for the paper work involved in issuing charters to aviation and shipping companies?"

OTHER EXAMPLES

The Federal Communications Commission, he submitted, should charge for the valuable franchises it issues in the form of licenses every 3 years to more than 2,000 broadcasting stations. Some of these may have entered the business wholly as a concept of public service, but also it is "a pleasant way of earning their bread and butter."

The Departments of Agriculture and Interior furnish hundreds of free services to farm and other groups, and some of these, said the editor, "could fairly be the basis of a small charge." American Overseas Airlines and Pan American have kept a Federal staff busy for months on the application of the latter to buy the former for $17,500,000, and he thinks the buyer and the seller should pay the costs. Also, when the railroads seek increased rates they should reimburse the Interstate Commerce Commission for the expenses of the long hearings, and so should others in the same position—telephone companies, power companies seeking grants from the Federal Power Commission and corporations asking the approval of the Securities and Exchange Commission for bond and stock issues.

"Why," inquired the editor, "should the 500,000 pilots and technicians have been issued their CAA licenses for nothing; likewise the 60,000 radio 'hams' and 60,000 commercial radio operators who hold 5-year licenses from the FCC?" He cited the Government Printing Office, which distributes most of its huge output free, except for a small charge that reflects only the actual cost of printing documents prepared for individual Government agencies. "In 1947," said Mr. Kennedy, "the Public Printer sold 36,000,000 pamphlets for $3,200,000 but over twice that number—86,000,000—were distributed free by Members of Congress and others.

"I imagine [he wrote] that some skeptics will look down their noses at this suggestion as providing too little in additional Government moneys to offset the added headaches of bureaucratic bookkeeping. But this is to ignore the basic fact that multiplied throughout the whole fabric of Government, such fees could be fixed on the cost of services performed and could add up to a lot of money for the Treasury.

"I am also in the radio and television business. Why shouldn't I pay the Government for servicing my various requests which have helped make my radio business profitable?"

SOME PAY FOR OTHERS

In addition to the good sense of much of this, it has a particular appeal for the great mass of citizens who pay for these special services, few or none of which they ever request for themselves. No calculation of the cost could even be approximated, but the amount is very large. And, going beyond the Hoover Commission, Mr. Kennedy has managed to devise a plan by which public revenue is increased and the budget reduced simultaneously.

In The Great American Bandwagon, Charles Merz, the editor of this newspaper, once observed that if Government charged admission to celebrated trials and like events, and held them in stadia about the size of the Yale Bowl, the take would greatly shrink the public debt. Mr. Merz wrote that with his tongue in his cheek, though his would be a sound revenue measure if the dispensing of justice were not the matter involved. Mr. Kennedy, however, is serious and has made a serious case.

What Is Prosperity?

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, February 16 (legislative day of Wednesday, January 4), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "What Is Prosperity?" published in the Washington (Pa.) Observer.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT IS PROSPERITY?

WLat is that state generally referred to as prosperity? Webster gives various meanings to the word. Prosperity is an advance or gain in anything good or desirable, according to the dictionary. It is also a general condition of industrial and commercial activity in which goods and money are comparatively plentiful, according to the same authority.

Presently goods and money are comparatively plentiful. But it can be seriously questioned whether there actually is an advance or gain in anything good or desirable. Money is plentiful, but that condition exists largely as a result of political manipulation

by the Federal administration, which has scattered public funds with a lavish hand, unmindful of the mounting debt, constantly striving to put off the evil day when these obligations must be met.

True prosperity can be based entirely upon the permanent prosperity of the people and while Americans do have money to spend, they cannot be permanently prosperous so long as they are saddled with debt which is mounting daily. Present prosperity is not bringing a gain that is either good or desirable, and must be followed by readjustment.

Plight of the Baltic Countries

EXTENSION OF REMARKS
OF
HON. NEIL J. LINEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mr. LINEHAN. Mr. Speaker, the plight of the Baltic Nations is of great concern to the United States and all liberty-loving people. The aggression of the Soviet Union against these nations on June 15–17, 1940, and the ensuing occupation put an end to a period of independence in which great strides had been made in self-government, economics, culture, and education. With other countries, the United States condemned this occupation by Soviet Russia, but unfortunately to no avail. The three nations on the Baltic have been put under the iron heel of Moscow and their recent history is a good example of the meaning of the Soviet system to the other peoples of the world. They are suffering all the hardships and cruelties to which any totalitarian tyranny subjects the people in its power. Many have been killed or tortured to death, while others have been deported to the interior of the Soviet Union or perished in concentration camps. These former independent countries are now more isolated from the west than any other countries. There are no foreign diplomatic or consular representatives there, nor can any of their inhabitants travel west.

In an appeal to the General Assembly of the United Nations in November 1947 the representatives of the Baltic states made the statement that June 1940 "also marked the beginning of a planned, systematic, and cruel genocide of these peoples." This appeal also quoted from a secret instruction from Moscow in January 1941 that "the removal of anti-Soviet elements from the Baltic Republics is a political task of great significance," which is the background for the tragedy now going on there. The policy of annihilating the Baltic nations and executing Lithuanians, Estonians, and Latvians is continuing to this day, despite the fact that Soviet Russia signed the Atlantic Charter and the Charter of the United Nations wherein man's rights and fundamental freedoms are assured.

The Baltic people are fighting a grim battle for life against the deliberate policies of the Kremlin. It is obvious that the Kremlin intends to completely eliminate the freedom-loving Balts. Arrests, executions, and mass deportations for slave labor in Russia threaten to destroy the Baltic nations completely. Many of the national leaders and much of the intelligentsia were killed off or deported during the Russian invasion of 1940. The deportation of larger numbers, classified according to progressive degrees of untrustworthiness, began after the Russians returned in 1944. Tested Russian Communists were sent to take their places, taking over their holdings and even their names. Russian has become the official language. Recent testimony before a subcommittee of the Senate Foreign Relations Committee on the proposed genocide treaty pictured the Soviet Union as systematically extirpating the Lithuanian and Ukrainian peoples to solidify the extended Soviet frontiers with safe Russians and to provide sure base areas for an onslaught on Europe and North America. However, it is reassuring that the United States and other nations have refused to recognize the status of the Baltic states resulting from Russian aggression and continue their de jure recognition of them as independent states. The declaration of the Secretary of State on July 23, 1940, condemning Russia's aggressive acts still stands.

Unemployment Insurance

EXTENSION OF REMARKS
OF
HON. STEPHEN M. YOUNG
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mr. YOUNG. Mr. Speaker, in 1931 and 1932 I was a member of the Ohio Commission on Unemployment Insurance. I helped draft the unemployment insurance bill of Ohio, which served as a model for many States of the Union throughout the past 18 years. I believe in a strong unemployment-insurance program and introduced a bill, H. R. 7331, to extend and improve the Federal-State unemployment-insurance program. This bill is designed to meet the present-day needs of workers and to extend and improve the program generally.

Under leave to extend my remarks in the RECORD, I report that the following is a summary of the bill providing for an extension and improvement of the unemployment-insurance law.

SUMMARY OF PROVISIONS OF LEGISLATIVE PROPOSAL FOR EXTENSION AND IMPROVEMENT OF THE UNEMPLOYMENT-INSURANCE LAW

In brief, title I provides for the observance by the States of certain minimum standards with respect to the eligibility of employees for unemployment compensation benefits, amounts and duration of benefits, and permissible reasons for disqualifying insured workers. In this regard the bill reflects standards which, with respect to amounts, duration, and eligibility for benefits, are already largely embodied in a substantial number of State laws. It would, moreover, stem the trend manifested in recent years in some States to extend the disqualification provisions, even to the extent of a complete denial of benefits in many situations. These provisions would thus provide greater assurance that involuntarily unemployed workers shall receive the benefits to which they are entitled. This title would also provide unemployment-compensation benefits to many workers who are presently excluded from State unemployment-compensation programs, primarily because the Federal Unemployment Tax Act is inapplicable to firms with less than eight employees.

Title II makes certain improvements with respect to financing the States' costs of administering their unemployment-compensation laws and public-employment offices. Among other matters, this title would provide for the earmarking of the proceeds of the Federal Unemployment Tax Act and make such funds available for the exclusive purposes of defraying the States' and Federal Government's expenses incurred in the administration of the unemployment-compensation program and public-employment offices, and for providing reinsurance grants to States. This title would require States to incorporate into their laws certain provisions designed to assure that benefits will be paid only to persons legally entitled thereto and to assure participation by States in appropriate arrangements for the payment of interstate claims.

Title III provides for the making of nonreimbursable reinsurance grants to States, thereby assuring the continued solvency of the States' unemployment funds in the event of an unexpected diminution of State revenues. In this connection, mention may be made that the provisions for making reimbursable loans to States whose unemployment funds fall below a certain margin of safety expired on December 31, 1949.

Title IV contains provisions for extending the duration of benefits in critical unemployment areas. This title contains certain safeguards to assure that only those persons who have an attachment to such labor-market areas shall be entitled to receive benefits for an extended period. The additional cost of providing benefits for the period of acute unemployment in any labor-market area would be borne by the Federal Government.

Title V would extend the States' unemployment programs to Federal employees, including military personnel.

A brief summary of the more important provisions of the bill follows:

TITLE I. AMENDMENTS TO CHAPTER 9, SUBCHAPTER C, INTERNAL REVENUE CODE

Section 101 would amend section 1603 (a) of the Internal Revenue Code so as to require the States to observe, in addition to the standards presently provided for in the code, the following additional minimum standards as a condition of securing the credit-offset allowances of the Federal Unemployment Tax Act:

First. Amount of benefits: Benefit payments to unemployed insured claimants of at least an amount substantially equivalent to 50 percent of a claimant's weekly wages up to at least $30 a week for individuals with no dependents; 60

percent of a claimant's weekly wages up to at least $36 a week for individuals with one dependent; 65 percent of the claimant's weekly wages up to at least $39 a week for individuals with two dependents; 70 percent of the claimant's weekly wages up to at least $42 a week for individuals with three or more dependents.

Second. Potential duration of benefits: Benefit payments to unemployed insured claimants equivalent to at least 26 weeks of benefits in a benefit year, if a claimant remains unemployed. Cancellation of wage credits or the reduction of benefits would be permitted only in case of fraudulent claims for benefits.

Third. Eligibility for benefits: Qualification for benefits if the employee has earned in his base period in covered employment (1) as much as 30 times his basic weekly benefit amount; or (2) as much as 1½ times his high-quarter earnings; or (3) if he was employed in as many as 20 weeks in his base period. The State would decide which one of these methods it chose to apply. A State would be permitted to adopt lower eligibility requirements if it so chose.

Fourth. Disqualifications: Benefit payments to all insured claimants able and willing to work, except that a State may deny benefits for the first week of unemployment in a benefit year; it may postpone the payment of benefits for periods up to 6 weeks if the claimant voluntarily quit work without good cause, or was discharged for misconduct connected with his work, or refused suitable work without good cause. A State may deny benefits to employees participating in a strike for the duration of the strike. It may postpone or reduce the amounts of benefits potentially payable, or cancel the wage credits, of any employee who makes a false claim for benefits.

The bill provides that these standards would become effective July 1, 1952. Each State would thus be afforded ample time to amend its laws to the extent necessary to bring them into conformity with these minimum standards.

Section 102 would extend coverage by redefining the term "employer" in section 1607 (a) of the Internal Revenue Code to include any person who has one or more individuals in his employ, thus removing the present limitation on the size of employers taxable under the Federal Unemployment Tax Act.

Section 103 would redefine the term "wages" in section 1607 (b) of the Internal Revenue Code in substantially identical language as such term is defined in the Social Security Act Amendments of 1949 (H. R. 6000) passed by the House on October 5, 1949. The only substantial difference is that the bill increases the maximum wages subject to the Federal Unemployment Tax Act from $3,000 to $4,800 (cf. sec. 208 (a) of H. R. 6000). The effective date of this section would be January 1, 1952.

Section 104 (a), (b), (c), (d), and (e) redefines the term "employment" in section 1607 (c) of the Internal Revenue Code so as to provide with some modifications, the same coverage and exemptions as are provided by H. R. 6000 (compare with section 205 (a) of H. R. 6000).

Section 104 (f) would redefine the term "employee" in section 1607 (i) in language substantially similar to that used in H. R. 6000 in defining this term (compare with section 206 of H. R. 6000). Thus this bill, as H. R. 6000, would specifically include within the term "employee" certain classes of persons who are economically dependent upon an employer, such as outside salesmen, full-time insurance salesmen, homeworkers, contract loggers, and certain classes of licensees of space in mines. In addition, the bill sets forth certain basic principles to be applied in determining the employer-employee relationship with respect to all other classes of employees, as provided in H. R. 6000.

Section 104 (g) would redefine the term "State" in section 1607 (j) of the Internal Revenue Code to include Puerto Rico, making Puerto Rico, upon the concurrence of its legislature, eligible for participation in the Federal-State unemployment insurance program—see also section 106.

Section 104 (h) would redefine the term "agricultural labor" in section 1607 (l) of the Internal Revenue Code in language identical with that used in H. R. 6000 in defining this term—see section 205 (d) of H. R. 6000.

Section 104 (i) defines certain miscellaneous terms, including "American vessel and American aircraft," "American employer," "benefit year," "high-quarter wages," "weekly wages," and "week of unemployment."

Section 104 (j) provides that the effective date of this section would be January 1, 1952.

Section 105 amends section 1609 of the Internal Revenue Code so as to require the Secretary of Labor to consult with the States on matters of policy with respect to any rules or regulations affecting the States which he may issue to carry out the purposes of this measure.

Section 106 defers the extension of this bill to Puerto Rico until January 1 of the first calendar year which begins 90 days after the legislature of Puerto Rico by concurrent resolution resolves that it wishes its extension to Puerto Rico.

Section 107 provides that the unemployment taxes in Puerto Rico shall be collected by the Bureau of Internal Revenue and that the minimum standards with respect to the amounts and duration of benefits and eligibility for benefits shall not be applicable to Puerto Rico until 4 years after the act becomes applicable to Puerto Rico.

TITLE II. AMENDMENTS TO TITLE III OF THE SOCIAL SECURITY ACT, AS AMENDED

Section 201 would amend section 301 of title III of the Social Security Act to improve the administrative financing of the States' unemployment-insurance program and public employment offices.

Subsection (a) amends section 301 to provide a permanent appropriation of the proceeds of the Federal Unemployment Tax Act to the Federal Unemployment Account. It also authorizes appropriations to the Federal unemployment account of such additional sums as may be necessary to carry out the purposes of this bill.

Subsection (b) contains new provisions authorizing appropriations from the Federal unemployment account to the Department of Labor of such sums as are necessary to provide payments to States to finance the administrative costs of their unemployment compensation laws and their public employment offices.

Subsection (c) contains new provisions authorizing appropriations from the Federal unemployment account of the sums necessary for the Departments of Labor and of the Treasury to carry out their functions under the Federal Unemployment Tax Act and the Wagner-Peyser Act and to provide reinsurance grants to States.

Section 202 would amend section 302 (a) of the Social Security Act so as to require States, as a condition for receiving administrative grants, to conform to the provisions of the Wagner-Peyser Act.

Section 203 amends section 303 (a) of the Social Security Act so as to require States to incorporate into their laws, as a condition of receiving administrative grants, provisions for, first, additional methods of administration which the Secretary of Labor finds are reasonably calculated to prevent the misuse of the unemployment-compensation program by fraudulent claimants and to assure the payment of compensation only to individuals entitled thereto; and, second, for participation in plans and methods of combining wage credits and handling interstate claims which the Secretary of Labor finds are reasonably calculated to assure the prompt and full payment of benefits to interstate claimants.

Section 204 amends section 304 of the Social Security Act by redefining the term "State" to include Puerto Rico—see, however, section 107, above, as to effective date.

TITLE III. AMENDMENTS TO TITLES IX AND XII OF THE SOCIAL SECURITY ACT, AS AMENDED

Section 301 rewrites title XII of the Social Security Act. This title, as rewritten, would provide for outright grants of funds to States, from the Federal unemployment account, whenever on the last day of any calendar quarter a State's unemployment compensation fund falls below the amount of compensation paid during the 6 months' period ending on such date. The amount of the grant would be the amount estimated by the Secretary of Labor to be equal to three-fourths of the excess of the compensation which will be payable under the provisions of the State's unemployment law during the quarter for which such grant is made, over 2 percent of the taxable pay roll for such period.

In order for a State to qualify for such reinsurance grants, it would be necessary for the State to levy a minimum contribution rate of 1.2 percent for the first and any subsequent taxable year after December 31, 1952, and prior to December 31, 1957, and for each of the five preceding taxable years beginning after December 31, 1957, whenever, on the computation date for such taxable years, the State's unemployment fund fell below an amount equal to 6 percent

of the most recent taxable pay roll, or less than the amount paid from such fund during the 2 years immediately preceding such date, whichever amount was greater.

Funds provided by reinsurance grants could be used solely for the purpose of paying unemployment benefits. Any unused funds would have to be returned to the Treasury to the credit of the Federal unemployment account when the State was no longer eligible to receive a grant.

Section 302 would amend section 904 (h) of title IX of the Social Security Act, as amended, so as to authorize the appropriation to the Federal unemployment account of the proceeds of the Federal unemployment tax collected prior to December 31, 1950, less the amount expended for administrative expenses.

TITLE IV. EXTENSION OF DURATION OF BENEFITS IN CRITICAL UNEMPLOYMENT AREAS

Title IV of the bill would add a new title to the Social Security Act—title XIV—which would provide for an extension of the duration of benefits in critical unemployment areas. The program would be administered by the States, and the Federal Government would reimburse the States for the benefits paid under this title. In brief, title XIV of the Social Security Act, as amended, would provide:

Section 1401 would define certain basic terms used in this title.

Section 1402 would authorize the Secretary of Labor on behalf of the United States, upon the request of the Governor of any State, to enter into an agreement with such State which would provide for the prolongation of benefits of insured workers up to 52 weeks in their benefit year in any labor market area—as defined by the Secretary of Labor—in which during each of the immediately preceding three calendar months unemployment exceeded 12 percent of the average monthly covered employment in the State during the preceding calendar year. Insured workers would be entitled to receive benefits for such extended period of time only if they were last employed in such area and had resided therein for at least 26 weeks. Extended benefits would terminate as soon as the Secretary found that unemployment of insured individuals had fallen below the 12 percent figure during each of the three immediately preceding calendar months.

Section 1403 would make the pertinent provisions of title XIII of the Social Security Act—reconversion unemployment benefits for seamen—applicable to the administration of this title and for reimbursing States for the additional sums expended for benefits under this title.

TITLE V. UNEMPLOYMENT COMPENSATION BENEFITS FOR FEDERAL WORKERS

Title V of the bill would add a new title to the Social Security Act—title XV—which would provide for unemployment compensation benefits for Federal employees. In general, the program would be administered by the States, as agents of the Federal Government, pursuant to agreements entered into between the States and the Secretary of Labor. In the absence of such an agreement with any State, the program would be administered by the Secretary of Labor. Federal employees would enjoy the same rights and be subject to the same disqualifications as provided by the unemployment compensation law of the State where they last performed Federal services. The Government would either advance or reimburse the States for the sums necessary to carry out the provisions of this title. The States would be entitled to additional grants under title III of the Social Security Act for the additional administrative expenses incurred as a result of administering this program. In brief, this title contains the following sections:

Section 1501 defines the terms "Federal services," "Federal wages," "Federal employee," and "benefits." The term "Federal employee" is defined to include any individual who has performed Federal services, including military services. The term "Federal services" is defined to exclude services performed by an elective officer in the executive or legislative branches of the Government.

Section 1502 would require the various branches of the Federal Government to make available to the Secretary of Labor, or to the appropriate State agency administering this title, such information as the Secretary of Labor finds is practicable and necessary to determine a Federal employee's entitlement to benefits.

Section 1503 would authorize the Secretary of Labor to enter into agreements with any State whereby the State would act as an agent of the Federal Government in the administration of this title. A Federal employee would be entitled to receive benefits on the same terms and be subject to the same disqualifications as are provided by the State law where such employee last performed Federal services. Federal employees who last performed services outside any State would have their rights determined under the law of the State of their residence. In the absence of an agreement with any State, the Secretary of Labor would administer the payment of benefits in the same amounts, on substantially the same terms, and subject to substantially the same conditions as though such an agreement had been entered into with the State.

Section 1504 contains provisions for the adjustment of benefits in cases of employees who would qualify for benefits under this title as well as under the Servicemen's Readjustment Act of 1944.

Section 1505 provides that Federal employees shall have the same right to have their benefit determinations reviewed by appropriate State administrative and judicial tribunals as other employees covered by the State law; that States shall be entitled to receive grants under title III of the Social Security Act for their expenses incurred in the administration of this program, and that the States shall furnish such information to the Secretary of Labor as may be necessary to carry out the purposes of this title.

Section 1506 provides for reimbursing the States, either in advance or by way of reimbursement, for the amount of benefits paid by the States under this title.

Section 1507 provides that a Federal employee would not be entitled to receive unemployment-compensation benefits until he has exhausted any accrued annual leave, whether or not paid in a lump sum.

Section 1508 authorizes an appropriation of the necessary funds to carry out the purposes of this title.

Section 1509 authorizes the Secretary of Labor to issue such rules and regulations as may be necessary to carry out the provisions of titles IV and V of this bill.

EXPLANATION OF PROPOSED UNEMPLOYMENT-INSURANCE AMENDMENTS

In his state of the Union message, the President said with respect to unemployment insurance:

> I also urge that the Congress strengthen our unemployment-compensation law to meet present-day needs more adequately. The economic downturn of the past year was the first real test that our system of unemployment insurance has had to meet. That test has proved the wisdom of the system, but it has also made strikingly apparent the need for improving its operation and increasing its coverage and its benefits.

In his budget message, the President outlined more specifically the recommendations he would make with respect to amending the Federal unemployment-compensation legislation. This bill, although not the administration proposal, with a few exceptions, embodies the President's proposals.

The proposal provides additional minimum standards which State laws must meet as a condition for Federal approval in order that employers may receive credit against the Federal unemployment tax for their contributions under such State unemployment-insurance laws. Certain standards are already required in the Federal legislation. The additional standards proposed are designed to assure that unemployed workers will receive a minimum of protection, no matter what State unemployment-insurance law they come under. The State laws must provide at least this much protection; they will be free to provide more adequate protection. These new standards would not have to be met until July 1, 1952, in order to give the States time to make such changes in their next regular legislative sessions.

With respect to benefit amount, the States would be required to pay 50 percent of the former weekly wages up to a maximum of at least $30 a week for totally unemployed individuals without dependents, with supplementary allowances for dependents up to 70 percent of weekly wages or at least $42 a week as a maximum for individuals with three or more dependents. At present, the highest benefit paid by any State not paying dependents' allowances is $27 a week and 19 States have a maximum benefit of $20 a week or less. Ohio now pays maximum benefits of $25 a week for persons without dependents and a maximum of $30 a week for persons with dependents.

The measure would require that benefits be paid for a duration of 26 weeks to all persons who remain unemployed that long. This standard at present is

met only by the State of New York, although 14 other States pay up to a maximum of 26 weeks, depending on the amount of previous employment or wages. Ohio pays up to a maximum of 26 weeks, but duration varies from 12 to 26 weeks, depending on former earnings.

The proposal would place certain limitations on the disqualifications which the States could impose. A State could impose a maximum of 6 weeks' disqualification for voluntary quitting, discharge for misconduct, or refusal of suitable employment. Ohio disqualifies for a maximum of 4 weeks for voluntary quitting and disqualification for misconduct, but with respect to refusal of suitable employment Ohio disqualifies for the duration of the unemployment. The bill would permit postponement but not reduction nor cancellation of benefit rights by the amount of the disqualification. About a third of the States reduce or cancel benefit rights in connection with such disqualifications. Ohio reduces benefits with respect to voluntary quitting and discharge for misconduct. Ohio is therefore in some respects more lenient and in some respect more stringent than the proposed standard.

The bill would also limit disqualification in case of labor disputes to unemployment due to strikes. Ohio is one of the nine States which would conform with this limitation, since it does not disqualify for unemployment due to lock-outs.

The present restriction of coverage of the Federal Unemployment Tax Act to employers of eight or more persons would be removed by the bill. At present 29 States cover smaller firms than 8 or more, Ohio covering employers of 3 or more. However, the States have held back on extending coverage to small firms until the Federal Government leads the way. Most of the States have passed provisions which would automatically extend the coverage of their laws when the coverage of the Federal tax is extended. The bill would supply the Federal leadership in covering the small firms.

The measure follows H. R. 6000, which amends Federal old-age and survivors insurance, with respect to certain other extensions of coverage, namely coverage of border-line agricultural workers and a new definition of employee. These new definitions are the result of exhaustive study by the Committee on Ways and Means and will result in a more equitable definition of who is covered by the act.

The bill also provides for unemployment benefits for unemployed Federal workers, both those who have been in civilian and military service. Benefits would be paid according to the laws of the States in which the Federal employee worked or was resident.

In title II of the act it is provided that all the proceeds from the Federal unemployment tax would be automatically appropriated to be used for unemployment-insurance purposes. The first call on these funds would be for grants to the States to defray their costs of administering unemployment insurance and the employment service, and the balance would be accumulated as a reserve to provide for reinsurance grants to those States in jeopardy of exhausting their unemployment funds.

In addition to the present requirements which States must meet in order to receive grants for administration, the bill would require the States to provide effective procedures for the prevention, detection, and adjudication of fraud and to cooperate in interstate plans for the payment of benefits to interstate workers.

Reinsurance grants would be made to States whose reserves have dropped below the previous 6 months' benefit costs. The grants would be equal to three-fourths of the benefit cost in excess of 2 percent of taxable pay rolls. In order to assure prudent financing on the part of the States, a State applying for reinsurance must have established a minimum contribution rate of 1.2 percent of taxable pay rolls when its reserve fell below 6 percent of taxable pay rolls or 2 years' benefit expenditures.

A Lesson for Truman to Learn

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, February 16 (legislative day of Wednesday, January 4), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Lesson for Truman to Learn," published in the Williamsport Sun for February 13.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A LESSON FOR TRUMAN TO LEARN

A picture of Abraham Lincoln and his son, Tad, has been distributed by the United States Savings Bonds Division of the Treasury Department. It tells its own story, and teaches its own important lesson.

It is a famous drawing of the martyred President which has become popular because it has a tone of warmth and security about it. How trustingly the lad turns to his father for explanation of the book they are reading! How much the picture seems to speak of home life and parental concern for the boy's future welfare!

The text which the Savings Bonds Division has written under the picture is important, too. It emphasizes the value of thrift. It stresses the importance of frugality, of living within one's income, of laying aside regularly a portion of one's earnings against "a rainy day." It commends private initiative and lauds both ambition and resourcefulness.

It says that comfort and security, a home and education, are "the heritage of every child." Such who have attained this heritage heretofore have done so by habits of thrift and careful living.

All this the Treasury Department applauds. Then, it adds the wise counsel that future security—a home and education—"can be attained through a regular and automatic investment in United States Savings Bonds."

That is good advice. And it would be well for more people to heed it.

But we find ourselves wondering whether, by the remotest chance, this Treasury Department sales talk on thrift and savings has come to the attention of President Truman. We believe that it contains a lesson for him, and for those around him who seem to find it so easy to spend money.

If thrift and systematic saving are so desirable for individuals, why does not the Federal Government practice it? If savings bonds are to guarantee happier and better futures for the children of this generation, then the Federal Government needs to operate on a balanced budget and in a condition of solvency which will assure the soundness of its investments.

If the people are to turn over their savings to the Federal Government through the purchase of its bonds, then the Truman administration is obligated to restrain its spendthrift inclinations and to conduct public affairs in a manner designed to win public confidence.

It is well for the Treasury Department to urge the purchase of savings bonds. But President Truman must remember that, when people invest money, they look at the balance sheet. They want evidence of solvency. Annual deficits running into billions of dollars do not encourage investors.

That is a lesson for President Truman to learn.

Greetings by Commander in Chief Lewis, Congressional Dinner, February 15, 1950

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mr. McCORMACK. Mr. Speaker, under permission granted to me to extend my remarks in the RECORD, it is a pleasure for me to include a splendid, inspiring, and effective speech made by Clyde A. Lewis, national commander in chief, Veterans of Foreign Wars, in the greetings extended by him at the commander in chief's congressional dinner, Hotel Statler, the evening of February 15, 1950:

Secretary of Labor Tobin, Senators, and Members of the House of Representatives, Gen. Omar Bradley, and distinguished senior officers of the armed forces of the United States, national officers, department commanders, and comrades of the Veterans of Foreign Wars of the United States, I bid you welcome.

It is an honor for me, on behalf of my organization, to greet such a distinguished body of leaders of our American governmental, military, and civil life. I am impressed by the fact that yours is a trust of unbounded opportunity and great influence in our Republic.

It has been the pleasure of the Veterans of Foreign Wars for the last two decades to hold the traditional dinner—we please to call it the congressional dinner—because it is given in honor of the Members of Congress who have served in the armed forces of the United States. We think it a splendid opportunity to meet the honorable gentlemen from the Hill, most of whom were once our buddies, our comrades in arms, and our shipmates—veterans all.

I should like at the outset of our program to reaffirm our pledge that this gathering is not—I repeat not—for the purpose of talking veterans business or official "shop," but rather to break bread and, if the spirit moves

us, to have a small libation together, all in the spirit of comradeship.

In my 75,000 miles of travel during the past 6 months as an official and commander in chief of the Veterans of Foreign Wars, I find our people intensely interested in the general aspects of our foreign affairs, our national defense, and in the state of the Union. Daily I am impressed by the keen interest of the people because, to my view, it means that democracy is functioning definitely at the "grass roots level." My observation is that our freedom-loving citizens want to know more than ever before just where they are going and what will be their status when they get there. For, as they proceed, so proceeds the Republic.

They sense that ominous political forces are loose in the world; they feel that the atomic era has brought us all to a crossroads in the history of mankind, and furthermore, the turn we are making, or should make, is a critical one for the United States, and possibly for the entire world.

There is something else I find the people are deeply sensible of and that is that the United States holds the leadership, whether we like it or not, of the so-called democratic bloc of nations. And gentlemen, your constituents believe with all their hearts that this bloc holds the greatest hope for all of humanity. The faith of the people in democracy is great.

Most of our people are truly thankful that in our native land is found the greatest abundance of the good things of life ever known to the average man in all the melancholy history of civilization—the most precious of them being liberty and the opportunity to pursue happiness and prosperity. This trust and faith of the people is an inspiring fact.

Never have our people placed such high value on competent leadership in national and international affairs. This is easily explained—because the people feel that only by the wisdom, the resoluteness, and the courage of our leaders will we be able to fulfill our destiny and thereby play our great part among the Nations of the earth.

We of the Veterans of Foreign Wars pledge ourselves to uphold those measures you leaders take for the good of the United States in general: a strong national defense and a realistic foreign policy. We believe peace may be maintained only by a strong defense and a realistic foreign policy. But a weak defense, any major loss of United States sovereignty, a flabby foreign policy and an impairment of the Constitution of the United States is, in our considered judgment, the quickest road to involvement in war. The VFW does not believe in peace at any price; it must be peace with honor.

Finally, permit me to say that because you gentlemen, our guests, are confronted with a multitudinous number of grave problems, the solution of which is of highest importance to our beloved Nation we thank you again for taking some of your valuable time to join us here at a dinner given by veterans for veterans.

Gentlemen, we are profoundly honored.

A Real Answer to "Methodism's Pink Fringe"

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mr. VELDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article appearing in the Herald, published by the First Methodist Church, of Peoria, Ill., entitled "Methodism's Pink Fringe":

"METHODISM'S PINK FRINGE"

What about it? The immediate and direct answer is that Methodism does not have one.

The article by Stanley High in the current issue of the Reader's Digest, bearing the above title, has provoked wide-spread discussion and has given many good Methodists a great deal of anxiety. Good Methodists do not like to have any reflection cast upon their church. They do not like to be numbered with those whose loyalty to basic American principles is subject to question. For these and many other sound reasons the publication of items like the Digest article is disturbing.

Let those Methodists who love their church cease worrying. There is, and there can be, no question of the loyalty and the sound common sense of the Methodist Church. It is probably the most thoroughly American institution in the country. It came into being as a direct result of the Revolutionary War—and from its inception has been American to the core. It always will be. Not in a narrow nationalistic sense—for it is also one of the greatest missionary agencies in the world. Sprung from the good earth of this great country, nurtured with the vigor of our American institutions—it has given back to this country an unsurpassed devotion, its purpose and prayer being best expressed in the familiar words: "America, America, God shed His grace on thee, and crown thy good with brotherhood, from sea to shining sea."

But the Methodist Church has no patent on the name, or rather the word "Methodist." It has been appropriated by many groups with various kinds of prefixes and suffixes. So, there are many organizations that somewhere in their title include the word "Methodist"; among them the Methodist Federation for Social Service. None of them should be identified with the Methodist Church, the official name of the church which was organized and established by John Wesley, and which is a duly incorporated body. What is more important, none of them, including the Methodist Federation for Social Service, has any right to speak for or in the name of the Methodist Church.

The only body that can speak for the Methodist Church is the general conference of the church, which is a delegated body whose membership is made up of delegates whose election begins with every local church in the denomination. The general conference meets every 4 years. It is to the Methodist Church what the Congress of the United States is to the Nation. It is the supreme legislative body of the church. Its actions and its pronouncements are regularly printed in a volume known as the Discipline of the Methodist Church. No other group, not even the Council of Bishops, can speak in the name of the church.

Methodism's official pronouncements upon social questions is found in paragraph 2020 of the Discipline of 1948. That pronouncement is as American as Yankee Doodle and as Christian as the Sermon on the Mount. Every intelligent Methodist should be familiar with it and will be proud of it. There is no other Methodist word and no other Methodist position upon current social matters and problems than that. There is therefore no pink fringe to Methodism.

Why did Stanley High write the article in the Digest? Only Stanley High can answer that question—but there is room for deduction. Probably Stanley High does not like some of the things that the federation has been saying; even more probable he does not like some of the spokesmen of the federation. Giving him full credit—it is likely that he does not like to see a great church suffer for some of the radical statements made by an organization that includes in its membership some of the most highly placed ministers and officers of the church. If that be true he has the support and gratitude of many thousands of the leading ministers and laymen of the church.

It is regrettable that an organization that, admittedly, deals with controversial issues, and that seeks radical changes in the economic and social life of the Nation, should appropriate the name of a great church even though its membership is made up almost entirely, if not exclusively, of members of that church. It ought to stand upon its own feet. Having said which it needs to be said that the members have every right to hold and espouse their own ideas on the problems and issues involved so long as they do so within the bounds of proper respect for law. About this there has been no question. In Voltaire's famous statement—we can differ with everything they say and yet defend their right to say it. But it ought not to be said in such a way as to convey the impression that a great church is saying it.

The conclusion of the whole matter is this: the Methodist Federation for Social Service is not the Methodist Church. It has no official connection with the Methodist Church. When it speaks it speaks only for itself.

There is no Methodism's pink fringe—and nobody knows that better than Stanley High.

W. T. S.

Faker Einstein Joins Communists in Attacking Judge Medina

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mr. RANKIN. Mr. Speaker, on February 13 I inserted in the RECORD excerpts from the report of the Un-American Activities Committee showing a large number of Communist-front organizations that Albert Einstein, the alleged scientist, is now, or has been, mixed up with.

Now, I find that this same Albert Einstein has joined in filing a brief in the United States court of appeals, in New York, to reverse the decision of Judge Harold R. Medina for adjudging six Communist lawyers in contempt of court for their efforts to demoralize and intimidate the court and the jury during the trial of certain Communists for their treasonable efforts to overthrow this Government.

This information will probably come as a shock to the average American, for nobody ever heard of Albert Einstein being a lawyer before.

In order that no Member of Congress may be misled about this proposition, I am inserting at this point a column from page 16 of the New York Times of Tuesday, February 7, 1950, carrying the whole story, and showing that Albert Einstein is one of the signers of the petition to reverse the action of Judge Medina in punishing these communistic lawyers for their contemptible efforts to harass, disturb, and demoralize his court.

The article referred to reads as follows:

CIRCUIT COURT GETS RED LAWYERS' PLEA—DEFENSE SAYS MEDINA LACKED RIGHT TO IMPOSE CONTEMPT SENTENCES AFTER TRIAL

(By Russell Porter)

Six defense counsel at last year's Communist trial asked the United States circuit court of appeals yesterday to reverse Judge Harold R. Medina's action in convicting them of contempt of court.

After 2½ hours of defense argument, the case was adjourned until this morning, when the defense has asked for another hour and Government counsel for an hour. Pending completion of the argument, another stay of execution was granted on the 1-to-6-month prison sentences imposed by Judge Medina last October. The sentences were originally set to begin in November, but were stayed during appeal.

Eleven members of the Communist Party's American Politburo are also free on bail pending appeal from their conviction for criminal conspiracy to teach and advocate violent overthrow of the Government.

At the end of the 9-month trial Judge Medina immediately adjudged defense counsel guilty of wholesale contempt throughout the trial as part of a conspiracy to obstruct the administration of justice and sabotage the trial.

Eugene Dennis, the party's general secretary, who acted as his own counsel, was convicted in both groups. The other defense counsel held in contempt were Harry Sacher, of New York; A. J. Isserman, of Newark, N. J.; Louis F. McCabe, of Philadelphia; George W. Crockett, Jr., of Detroit; and Richard Gladstein, of San Francisco.

Paul L. Ross, of New York; Thomas D. McBride, of Philadelphia; and Charles J. Katz, of Hollywood, Calif., appeared yesterday as attorneys for defense counsel.

SAYS POWERS ARE LIMITED

They argued that Judge Medina's legal powers to impose summary punishment for contempt were restricted to immediate emergency action on contempts committed in his presence that would interfere with the administration of justice unless checked.

He had no right, they insisted, to take such action at the end of the trial, when there was no disturbance or other threat against the order of the court, or to do so because of an alleged conspiratorial agreement that obviously could not have been made in his presence.

The constitutional right of due process, they contended, required that any action at the end of the trial should have been taken after a hearing by an impartial judge.

In comments from the bench, Judge Jerome N. Frank sharply questioned defense arguments. Judge Frank pointed out that Judge Medina had repeatedly warned defense counsel during the trial that they were in contempt and that he was going to do something after the trial. It was obvious, Judge Frank added, that Judge Medina didn't mean he was merely going to write a nasty letter.

"The judge thought it would disrupt the trial if he sent them to jail during the trial," Judge Frank added.

Judge Frank raised the question whether Judge Medina's warnings were not equivalent to a judge's recognized power to impose judgments of contempt for various acts as they occurred, and to suspend sentence until after the trial.

As to the alleged conspiracy by defense counsel, Judge Frank asked if a judge who saw all the outward manifestations in his presence that such an agreement had been made, had not the right to draw inferences that it existed.

"Only after a hearing," Mr. Katz insisted.

QUESTIONS VALUE OF HEARING

Judge Frank then asked what evidence could be adduced at such a hearing aside from defense denials of conspiracy.

"They are now getting a hearing before three judges," said Judge Frank. "If we find no reasonable judge could reach any other conclusion [than Judge Medina's] wouldn't it be foolish to send it back to another judge?"

Judge Frank asked whether any error that might have been committed in the district court wasn't a harmless one.

Mr. Katz replied that at a hearing defense counsel could explain their reasons, which did not appear in the trial record for doing and saying what they had said and done. He said they could bring evidence whether or not they had sneered at or badgered the judge as charged, and as to how loud they had argued.

Particularly in view of Judge Medina's charges that defense counsel had falsely accused him of racial discrimination and lack of integrity and had tried to impair his health, it was argued, another judge should have disposed of the case.

Mr. Ross denied there had been any conspiracy by defense counsel or that the individual instances cited by Judge Medina warranted punishment. He said defense counsel had only exercised their legal right to present their clients' case vigorously and persistently.

Several lawyers were allowed to file briefs as friends of the court. These briefs bore several hundred signatures, including those of Albert Einstein and Thomas Mann. Judge Augustus Hand, presiding, said the introduction of the briefs seemed very foolish, since they could not add anything to the legal arguments fully briefed by defense counsel.

Judge Frank raised the question whether these briefs were not intended merely to indicate a lot of people are rooting for the defendants.

Judge Charles E. Clark was the third member of the court.

Housing: The Political Football

EXTENSION OF REMARKS

OF

HON. HENRY J. LATHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1950

Mr. LATHAM. Mr. Speaker, for the benefit of the Members, I wish to extend in the Appendix of the RECORD a talk given by Clarence R. Knickman, a distinguished citizen of my district, on the subject of housing:

Many Federal, city and State officials have found that housing is a subject that the public is sympathetic with and very much confused about. The peoples' sympathies are being exploited; hence housing is fast becoming the biggest give-away program in the country.

Low-cost housing and tax exemption started under the heading of slum clearance but every conceivable subterfuge has sprouted from this and is gaining momentum, and if unchecked, will result in full-scale socialized housing.

The backbone of good American citizenship is home ownership. What incentives can a family have for home ownership when they realize that the more tax-exempt housing that is created, the larger is the home owners tax burden. What incentive will investors have to build rental housing when Government subsidizes construction that is tax free in competition with and at the expense of higher taxes of private owned and operated properties.

Up to the present time there existed an emergency; that emergency is definitely over. There are plenty of vacant houses and vacant apartments. Apartment-house owners have started offering 1 and 2 months' concessions in order to try to fill their vacancies. These vacant apartments are for families earning $3,500 annually and up. Advertisements in the newspapers also offer free moving expenses for prospective tenants. That is the condition now, but in addition to these vacancies there are many thousands of additional apartments in the New York metropolitan area under construction, and many thousands more planned and approved for immediate start in the spring.

Some of our legislators and housing officials are trying to enact legislation permitting families earning up to $9,500 per year to live in tax-exempt housing; just think of such an outrage, when the average home owner and legitimate rent payer whose tax will increase because all these tax exemptions, earns only about one-half of that income.

There now exists city owned public housing, tax-exempt renting at $8 per room assisted by cash subsidies by the State and Federal Governments. Also city owned middle-income housing at $17 per room tax exempt. Tax exemption is also granted on redevelopment housing. It is also granted on limited-dividend housing both for rental and cooperative ownership. The latter is for private investors, such as organized groups, labor unions, etc. This limited-dividend housing is increasing rapidly. These groups realize the benefits their members can achieve in cooperative ownership and renting units in projects carrying tax exemption. Most of these groups who are enjoying these benefits consist of families high above the $3,500 income group.

When you stop to realize that at the present time one-fourth of the real estate in the city of New York is tax free ($6,000,000,000 is tax free). This, of course, includes city and Government-owned property within the city, institutions, churches, etc., but $216,000,000 of this is in tax-exempt public-housing redevelopment and limited dividend projects. This will increase considerably upon the development of the vast number of these projects now being planned and being voted on by the legislators.

The low-income group earning less than $3,500 is the group that needs help, and they are the only ones that should be helped.

The city of New York or any large municipality could make a very profitable investment through slum clearance by condemning slum areas or outmoded areas which now produce very little tax revenue. A good many of these sectors are very convenient to transportation. The city could readily auction this property off to private builders at low prices with a distinct agreement that low-cost rental housing be built thereon for families earning less than $3,500. The increase in taxes due to the building, plus the creation of new business areas surrounding these developments, would provide great income in additional taxes for the city.

It is a well established and proven fact that private enterprise builds cheaper than government, and private enterprise can operate and manage these properties with greater efficiency and economy. Elected and appointed Government officials should go all out to cooperate and assist private builders who are really the creators of the source from which taxes are derived.

Home purchase should be encouraged. Home ownership is the American way of life; it is the American's dream.

Reduce carrying charges on new home ownership. This will create a building boom and all talk of housing shortage will vanish. At present the city of New York assesses new homes much higher than the old ones. Why discriminate between the outs and the ins? Partial exemption on small, new one- and two-family houses would go a long way in reducing monthly carrying charges.

Further reduction in carrying charges could be made by using semiliquidating mortgages. Why make a new house prospect liquidate his entire mortgage in 15 to 20 years? A well-built house, well kept, will have great value after this period. Write a mortgage for 15 years semiliquidating. Most of these owners will have achieved enough success to pay the balance at that time. If not, this mortgage could be renewed for the balance and for a period commensurate with the condition of the house and with the owner's ability to pay. At this time if the mortgagee wants his money, the remaining mortgage would be a conservative investment for any mortgagee.

Rent control is no solution to the problem of providing low-income groups with adequate housing. Most of the controlled rental units are in old buildings where rents are very low. Many of the tenants in these controlled units have achieved great success and greater incomes, but their controlled rental unit is a protected franchise which when once surrendered can never be regained. So, no matter how inconvenient or undesirable it might be to the higher-income family, selfishness prevents his releasing it to some family who could not afford better. Rent control creates such inequities between the outs and the ins, that it cannot be justified.

I repeat again, the emergency is over—let's solve these problems with some sound, common-sense thinking.

Alternative to Atomic Chaos

EXTENSION OF REMARKS

OF

HON. ROBERT S. KERR

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Thursday, February 16 (legislative day of Wednesday, January 4), 1950

Mr. KERR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Alternative to Atomic Chaos" from the Christian Century of February 15, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ALTERNATIVE TO ATOMIC CHAOS

Can this atomic arms race toward universal destruction be stopped? Apparently neither Truman nor his State Department is greatly concerned whether it is stopped or not. They accept passively the stalemate in the United Nations Atomic Energy Commission, which has brought atomic control negotiations to a halt. They will not even act on the silly dispute over Chinese representation on the Commission to get the negotiations started again. They are adamant against direct exchanges with Stalin. They insist on the Baruch control plan, even though the props were knocked from under that plan when the American monopoly of atomic weapons ended. But they think public fatalism has produced such widespread apathy that there will be no serious pressure for any change in official policy. So that policy is to make the most terrible bombs possible as quickly as possible, and for the rest to let things drift along and see what happens.

So far only one national leader has challenged this drift toward disaster. To be sure, Senator VANDENBERG and a dozen scientists who helped start the atomic arms race have suggested that the United Nations be assured that, after we have produced a hydrogen bomb, we will never use it except in retaliation. But that sort of assurance will never stop an arms race—especially since we did drop atomic bombs on Japan without any necessity whatever. Washington rumors hint that David E. Lilienthal may have something important to say on this atomic arms race after he gives up the chairmanship of the United States Atomic Energy Commission. At this writing, however, Mr. Lilienthal is still gagged by his official position. Only one national leader has spoken the truth as to where the atomic arms race is taking us and coupled with that truth a proposal both statesmanlike and Christian as to how to stop it. But that courageous speaker is the one Member of Congress who knows most about what is at stake.

On February 2, hard on the heels of President Truman's order to the AEC to continue work on the H-bomb, Senator BRIEN MCMAHON, of Connecticut, made a speech in the Senate freighted with destiny for the Nation and for all mankind. Senator MCMAHON, as chairman of the Joint Committee on Atomic Energy of both Houses of Congress, knows as much as any living man about the nature of the atomic arms race, where it has carried us thus far and where it is headed. His speech should be read word by word, it should be studied clause by clause, in every high school, college, editorial office, discussion club, public affairs group, adult Bible class, ministers' meeting, radio forum or other place where citizens consult together in the United States.[1] If the newspaper in your town has not printed the McMahon speech in full, ask it to do so, making sure that enough citizens endorse the suggestion to give it maximum weight with your newspaper publisher.

I

Every thoughtful citizen, on reading the McMahon speech, will see at once that here is the first proposal for dealing with the atomic arms race commensurate with the urgency of the crisis this race has produced. Senator MCMAHON began by agreeing that under present circumstances President Truman had no choice but to approve production of the hydrogen bomb. He went on, however, to point out that this insures that the Russians will build a similar bomb and that any military advantage we may gain by building the H-bomb first will be short-lived.

"Let me warn, with all the solemnity at my command, that building hydrogen bombs does not promise positive security for the United States; it only promises the negative result of averting, for a few months or years, well-nigh certain catastrophe."

"We are plunged into a truly terrible arms race," the Senator warned his colleagues. What can be done about it? There are only two choices. The United States can go on with the cold war, as President Truman seems content to do. But "5,000 years of history" teach that will end in another world war—this time, a hydrogen war. Moreover, maintaining the cold war is undermining liberty in this country, and if we keep it up in terms of an atomic arms race "We will find ourselves more and more compelled to imitate the totalitarian rival." Liberty, as well as human survival, is at stake.

Our only other choice is to move heaven and earth to stop the atomic armaments race. How? We must regard no suggestion as too startling or unconventional for careful consideration. And we must be guided, disciplined, and inspired by our code of ethics, and democratic peace-loving decencies. The Baruch plan, when originally proposed, was such a pioneering and morally acceptable policy. But it failed to win the concurrence of the Russians. Today, with the American monopoly of atomic weapons broken, it is obsolete. So we must try again. "It is my intense conviction," said Mr. MCMAHON, "that our decision, born of necessity, to build the hydrogen bomb, must be accompanied by the immediate initiation of a moral crusade for peace having far greater potential effect than any physical weapon, even chunks of the sun. Otherwise we would deal a severe blow both to our moral position and to our fervent hopes for a secure future."

To make this new proposal succeed where the Baruch plan failed, Senator MCMAHON pointed out, it must be made known to the Russian people and others behind the iron curtain and must be "sold" likewise to the peoples on this side of the iron curtain, our formal allies, who today are just about as afraid of where American atomic policy is heading as are the Russians. In this latter observation, the Senator was making the same point the Christian Century has tried on many past occasions to emphasize. (See, for example, Let's Change the Voice of America, December 14, 1949.) He insisted that until the American people spend more on trying to make their peace proposals known to others than they spend on advertising cosmetics, they cannot pretend even to themselves that they are seriously tackling this problem. The Connecticut Senator advanced various thought-provoking specific suggestions as to how to go about this task of penetrating other minds—particularly Russian minds.

"At almost any cost we must assure that the Russian people have opportunity to consider, side by side, the atomic proposals of their own rulers and our atomic proposals—and that the Russian people act as part of the world jury which brings in a verdict concerning this monumental issue."

Then Senator MCMAHON tackled the key question as to what the United States proposal for control of A-bombs and H-bombs should be if the atomic arms race is to be stopped. It must, he insisted, provide for "strict control of raw materials, strict control of plants, and continuous inspection." Walter Lippmann interprets this to mean that the Senator was still calling for Russian acceptance of the outdated Baruch plan. The words, to be sure, do conform to the general structure of that plan, but they do not necessarily involve adherence to its details. In the interest of good faith, however, Senator MCMAHON should, if he intends to push any plan involving continuous inspection of plants by an international body—which would include Russian representatives—ask the Senate to adopt a prior resolution affirming its readiness to ratify such an agreement. One reason the Baruch plan failed was because few believed that, if adopted by the UN, the Senate would ever have given it the two-thirds majority required by treaties.

Whatever provisions are proposed to set up effective atomic controls, Senator MCMAHON made clear his belief that these must be accompanied by certain constructive and imagination-stirring proffers on a scale of generosity sufficient to induce other nations and peoples to accept the necessary international controls. It was at that point that Senator MCMAHON sketched the idea which captured the headlines in the daily press. "Let this Nation," he said, "offer to spend for the next 5 years two-thirds of its present military outlay—that is, $10,000,000,000 a year for 5 years—on giving substance to

[1] The full text of the speech is to be found in the New York Times for February 3, or may be obtained from Senator BRIEN MCMAHON, Senate Office Building, Washington, D. C.

President Truman's point 4 idea, on developing peaceful uses of atomic energy, and on giving economic aid to all nations, including Russia.

The $50,000,000,000 would not be given without conditions. It must be matched by acceptance of the conditions for an effective UN control of the production of atomic weapons and by an undertaking on the part of the other nations that they likewise would devote two-thirds of their present spending on armaments to the constructive ends outlined by Senator McMAHON. But with any such devotion of resources during the next 5 years to raising the living standards of all mankind—and Senator McMAHON hinted, out of the great knowledge he possesses as chairman of the Atomic Energy Committee, at productive triumphs of breath-taking immensity which are now within reach—the tension and fear now harrying the nations toward disaster can be lifted. Then the atomic arms race will end. Then mankind will recover the opportunities of peace.

Senator McMAHON had no illusions as to the difficulty of winning the Russians to acceptance of such a proposal. But difficulties are something to be tackled, not bowed to in despair. He had no illusions, moreover, as to the fatalistic cynicism with which his proposed policy will be greeted by some Americans. But he asked that those who reject this plan for ending the arms race bring forward a better one. "In 1945 and 1946, when our thoughts were focused upon the Hiroshima bomb, we enjoyed an opportunity to wage atomic peace that somehow—despite the magnificence and generosity of our proposal to the United Nations—we did not fully exploit. Our present concern with the hydrogen bomb furnishes a second opportunity. I do not think a third will be given us."

II

There, for the present, Senator McMAHON left his proposal. It was as much warning as proposal—warning based on the immense knowledge he possesses. And it was as much appeal as warning. It was an appeal to his fellow Members in Congress. It was an appeal to the President of the United States and to the State Department. It was an appeal to Stalin, to the government of the Soviet Union and to the Russian people. It was an appeal to the conscience and the moral courage of all mankind. Is such an appeal to be allowed to drop into obscurity? Is it to molder in the files of the CONGRESSIONAL RECORD until those files disappear in a hydrogen blast along with the other works of man? Is public apathy, murmuring at the approach of catastrophe but accepting it as inescapable, to let this appeal "echo away into silence as though it had never been"? That is the question which now confronts the American public, and particularly the American churches.

Senator McMAHON did not present his proposal as the final word by which to end the atomic arms race. He did not claim for it any such plenary inspiration as the administration has tried to impute to the Baruch plan in the meetings of the United Nations Atomic Energy Commission. We believe, for example, that the McMAHON plan could be strengthened at the point of immediate action if it included the proposal of the American Friends Service Committee for an interim sealing of atomic stockpiles by the United Nations pending the conclusion of permanent agreements for atomic disarmament. We see no reason why Senator McMAHON should not incorporate that Quaker suggestion in his program. Details of the policy toward which Mr. McMAHON is pointing are all to be worked out—and that is one of its signs of wisdom.

But the McMahon speech should have important historical consequences. First, because it shows how many possibilities for ending the atomic arms race and using the new powers of atomic fission for constructive purposes are still unexplored. Second, because by showing this and by the boldness and imagination of its proposals it may arouse the people from the apathy into which they have sunk as atomic devastation has drawn ever closer. Third, because it should make it extremely difficult—in fact, well-nigh impossible—for White House and State Department to go on talking piously about the reluctance with which they are pushing the atomic arms race while they do nothing positive to stop it.

Nations, legislatures, citizens—we have had our warning and we have heard an eleventh-hour appeal. The warning and the appeal have come from the man in Congress who knows best the awful fate in store if this atomic arms race is not soon stopped. But the warning and the appeal have been pointed with a promise: "If the proposal were actually accepted, we would have concluded the cheapest monetary bargain in our history; we would have probably saved mankind from destruction by fire; and we would have paved the way toward a new era of unimagined abundance for all men, based upon atomic energy constructively harnessed." The voice of prophecy on the floor of the United States Senate. Will the churches give the prophet the irresistible support he deserves?

"He Belongs to the Ages"

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by James Morgan, from the Boston Sunday Globe of February 12, 1950:

"HE BELONGS TO THE AGES"

LINCOLN'S MEMORY NEVER MORE ALIVE THAN TODAY WHEN OUR POLICY MAKERS NEED TO DRAW LESSONS FROM HIS AGELESS PRINCIPLES

(By James Morgan)

It is five and eighty years since Edwin M. Stanton is said to have turned from the death bed of Abraham Lincoln with the remark, "Now, he belongs to the ages." We, in our time, can bear witness to the truth of that prophecy attributed to the Secretary of War. For the memory of Lincoln never was more alive than it is on this anniversary of his birth.

Yet, the issues with which Lincoln directly dealt are dead. That human slavery ever existed in the United States is all but unbelievable to us. Secession no longer is a debatable question and southerners would not reverse the verdict of the Civil War. All Americans are Unionists now, when the Blue and the Gray, like the Red and the White in the War of the Roses, awaken only echoes of—

"* * * old, unhappy, far-off things
And battles long ago."

Nevertheless, Lincoln is no ghostly figure of a dead past, but a living presence. The reason for this needs to be understood by our policy makers today, who are too easily satisfied with expedients to serve the moment. Lincoln checked and double-checked his course at every step with an American tradition and an enduring, universal principle. He did not see the grave crisis of his time as an isolated incident but as part of the never-ending, world-wide struggle for freedom. Hence, now, when government by the people stands challenged the globe around, there is no truer spokesman among the living for liberty in all lands than this voice from the grave.

Why he belongs to the ages

Lincoln foretold the larger, enduring significance of the war for the Union in his second annual message in 1862, when he sounded the warning, "We cannot escape history * * * no personal significance or insignificance can spare one or another of us. The fiery trial through which we are passing will light us down, in honor or dishonor, to the latest generation * * * we shall nobly save or meanly lose the last, best hope of earth."

Stanton was by no means alone among the contemporaries of Lincoln in perceiving that he belonged to the ages. Even while the corpse of the assassinated President was borne across the country, Ralph Waldo Emerson told his mourning Concord neighbors, "The weight and penetration of many passages in his letters, messages, and speeches, hidden now by the very closeness of their application to the moment, are destined hereafter to wide fame." A few weeks later in that same year, 1865, James Russell Lowell dared to predict in his commemoration ode at Harvard:

"Great captains, with their guns and drums,
Disturb our judgment for the hour,
But, at last, silence comes;
Then all are gone and, standing like a tower,
Our children shall behold his fame,
The kindly, earnest, brave, farseeing man,
Sagacious, patient, dreading praise, not blame,
New birth of our new soil the first American."

Our leaders in Washington could profit by taking thought of Lincoln's method in meeting the questions that crowded upon him. He met them with no snap judgments or impromptu answers in press conferences. He took them, one by one, into the laboratory of his deep spiritual nature, and to that sanctuary this prairie mystic admitted no man.

The still, small voice

The more momentous decisions of Lincoln's life on the national stage were made in the solitude of the secret places of his inner self. Unknown to anyone, he took his stand in the "house divided against itself" speech, which logically led him into the great debate with Douglas and, finally, to the Presidency. In a retreat within himself, he selected his Cabinet and wrote his inaugural. Against the advice of all but one of the members of his Cabinet, he determined in a sleepless night to provision Fort Sumter and thereby accept the fateful challenge to war.

When he surprised his counselors with the Emancipation Proclamation, he told them that he was not asking their opinion of the measure itself, because already he was pledged to it in a compact with God. A gnawed penholder is treasured as the only witness to the anxious care that weighed upon him while, unseen, he prepared that historic document. In the same hidden recesses, he thought out his immortal Gettysburg Address, which told in 2 minutes the greater, the timeless meaning of the war to save the Union, that "Government of the people, by the people, for the people shall not perish from the earth."

I do not wish to give the false impression that Lincoln acted without advice. No President ever listened to more of it. It was only after he had heard all sides of an argument that he retired within himself, weighed the conflicting answers in the scales of his conscience and his common sense and formed his judgment in quietude.

Few Presidents, if any, have had the patience of mind, the strength of body, and the good humor to bear with the wrangling that raged about him in the Cabinet and among the Senators, Representatives, and Governors who stormed in upon him. Throwing his door wide open to Tom, Dick, and Harry 4 days a week, he called these receptions to the unknown and unprivileged his public-opinion baths, in which he said he was renovated and reinvigorated. "No hours of my day," he insisted, "are better employed than those which bring me again within the direct contact and the atmosphere of the average of the whole people * * * they renew in me a clearer and more vivid image of that great popular assemblage out of which I sprang and to which I must return."

Two Lincolns

This seemingly most gregarious of men in the gallery of our history really went through life alone, with no chum in boyhood, no confidant in manhood. There was the outer Lincoln, the plain, simple, small-town man, who milked his cow, bedded his horse, went to market with a basket on his arm, and sat on a box at the foot of his office stairs, telling stories to a group of street loiterers. There was the circuit-riding lawyer who, tilted back in his chair, set on roar a crowd in a country tavern. Even his closest associates caught only glimpses of the poet, dreamer, idealist, prophet, who pondered within those somewhat grotesque externals.

It is this duality which has baffled the attempts to reenact on the stage the most dramatic life in our biography. These depict but the shell of the man. It is Hamlet, without the soliloquizing, soul-searching, melancholy Dane. There is yet to appear a playwright capable of dramatizing the thought, the spirit concealed within the outer Lincoln.

The key to the secret of the power in this man's memory was given by himself in his explanation of the lasting, widespread influence of the Declaration of Independence. He said of the framers of that manifesto, what may as truly be said of him, that they reached far out into the future and sought to place a stumbling block in the path of every form of tyranny everywhere in all time. They aimed, Lincoln said at Independence Hall while on his way to his inauguration, to "give liberty not alone to the people of this country, but hope to the world for all future time * * * that the weights would be lifted from the shoulders of all men and that all should have an equal chance."

Lincoln and the cold war

Today, we are involved in a cold war, and we can win it if we will only keep cool. Lincoln did not lose his temper when all about him were losing theirs in the bitterness of a family quarrel. Should we not be equal to holding onto ours in this controversy with an alien antagonist in another hemisphere?

His adversaries could not provoke Lincoln into recrimination or into any retort. Whenever we let the propagandists of Moscow incite us to bandy epithets with them we surrender the initiative and are thrown on the defensive. We play their game, with the inevitable result that they win and we lose a trick.

While we are talking back at Moscow, we are wasting time at Washington which should be given to thinking out what we stand for, instead of telling only what we are against. For lack of a positive policy we rely on scares to rally Congress and the country in support of negative policies. Not fear but courage should be our weapon in this war of nerves. Let us observe this birthday of the man who belongs to the ages by following his example of upholding principles that are ageless.

Migratory Farm Workers

EXTENSION OF REMARKS
OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1950

Mrs. DOUGLAS. Mr. Speaker, the conditions under which millions of migrant farm workers and their families work and live—and travel from one part of the country to another seeking work—are a long-standing national disgrace.

On October 26, 1949, I wrote our President, Harry S. Truman, as follows:

OCTOBER 26, 1949.

The PRESIDENT,
The White House.

DEAR MR. PRESIDENT: Having entered politics because of my anxiety to do something in behalf of migratory farm workers, I have continued to be concerned with their welfare and that of all farm workers, throughout the period of my political activity.

We have been much concerned in recent years with maintaining and stabilizing farm income but we have done nothing to stabilize the work or income of farm labor, except the hope that some of the money at the top would trickle down—an idea that we Democrats have never felt would work.

In addition we have established, and are preparing to extend, the system of social security. But we have left the farm worker out. We have given industrial workers the benefit of the National Labor Relations Act, but exclude the farm worker from its benefits.

I believe that we should give the farm worker some of the attention he deserves, and I wish to join those who have recommended to you the appointment of a commission to investigate agricultural labor. Such a commission could perform a major service which has been left almost neglected until now.

Yours sincerely,

HELEN GAHAGAN DOUGLAS.

On November 5 the President replied to that letter as follows:

THE WHITE HOUSE,
Washington, November 5, 1949.

Hon. HELEN GAHAGAN DOUGLAS,
House of Representatives,
Washington, D. C.

DEAR MRS. DOUGLAS: Your letter of October 28 with reference to the problems of migratory farm workers raises several questions concerning complex areas in our national economy.

The Department of Labor is currently exploring the feasibility of recommending the establishment of a Presidential commission to investigate the problems of agricultural labor, and I am sure that in case such a commission is established the problems of adequate income to which you specifically refer will be one of the basic matters for its consideration.

Please be assured that I deeply realize the fact that agricultural workers present a special problem in our economic pattern and that I shall continue my efforts to alleviate the difficulties of this important group of the American people.

Very sincerely yours,

HARRY TRUMAN.

Last August I obtained from the State Department the text of the international agreement between our Nation and Mexico providing for the admission of Mexican farm workers in such amounts as the United States Employment Service certified as necessary to meet labor shortages in the various States.

On September 2, September 8, and again on October 11, 1949, I wrote Secretary of Labor Tobin, requesting that I be kept currently informed of the number of such certifications, the actual recruitment figures, and the number of workers returned to Mexico.

Since then, I have received periodic reports. The latest of these, dated December 14, 1949, covering the period August 1 through December 2, 1949, shows—

Number of Mexican workers requested and certified as needed	209,690
Cancellations	12,410
Number actually employed under contract	98,408

Of these 98,408, about 78,000 were Mexicans illegally in the country who were legalized under the international agreement; 20,625 were actually imported from Mexico under the agreement up to December 2, 1949.

These figures are derived from the following letter from Robert C. Goodwin, Director of the Bureau of Employment Security, United States Department of Labor, who administers the United States Employment Service:

UNITED STATES DEPARTMENT OF LABOR,
BUREAU OF EMPLOYMENT SECURITY,
Washington, D. C., December 14, 1949.

Hon. HELEN GAHAGAN DOUGLAS,
House of Representatives,
Washington, D. C.

DEAR MRS. DOUGLAS: In accordance with my letter to you of November 7, I am listing below the transactions in the importation of Mexican nationals for agricultural employment in the United States for the period ending December 2, 1949:

State	Requests for Mexican nationals as of Dec. 2, 1949		Record of contracting as of Dec. 2, 1949	
	Certifications, number of workers	Cancellations, number of workers	Number of "wetbacks" legalized	Importations from Mexico
Arizona	6,500	0	2,299	3,924
Arkansas	43,707	8,215	17,986	0
California	6,470	0	6,470	0
Colorado	2,025	0	0	124
Kentucky	100	0	87	0
Louisiana	1,915	0	1,352	0
Mississippi	9,554	4,591	1,454	0
Missouri	5,655	515	2,993	0
Montana	750	0	0	627
Nebraska	250	0		
New Mexico	21,300	1,064	9,369	9,568
Tennessee	193	0	191	0
Texas	110,651	25	35,582	5,382
Wyoming	625	0		

There is enclosed herewith, also, Form I-120a, issued by the Immigration and Naturalization Service, which covers information of your interest, for the period ending September 30, 1949.

For other copies of this release of the Immigration and Naturalization Service, you should address Mr. Willard Kelly, Assistant Commissioner, Employment Division, United States Department of Justice, Washington 25, D. C.

Sincerely yours,

ROBERT C. GOODWIN,
Director.

In recent months, traveling up and down and across our marvelously productive California valleys, I met people everywhere who were concerned over the

welfare of the migrant when the picking season would end. They were teachers, businessmen, farmers, doctors, welfare workers, and so forth. Everywhere one heard the refrain: "When the work in the fields comes to an end shortly, then the hunger will begin. How do we meet it? What do we do?"

The situation became so acute this winter that a conference was called in Fresno by the State department of public health. Before presenting the text of this report I insert in the RECORD an excerpt from an article in the San Francisco Chronicle of January 4, 1950:

[From the San Francisco Chronicle of January 4, 1950]

THE MIGRANT WORKER—HEALTH DIRECTOR CALLS PROBLEM BAD SORE ON OUR BODY POLITIC

(By Stanton Delaplane)

The State board of health heard some plain talk about the migrant farm worker yesterday: His diseases and infant deaths, his unemployment and muddy shacks.

Bluntly, Dr. Wilton Halverson, State director of public health, declared, "This is primarily an economic problem, a bad sore on our body politic. All we (the health department) are doing is applying a poultice."

Dr. Halverson believed that the boards of supervisors in the six San Joaquin Valley counties might take "a less restrictive policy" in applying public-health remedies to the 35,000 cotton pickers' families stranded in the valley by the annual season of unemployment.

In a sense, he returned the responsibility which county supervisors, welfare directors, and health officers tried to put upon the State at a 2-day meeting last week.

WARREN'S POSITION

The migrant farm picture, however, looked brighter than it has for some years as Governor Warren yesterday said the State would mobilize every agency to lick the problem of poor housing, poor health, and unemployment that is the annual hang-over of California's rich harvest.

With the huge demand for cotton pickers as California's new "4–42" cotton shot up to 1,300,000 bales, the bulk of the State migratory workers reach the end of the harvest trail in the Valley.

There they face a 3- to 4-month unemployment season until spring brings new crops to work.

Governor Warren said he would not ask emergency legislation in the March session of the legislature. But he said the situation again points up the need for including agricultural workers in the State unemployment insurance set-up. They do not have it now.

FRESNO MEETING

Last week, State agencies met with county officers at Fresno at the Governor's request to work on the migrant farm-labor problem.

The counties largely felt it was up to the State to provide funds and services for health, education, and relief.

An offer was made by the Federal Agricultural Department to distribute surplus foods in this year's emergency. At present, almost unlimited quantities of dried eggs and milk, apples, potatoes, and honey are surplus and available for a phone call.

To date, only Kern and Madera Counties have asked for surplus, both for potatoes.

HEALTH DEPARTMENT PLANS

The board of health yesterday heard department of health plans discussed by Dr. Ellis Sox who attended the joint meetings last week in Fresno.

Of prime importance, he said, was a study of the unknown infant diarrhea which accounted for 28 deaths, mainly among Mexican cotton-picker families, this year.

He thought much of this was due to lack of education and somewhat to restrictions on health services by the counties. A large number of migrants are not eligible for county medical service except in emergency because of short residence in the country.

It was recommended (if county supervisors approve) that (1) any illness in a child be classed as emergency and, therefore, admissible to county medical care; (2) pregnancy be classed as an emergency so that prenatal care can be given. At present only actual labor and delivery of the baby is classed as emergency.

Dr. Sox hit upon the economic theme again in reporting that the conference of health officers thought Federal social security should be extended to cover agricultural workers. But he said it would be a long pull to put over.

Mr. Speaker, the excellent report of the conference to which the Chronicle refers can well be a guide for the work of a Federal commission to study the problems of migratory labor. The text follows:

REPORT OF CONFERENCE ON HEALTH AND RELATED PROBLEMS OF AGRICULTURAL WORKERS, FRESNO, CALIF., DECEMBER 29, 1949

This conference was initiated by the State department of public health in order to appraise the various problems related to agricultural workers in the six southern San Joaquin Valley counties.

Included in this conference were representatives of local health departments and local official and voluntary agencies, which were present by invitation from the local health officers, as well as various State official and voluntary agencies, who were also invited to be present.

In addition to the general public health problems which face local health departments and the community generally, basic aspects such as the need of agricultural workers, their movements throughout the State, the responsibility of growers for sanitary facilities and housing, the better correlation of community activities in meeting this essentially local problem were discussed.

The conference was opened by a short general presentation of the problems to be considered and then was divided into two major sections, one on health and medical services and the other on housing and sanitation. The first major section was further divided into three subsections, one on health and medical facilities and services, the second on community organization and education, and the third on auxiliary services. These sectional reports were presented to the conference as a whole and were acted upon by the group.

The results of this conference have been discussed with Governor Warren and the State department of public health and other State agencies, as well as local agencies, have already initiated a program to meet many of these problems.

Following is the report of the sections of the conference, as acted upon by the conference as a whole, with a short résumé of progress made since December 29, 1949:

REPORT OF SUBSECTION OF HEALTH AND MEDICAL SERVICES AND FACILITIES, FREDERIC M. KRIETE, M. D., CHAIRMAN

The conference made six recommendations on health problems. These recommendations were prepared by a small working committee, approved by the section on health services, and finally accepted with only one change, by the conference as a whole. The recommendations are presented as they were finally approved by the conference.

Following each recommendation there is a summary of some of the discussion which developed during the course of the meeting.

Recommendation No. 1: The six counties do not have sufficient personnel to meet the health needs of the agricultural worker and will require additional financial assistance to augment staff and facilities. The group recommended that such assistance be provided by the State government.

No one in the group felt that county governments were in a position to spend any additional money for health services to the agricultural worker. In the first place, they felt that county financial resources are already strained; in the second place, they felt that the county should not be held solely responsible for services to this group.

Furthermore, the counties vary in their financial resources and would find it difficult to provide an equal level of services. Any county which provided better services than the neighboring counties might find itself burdened with more than its share of migratory workers seeking assistance.

The type of personnel most needed in staff expansion seemed to be the nurse. This was true even in those counties which have not filled all the budgeted positions, although obviously they could not expect assistance until such positions were filled. There was no discussion in this particular section of the relative functions of registered nurses and public-health nurses. Emphasis was laid not only on the need for improvement in the quantity of care, but also in the quality of care. Mention was made of need for more participation in these programs by local physicians.

Recommendation No. 2: The high infant mortality rate indicates the need for additional and better health services for expectant mothers, infants, and children; and the group recommended that these be provided on a decentralized basis. This applied to both preventive and therapeutic services; and the planning for decentralization must include participation by the health department, the welfare department, the growers, and other community agencies.

This recommendation reflected the group's feeling that the services, to be effective, must be carried to the farm worker. This was particularly true of preventive and educational measures. No attempt was made to define the exact methods of decentralization, since this would vary from county to county. It was felt that in many places the growers would cooperate in furnishing housing facilities; and it was hoped that welfare departments might cooperate in decentralizing some of the out-patient services now available only at county hospitals. The use of trailers was mentioned by several.

One of the problems which frequently came up in this connection was the necessity for administrative flexibility in shifting personnel and program in response to the fluctuations in camp populations.

Recommendation No. 3: The group recommended that the San Joaquin Valley Supervisors Association include prenatal and postnatal care and medical and hospital services for indigent sick children in the definition of a medical emergency. The group further recommended that the problem of county residency in relation to medical services be studied by a committee appointed by the Governor.

This recommendation was made because of the difficulty in securing medical care for those expectant mothers and sick infants who are indigent but who do not meet the indigent act residence requirements of 3 years' State residence independent of assistance and 1 year county residence. It seemed to the group that it is a waste of time to teach mothers to seek medical care for their children early in sickness, only to have them turned away from the hospital until the infant is sick enough to qualify for medical care as an emergency. The original recommendation called for a relaxation of residency requirements for county medical services; this, however, involves legal complications, as medical services for the indigent are provided under terms of the indigent act,

and a change in the law would then also affect eligibility for general public assistance. The adoption of a simple definition of an emergency by the San Joaquin Valley Boards of Supervisors does not require legislative action, and can probably be secured. This would assist in getting mothers under prenatal care in county hospital clinics, rather than waiting until they go into labor to accept them for service. Since adequate prenatal care does seem to be effective in reducing both maternal and infant mortality, as well as the incidence of prematurity, this would seem most desirable.

Recommendation No. 4: The group recommended that the Federal Social Security System be broadened to include agricultural workers of all categories.

There was a great deal of discussion about the income of agricultural workers, particularly the migratory workers. Aside from the general statement that migratory workers have periods of income alternating with other periods of no income, there was no agreement on either the amount of annual earnings or the wisdom of family expenditures. Little or no factual information on this matter was available in the section, and personal opinions were freely, even emotionally, expressed. However, everyone agreed that the several social-security benefits, both Federal and State, would help to cushion the effect of unemployment.

Recommendation No. 5: The group recommended that the State department of public health arrange for fundamental epidemiological studies on the diarrheal diseases in the Central Valley.

This was felt to be an obvious need, and the recommendation was unanimously supported.

Recommendation No. 6: The group felt that the measures recommended above will help to alleviate some of the acute health problems in these counties. However, the basic problem is a chronic one, complicated by a variety of social and economic factors. The group recommended that serious and intensive study be carried on to discover some means of meeting the labor needs of this area, while simultaneously helping the migratory worker to develop into a permanent contributing member of the community.

This recommendation came out of the original committee as an indication of the great difficulty which individuals had in attempting to keep their attention focused on the matter under discussion. The committee was supposed to work out methods of improving health services to migratory agricultural workers, but the discussion kept shying off into broader areas of social and economical implication.

One of the great difficulties in rendering health services to the migratory groups is the fact that they do not stay long enough in one place to facilitate good educational and service programs. As they move from county to county, there are serious problems of sharing of health information about individuals by the different health jurisdictions. There was a good deal of wistful talk about slowing the migrant down; and it is inescapably true that the best solution to the problem of migratory labor is to have no migration. Hence this recommendation.

The committee which produced the recommendations originally consisted largely of public-health personnel. There was only one representative from a local welfare department, there were no county supervisors, and only four educators. On the other hand, all the counties concerned were represented, and toward the end of the session Mr. Don McColly of the State chamber of commerce was present and contributed to the deliberations.

REPORT OF SUBSECTION ON AUXILIARY SERVICES, HELEN E. WALSH, CHAIRMAN

A. Surplus commodities

The discussion of surplus commodities was limited to the utilization of these foods by the families, since the respective county welfare departments have worked out the details of distribution within the county.

1. The committee members expressed the opinion that limited cooking equipment and facilities and inadequate storage space are factors that would influence the acceptability of surplus commodities. In addition, the two food items—dried milk and dried eggs—present a further problem because of the lack of familiarity on the part of the recipients in handling these products.

Accordingly, it was suggested that instructions be outlined regarding the use and cooking of dried milk and dried eggs and simple recipes be compiled for distribution with these products.

Since the distribution of the surplus foods will commence immediately, the home economist from the Fresno County Welfare Department, the home advisers from the Fresno County Agricultural Extension Service, the school-lunch nutritionist from the State department of education, and the district nutritionist from the State department of public health met on Tuesday, January 3, 1950, in Fresno to develop this material. In addition to the instructions and recipes, a list of foods to supplement the surplus commodities will be prepared for use by the directors of county welfare departments in advising volunteer groups of foods to donate.

2. The committee felt that in addition to this mimeographed material there was need for cooking schools to demonstrate the use and cooking of foods. The problem of where such schools might be held was discussed. The local churches were mentioned as a possibility. It was suggested, also, that the growers might be approached regarding the provision of a demonstration kitchen in the camps. Earlier this year owners of two camps in Kings County contributed $25 each to cover the costs of a series of nutrition classes held in their camps under the auspices of the health department.

It was agreed that the home economists and nutritionists from the various agencies in the six counties would plan jointly the content and schedule for the cooking schools.

3. In connection with the discussion of cooking schools the problem of limited cooking facilities was again discussed. It was pointed out that this is one of the factors that handicap these families in providing even a minimum adequate diet. This is particularly true for the infant and small child.

(a) It was recommended that the Housing Division and the growers give attention in their study of housing to minimum food storage (shelves and coolers) and stationary cooking equipment.

(b) It was further recommended as a part of this study that the possibility of community kitchens be explored.

These community kitchens (similar to community showers, laundries, etc.) to be used either by individual families to prepare their meals, or rotating committees to prepare and serve meals to a group of families.

(c) Another suggestion that the committee felt should be studied was the possibility of a nonprofit cafeteria which might be operated by the families or the growers.

The last two recommendations to be considered as a part of a long-range program.

4. Throughout the discussion it was apparent that more information concerning the food practices of these agricultural workers was needed.

Therefore, it was recommended that a study be made which would not only point up the dietary habits but food marketing and preparation practices.

The State department of public health in cooperation with the State interagency nutrition committee would construct the questionnaire and be responsible for tabulating the data.

The local home economists and nutritionists in the counties would be responsible for collecting the data.

B. Day care of children

5. The many problems encountered in providing supervised day care of small children were enumerated. These included such problems as financing, adequate housing and play areas, isolation units, and trained personnel. The magnitude of the problem pointed up the need for assistance beyond the resources of the local area.

For this reason it was felt that the problem should be referred to the State child-care program and that the Department of Education and other concerned agencies should study the possibility of extending its program to children of agricultural workers in rural areas.

This type of program would not only provide an educational program for the parents but an adequate lunch for the children.

6. The committee felt that in addition to the day-care program a long-range educational program to teach parents proper child care is essential.

It recommended that local health departments, welfare departments, and agricultural extension assume this responsibility, which would necessitate additional public-health nurses, welfare workers, and home advisers.

C. Recreation

7. The importance of providing adequate recreational facilities for agricultural workers and their families was discussed. Several county representatives pointed out that the counties employ recreational supervisors.

It was recommended that this problem be referred to the respective counties for consideration by the boards of supervisors.

The resources at the State level were discussed, and it was recommended that these be mentioned to the local counties. Those listed were the State recreation commission, State department of education, and youth authority.

It was further suggested that the growers be advised of this need. In certain camps the management have recognized the importance of recreation and have provided recreation personnel to supervise and guide a program for the workers and their families.

REPORT OF SUBSECTION ON COMMUNITY ORGANIZATION AND EDUCATION, MRS. ANN W. HAYNES, CHAIRMAN

A number of resources are available in the counties which can contribute to an educational program directed to—

1. Teaching agricultural workers more healthful ways of living.

2. Helping the community provide more opportunities for participation by agricultural workers in community life.

In both phases of the program, education should be "not something we do for people but something we do with people."

Not all agencies and groups that can be interested in participating in the program were represented in the section. The following specific resources, aside from those of health departments, were mentioned:

Local chapters of the American Red Cross: The representative of the Pacific area office stated that the Red Cross is interested in expanding its program of classes in home nursing and in infant and child care with particular emphasis on reaching agricultural workers. The Red Cross recognizes that it will be necessary to modify the course to meet the needs of this group and to be adaptable to the conditions under which they live. A training course for teachers of the two courses will be held in the valley, including nurses employed by health departments, willing to take the training.

Agricultural Extension Service: Home and farm advisors of the UC Agricultural Extension Service will be able to work more intensively with agricultural workers than has

been possible in the past. Because of the methods used by the advisers, it is believed they will be successful in discovering leaders in the agricultural-worker group. These leaders can be made available also for programs of other agencies.

Schools: The health-education programs of schools in the valley have been greatly improved during the past few years. An additional important contribution the schools can make is in provision of opportunities for agricultural workers and their children to participate in community life.

Growers: One large firm in Fresno County has indicated an interest in employing a nurse to work in the camp under the direction of the local health department.

It was felt by the section that many additional resources could be discovered by exploration at the local level.

There are serious needs and problems in all of the counties that stand in the way of community organization and education. Among those brought out by the section are:

1. Need for an over-all community organization that includes professional and lay people and reaches into small communities.

It was felt by the local people present that the councils now operating do not completely meet this need.

2. Need for personnel: (a) People trained in teaching methods of working with this particular group; (b) people trained in community organization.

Only one of the health departments employs a health educator and that position is now vacant. Vacancies exist in nursing positions in health departments. Not all departments have sufficient nursing staff to meet the normal needs.

3. Need for facilities in camps: (a) A place for group meetings; (b) provision for supervision and recreation for children while meetings are being held for adults.

4. The problem of finding a time for meetings that is possible both for the agricultural workers and teachers.

It was felt that much of the teaching might have to be done on person-to-person basis.

5. The problem of the heterogeneity of the agricultural-worker group, the lack of organized and natural subgroups.

6. The problem of how to reach the people who are not concentrated in labor camps.

The section felt that not all needs could be met, nor all problems solved, immediately. However, they do not present insuperable difficulties and, through utilizing all resources that are available, a sound program of community organization and education can be developed in each of the six counties. As a start toward that program the section presented the following recommendations:

Recommendations

1. At an early date, the local health departments should take the leadership in bringing together in each county the people and agencies concerned with planning, developing, and coordinating the educational program.

2. A training course should be held on a county or regional basis, whichever is practical, to train the people who will work in the educational program in (a) content—so that confusion and contradictions in information given agricultural workers may be eliminated; (b) methods of working with agricultural workers.

3. Provision should be made at the State level for joint planning and coordination between all agencies concerned with the educational program.

REPORT OF SECTION ON HOUSING AND SANITATION, ELLIS D. SOX, M. D., CHAIRMAN

1. The following was submitted for action by the conference as a whole:

"It is recommended that the provisions of the State labor code relating to housing be amended to include labor camps, labor supply centers, tent camps, and so-called house courts, and that authority be vested in the State board of public health to adopt regulations governing the construction, maintenance, and operation of such camps and courts, with particular reference to the sanitation facilities provided therein; it is further recommended that enforcement of these sections and of any regulations promulgated be delegated to the State and local health departments."

In view of the far-reaching implications of such proposed legislative changes upon both the State department of industrial relations and the State department of public health, and upon industrial housing throughout the State, the conference acted as follows:

It is recommended that above motion be tabled pending a later meeting to be called by the State department of public health in cooperation with the State department of industrial relations, such meeting to include representation of both official and nonofficial agencies, and other persons having an interest in this problem.

Discussion included reference to the area of the State not presently served by organized local health departments and which could not assume responsibility for enforcement if such authority were provided without budgetary provision. It was also felt that the original recommendation, with its State-wide implications, was premature and justified more extensive study.

It was suggested, although not formally adopted, that this matter might be referred to appropriate committees of the State legislature for study and action.

The basis for consideration of this matter included the following factors:

(1) Authority and responsibility for inspection of labor camps are vested in the Division of Housing of the State Department of Industrial Relations, and have so existed since 1913, at which time there were no organized county health departments.

(2) A labor camp includes housing facilities provided for five or more employees of an employer on his property. Technically speaking, therefore, when less than five of the inhabitants are employees of the owner, it ceases to be a labor camp and the responsibility for inspection and supervision by the Division of Housing ceases. The labor camp then becomes a responsibility of the local health department under the health and safety code provisions governing disposal of sewage and wastes, etc., or as provided by any pertinent local ordinances. The questions arose at this point: "When is a labor camp not a labor camp?" and "Is this shifting responsibility and authority sound and efficient administratively?"

(3) The local health authorities, with one exception, felt very strongly that the delineation of responsibility should be made more definite, and that it should be placed in the local health department. Additional personnel would be required if such a change were made, and it was suggested that State subsidy should assist in their provision.

(4) The division of housing, on the other hand, has been inadequately staffed. Assurance has been made that augmentation of that staff will be made at once.

(5) Pending action one way or another as to legislative changes, it was agreed that the division of housing would assign its personnel to cover a specific county, and that they would work in close cooperation with local health-department personnel. It was suggested that they might be housed in the local health departments, but agreed they would not be under the direction of the local health officer. This would assist in meeting the immediate problem, in that specific cases could be handled jointly by the two agencies. The details of this arrangement are to be worked out between the division of housing and the local health departments.

2. The following recommendation was adopted:

It was recommended that consideration be given to amending the Labor Code in the section pertaining to agricultural-labor housing to include the provision of a permit system as a part of the administrative procedure carried out by the Division of Housing.

It was further recommended that local health officers and boards of supervisors in the development of local ordinances pertaining to housing in the unincorporated area, or pertaining to the control of environmental sanitation include in the local ordinances the provision for the issuing of a permit prior to the construction, maintenance, or operation of such facilities, and with the privilege of revoking such permit by the health officer after a proper hearing on the matter.

Discussion on this item was concerned with the difficulties now existing in finding areas which have sprung up as part of the housing provisions for agricultural laborers, whether they be in labor camps or in facilities not included under the purview of the labor code.

It was agreed that this would place upon the grower or the operator of such a housing facility the responsibility for informing the local health department or the division of housing of his intent to establish such a facility. Further, it would facilitate enforcement of violators.

3. The following recommendation was adopted:

It was recommended that local health departments and boards of supervisors consider adoption of the principles of two ordinances adopted by the Kern County Board of Supervisors. These are:

(1) Ordinance G–53, referring to the designation of certain areas of the unincorporated area of counties as "urban" areas, the definition being as follows:

"Urban areas shall consist of those portions of the unincorporated area of the county (of Kern) which are closely built up and largely given over to business and residential use and that area adjacent to such built-up areas which is potential business or residential area, and its inclusion is reasonably necessary to preserve the character and stability of the existing built-up area, in all of which area it is feasible, practicable, and necessary to provide uniform health, sanitation, and safety ordinances, and regulations which are not adaptable to sparsely populated and rural areas."

It was felt that the adoption of this principle would permit the passage of local ordinances and regulations by the health officer which would assist in the control of conditions existing in the so-called fringe areas around incorporated cities and in other built-up areas where increased density of population is associated with accentuation of sanitation problems.

(2) Ordinance 302, which covers the construction, reconstruction, or maintenance of "house courts, apartments, camp, car and/or trailer, tent-camp space, and squatter camps, giving authority to the local health department for the enforcement thereof."

This ordinance covers a field of housing used by agricultural workers and others which are not completely covered by the provisions of the State labor code or of the health and safety code. It constitutes a stop-gap to cover the jurisdictional no man's land between the local health department and the State division of housing.

4. The following recommendation was adopted:

It was recommended that a study be made immediately looking toward the establishment of camp sites for agricultural workers, with acceptable sanitary facilities, with adequate management, operating with the ap-

proval and under the general supervision of the local health department.

There were two phases to the discussion of this item. One was whether or not such camps should be operated by counted government. There was a unanimous feeling that neither the Federal Government nor the State government should operate such facilities. There was a general feeling that county government should not operate such facilities.

There was relatively unanimous agreement that such facilities can be effectively sponsored and operated by growers' associations, as has been the case in Tulare and Kern Counties. One grower, a Mr. Thomas, of Madera County, expressed the opinion that such camps, particularly when operated after the harvest season is over, become places for organized unrest and labor difficulties. Mr. Stein, manager of the two grower-operated camps in Tulare County, with 8 years' experience in both Federal and privately operated camps, expressed the opinion that this was not the case, particularly when the camp management was strong and leadership of the inhabitants themselves was cultivated and encouraged.

It was brought out that education, for both better living habits and other aspects of public health, could be accomplished more easily under conditions where there are large groups of people in a single area for a long period of time. The provision of health services to such a group of people is easier and more effective than when the same number of people are scattered throughout the county.

5. It was recognized that with all the discussion concerning the problem there appeared to be no concise or accurate knowledge available as to the need for housing of agricultural workers in this area, particularly at the peak of labor demand, its relative adequacy, the status of sanitary facilities, etc., or any sound method of evaluating either the quality, the quantity, or the actual need. The following recommendations concerning this were adopted:

(a) It was recommended that information available from the State department of employment and the bureau of labor statistics be utilized by State and local agencies in anticipating labor needs on an area basis, in order that more effective planning for the provision of adequate housing and sanitary facilities might be developed.

(b) It was recommended that by January 31, 1950, local health departments in cooperation with the staff of the Division of Housing make a survey of existing facilities for the housing of agricultural workers, including the number and the type of housing facilities, and percent of occupancy, and some estimation of their sanitary status, utilizing the standards of the Division of Housing as the minimum requirements to be met.

(c) It was recommended that the Governor appoint a study committee to develop techniques for evaluating the need for housing of agricultural workers throughout the State, to study the flow of agricultural workers throughout the State, and that after such techniques have been developed, and if it appears necessary, an actual survey of these conditions be conducted.

(In the discussion of this latter resolution it was brought out that agricultural workers are brought into various areas of the State, particularly during the peak of demand, from urban centers.)

RÉSUMÉ OF PROGRESS SINCE DECEMBER 29, 1949

The State department of public health reported on the activities of the above conference to Governor Warren at a conference in his office, attended also by representatives of other State departments.

To further implement some of the recommendations of the conference, the State department of public health has assigned Dr. Donald Davy, assistant chief of the division of local health service, to correlate the activities of the department, with headquarters temporarily in Fresno at the departmental branch office in the Rowell Building. The phone number is Fresno 4–1129. Dr. Davy in addition to integrating the activities of the department will assist local health departments and other agencies in any way possible.

The department is seeking health educators to be employed temporarily by the State and assigned to this area to assist in the community organization and general health educational program. The nutrition services of the department are active, along with the Agricultural Extension Service and the local welfare departments, in giving advice and consultation to those utilizing surplus commodities. A basic educational program is being started immediately.

The department of public health is preparing a recommended project of research in the epidemiology of the diarrheal diseases for submission to the United States Public Health Service.

The bureau of sanitary engineering is cooperating with the division of housing of the State department of industrial relations in an attempt to make more effective the program of sanitation and housing which much be carried on jointly by State and local agencies.

The bureau of vector control of the State department of public health is investigating methods whereby its services may be tied in to the general sanitation services in the control of insect vectors of communicable diseases.

In cooperation with the various welfare departments, the State department of public health and local health officers will confer with the San Joaquin Valley Supervisors Association on February 10, 1950, to discuss basic problems which are of concern to county supervisors. This includes the distribution of surplus commodities and the decentralization of both health and medical services and, possibly, the lowering the admission requirements for indigents by making prenatal and postnatal care and medical and hospital services for indigent sick children medical emergencies.

As further problems present themselves the State department of public health will cooperate with other agencies in meeting them in any way possible. Your suggestions should be presented to your local health officers or to Dr. Davy in our Fresno office for further study and action.

STATE DEPARTMENT OF PUBLIC HEALTH,
DIVISION OF LOCAL HEALTH SERVICE.

Mr. Speaker, California's State director of public health, Dr. Wilon Halverson, says this migrant farm labor problem "is primarily an economic problem."

The California conference, as its report shows, looked at this problem steadily and saw it whole, not as an isolated health problem, or school problem, or housing problem.

The economic problem is basically affected by the supply of labor in relation to the need for labor. I am convinced that there is a surplus of farm labor, not only in California, but throughout the Nation.

Of course, to provide the largest number of days worked for the labor supply that is available, we should have an up-to-date system of recruiting, transporting, placing, and housing migrant workers.

Instead, we ignore available labor here in the United States, all over the United States, and continue to make our unemployment picture worse by bringing in more Mexican workers to share the already insufficient number of jobs.

The most recent information I have received as to the situation among agricultural workers in California is in a report on the Imperial Valley dated January 30, 1950. The report was submitted by Hank Hasiwar, a representative of the American Federation of Labor's National Farm Labor Union.

The union has presented this report to President Truman and Secretary of Labor Tobin with a request for an immediate investigation and action.

This report recites low wages, inhuman living conditions, and insecurity among American citizens caused by the influx of Mexican nationals under the international agreement and by thousands of Mexicans who enter in violation of our immigration laws. This report should shock the conscience of all who read it. The text follows:

NATIONAL FARM LABOR UNION, A. F. OF L.,
Bakersfield, Calif., January 30, 1950.

REPORT ON THE IMPERIAL VALLEY

PREFACE

The Imperial Valley is located in the southern most region of California, bounded on the south by the Republic of Mexico. It is a fabulously rich agricultural area whose climate conditions enable this valley to grow and harvest fruit and vegetables while the rest of the Nation is fighting blizzards and hail.

Yet in this valley American people, mainly those of Mexican descent, are slowly starving because illegal aliens from Mexico have their jobs.

To the north in the vast agricultural empire of the San Joaquin Valley, where all crops have been harvested, American people of all races and creeds are suffering hunger because there is no work. In the great Central Valley of which the San Joaquin is the major part, between fifty and sixty thousand farm workers are unemployed.

It is indeed a tragic mystery for many farm workers that in areas where work is going on, all avenues to secure employment have been closed to them by the most rapacious group of employers who operate in the American economic system.

THE IMPERIAL VALLEY

The writer of this report arrived in the Imperial Valley on January 23 to survey that area at the request of many American people of Mexican descent who were being forced against the wall of poverty by thousands of their former fellow countrymen employed illegally in the Imperial Valley by the growers in that area.

The writer found a condition that was unbelievable, hardened as he was the last 3 years by the inhuman exploitation of the farm laborers in the State of California.

He found that many Americans of Mexican descent and others legally in the United States for many years were earning wages scarcely comparable with that of an American standard by any stretch of the imagination.

Typical of such pay checks earned by energetic Mexican-Americans who are known for their ability as farm laborers were such checks as follows:

For week ending Jan. 7	$3.70
For week ending Jan. 13	5.10
For week ending Jan. 20	9.20

Another energetic Mexican-American worker, the father of seven children, earned for the—

Week ending Jan. 13	$9.90
Week ending Jan. 20	15.90

These figures are from the check stubs of a leading firm operating in the Imperial Valley—the Arena Imperial Co., located in Brawley, Calif. Further, these stubs and many others are in evidence.

Yet even these examples can consider themselves fortunate, for there are many residents of towns in the Imperial Valley, as El Centro, Brawley, Holtville, Calexico, and Calpatria, who cannot even secure employment to earn even such pittances.

Additionally, hundreds of laborers not only those of Mexican descent but colored and white Okies and Arkies have been turned back from the Imperial Valley for lack of employment and forced to return to their origins where they at least could secure a roof over their heads. Many of these ran out of gas money to drive their jalopies back and became stranded in the Imperial Valley. At the time of the organizer's visit, in Brawley alone, 200 Okies and Arkies were completely stranded and absolutely destitute.

In the Imperial Valley there is no relief program, for no direction of human interest extends from the growers to the people who make their industry possible.

In the great Central Valley of California farm workers are going hungry because there is no work. In the Imperial Valley farm workers are going hungry because illegal Mexicans have the jobs.

The illegal Mexican is commonly called a wet-back, supposedly derived from getting wet in crossing the Rio Grande. The wet-backs or wets cross from Mexicali over the border into Calexico, El Centro, and Brawley. From there many thousands work their way as far north as the State of Washington. It would be safe to estimate, although no official figures are available, that there is at least 60,000 wet-backs in the west-coast States. However, the Imperial Valley, because of its nearness to the border and because of its outright control by the corporate farm interests receives more than its fair share of the wet-backs.

In the Imperial Valley at present there is a total work force of some 18,000 farm laborers. At peak in the month of March between 23,000 and 24,000 are employed. Of this number there are 5,000 Mexican nationals working now in the valley due to a contract negotiated between the United States and Mexico for the legal importation of foreign Mexican nationals. Additionally there are 6,000 wet-backs working now who come regularly over the border or who shack up in towns within the valley or who live on the ditch banks. This makes up a work force of 11,000 citizens of the Republic of Mexico as against 7,000 citizens and legal residents of the United States.

This is the work force in agriculture which at the present is primarily engaged in harvesting carrots, lettuce, and cabbage. Additionally, numbers of wet-backs are employed in other pursuits besides those of stoop labor. The A. F. of L. Central Trades and Labor Council in El Centro has found wet-backs in the restaurant industry, the retail trades, and the building. They, too, are most concerned with this encroachment, and particularly so when they discover numbers of them with social-security cards.

The supply of wet-backs seems to be a never-ending one. At the writing of this report there were 25,000 Mexicans gathered in Mexicali, all waiting for jobs in the United States. Each week 1,500 to 2,000 enter this new port of entry hoping to find their fortunes in the United States. This labor pool at first was supposedly set up to provide for the legal entree of contract Mexican nationals into the United States, but so effective has been the propaganda that from all over the interior of Mexico are arriving Mexican citizens eagerly looking forward to their long-awaited manna. Only a few of these can be used contractually, the others must find employment as wet-backs or starve. For this the Republic of Mexico deserves its full share of discredit. It is common to hear our Mexican-American citizens explain this phenomenon by saying that Aleman has sold out. Miguel Aleman is the President of the Republic of Mexico.

Separating Mexicali, Mexico, from Calexico, United States, is a 5½-mile fence. The fence has holes in it and for those who are more energetic the paths are well worn on each side. The fence is patrolled by the United States Immigration Service but twice a day, thus providing ample opportunity for any number to cross at the proper intervals.

Certainly the United States Immigration Service must be a frustrating occupation for as soon as this service does pick up illegal aliens for deportation (wet-backs), and they have picked them up at bursts of 2,000 per week, the wet-backs infallibly return, all the wiser for having been caught. It is commonly joked that when the wet-back is picked up and returned to Mexicali, he hops a cab and beats the Immigration Department back over the border.

All admit that the United States Immigration Department has a hopeless task in cleaning up the wet-backs problem. At most the border patrol can only be a source of irritation to the growers whom they raid for wets.

The composite of the employer force in the Imperial Valley typical of farming in the State of California. There are 100 grower firms that control 50 percent of the total acreage in the Imperial Valley. Approximately 5,900 other growers control the other 50 percent. Farming in the Imperial Valley is on a cash-crop basis and controlled in spirit as well as financially by the corporate farmers.

Although a curse need not necessarily be imposed on bigness nevertheless an emulation on the part of many smaller operators takes place that often results in even more abuses. It can commonly be said that wet-backs are exploited severely. Many small growers and even renters have called the Immigration Service in to clean out their wet-backs and refused to pay them wages that were due them. In one week it was reported that certain small growers and renters refused to pay 461 wet-backs for their labor. The organizer discovered from his Mexican contacts that this practice takes place among larger growers as well. It has become a most convenient custom to tell the wet-back to go back to where he came from when it is time to pay him off.

Wet-backs are again in a most unfortunate position because of their inability to get protection or redress for their grievances. They cannot complain about sleeping on irrigation ditch banks—nor can they complain about getting 30 or 35 cents per hour—which is less than half the scale of the 60 cents per hour for the contract Mexican national.

The scale of 60 cents per hour set for contract nationals has rapidly become the prevailing wage for all American workers in the Imperial Valley.

Even the contract nationals (those who are legally here for the duration of the contract) are exploited unfairly. Reports that they are inadequately housed, that they do not receive the scale of 60 cents per hour through manipulating them to lower piecework rates are common. Complaints from the nationals are so numerous that the Mexican consul finds himself inadequate to police the contracts.

It is obvious to the most superficial observer that the contract Mexican nationals and the wet-backs are being used by the growers to destroy American living and working standards for the American farm workers. It becomes further obvious that the wet-backs and the Mexican nationals are being exploited even more greatly than our own American people.

Spanish-speaking Americans will tell you that Brawley, the largest farm labor supply center in the Imperial Valley looks like Mexico in the early mornings when the growers' trucks come in to pick up the wet labor, dressed in ragged clothes, wearing a large straw sombrero and serape around their shoulders. The residents of Brawley look on while the wets are picked up and leave for work. So serious has this problem become that Mexican-American ex-GI's and the wet-backs have had small outbreaks of violence.

Living year round in the Imperial Valley are a sufficient number of workers to form a basic work force. At present the farm labor population in the leading towns are:

Brawley	3,900
El Centro	3,700
Holtville	2,000
Calexico	2,000

In surrounding areas there is an additional resident work force of 6,500. Supplementing this work force are migrants who make their regular trek to the Imperial Valley to assist in the harvesting of carrots, lettuce, melons, beets, and other vegetables. This year the trek is not as large because the wet-backs have the jobs. Additionally, the population of the main towns in the Imperial Valley have been going down because of the steady loss in job opportunities for the original resident farm population. Steadily increasing the labor pool of available illegal labor in Mexicali is the increasing number of 25,000 Mexican citizens in Mexicali, growing from 1,500 to 2,000 each week. Consequently, the San Joaquin Valley is becoming increasingly flooded with displaced Mexican-Americans from the Imperial Valley. At this writing hunger, privation, and loss of homes, combined with bewilderment and hopelessness, is the symbol of the times for the farm workers in the San Joaquin Valley.

CONCLUSIONS

It is of foremost necessity that immediate action be taken to prevent the further demoralization and impoverishment of the American farm workers in the Imperial Valley.

1. The border must be plugged against the entrance of any further "wetbacks." Those in the United States should be immediately rounded up by the United States Immigration Service and returned by the Mexican Government to the Interior of that Nation. The recently acquired pool of 25,000 laborers waiting in Mexicali must be dried up by shipping them back home under clear instructions by the Mexican Government.

2. The State of California now prevents the employment of illegal aliens on public projects. This should be extended by law into agriculture with penalties attached, otherwise the growers will violate the law as they are doing at present.

3. The State of California in conjunction with the National Farm Labor Union, A. F. of L., should begin to shift unemployed and qualified farm workers to the Imperial Valley to complete the harvest. Transportation will have to be arranged for most since they are completely penniless, having no unemployment insurance to rely on. All harvesting prior to World War II was done with American labor in the Imperial Valley thus there is no reason why it can't be done with the same now.

4. The present contract under which 5,000 Mexican nationals are employed should be immediately abrogated by the American and Mexican Governments.

If these things are done immediately, we can still save an immensely perilous situation. This is an obligation which both the Mexican and United States Governments owe their people. If these proper actions are taken we can rest assured that we will have

restored faith in the people themselves as well as in their respective governments.

HANK HASIWAR,
Western Representative.

Mr. Speaker, we have a migrant farm labor problem. It is a continuing problem. It is being aggravated by the continued importation of migrant labor from Mexico and the West Indies.

My conclusion is that we ought to stop the importation of foreign migratory labor. We have a surplus of domestic farm labor. The problem is to supply these men and women with full employment at decent wages and working conditions. The problem grows worse daily. It is not a seasonal problem. It is not just a California problem. It is not a Southwest or a Mexican border problem. It extends all over America, as Mr. Goodwin's table of certifications shows.

I believe that, if the full facts about migrant farm workers' problems can be assembled and spread out for all to see, the American people and Congress will do what is right.

We have had complaints, we have had surveys, investigations, and reports for the past quarter of a century dealing with this, that, or the other phase of the migrant farm labor problem. Labor, church, civic, and welfare organizations have reported on conditions among migrant farm labor families, on the health of children of these workers, on their working conditions, on their nutrition and health, and, in at least one instance, on the extent of disease, starvation, and death in the midst of the plenty they helped to harvest for the tables and the clothes closets of America.

But we have never had a thorough Nation-wide examination of the entire problem with findings and recommendations for raising this great depressed segment of our people to an American standard of living.

Since the war, this American tragedy, once described in John Steinbeck's Grapes of Wrath but dismissed as a temporary phenomenon of the last depression, has returned. It is with us again. The most recent employment figures show that unemployment has increased, seasonally it is true, from three and one-half to four and one-half million employable persons. It is emphasized that a large proportion of this increase in unemployment is among farm workers. The hope is expressed that, as spring comes on, these workers will again find jobs.

But the most optimistic estimates of employment in 1950 say only this: that, if business holds up, the level of employment may be maintained through the end of 1950. With a net increase in the labor force of at least 800,000, composed of GI's who are finishing their education and training and other young men and women finishing school, the prospect now is for more than 4,000,000 unemployed by the end of 1950.

The effect of this upon migrant farm labor will be to make the search for work more desperate, the trips from one crop area to another more frequent. Farm wages and working conditions may be pounded down by employers facing lower farm prices on the one hand and on the other hand seeing larger pools of unemployed available.

I hope President Truman will create at the earliest possible moment a Commission to assemble the full facts about the conditions under which migrant farm workers are employed or seek to be employed and live or seek to live. Such a Commission, appointed by the President and given the cooperation of all agencies of the executive and legislative branches of the Federal and State Governments, and county and municipal agencies, can give us sound bases for intelligent action, adequate to meet the need.

If this is done and if the American people and their elected representatives respond as I believe they will respond, we can then eat our food and wear our clothes without our consciences telling us of sins of omission, economic, social, and political sins against millions of fellow Americans.

If this is done now and if we act as we should act on the basis of such findings and recommendations, our Nation will be healthier, stronger, happier, and more secure within and without.

Senator McMahon and His Proposal to Neutralize the Bomb

EXTENSION OF REMARKS
OF
HON. ROBERT S. KERR
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES

Thursday, February 16 (legislative day of Wednesday, January 4), 1950

Mr. KERR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Mr. William S. White regarding the able Senator from Connecticut [Mr. MCMAHON], which article appeared in the New York Times magazine of February 12, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

M'MAHON, SENATOR AND ATOMIC SPECIALIST—THE FATHER OF CIVILIAN ATOM CONTROL PROPOSES A BOLD NEW APPROACH TO NEUTRALIZING THE BOMB

(By William S. White)

WASHINGTON.—For the people of the earth first the atomic bomb discovery and now the urgent progress toward the infinitely more destructive hydrogen bomb have thrust into the ordinary way of life a clutching, mass fear of death not even fully understood.

Perhaps no one in all the world has been more vitally stirred than a young United States Senator from the State of Connecticut. Like everyone else, he, too, is to live or die upon the issue. But for this dreadful business BRIEN MCMAHON would be only 1 of 96 Members of what used to be a rather droning, pleasant old club called the Senate—and he most likely would be a quite obscure and junior one, speaking for the most part when spoken to, and careful not to move forward into the chairs reserved by ancient custom for the patriarchs.

Instead he has, in a single term in the Senate, accumulated a frightening responsibility, as chairman of the Joint Congressional Committee on Atomic Energy, which oversees the agency that in turn controls all in this field, the Atomic Energy Commission. He did not reach that post by soft means or manners; by the polite, after-you-sir bows expected of a Senate newcomer. He fought and clawed for it with the single-minded toughness of a zealot upon whom a great and fearful urgency had fallen.

He got it, against all tradition of seniority and over the claims of men who had been in the Senate for years before him, for two reasons. If he was not the first man in Congress fully to understand the meaning for men and government of what was afoot in the grim laboratories, certainly he was the first doggedly and plainly to articulate that meaning.

He was, moreover, the leader among the congressional forces that fought fiercely, and from the beginning, to take the atom away from the military and to lodge it in civilian control. He was in short, the author of the McMahon Atomic Energy Act for which, quite naturally, there was no precedent, since the fact of the atomic bomb was quite unprecedented itself. It was against this background and in his capacity as the highest lay authority on atomic matters that Senator MCMAHON made his recent great speech—and the adjective is used to denote a tour de force—proposing bold new approaches to the Russians for neutralizing atomic weapons. He urged the United States to set aside $10,000,000,000 yearly for the next 5 years (about two-thirds of present defense expenditures) for a global Marshall plan of atomic and other developments for all countries, including Russia—provided all participants in the program, which the United Nations would administer, accept world atomic control with full inspection.

When the word was flashed in 1945 that our first A-bomb had fallen upon Hiroshima in Japan, BRIEN MCMAHON, who had been in the Senate only about long enough to know the respective locations of the Republican and Democratic lounges, was at breakfast with his brother in Vermont. He was, then, too young a chap in the Senate to be trusted with anything important, including important information. He did not know that an appropriation of $2,000,000,000 had been put through Congress mysteriously for a hush-hush thing called the Manhattan District Project. Indeed, he did not know that there was a Manhattan District project.

His instant response to what was coming in over the radio in that peaceful Yankee farmhouse was no different, in substance, from that of many intelligent men everywhere: That monstrous thing, too big for thought, had been wrought by the scientists. But he had a secondary, and quick, response that was wholly different. This thing, he thought, must first of all be understood, even by politicians—perhaps most of all by politicians.

He set out at once to try to understand and the first data to help him along the line, he says, "were the pioneer articles written by William L. Laurence, of the New York Times." Senator MCMAHON took on all that Mr. Laurence had to offer and then, a man with a legal education and not a scientific one, he began to read all the heavier stuff besides. Certainly, he would not claim today that he approached, then, the dim corridors where lay the essential secrets; all he did was keep his foot thrust into the outer door.

What he learned and heard frightened him to an exquisite degree. It put him in fear not only of the atomic engine itself, but in fear for the survival of the kind of government we have always had. He saw, as he puts it now, an ever-constricting ring of

secrecy. He heard an ever-growing observation among politicians, based upon the obvious fact that leaks in the wrong direction might physically destroy the United States and all it had and hoped for: "We can do nothing but leave it to the experts, the military and scientific experts."

To Mr. McMAHON this concept of secrecy was a dangerously creeping thing, particularly when it implied—as it did in those days—a barrier raised even against the elected representatives of the people. Insofar as military security would permit, he has always been antisecrecy; has always sought ways to lift the curtain.

So, in what seemed to some at the time a quixotic mission of hopelessness, he began drafting the McMahon Act as a counterattack upon a War Department proposal for continued military control. It is more or less the thing in Congress that when a man introduces a successful resolution for setting up a special committee he gets the chairmanship. In this case, though, this was no committee to investigate coal prices or to preserve wildlife. What was being created here was a group with immense power over the military and possible civilian use of the greatest force known to man.

McMAHON was, in the common view of the Senate, a New Dealer, young, untried, a Johnny-come-lately and a man who at the very least, had to be much more seasoned before taking on anything so breath-taking. McMAHON was a New Dealer, all right; but he also was a sophisticated product of urban politics; he knew plenty of people in the right places—and passive resistance was not his strong point. He pulled wires, he lobbied among Members, he struggled onward—and he got the job. Did personal ambition play a part here? Certainly. Was there also a sense of mission apart from self? On all of the evidence since, yes.

But when the committee to serve under Senator McMAHON was appointed, the then President of the Senate, Senator KENNETH D. MCKELLAR, of Tennessee, was filled with gloomy forebodings. He put upon it, as junior to Mr. McMAHON in this new job, the greatest, long-lived stars of the Senate—men like CONNALLY, of Texas, VANDENBERG, of Michigan, TYDINGS, of Maryland. It was rather the way in which Balkan countries have sometimes surrounded with a stern regency of elder statesmen a young nominal king of insufficient years and doubtful designs.

The mere presence, sitting at the table below him, of such powerful figures as CONNALLY, and VANDENBERG, and TYDINGS would have been well calculated to put into young Senator MCMAHON the greatest fear in the Senate—the fear of seniority, with its crushing disapproval of the pushing and those not mellowed by tradition and tried by debate.

But Mr. McMAHON's parents had raised no softy and, by a combination of deference to his elders at some points and aggressive chairmanship at others, he has managed always to sit at the head of the table. It was helpful also that regardless of his obvious and undenied personal ambition, he was profoundly sincere about the job at hand. The elders watched carefully and as this was slowly borne in upon them they seemed content on the whole with the arrangement.

By the observation of this correspondent and by the private word of those who would be bound to know—fellow Senators who see things proceed in camera—McMAHON, in the atomic field, is in the deadliest of earnestness. Indeed, he is said by some of his colleagues to be hipped on it. He himself, in moments of reflection, sometimes falls into deep melancholy as he contemplates matters not known outside the committee room. Once, to illustrate his anxieties to a friend, he observed: "You know, this may be, literally, the apocalypse."

All this should not leave erroneous impressions about McMAHON as a man. He is not by any stretch of the imagination any St. George in plume and armor. He is, when he is not "the Atomic Senator," a hard-boiled politician from a closely divided State where there are no stately minuets in the party clubrooms and where the instinct for self-preservation is profoundly developed. Whenever a good turn can be done for the Democratic Party—apart from the atomic field, which in fundamental matters he seems honestly to try to keep inviolate—McMAHON is the man to do it.

In ordinary affairs he is deeply partisan, untroubled by philosophic hesitations and not at all deterred by excessive scruples from hitting a Republican, in the political sense, over the head with any odd bit of plank or masonry that happens to be lying about. He is aware every minute, in the most urgently practical sense, that he is running in this off year for reelection in a State that at such times has tended to be quite inhospitable to sitting Democrats.

When he sits with the Democratic policy committee—an extraordinary position for a first-termer which he got by virtue of the fact that he is secretary of the Senate Democratic conference, or caucus—he is what his associates there call an attack man. Among the functions of his committee (which embodies the Democratic leadership of the Senate) is to decide what bills the Senate shall take up at a given time. Rarely does Mr. McMAHON find, in these meetings, anything particularly pressing or specially worthy about a bill of Republican authorship.

The more easygoing, and older, policy committee members chuckle a bit about this. When, on occasion, they suggest that such and such a Republican Senator has made an interesting legislative proposal that might just possibly be worth letting to the floor, Senator McMAHON is apt to put in a vehement dissenting opinion. "Why the hell," he may demand, "can't a Democratic Senator put in a better one? And then let's take that one up."

On the floor—again one is discussing the ordinary issues—Mr. McMAHON is a stalwart and faithful Truman Democrat, as regular in this sense as any good soldier in an infantry platoon when the order comes to set off on patrol. On all these matters he is careful to bow to his seniors in the party—and particularly to the salty and high-tempered CONNALLY, of Texas, the greatly feared (and beloved) prima donna of the Senate as chairman of the Foreign Relations Committee.

Mr. McMAHON is on this committee, too, and his membership here, so early in his career, represents an upward climb of the greatest good fortune. Mr. CONNALLY accepted him a little grudgingly at first, and it used to be, when the mood was upon him to dress down the troops, that he would absently refer to Senator McMAHON on the Senate floor as "Mister Mackmohahn," thus leaving the suggestion that one really couldn't bother to know how to pronounce everybody's name. Senator McMAHON, who is good enough himself at this sort of thing to appreciate a great artist in the mysteries of rank, would grin, with a kind of rueful enjoyment of the skill of the master, with the rest of the Senate.

Suddenly it became apparent that Senator CONNALLY had now definitely put Senator McMAHON on the foreign-policy first team. He is now, by the Connally appointment, chairman of a Foreign Relations Subcommittee that has the antigenocide treaty—itself a revolutionary thing in history—in its charge. It thus comes about that Senator McMAHON'S almost exclusive present concerns, apart from the day-to-day routine necessary to any Senator, are with two concepts of horror: The possible mass destruction of human life by atomic-hydrogen bombs and the actual murder in the recent past of millions for no other reason than their race.

While Mr. McMAHON is no bundle of palpitating emotion, he is basically a sensitive man—as are a great many men in the political trade—and profound anxieties often lie upon him.

Out of these anxieties grew the Senate address in which he proposed his world-wide Marshall plan. When President Truman was considering whether to go ahead with the hydrogen bomb, while the world waited upon his words, Senator McMAHON sent privately to the President a proposition in two parts: First, that by all means we should build the bomb, but, second, that we accompany this with a new and dramatic proposal intended to halt the atomic armaments race.

The President did not accept this suggestion and Mr. McMAHON as a loyal Democrat did not complain. Still, haunted by what he knew and what he feared, he felt himself unable simply to stay silent. He began to prepare his address, helped along by one of the most competent professional staffs in the Senate. He told only a few outside persons what he intended to say, but these were men in the highest position of American life. He listened to their suggestions.

Finally, he went forth one morning to the Senate floor, holding, with concealed nervousness, an extraordinary manuscript. As he began to deliver it, in his rather high, breaking voice, much of the Senate, as is its custom, went on noisily about its own business. At length, however, a silence fell and at the end it persisted for a full minute until colleague after colleague began to rise in congratulation.

What Senator McMAHON wants to say is this:

That this country must, of course, build every weapon possible for its defense, but that it ought not to do so without the most desperate efforts to make unnecessary the use of those weapons.

That piling secret weapon on top of secret weapon tends increasingly to exclude both public and Congress, and more and more to leave terrible decisions in fewer and fewer expert hands.

That something must be attempted, some crusade against the atomic armaments race, if only as the highest moral duty, and if only for history's sake.

To those who objected that what he was proposing was impractical and even dreamlike, the Senator retorted: First, find a better plan then, and, second, that the point had been reached where even dreams should not be too quickly tossed aside.

The speech, one gathers, was not made with thought of the rather precious little coteries of professional idealists who always come chattering about to lionize a man in such a case; neither was it made for those who think necessarily and always that there is an honorable alternative to honorable combat.

By what sort of man was it made? First, the vital statistics and the like. BRIEN MCMAHON was born in Norwalk, Conn., in 1903. He graduated from Fordham University and the Yale Law School. He served as an attorney in the Department of Justice from 1933 to 1939. In 1935, when President Roosevelt appointed him an Assistant Attorney General, he was the youngest man ever to hold that place. He was 31 at the time. He had a good record as a Government prosecutor.

Mr. McMAHON was elected to the Senate in 1944. He got the Democratic nomination with powerful support from the Federal wing of the party, for he had never before held any sort of elective office in Connecticut. He reached here without having had to play the somewhat dreary game of musical chairs which most Senators have had to play—first county attorney, then State legislature, and so on up.

He is a sophisticated, reasonably party-going man in Washington; heavy shouldered,

blocky, not lacking in the light, harmless cynicisms of this city in small matters, and wearing the marks of good living upon him. He married the former Rosemary Turner, a beautiful woman by any standard, and they have a 9-year-old daughter, Patricia.

The Senator, by the private testimony of those who know best—his colleagues on the floor—is well liked there; not "in the top 2 percent of popularity," as one says, "but well up there." A criticism of him one hears is that, especially in dealing with atomic matters, where he is so well informed, he has a tendency sometimes to shrug off less intense associates and to insist too much on his own way.

It is said here and there that he has, at times, a faintly pontifical manner. This, it seems from the outside, probably is actually a reflection of the fact that he really is hipped on atomic things and cannot resist the temptation to try to instruct. It also could spring, in part, from another cause. Senator McMAHON has a rather formal courtesy, dresses in the highest mode, and lacks the casual, happy-go-lucky touch that many of the old-timers have achieved through long-secure seats and through the belief, as the years go by, that all things pass.

It may be, indeed, that Mr. McMAHON cannot put down the urge to pontificate against that very assumption when he looks upon the sun and reflects upon the glittering brightness—or malignance—that lies there for mankind.

Prayers for Peace Movement

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1950

Mr. SABATH. Mr. Speaker, on February 13, 1950, the Tory leader, Winston Churchill, made a statement wherein he stated that, if elected, he would do all in his power to bring about another meeting with Stalin. To my mind, his statement was purely political, because the vast majority of the people of the world are in favor of peace, yes—a lasting peace.

In that connection, Mr. Speaker, it gives me sincere pleasure, particularly in these days of stress and strain, to insert two resolutions in the RECORD, one which was passed by the Jewish War Veterans of the United States of America at its fifty-fourth annual encampment, held in Miami Beach, Fla., October 19 to 23, 1949, and the second resolution, which was adopted at a conference of Agudath Israel of America, Inc., held during the week of November 28 to December 5 at the Manhattan Towers Hotel, New York City.

Both of these outstanding groups of citizens have lent their whole-hearted support to a rapidly growing movement in the United States very justly called "Prayers for Peace Crusade." The movement was quietly started last October 28 by the Honorable Herve J. L'Heureux, Chief of the Visa Division, Department of State, in his home town of Manchester, N. H. At that time Mr. L'Heureux stated that it would be fitting if a custom sprang up for a daily 1-minute prayer for peace in every town and city in the country. The idea, as Mr. L'Heureux presented it, was that all traffic, industry, and other activities should cease for just 1 minute at noon each day. Simultaneously every man, woman, and child would offer a prayer to God to grant the world lasting peace.

To date some 751 religious, civic, social, veteran, and industrial organizations have adopted a resolution to pause for 1 minute daily in silent prayer for peace.

I would like to add my personal stamp of approval to a truly magnificent purpose of action, born by a remarkably outstanding citizen and servant of humanity.

The resolutions afore-mentioned follow:

RESOLUTION PASSED BY THE JEWISH WAR VETERANS OF THE UNITED STATES OF AMERICA AT ITS FIFTY-FOURTH ANNUAL ENCAMPMENT HELD IN MIAMI BEACH, FLA., OCTOBER 19 TO 23, 1949

Whereas two dreadful wars and the present disconcerting international circumstances have left this world in confusion; and

Whereas mankind seems unable to find a basis upon which to build a happier understanding among the nations of the earth: Now, therefore, be it

Resolved, That the Jewish War Veterans of the United States approve the Prayers for Peace Crusade, and that all members are urged to participate in this movement by joining in 1 minute of prayer at 12 o'clock noon each day; be it further

Resolved, That each of us, in his own way, will, at this time, ask God to reveal to mankind the way to peace on earth and good will to all men, so that man's mind shall be receptive to God's way, and that in the words of the prophet, Isaiah, "Nation shall not lift up sword against nation; neither shall they learn war any more."

JACKSON J. HOLTZ,
National Commander.

RESOLUTION ADOPTED AT A CONFERENCE OF AGUDATH ISRAEL OF AMERICA, INC., HELD DURING THE WEEK OF NOVEMBER 28 TO DECEMBER 5, 1949, AT THE MANHATTAN TOWERS HOTEL, NEW YORK CITY

Whereas we have seen the terrible destruction the last war has brought on the human race; and

Whereas we feel that war degenerates man's action into that of an animal whose only desire is to destroy and annihilate everything good that exists: Therefore be it

Resolved, That the Agudath Israel of America, Inc., lend its wholehearted support to the Prayers for Peace Movement and urge all its members in this country to participate in the movement by joining in 1 minute of prayer for peace at 12 o'clock noon each day; be it further

Resolved, That we call upon our sister organizations throughout the world to adopt a similar resolution so that there be created a unity of action for this historic cause.

Uncle Sam Plays Santa Claus to the World, Lets Its Native Indians Starve

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1950

Mr. O'KONSKI. Mr. Speaker, the neglect and inefficiency by the Federal Government of the native American Indians is a blot on mankind. For a government that dishes out billions to irresponsible governments and people the world over, the blot becomes a shame.

Mr. Speaker, under unanimous consent, I insert a series of articles by the Milwaukee Journal on this subject:

BAD RIVER LAND PRETTY, BUT WON'T RAISE FOOD

(By Rod Van Every)

The rickety, unpainted Indian houses—"picturesque," the tourists say—that line smooth Highway 2 as you drive through Odanah contain hunger and squalor. Almost every family is sustained by some kind of public relief.

Odanah is the population center of the Bad River Reservation in Ashland County. The reservation borders Lake Superior, and there are some lovely views. But the land is bad.

There are no resorts, no white tourists. When tourists zip along Highway 2, they may look at the Chippewas' houses but they do not stop. Why should anyone stop?

JOBS RARE AT BAD RIVER

The Lac Court Oreilles people are in worse shape, but not much.

There is virtually no work at Bad River. The painters and the carpenters are jobless. Six men are section hands on the railroad, and if there is heavy snow, a half dozen more may get short-term jobs. A few work in the wood-processing plant and the paper mill at Ashland. There are three Indian service mechanics, and a few part-time employees of Odanah stores.

Some winters many men get work cutting pulpwood. But there has been no market for pulpwood in the area for almost a year. To complicate matters, men are returning to the reservation in increasing numbers. They have lost their jobs in the cities.

There are 1,275 Chippewa names on the tribal roll at Bad River, but the guess is that there are no more than 1,000 persons on the reservation. Most of them live in the North, along Highway 2 and at Odanah.

SOME HOMES CONDEMNED

Only a few homes at Odanah have electric lights. Virtually none have inside toilets. Water must be hauled from several community pumps. Although there is a serious housing shortage, with many families doubled up, there are about 10 boarded-up homes. Some have been condemned as unfit for human habitation, but others are empty because their owners are working in the large cities.

The man to see is Al Arbuckle. He is 35, chairman of the tribal council and chairman of the broke town of Sanborn. He knows everyone in the area, and as you drive along the streets he rattles off the economic condition, number of children, amount of relief and the working ability of every family. "I don't see how it could be any worse," Arbuckle says. "It is always bad, but this winter has been the worst. I don't know what we'd do if we didn't have the project."

CEMETERY PROJECT IS ECONOMIC CORE

"The project" is made work at an Indian cemetery, about a mile out of town. Tombstones have been straightened, brush on the graves cut down and more brush on a 40-acre adjacent tract whacked off. The by-product, fuel wood, is distributed to the needy.

"The project" is the economic core of the community.

There are 89,500 acres in the town of Sanborn. But only 11,300 are taxable. Their value with improvements and personal property amounts to $116,000. Sounds good, doesn't it? One hundred and sixteen thousand dollars. But much of the land is no good, covered with swamps and cut-over

brush and scrub. The total tax should be $7,902, Arbuckle says, but, because of the delinquencies, actual tax collections are about half that. So $4,000 is the total tax income of the town of Sanborn. Many Milwaukee wage earners make that amount for one family.

FAMILY SIZE SETS WAGE

There are various State aids to help the town of Sanborn, but they were not enough. So the town went to the State emergency board a year ago, and in 1949 special State funds spent in the town totaled $19,000. Now the average monthly expenditure is about $3,000.

With this money, the little town operates its pitiful "project."

Not everyone gets a chance to work daily on the project. A man is rated on the number of mouths he has to feed. One man with a big family gets 160 hours a month. He earns 70 cents an hour or $112 a month—about $26 a week. Other men work as few as 26 hours a month—$18.20.

No one can get on the project until he has used his last resources. The wages are paid once a week by check, and the town board has instructed the Odanah stores that they may not sell anything fancy to relief recipients—just staples, the starches.

Some surplus commodities—mostly potatoes—have come into the reservation. There was one shipment late last fall and another late in January. It has not been nearly enough to help much.

LIQUOR PURCHASE COSTS JOB

There also is a very firm understanding about purchase of liquor. If a relief project Indian is caught with liquor, his name comes off the hour list, Arbuckle says, but adds: "We've never seen any evidence of liquor among them."

Arbuckle himself is well off, compared with most of his constituents. He draws a few dollars as town chairman, and he is the janitor for the Indian service's group of clean, white buildings at Odanah. Still, it is not easy, with six children to feed.

Arbuckle works closely with Peter Walz, 37, a district agent of the Indian service who comes to Odanah once a week. Walz also visits the Red Cliff Reservation and works in the office of the Great Lakes Consolidated Indian Service at Ashland.

SUMMERS DON'T IMPROVE ECONOMY

In most Indian communities, things are easier in the summer. There are more jobs. But the summers do not bring much economic sunshine to the Odanah Chippewas. Some men sail the Great Lakes on ore and coal boats. Others work on the coal and ore docks and on railroad section crews. A few follow the harvests, especially as bean pickers.

CAN'T AFFORD CURING DIET

Let's visit some of the people.

This old woman lives on an old-age pension of $27 a month. Her son has a shaky job in Milwaukee, but he is able to send her $10 now and then. The woman has high blood pressure and rheumatism, and the doctor has told her she must drink much fruit juice. She has bought none. She can't afford it.

"Ah, this is worse than the depression," Arbuckle says. "Then, at least, there was WPA, and everyone had work."

In this little house an Indian service mechanic supports his wife, two children, and an aged father on $37 a week.

This old bachelor has only himself to feed, and he is lucky. He has an old-age pension.

PENSIONS MAKE HIM MAD

"Those pensions make me mad," Arbuckle says. "Out here they aren't as much as in other places in the county. The county welfare department says you can live cheaper here, and there are free fish and deer. So they cut the amounts for old-age pensions, blind pensions, and aid to dependent children.

"Worst of it is, you can't live any cheaper here. It's the food that costs so much. And we pay rent and interest on our house loans, just like everyone else. Then there are transportation costs—getting to and from Ashland, if you're lucky enough to have a job there. That's 10 miles.

"The only solution is to leave the reservation," Arbuckle insists. "But where are you going to go? There are no jobs in the cities, and you got to have at least a little capital, $50 or so, just to go looking for a week."

LITTLE CRAFT WORK

There is almost no craft work—beads, baskets, or buckskin—on the reservation.

St. Mary's Catholic Church helps where it can, and its big school, taken over by the State several years ago, provides a warm refuge for children. That hot school lunch at noon is welcomed.

The sisters at the church also operate an orphanage in which about 20 children are cared for. County funds help.

Twenty youngsters go to Ashland high school, but many hate to go because of their poor clothing and the jibes of the white children.

CONTRACT DOCTOR KEEPS CLOSE EYE ON HEALTH

Pretty close tab is kept on Indian health at Bad River. Dr. Del Andrus, 65, of Ashland, comes out to the spic and span Indian agency clinic a couple times a week.

Dr. Andrus is one of five contract doctors in the northern part of the State. The contract doctors are paid a fee by the Indian service. Serious cases of illness go to the 45-bed, 10-bassinet Indian hospital at Hayward, with its one full-time doctor and six nurses. The Indian service also has contracts with six counties and two townships for free hospitalization and medical care of Indians.

ONE DENTIST, THREE STATES

One full-time dentist, working chiefly among Indian children at the schools, must cover all of Wisconsin, upper Michigan, and Iowa. Tooth decay, caused by inadequate diet and improper care, is a major problem on reservations and in nonreservation Indian communities. But the one dentist, Dr. Charles B. Fisher, has such a huge territory to cover that he cannot visit any area oftener than about once every 2 years. Congress has not appropriated enough money to hire more dentists and doctors.

Dr. Andrus says the health situation at Bad River is pretty fair.

The Red Cliff Reservation takes up the scenic tip of the Bayfield Peninsula, the northernmost part of Wisconsin. It is the smallest of the Wisconsin reservations, and the Chippewa tribal roll contains only 653 names. The Indian service believes that about 400 people live on the reservation; local estimates are 60 families, about 250 persons.

Conditions are better at Red Cliff than Odanah. The houses are better, neater. There is more work for the people. There is more saving of earnings. Only a few are on relief, and they are a heavy financial burden on the penniless town of Russell.

Several Indian families operate small farms. Many men are cutting pulpwood, working for whites, who are required by the tribal council to hire Indians before they are granted timber rights. Some work in Bayfield and Ashland.

NO ONE DESTITUTE

"No one is destitute here," says George Gurnoe, Jr., 57, a member of the tribal council.

When a family gets in a tight spot the town of Russell provides relief food in return for work on town roads and other projects.

Childless Mr. and Mrs. John Buffalo have a spick-and-span house and are doing all right. John works on the ore boats during the summer and fall, and he saves his money.

The James La Ferniers are making it this winter okay, but it is a tight squeeze. Mrs. La Fernier, 46, works 9 hours a day, 6 days a week in a Bayfield restaurant. She gets $20 a week. James suffered a broken leg last September, and it didn't heal properly. He has been unable to do much work.

As everywhere with the Indians, summers are kinder. Then the men and women of Red Cliff harvest strawberries, raspberries, apples, and string beans, and work in the bean cannery. There is off-and-on work with the commercial fishing boats and the tourist trollers. Then in the fall come the terrific herring runs. Everyone works around the clock—on the boats, in the canneries, processing, cleaning, and packing the fish.

WANTED: SMALL INDUSTRY

Here, too, the Indians would like to acquire a small sawmill or box factory to use the poplar and the few stands of balsam. All the financial bumps would be ironed out smoothly by the pay roll of such an industry, they are sure.

No Indian-service doctor has visited the neat agency clinic at Red Cliff for several years, but there are plans to contract with a 75-year-old doctor from Ashland for once-a-week visits.

Booker T. Washington and George Washington Carver: From Slave Cabin to Hall of Fame

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1950

Mr. WHITE of Idaho. Mr. Speaker, at a time when we are commemorating the birthday and honoring the memory of Abraham Lincoln—the Great Emancipator, it seems to me particularly appropriate to mention the achievements of those two great Negro leaders—Booker T. Washington and George Washington Carver.

In 1946, the Committee on Coinage, Weights, and Measures, of which I was then chairman, favorably reported H. R. 6528 for the minting of 5,000,000 Booker T. Washington memorial half-dollars to honor that great Negro leader who, by devoting a lifetime of service to his people, rose from slave cabin to the hall of fame.

The bill passed the House and Senate without a dissenting vote, was signed by the President, and became Public Law 610, Seventy-ninth Congress.

These coins are being distributed by the Booker T. Washington Birthplace Memorial, Booker Washington Birthplace, Va. This memorial is a nonprofit organization dedicated to the perpetuation of the ideals and teachings of Booker T. Washington, and to establish trade and industrial schools for the training of Negro youth, thereby improving the economic status of the Negro and benefiting our entire national economy.

The Booker T. Washington Birthplace Memorial has acquired the Vir-

ginia plantation where he was born, restored the buildings including the log cabin, established the Booker Washington Birthplace, Va., post office, and are using the land for agricultural training.

In nearby Roanoke, Va., an industrial training school has been established where 250 Negro GI's are receiving industrial training; and the memorial plans to establish similar trade schools in all parts of the United States where there is a substantial Negro population in need of such training.

Booker T. Washington early recognized the talents of the eminent Negro scientist, George Washington Carver, and induced him to come to Tuskegee to carry out his scientific agricultural experiments which have so materially benefited southern agriculture, adding millions of dollars to the revenues of the southern farmer.

Several years ago a national monument was planned by the Federal Government for the birthplace of George Washington Carver, in Diamond, Mo. In 1943 Federal legislation was passed authorizing the expenditure of $30,000 to purchase the property on which Dr. Carver was born. Last year the Federal court made an award of $79,000 to clear up claims and expenses against the property. The total court acquisitional cost amounted to approximately $80,000. The original $30,000 will be applied to this, leaving a deficit of $50,000 on the property. The indebtedness has to be cleared up before plans can be carried out to establish a national monument on this spot.

Since the lives of Booker T. Washington and George Washington Carver were so clearly associated, the trustees of the Booker T. Washington Birthplace Memorial felt that something should be done by the memorial to help make the monument possible. To this end, in their 1949 annual session, the trustees made plans to establish the George Washington Carver National Monument Foundation so that the George Washington Carver National Monument might become a reality.

The entire movement was initiated because of information submitted to the memorial by a Federal agency to the effect that the award would go by default if some public-spirited organization or organizations did not take hold. Since one of the main objectives of the memorial is helpfulness toward others, the trustees decided to assume the leadership.

Attorney Paul E. Bradley, of Joplin, Mo., has informed S. J. Phillips, president of the George Washington Carver Monument Foundation, that Missouri has granted a charter to this organization, with headquarters at Diamond, Mo. The charter stated that the purposes of the newly organized foundation are as follows:

First. To work out ways and means by which the needed $50,000 will be raised;

Second. To assist other nonprofit organizations;

Third. To help underprivileged youth through opportunity scholarships;

Fourth. To establish community service clubs;

Fifth. To do research in the field of agriculture and rural leadership; and

Sixth. To promote racial understanding.

Mr. Phillips, in commenting on the activities of the foundation, said that months before the granting of the charter considerable work had been done toward making local and national plans whereby the American public might have the opportunity to help acquire the birthplace of George Washington Carver, so that the national George Washington Carver monument might be developed as planned.

To make it possible for the Secretary of the Interior to carry out the direction of Congress to acquire on behalf of the United States the 210 acres comprising the birthplace of George Washington Carver, I will introduce the following bill on Monday, February 20, 1950.

I am advised that the Director of the Budget has no objection to the proposed legislation.

A bill to amend the act of July 14, 1943, relating to the establishment of the George Washington Carver National Monument, and for other purposes

Be it enacted, etc., That in order to permit the acquisition of the necessary land for establishment of the George Washington Carver National Monument, section 4 of the act of July 14, 1943 (57 Stat. 563), is hereby amended to read as follows:

"SEC. 4. There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this act, including an amount not to exceed $80,000 to be used in payment for land to be acquired pursuant to this act."

Who Is Responsible for the Adverse Report on FEPC Legislation?

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mr. SABATH. Mr. Speaker, the unfortunate death of our colleague Chairman BLAND will justly preclude speeches on other subjects today. Inasmuch as continuous inquiries as to the status of the civil-rights legislation pour into my office, and inasmuch as I feel that the country should know who is responsible for the bottling up of this worth-while legislation, I am inserting a copy of a statement to the press which I issued today on this subject, for the information of all concerned. The release is as follows:

STATEMENT BY HON. ADOLPH J. SABATH, REPRESENTATIVE FROM ILLINOIS

Congressman ADOLPH J. SABATH, Democrat, Illinois, explained today why the highly important and controversial Federal fair-employment practice bill has continually met with unfavorable action in the Committee on Rules. Mr. SABATH is the chairman of the Committee on Rules and dean of the House.

He said: "In view of the farcical performance yesterday and in the past several weeks on the part of the Republicans aided by the Dixiecrats by forcing seven roll calls in an effort to delay action on the civil-rights legislation and other important bills, I called a meeting today of the Committee on Rules in order to put an end, once and for all, to these ridiculous and dilatory tactics."

The 84-year-old veteran said: "I place the responsibility for the failure to obtain favorable action on the FEPC bill, in a great measure, on the shoulders of the Republicans. The Republicans have consistently opposed this measure notwithstanding their party platform, which reads as follows:

"'One of the basic principles of this Republic is the equality of all individuals in their right to life, liberty, and the pursuit of happiness. This principle is enunciated in the Declaration of Independence and embodied in the Constitution of the United States; it was vindicated on the field of battle and became the cornerstone of this Republic. The right of equal opportunity to work and to advance in life should never be limited in any individual because of race, religion, color, or country of origin. We favor the enactment and just enforcement of such Federal legislation as may be necessary to maintain this right at all times in every part of this Republic.'"

Mr. SABATH stated that both the Democratic and Republican national conventions went on record, in no uncertain terms, in favor of civil-rights legislation. Under one pretense or another, the Republicans succeeded in obtaining delays and postponements on the consideration of FEP legislation before the Committee on Rules and, "I, as chairman, never have been able to obtain sufficient votes from the Republicans to offset those who are opposed to the measure."

Mr. SABATH pointed out the fact that the very last request our great and revered President Franklin D. Roosevelt made on the last day of his life was one wherein he "urged me to endeavor to obtain a rule establishing an FEPC. Not only that, but on the day of President Roosevelt's funeral, President Truman assured me, and has demonstrated beyond a doubt, that it is also his aim and intention to bring about favorable action on this legislation."

Mr. SABATH pointed out that again in the Eightieth Congress when the Republicans had absolute control over the Committee on Rules and had the votes, they again failed to carry out their pledge to the American people; namely, to support FEP legislation.

The dean of the House very candidly stated that the same dilatory tactics were again used during the first session of the Eighty-first Congress. He said: "Though four Democratic members of the Committee on Rules tried on several occasions to obtain favorable action on a rule for the FEPC bill, due to the evasive position assumed by the Republican members of the committee in conjunction with the Dixiecrats, no favorable action has been taken and adverse action was taken today." A motion to reconsider the bill carried, and one additional Republican vote could have carried the rule.

The chairman said that "In view of the fact that other important legislation is being delayed, I finally came to the conclusion that the country should know specifically and practically where the membership of the Rules Committee stands on this important and worth-while bill. I insisted that a rule be granted today for the consideration of the civil-rights measure. As a matter of fact, I felt that the meeting and the vote therein should be held at an open hearing, but the gentlemen opposed insisted that a closed session and a closed vote be taken. All this notwithstanding the fact that the clever newspapermen at all times, and even before I leave the chair, manage to obtain complete information as to any vote considered in an executive session of the Rules Committee."

Consequently, Mr. SABATH stated, "the country should know that if one more Republican had voted for the rule today, it could

have resulted in a rule being granted and the bringing of the bill to the floor of the House for consideration and debate by the membership."

Mr. SABATH charged that the Republicans have played politics with this bill from the very beginning and they are playing politics now. He said: "Next week the Republicans will continue to play politics with FEPC. At another meeting of the Rules Committee some of the Republicans who voted against the granting of a rule contemplate making a motion to reconsider the adverse vote taken today—all for the sake of confusing the American people."

The chairman stated that "I am confident that such tactics will not inure to their benefit. Let the responsibility rest on the shoulders of the Republicans who are responsible for the bottling up of this legislation."

Stichman Program Assailed by Moses as Unfair to City

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1950

Mr. MULTER. Mr. Speaker, with committees in both Houses of Congress now devoting much time to consideration of cooperative housing, I believe the following item which appeared in the New York Times of December 12, 1949, will make interesting reading:

STICHMAN PROGRAM ASSAILED BY MOSES AS UNFAIR TO CITY—LIMITED DIVIDEND HOUSING PLAN WOULD GIVE AWAY LOCAL TAX FUNDS, COORDINATOR ASSERTS—SAYS MAYOR BACKS STAND—STATE HOUSING HEAD DISPUTES THIS—TO GO AHEAD UNLESS HE HEARS FROM O'DWYER

City Construction Coordinator Robert Moses attacked yesterday State Housing Commissioner Herman T. Stichman's program for the construction of tax-exempt housing projects under the State's limited dividend housing law as a too generous waiving of city taxes without the approval of appropriate city authorities.

Saying he was speaking with the authorization of Mayor O'Dwyer, Mr. Moses declared that in future all projects of this kind involving city tax exemption, city planning, and city improvements "must be discussed and agreed upon in advance by the appropriate city officials." "This procedure," he said, would have to be followed before Mr. Stichman "make public announcements to the press that they have been consummated through his unaided efforts."

Mr. Moses said his statement was prompted by Mr. Stichman's recent announcement that he had applications for 50 more limited-dividend housing projects.

In a sharp rejoinder Mr. Stichman said he had discussed the State's program for nonpromotion cooperative housing with the mayor at the outset, and that the latter had endorsed it. He added that until the mayor "personally advises" him of the withdrawing of such support he will continue with the program.

MOSES REPROACHES STICHMAN

Mr. Moses reproached Mr. Stichman for seeking to give the impression that he had the authority to establish such projects "subject to perfunctory approval by the city." Mr. Stichman, Mr. Moses said, also implied that these developments would largely eliminate the need for any intermediate type of public housing such as the city's nonsubsidized projects.

Mr. Stichman was accused of constantly criticizing such city projects while failing to indicate that all he offered the limited-dividend corporations under his program was city tax exemptions of the entire improvement. The developers pay full taxes on the land.

"Commissioner Stichman has no right to give away huge sums of city taxes for many years to come without the city's approval nor has he the right to charter and locate city-housing projects until after full investigation by the appropriate city officials, including the city planning commission and board of estimate," Mr. Moses said.

"Commissioner Stichman has some very foggy ideas as to the incidental problems and costs, all of which fall on the city, for drainage, sewerage, schools, streets, transportation, playgrounds, neighborhood zoning, and other purposes," Mr. Moses declared.

"All the projects announced by Commissioner Stichman appear to be on vacant land. They do not involve genuine slum clearance, which is the best justification for partial tax exemption. In most cases, also, the builders and developers have very little if any real equity. At most they have a small investment representing part of the cost of land and promotional expenses. They usually get an FHA guaranty nominally representing 90 to 95 percent of the full value and actually often representing more than 100 percent. This guaranty enables them to borrow all the money needed for the enterprise."

Nearby speculative builders with FHA guaranties, he added, could not compete against the limited dividend companies sponsored by the State official, which would enjoy a huge amount of city tax exemption.

Mr. Stichman, declaring that he could not recognize Mr. Moses' right to speak for the mayor "in this vital matter," said:

"I plan to go ahead trying to help lower middle-income families acquire mutual home ownership and rental housing at costs within their means. Let the city try to block this and tell the homeless its reasons. I don't think Mayor O'Dwyer or Commissioner Moses will do so.

"The mayor has told labor leaders and others who have discussed our program with him that he would cooperate with us, stating that I had always cooperated with him in housing matters. Unless and until Mayor O'Dwyer personally advises me that he is withdrawing that support from our efforts to help lower-middle-income families obtain mutual home ownership at costs within their means with State and city aid, I must continue to believe that he will keep his word with respect to cooperation from the city."

During Mr. Moses' absence in South America, Mr. Stichman said, his assistant, Harry Taylor, was kept fully informed of the State's plans. On Mr. Moses' return recently, Mr. Stichman said, the former advised him he would go along with more projects under the State program.

While the State projects are being built on vacant land Mr. Stichman said that also was true of the approximately $250,000,000 worth of the so-called nonsubsidized city projects. Speculative builders, he said, were dropping their rentals 25 percent to meet competition in sections where the State was erecting dwelling units.

He said tax exemption was only part of the program. Builders, he explained, were limiting their profits under the State program to 5½ to 7½ percent, or less than half that on city projects. Labor also was more productive on State developments, he continued, because workers knew that under the cooperative program they "will benefit themselves and other wage earners who need housing."

The Government Can't Do It All

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 13, 1950

Mr. REED of New York. Mr. Speaker, it is with the greatest of pleasure that under an extension heretofore granted, I am inserting an article by Mr. Herbert Hoover, our former great President, which article appears in the American Economic Security, volume VII, 1950.

This article really comes from the heart of our greatest living humanitarian, and should cause people to reflect and act through every means at their command to preserve our own form of government from the devastating disease of socialism:

THE GOVERNMENT CAN'T DO IT ALL

(By Herbert Hoover)

We have seen a steady expansion of Government into welfare activities. I am not criticizing the expansion of Government aid to public welfare. It has a place in American life—provided the cloak of welfare is not used as a disguise for Karl Marx. But parallel with this expansion, we have stupendous taxation to support the hot and cold war. That makes it difficult for the citizens to support voluntary welfare agencies. It requires more personal sacrifice than ever before.

From all this, many citizens ask themselves: For what reasons must we continue to support the voluntary agencies? Why not let the Government do it all?

The first short answer to this question is that you cannot retire from the voluntary field if you wish our American civilization to survive. The essence of our self-government lies outside of political government. Ours is a voluntary society. The fabric of American life is woven around our tens of thousands of voluntary associations. That is, around our churches, our professional societies, our women's organizations, our businesses, our labor and farmers' associations—and not least, our charitable institutions. That is the very nature of American life. The inspirations of progress spring from these voluntary agencies, not from bureaucracy. If these voluntary activities were to be absorbed by Government bureaus, this civilization would be over. Something neither free nor noble would take its place.

MORALS ARE PRIVATE PROPERTY

The second answer to this question is that it is our privately supported and managed hospitals and educational institutions that establish the standards for similar governmental agencies. It is the voluntary institutions which are the spur to official progress. Without them our governmental healing and educational agencies would lag and degenerate.

The third answer to this question is that morals do not come from Government. No Government agency can create and sustain a system of morals. Even when private charities are not working specifically in the religious field, their works confirm religious faith and morals.

There is a fourth answer. Governments and bureaucracies cannot build character in our youth. With the brutalization which results inevitably from war, character building

has never been as necessary as it is today. Many private welfare organizations are, directly or indirectly, helping build character. Some, for example, support the development of sports in our youth. The ethics of good sportsmanship are second only to religious ethics.

There is a fifth answer. The greatest and, in fact, the only impulse to social progress is the spark of altruism in the individual human being. "But the greatest of these is charity" has been a religious precept from which no civilized people can depart without losing its soul. Governments practice charity solely because it rises from that spark in the hearts of the people. The day when altruism in the individual dies from lack of opportunity for expression, it will die in the Government. At best, charity by government must be formal, statistical, and mechanistic. We need charity in its real sense—from the heart.

There is a sixth reason. The world is in the grip of a death struggle between the philosophy of Christ and that of Hegel and Marx. The philosophy of Christ is a philosophy of compassion. The outstanding spiritual distinction of our civilization from all others is compassion. With us, it is the noblest expression of men. Those who serve receive an untold spiritual benefit.

THE GOOD SAMARITAN'S SOLUTION

The day we decide that the Government is our brother's keeper, that day the spirit of compassion will have been lost. If we abandon private charity, we will have lost something vital to America's material, moral, and spiritual welfare.

But a simpler answer than all this lies in the parable of the good Samaritan. He did not enter into governmental or philosophic discussion. It is said that when he saw the helpless man "he had compassion on him; * * * he bound his wounds * * * and took care of him."

Genocide in Lithuania

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mr. FLOOD. Mr. Speaker, today, February 16, 1950, marks the thirty-second anniversary of Lithuania's independence. Americans of Lithuanian extraction throughout the country will observe this day fittingly. We are well aware of conditions in Lithuania at the present time and we know that the voice of her people is mute with the heel of the Soviet tyrant on the throat of a nation and a race.

So it is that I am proud to give my voice to the cause of this brave little nation and let it resound in behalf of their liberty and freedom in this Chamber, the "home of the free and the land of the brave." Before God these people are our brothers—in thought, word, and deed.

Evil begets evil. Spawned and sired by the modern antichrist, perfected and refined in all its subtleties by these dictators who would make a god of the omnipotent state. A new and terrible crime against humanity is being perpetrated on what remains of the Lithuanian people in their beloved Baltic homeland. The purpose of Russia is to erase them as a nation and a people—right off the map.

This new horror is called genocide.

God save Lithuania from this inhumanity of man against man.

THE TOLL OF GENOCIDE IN LITHUANIA

In a memorandum dated October 3, 1949, the Supreme Lithuanian Committee of Liberation informed the United Nations of the series of major waves of genocide operations carried out by the Russians since their reoccupation of Lithuania. These operations were in addition to the systematic detention and exiling of from 2,000 to 3,000 persons monthly. The toll of Lithuanians murdered and exiled during the years 1941-48 was: 300,000 victims of the Nazi occupation and 520,000 victims of the second Russian occupation. The net manpower losses since 1940 amounted to 30 percent of the indigenous population. For a small nation of 3,000,000 people this is an irretrievable injury inflicted by a foreign state with which excellent relations had been maintained prior to the surprise invasion. The memorandum pointed out that forcible collectivization of agriculture constitutes a refined method of genocide which deprives the Lithuanians remaining in the homeland of their churches, of all personal freedom and property, of all contact with national culture, religious instruction, independent thinking. The opposition to collectivization cost 100,000 deportees in 1948 and 120,000 in the first half of 1949.

In addition to outright killings, deportations, suppression of national culture, and separation of families, the nation is deprived of all normal family life and the continuity of the nation is stopped. Young men of Lithuania are drafted into Soviet armed forces to serve in Russia. Other young men and women are drafted into "volunteer" labor battalions for service in Russia. Children are forcibly taken away from their parents and sent to specialized training schools to be reared as Russian heathens.

Lithuanian youths are waging an armed struggle as guerrillas and are dying fast. Prisoners are tortured in an unbelievable manner. Female prisoners are deliberately raped and infected with venereal diseases, and men's sexual organs are mutilated. Masses of Russians and Asiatics are brought in and settled in Lithuania.

The picture of Russian misrule and oppression is too horrible to relate in detail.

NEED FOR INTERNATIONAL ACTION

Genocide is being perpetrated in Lithuania, Latvia and Estonia, East Prussia, Eastern Poland, the Ukraine, and so-forth. It is perpetrated by the political organs of Soviet Russia, by Russian armed forces in occupation of these countries and areas, and under the direction of the supreme state organ of the Soviet Union—The Politburo. Collateral genocidal operations at the same time are effected against prisoners of war of other innumerable nationalities. All told, it is multiple genocide, under all five heads of the definition of genocide, affecting many peoples and many races. It is international in its operations.

International cooperation is necessary to stop international crimes. Genocide is a more horrible crime than slave trade of the former ages, or piracy, or opium trade or other crimes which are international in scope and are being suppressed by concerted international efforts.

International law is, after all, but a set of usages accepted by nations. The first step in developing new international standards is to accept the definition of certain acts and to denounce such acts as international crimes. When most members, or major members of the international community of nations accept these standards, they become established international law.

The United States is a major member of the international family of nations bound to observe the principles of the United Nations Charter. Other countries are accustomed to look to us for moral leadership, and action by the United States is reflected in all corners of the globe. Can we with honor refuse to help establish international law standards to make genocide an international crime? Our refusal to ratify the Genocide Convention would be tantamount to encouraging Serov and his ilk to expand their genocidal operations and to ignore the Ten Commandments.

It is true that, in the absence of established international machinery capable of preventing and punishing international crimes, the Genocide Convention when ratified by the required number of countries will remain ineffective against states choosing to ignore the international verdict of public opinion. Under the terms of article VI of the Genocide Convention an international penal tribunal, if and when formed could acquire jurisdiction only "with respect to such contracting parties as shall have accepted the jurisdiction of such tribunal." At this time, there is no international penal tribunal.

Had there been no Kellogg-Briand Pact, which was but a pious declaration, we would not have had an established concept of aggression, and could not have developed our notions of opposition to forms of aggression. We could not have tried the major Nazi war criminals, for conspiring against peace.

And the same with the Genocide Convention. If we ratify this treaty, it will remain for some time a set of principles with no machinery for enforcing them. However, it will have contributed to international acceptance of new standards and will carry the force of law, as part and parcel of international law. Our leadership will encourage ratification of other countries. Enforcement machinery can be discussed later. When that time comes, the United States will have ample opportunity to discuss the project on its merits. The main thing is that there will be a law against genocide. This fact alone may deter criminals.

RESOLUTIONS DULY VOTED BY THE LITHUANIAN AMERICAN CONGRESS HELD ON THE FOURTH, FIFTH, AND SIXTH DAYS OF NOVEMBER 1949, AT HOTEL NEW YORKER IN THE CITY OF NEW YORK, UNDER THE AUSPICES OF THE LITHUANIAN AMERICAN COUNCIL, INC.

I. MESSAGE TO THE PRESIDENT

(By wire, voted November 4, 1949, after the opening)

The Honorable HARRY S. TRUMAN,
President of the United States,
Thee White House, Washington, D. C.:

Delegates of 1,000,000 Americans constituted in a Lithuanian American Congress meeting at Hotel New Yorker in the city of New York, unanimously send a message of greetings to the President of the United States.

Deeply touched by the sentiments motivating your policy as expressed in your message to this Congress, the delegates in behalf of themselves and their constituencies reaffirming their undying loyalty to the principles of American democracy, pledge their loyal cooperation with your administration toward the goal of equitable domestic tranquillity and international peace founded on principles of national self-determination and Atlantic Charter, in other words on principles of freedom and justice which you invoke with God's help.

The Lithuanian American Congress will voice their views and aspirations in a set of resolutions after due deliberation, and copies thereof will be presented to the White House. At this time please accept our unanimous expression of gratitude for your unswerving policy of nonrecognition of the fruits of Nazi-Soviet partnership in aggression and for your continuing recognition of sovereignty of Lithuania, Latvia, and Estonia.

LEONARD SIMUTIS,
President.
Dr. PIUS GRIGAITIS,
Secretary.

II. MESSAGE TO THE APOSTOLIC DELEGATE

(By wire, voted November 4, 1949)

His Excellency Archbishop AMLETO CICOGNANI,
The Apostolic Delegate,
Washington, D. C.:

Delegates of 1,000,000 Americans constituted in a Lithuanian American Congress meeting at Hotel New Yorker in the city of New York, request Your Excellency to transmit their message of respects to His Holiness the Pope.

Gratefully recalling the incessant papal intercession in behalf of the martyred people of Catholic Lithuania and their just cause of liberty, the delegates beg His Holiness to bless and invoke Divine guidance in their deliberations and their efforts seeking justice for the freedom-loving Christian people of Lithuania and other countries presently enslaved by militant Soviet communism.

LEONARD SIMUTIS,
President.
Dr. PIUS GRIGAITIS,
Secretary.

III. MESSAGE TO UKRAINIAN AMERICAN CONGRESS

(By wire, voted November 4, 1949)

UKRAINIAN AMERICAN CONGRESS,
Washington, D. C.:

Delegates of 1,000,000 Americans constituted in a Lithuanian American Congress meeting at Hotel New Yorker in the city of New York send their greetings and best wishes to their fellow citizens and fellow freedom fighters of Ukrainian descent. This congress wholeheartedly supports the just cause of the Ukrainian people as that of other liberty-loving peoples presently enslaved by Russian Soviet communism.

LEONARD SIMUTIS,
President.
Dr. PIUS GRIGAITIS,
Secretary.

IV. BASIC DECLARATION

(Voted November 5, 1949)

The Lithuanian-American Congress, representing by duly elected delegates the preponderant majority of Americans of Lithuanian descent or extraction, reiterates its constituency's devotion to the principles enunciated in the American Declaration of Independence, the Constitution of the United States, the Wilsonian 14 points, the Atlantic Charter, the 4 freedoms, the Truman doctrine, the Universal Declaration of Human Rights, the Convention for the Prevention and Punishment of the Crime of Genocide, the objectives of the United Nations Charter, and North Atlantic Pact.

Firmly espousing the inalienable rights of men and nations, the principle of equality of men and races, the right of all peoples capable of self-government to pursue individual happiness and to develop their creative national talents in freedom under a representative form of democratic government, the sovereign equality of states, large and small, and international cooperation under the rule of reason, of justice, and of law, the Lithuanian-American Congress carefully reviewed the events of the past decade and the deplorable state of international affairs at the close of the year 1949.

In old Europe the cradle of modern civilization, a major half of the continent lies under the sway of lawless rule by a group of conspirators established in the Kremlin of Muscovy who had extended their police-state regime over formerly independent peoples of the western Christian community of nations. The march of lawlessness and aggression initiated by Hitlerite Germany in partnership with Soviet Russia, has submerged in bondage the easternmost representatives of western civilization and democracy who had for centuries past defended Europe from barbaric onslaughts, to wit: Lithuania, Poland, Latvia, Estonia, Ukraine, Rumania, Bulgaria, Hungary, Albania, Yugoslavia, Czechoslovakia, and parts of Austria and Germany. Human rights are totally extinct in all of these countries. Western Christian religions are being forcibly eradicated in the Baltic states and the Ukraine, freedom of religion is constricted in other countries, and formerly independent Christian churches are being subverted to serve the interests of the Communist Party and its political police. Living standards of the subjected peoples are lowered below the meager standards of Eurasian Russia. Millions of innocent people are being starved to death in slave-labor camps of Arctic Russia under a program of incessant genocide operations of unprecedented scale. The most formidable European races of the best fighting traditions are being molded into a mass of robots trained to destroy their own peoples and their friends of the Western World.

Resistance to Communist enslavement first exemplified by heroic Finns in a defensive open war and taken up, in underground resistance at first and in guerilla operations later, by gallant Lithuanians, Latvians, Estonians, Ukrainians, and Poles, failed to evoke a world-wide understanding of the aspirations of these champions of the Atlantic Charter. The great democracies failed to champion the principles enunciated by themselves during World War II, and brave bands of patriots, abandoned by the signatories of the Atlantic Charter, are facing extinction in their lone fight for liberty against the armed might of Soviet Russia sustained by lend-lease. Nevertheless, underground resistance survives in the Baltic states, Poland, and the Ukraine, and is in the pangs of birth in other Communist-dominated European nations east of the Stettin-Trieste line.

In Asia, the most populous continent lies prostrate in convulsions. Militant communism is completing the subjugation of China and rearing its ugly head in other parts of the continent. The sun of freedom which had brightened the Asiatic horizon in 1945 is obscured, is setting under the hammering blows of lend-lease arms wielded by hosts directed by Moscow-trained conspirators. Unfortunately, the peoples which had recently gained their freedom at the hands of western European and American powers, evince a deplorable lack of understanding of the Communist conspiracy and its methods, and heedlessly profess their neutrality.

On other continents, the situation is more promising, even though poverty and exploitation present a dangerous contingency not to be ignored by United Nations of the non-Soviet world.

In our own country, people are recovering from their short-lived artificially fostered "love Russia" complex and are awakening to the Communist menace to American security, to American ways of life, and to international peace. The American reawakening is occasionally attended by outbursts of intemperance. Nevertheless, civil rights are imperiled nowhere in the United States, and there is every indication that Communist conspirators will be ultimately eliminated from the seats of power in the national Government and in labor unions.

The current international confusion is the heritage of the political errors and maladjustments of the fateful conferences of Tehran, Yalta, and Potsdam. Abandonment of the central-eastern European and Chinese peoples, the siege of Berlin, the veto-ridden United Nations, the huge armaments outlay and the Marshall plan—are the price for the ill-advised arrangements imposed by Stalin on gullible western statesmen, constitutional representatives and servants of the American and British peoples who posed as chiefs of state at the ill-fated conferences. These secret political decisions were never submitted for ratification, and were never ratified, by either the Senate of the United States or the Parliament of the United Kingdom. The Soviet Union itself had already violated and repudiated the letter and the spirit of the Yalta and Potsdam agreements.

Wherefore, the Lithuanian American Congress respectfully submits to the President, Secretary of State, and Members of Congress of the United States:

That the Government of the United States rescind in toto the unratified political decisions of Tehran, Yalta, and Potsdam conferences, which were nullified by Soviet violations;

That, having abrogated the said unratified maladjustments, the Government of the United States reaffirm its determination to reconstitute peace in conformance with the principles of the Atlantic Charter applied to the friends and former foes alike, pursuant to the declaration by original United Nations of January 2, 1942, and the Russian adherence to said principles in the international treaties signed with the United Kingdom and the United States in 1942;

That the Government of the United States insist on the sanctity of treaties, much advertised by Soviet spokesmen since 1939, by demanding that the Soviet Union honor its international treaty obligations under the peace treaties and nonaggression and friendship pacts concluded by the Soviet Union with the Republics of Estonia, Latvia, Lithuania, and Poland in the period of 1920–38, and withdraw the Russian occupation forces and police-party apparatus from said states;

That the Government of the United States take cognizance of the existing threat to international peace and security in consequence of the armed struggle continuing in the Russian-occupied Baltic states and in the allegedly sovereign Ukraine, a member of the United Nations, and invoke applicable

provisions of the United Nations Charter as a dutiful member of the United Nations and a permanent member of the Security Council;

That the Government of the United States reaffirm its policy enunciated on July 23, 1940, regarding the devious policies and predatory activities of the Soviet Union as part of a deliberate attempt to annihilate the political independence and territorial integrity of the Republics of Lithuania, Latvia, and Estonia, and, taking further cognizance of the barbarous Soviet policies applied against the Baltic peoples, invoke the aid of the United Nations in stopping the crime of genocide being perpetrated by the Government of the Soviet Union and its single ruling party.

V. THE GENOCIDE CONVENTION

The Lithuanian American Congress expresses its gratification over the very active initiative of the United States Government in drafting the Convention for the Prevention and Punishment of the Crime of Genocide.

This Convention was signed by a majority of the United Nations and is ratified by several States. Its ratification is currently pending before the United States Senate.

The Lithuanian American Congress views the need to ratify the Genocide Convention as an issue second only to the problem of liberation from bondage of the Baltic states and other countries enslaved by the Soviet Union in the aftermath of the late war.

The Genocide Convention represents the first international legislation designed to effectuate at least one part of the Universal Declaration of Human Rights and to abolish the barbarous practices in mid-twentieth century.

Heedless massacres committed in the heat of passions by uncivilized barbarians in the ancient times, were elevated by the Soviet and Nazi regimes into a status of a planned party-state policy which added more refined methods of genocide, viz, planned starvation, sterilization, kidnaping of children, systematic disruption of family life of the allegedly inferior races and of the large segments of society at home and in occupied foreign countries, creation of conditions preventing a natural development of national cultures and religious life, and slow death by exhaustion at hard labor in the Arctic slave labor camps.

These practices did not disappear with the United Nations victory over Hitlerite Germany and the publicized transformation of the Soviet dictatorial system into an allegedly peace-loving and democratic regime. Jews and certain Slavic peoples were the primary victims of the Nazi-managed genocide, not counting the masses of the German people opposing the Nazi system. The Lithuanians, Latvians, Estonians, Ukrainians, Volga Germans, Greeks, Crimean, and Caucasian peoples are presently the principal victims of the Russian-managed genocide, not counting the masses of the Russian people opposing the Communist totalitarianism.

Having fought two world wars in defense of the basic principles enunciated by two American Presidents and spontaneously adopted by other peoples, principally the long-suffering nationalities imprisoned within the former Russian, German and Austro-Hungarian empires, the American people are obviously determined to see these principles honored, especially by governments of the countries which were saved from destruction through American intervention in the wars and American lend-lease aid. Genocide is the most horrible crime which must not be countenanced by the civilized society and must not be encouraged by inattention, inaction, indifference and failure to ratify the Genocide Convention.

Wherefore the Lithuanian-American Congress, in behalf of one million constituents represented by the delegates voting unanimously for this resolution, respectfully urge their representatives in the United States Senate to ratify the Genocide Convention by an unanimous vote.

VI. DISPLACED-PERSONS LEGISLATION

The Displaced Persons Act of 1948 marked a significant congressional action developing out of a serious realization of the need for American contribution to the solution of the vast international problem of political refugees from the iron-curtain countries and of the persons displaced in consequence of the ravages of war. American responsibility for the creation of the problem itself was large, inasmuch as the United States Government, as a party to the unratified political maladjustments of the Tehran, Yalta and Potsdam conferences, was responsible for the presence in western Germany, Austria and Italy of the masses of people from countries which were committed at Yalta and Potsdam to the tender mercies of the Soviet Union and its cohorts of political police.

The DP legislation of 1948 represented a provisional compromise between the widely divergent views held by the respective congressional committees. The act is defective in several respects, particularly because of a comparatively small number of authorized admissions, the failure to provide for a priority to eligible persons who had spent most time in involuntary exile, acceptance of an unsatisfactory definition of displaced persons hammered out by the United Nations in the face of continuous disruptive Soviet misrepresentations and attacks, failure to provide for a fair proportional distribution of admissions among the ethnic groups, and particularly because of the unjust freezing of the small immigration quotas of the Baltic states.

The Congress failed to enact amended legislation in 1949, even though the House of Representatives had voted a Celler bill. The Celler bill contained some improvements, such as an enlarged number of admissions and a more equitable cut-off date. On the other hand, it retained the unjust provisions of freezing the immigration quotas and failed to provide for a priority to persons who had spent most time in involuntary exile. The Displaced Persons Commission pointed out other unworkable provisions, such as stiff housing guaranties, but its suggestions for amended liberalized legislation attacked principally the features which it termed "discriminatory" against Catholics and Jews. These arguments failed to convince the Senate committee which could not fail to note that the arguments of alleged discrimination were not borne out by facts and statistics.

Liberalized legislation for admission of displaced persons is needed, and the United States must share in the solution of the problem by accepting greater numbers of refugees from the iron-curtain countries. However, in solving the problem, due attention should be paid to the element of justice. The unfreezing of the immigration quotas and elimination of the restrictions not contained in the regular Immigration Act, should receive serious attention in the enactment of liberalized legislation.

Calling these reflections to the attention of Members of Congress of the United States, the Lithuanian American Congress respectfully submits that these considerations be carefully weighed and that a liberalized Displaced Persons Act be enacted early in 1950.

VII. UNITED NATIONS ORGANIZATION

The Lithuanian American Congress commends the ably rendered service of the Lithuanian American Council in educating its constituency regarding the proper mission and organization of the United Nations. Back in 1945, at the San Francisco Conference, a memorandum was submitted by this council outlining very serious observations on the plan of organization and suggesting that the veto power be entirely eliminated. At that time, spokesmen for the bipartisan foreign policy were not prepared to concede the validity of these observations fearing that the Senate of the United States would not renounce the veto power out of its regard for the extreme notions of sovereignty. By 1949, the abuse of the veto power by Soviet representatives at the UN Security Council has changed the views of a great many of our statesmen.

United Nations raised great hopes in the universe when its organization was planned and while the people firmly believed that the Atlantic Charter and the "four freedoms" would be fulfilled. These hopes faded as American and British policies floundered over the pitfalls of the gradually revealed secret commitments of Yalta and Potsdam. Some hope is still lingering, as gallant guerrilla forces continue to fight and die with the Atlantic Charter on their lips, in Lithuania, Latvia, Estonia, and the Ukraine. Resistance forces emerging in the satellite countries of central Europe are recalling the selfsame promise of the Atlantic Charter. But in the United Nations, the Charter is passed over in silence, inasmuch as the authors of the Atlantic Charter fail to champion it and are content with debating over harmless declarations carrying no obligation to enforce these declarations.

Nevertheless, the United Nations remains a useful organization not only as a forum for the discussion of international problems that might otherwise be settled in secret compromises as at Yalta and Potsdam. Inheriting a number of international institutions from the late League of Nations, the new international organization developed and expanded their useful functions. It brought new institutions into play to deal on a more efficient basis with vast problems of the refugees, cultural exchange and information, economic cooperation, etc. The influence of these new institutions is beneficially exercised in the countries outside the Soviet orbit—as the Soviet single-party regime brooks no interference or propaganda within the territories brought under its control in consequence of the surrender of central-eastern Europe by the American and British Governments. This influence is beneficial in spite of the fact that persons not genuinely representative of the Christian outlook of civilization serve in international councils, and that Soviet agents are permitted to terrorize anti-Communist refugees committed to IRO care in the American, British, and French zones of Germany and Austria.

United Nations would be much more effective if the veto power were eliminated entirely and if majority decisions bound all members, particularly in security matters and in the employment of force against states menacing peace.

Furthermore, any aggrieved nationality should be enabled to present its grievance and to be heard. Some excellent precedents in this respect were provided in the case of the Indonesians and Israelis—but their cases did not involve grievances against the Soviet Union. The Baltic states, the Ukraine, representatives of the true will of the nations classed as satellites, should be equally entitled and enabled to present their cases to the United Nations if that organization is to justify its existence as guardian of peace, security, and human rights.

VIII. VOICE OF AMERICA

While the facilities of the late OWI served to channel the spurious Soviet propaganda to the detriment of a number of occupied nations, the Voice of America and the United States Information Service have developed into major instruments of interpreting America, the American policy, and a genuine reporting of world events to the people of the

world, particularly to clandestine listeners among the unseen multitudes enslaved by the conspirators of the Kremlin.

The standards of information have much improved within the past few years, and materials broadcast were made understandable to foreign audiences for whom they are intended. The number of languages employed is likewise expanding and embracing ever larger audiences.

These developments are warmly commended by the Lithuanian American Congress. Their effectiveness is well attested by the growing Soviet attempts to jam the Voice of America broadcasts and to bar the USIS personnel from direct access to the people of the occupied countries.

The Lithuanian American Congress respectfully submits that the facilities of the Voice of America broadcasts and other information services be expanded to include transmissions in the Lithuanian language. Information should be compiled in cooperation with spokesmen of the Supreme Lithuanian Committee of Liberation and, at least occasionally, broadcast in person by personalities well known and respected in Lithuania. Similar facilities should be directed toward informing the people of Latvia and Estonia. Limited information reaches the Baltic states through the medium of German-Polish, and Russian-language broadcasts. But the masses of the population are excluded from sharing this information as long as it is not made available in the native languages understood by millions of survivors.

The Lithuanian American Council is authorized and directed to extend every cooperation to Government agencies entrusted with this service in behalf of the American people.

IX. ALL-AMERICAN COLLABORATION

The Lithuanian American Congress realizes the presence of objections to so-called "hyphenated Americans" in some sections of the country, alongside the existence of certain slavishness among the first and second generation of Americans in their eagerness to assimilate superficial "Americanism" of their own imagination. Nevertheless, "hyphenated Americans" and second and third generation Americans are second to none in their supreme devotion to the United States and in their distinguished record in the war, both on the fighting and on the home fronts. They are second to none in their sense of civic duty, and they have a superior understanding of problems associated with the countries of their ancestors and enriching their cultural contribution to America.

This superior knowledge of specific European affairs should be placed at the service of the country and should be availed of by Government agencies concerned with such affairs. In addition to local activities and keeping the neighboring communities properly informed and immunized against subversive propaganda, coordination on a national scale would be most beneficial to the country and to the cause of liberty everywhere.

The Lithuanian American Congress commends the hitherto humble efforts at collaboration made by the Lithuanian American Council, and suggests that this cooperation be made permanent, particularly with like representative organizations of fellow Americans of Latvian, Estonian, Polish, Ukrainian, Slovak, Czech, Hungarian, Rumanian, Bulgarian, Yugoslav, and Albanian descent. All of these representative organizations have at their disposal numerous newspapers, magazines, and radio programs, and a well-coordinated movement in behalf of a proper understanding of the problems of central-eastern Europe would best serve the conduct of American international relations on a well-informed and stable base.

X. SUPREME LITHUANIAN COMMITTEE OF LIBERATION

The Lithuanian American Congress welcomed the presence at the Congress of a number of former members of the Supreme Lithuanian Committee of Liberation (the VLIK), former underground leaders and guerrilla freedom fighters, and former prisoners of the NKVD and the Gestapo.

The underground resistance of the Lithuanian people, rising spontaneously since the first day of the Russo-German partnership in aggression and the first Russian occupation of the country, became a most effective movement under a coalition of political parties and resistance combat units—the VLIK. All of the German plans of mobilization of Lithuanian manpower and economic resources failed completely, and Lithuania was one of the only two European countries which, during the Nazi occupation, failed to produce SS legions for Hitler. The passive resistance under the leadership of the VLIK and its clandestine network of information services ultimately developed into armed resistance to the German occupation and to the second Russian occupation. The experience in clandestine resistance activities gained under the VLIK leadership, enabled the Lithuanian people to continue to this very day their resistance to the most barbaric Soviet occupation.

Political collaboration between the VLIK and the diplomatic missions of the Lithuanian Republic still recognized in the capitals of the western democracies, presents another aspect of political maturity of the Lithuanian people and the unbroken unity of views and aspirations of the people surviving in the homeland and their spokesmen abroad.

The Lithuanian American Congress extends, through the Supreme Lithuanian Committee of Liberation, its greetings and expression of the most profound admiration for the gallant Lithuanian Freedom Fighters still waging battle against the dark forces of enslavement and oppression in Russian-occupied Lithuania, and for their good neighbors and friends in Latvia and Estonia.

Lithuanian Americans not only admire the fight for freedom of the Lithuanian people, and of the Latvian and Estonian peoples. They will continue to render, as they had in the past, every moral and political encouragement and assistance to the heroic forces of freedom in Lithuania and the other Baltic states until these martyred peoples shall achieve complete liberation of their homelands to resume their proper place, as masters of their own destinies, among the community of free nations.

XI. SELF-DETERMINATION AND REUNION OF ALL LITHUANIAN LANDS

The Lithuanian American Congress welcomes the activities of the Council of Lithuania Minor, spokesman for the indigenous Lithuanian population of northern East Prussia, seeking a reunion of their homeland with the sovereign Lithuanian state.

Survival of the Lithuanian speech, customs, and national orientation in northern East Prussia after nearly seven centuries of thralldom under the German rule, presents a most heartening example of the Lithuanian fitness of survival and of a Lithuanian individuality. The aspirations for a reunion with a preponderantly Roman Catholic Lithuanian state prove a genuine fraternal feeling and a great trust in the traditional Lithuanian religious tolerance which Protestant Lithuanian inhabitants of East Prussia repose in their brethren of Lithuania Major.

The Potsdam decision granting a tentative American and British support to the Russian claim to northern East Prussia violates every tenet of historic honesty, political vision, the right of self-determination, the principles of the Atlantic Charter, and the spirit of the United Nations Charter. This tentative decision, made without the advice and consent of the American people and of the population directly concerned, would condemn all of the Baltic peoples north of the Braunsberg-Goldap line in East Prussia to slavery and extinction under Russian totalitarianism. Russia has no historic, ethnic, national, economic, cultural, or security title to the Lithuanian areas of East Prussia, and a Russian or pseudo Byelorussian military-naval base at Koenigsberg could only serve as a springboard and bridgehead for further Russian aggression and expansion westward.

Wherefore, the Lithuanian American Congress respectfully submits to the President, Secretary of State, and Members of Congress of the United States that the Potsdam promise of support for Russian imperialist claims to northern Lithuanian half of East Prussia be rescinded, and that the United States espouse the legitimate aspirations of the indigenous population of that area to reunite with the sovereign and independent democratic Republic at Lithuania. Furthermore, that Lithuanian inhabitants of East Prussia, presently classed and treated as nationals of Germany, be reclassified as Lithuanian displaced persons and refugees entitled to American protection from the tentacles of Russian repatriation missions and from forcible Germanization, or cultural genocide.

XII. GRATITUDE TO RESETTLEMENT AGENCIES

The rolls of delegates to the Lithuanian American Congress were swelled with numerous new Americans who until recently had been nameless displaced persons.

Among these new Americans taking an active and intelligent part in the deliberations of this congress were former statesmen, functionaries, diplomats, scientists, professionals, teachers, army and navy officers, university students, clergymen, friars, excellent agronomists and farmers, artists, laborers, stage and opera stars, former guerrilla fighters, and victims of Russian and German concentration camps. Among them were Catholic, Protestant, and liberal men and women, former leaders and members of political parties of the Right, Center, and Left, business people and labor-union leaders. Their spirit of genuine democracy and tolerance, and high regard for human dignity and freedoms, proved that they will become, as a great many already had done, excellent American citizens with a highest sense of civic duty. Their model use of the ancient Lithuanian language coupled with their equally facile use of the English language, evoked a feeling of profound pride among the second and third generation Americans of Lithuanian descent who formed a majority at this congress.

These new Americans, the former DP's, were welcomed with warmth of feeling by the old Americans.

The new Americans have found shelter and opportunity for a resumption of normal life on the hospitable shores of America thanks to the wisdom of the executive government and of Members of Congress of the United States who made Displaced Persons Act a living reality, and thanks to the charity and selfless devotion of the National Catholic Welfare Conference and its war relief services and resettlement council, the Church World Service of the American Protestant Churches, the International Refugee Rescue Committee, the American Friends Service, Jewish volunteer agencies, and other American organizations which sponsored the program of resettlement in America of former DP's. Their combined efforts, their devotion and material contributions enriched the American community with more than 100,000 men, women, and children of finest qualities.

The Lithuanian American Congress unanimously voted to commend the executive and legislative departments of the United States Government, and the voluntary agencies

mentioned above, for their excellent contribution and humanitarian service in rehabilitating the victims of Nazi-Soviet partnership in aggression and enslavement. The National Catholic Welfare Conference is particularly gratefully commended for the great assistance rendered in aiding Lithuanian DP's, more than three-fourths of the Lithuanian refugees, of various religious affiliations, who had arrived in this country under displaced-persons program, were resettled by the Catholic agency without discriminating among Catholics, Protestants, and persons not affiliated with any Christian church.

XIII. ON CONSPIRACY OF SILENCE AND PRO-RUSSIAN DISCRIMINATION

A number of American organizations have sprung up within the past few years purporting to halt communism and save our freedom, to aid iron-curtain refugees, to present a common cause of the Soviet-enslaved peoples, etc.

As a general rule, these committees are not in any way associated with representative organizations of the American people most directly concerned with problems of the nations enslaved by Russia. Second phenomenon common to such committees is the long list of members of their boards, enumerating on their stationery persons formerly highly placed with Government departments, thus tending to create an impression of intimate association with policy-making media. At least one such organization features its endorsement by the Secretary of State.

Unfortunately, another phenomenon common to some of these committees is the pro-Russian bias and evasion of mentioning the Baltic states.

One such committee, endorsed by the Secretary of State and listing among its board of directors a former Under Secretary of State, several former Assistant Secretaries, department heads, officials of the OSS, ambassadors, the former supreme commander of the liberating allied forces in western Europe, etc. Gifts to this committee are said to be deductible for income-tax purposes. The objectives are most commendable.

However, the map printed in its informative leaflet contradicts the official policy of the United States, in effect since July 23, 1940, in that it shows the territories of Estonia, Latvia, Lithuania, one-half of Poland, northern East Prussia, Carpatho-Ukraine, and sections of Rumania as territories of the Soviet Union. New Poland and Czechoslovakia, Rumania, Hungary, Yugoslavia, and old Bulgaria are shown in different color, to illustrate the countries meriting the interest of this committee. The Baltic states and Albania are shown outside the area. The printed text repeats the list of countries, again excluding the Baltic states and Albania, and recites that 80,000,000 sturdy people living between Germany and Russia are now in bondage. A conclusion is obvious that many other millions—in the Baltic states, Albania, Poland east of the Curzon line, the Ukraine east of Slovakia and the Pruth, as well as in Russia itself—are not now in bondage.

The Lithuanian-American Congress, taking note of the existence of such organizations misrepresenting the official policy of the United States while professing to have the endorsement of the present Secretary of State, calls the attention of the Secretary of State and of the distinguished fellow Americans serving on boards of such committees, to the misguided use of their endorsement, and respectfully suggests that they owe a duty of honor to correct the misrepresentations made ostensibly with their endorsement.

Furthermore, certain map publishers and map syndicates contribute to Soviet propaganda and to misinformation of American school students and newspaper readers, by publishing maps featuring Russia in its new frontiers, lacking any international recognition. A particularly painful impression is created by the use of such synthetic maps in the press sympathetic to the cause of liberty of the Baltic peoples and antagonistic to the predatory subversion of communism.

The Lithuanian American Congress calls on the editors and publishers of the free American press to exercise their right of calling to the attention of map-making syndicates the harm and disservice to the American people which they render by channeling Soviet imperialistic propaganda to American children and news readers. Maps shown in the official publications of the Department of State could best be utilized, and would contribute toward a better understanding of American foreign policy.

XIV. THANKS TO DISTINGUISHED STATESMEN

The Lithuanian American Congress unanimously expresses greatest appreciation and gratitude to the many distinguished statesmen who lent their moral encouragement and sympathy with the objectives of a just and stable peace which motivated this Congress.

President Harry S. Truman, of the United States, transmitted a warm message in writing. This congress found itself in unanimous agreement with the goal of freedom and justice which the President is seeking.

Gov. Thomas E. Dewey, of the State of New York, honored this congress by addressing it in person. His views coincided in a great many respects with the policies advocated by Lithuanian Americans.

Senator HERBERT R. O'CONOR and Representative DANIEL J. FLOOD addressed the congress, and affirmed their cooperation for justice and liberation of Lithuania and the other Baltic states.

United States Senators Scott W. Lucas, Robert A. Taft, Henry Cabot Lodge, Jr., Millard E. Tydings, Brien McMahon, Irving M. Ives, John Foster Dulles, William F. Knowland, Homer E. Capehart, Owen Brewster, John J. Williams, Paul H. Douglas, Leverett Saltonstall, Sheridan Downey, and Edward Martin; and Representatives John W. McCormack, Philip J. Philbin, Adolph J. Sabath, John J. Rooney, John Davis Lodge, Lawrence H. Smith, Ivor D. Fenton, Ray J. Madden, James J. Murphy, Edgar A. Jonas, Harold D. Donohue, Charles A. Buckley, Lansdale G. Sasscer, Peter W. Rodino, Jr., Edward A. Garmatz, George H. Fallon, and Barratt O'Hara, transmitted their statements and declarations which greatly encouraged the delegates in their deliberations and in their hopes of ultimately achieving justice and understanding for the peoples of Lithuania, Latvia, Estonia, and other nations enslaved by Russia.

Bishop Joseph F. Flannelly, of the Catholic archdiocese of New York, touched the delegates with his profoundly Christian sermon at St. Patrick's Basilica in New York, and his moving encouragement and blessing.

Mayor William O'Dwyer, of New York City, through Deputy Mayor John J. Bennett, welcomed the delegates to the greatest American city and voiced views which convinced the delegates that the American people are practically unanimous in supporting the administration's policy of nonrecognition of the fruits of Nazi-Soviet partnership in rapacity, and in demanding liberation of Lithuania and other freedom-loving peoples from bondage.

Their excellencies, Povilas Zadeikis, Julijs Feldmans, and Johannes Kaiv, the ministers of the Republics of Lithuania, Latvia, and Estonia accredited to the Government of the United States, and their diplomatic and consular colleagues who addressed the Lithuanian American Congress, greatly contributed toward a most realistic understanding of the direst situation of their victimized nations. The Lithuanian American Congress found itself in full accord with their pleas for justice and demand to stop the crime of genocide being perpetrated by the Russian occupant of their countries.

The Lithuanian American Congress: Leonard Simutis, President; Anthony A. Olis, Vice President; Pius Grigaitis, Secretary; Michael Vaidyla, Treasurer.

Resolutions Committee: Constantine R. Jurgela, Chairman; Matas Zujus, Secretary; Msgr. John Balkunas, John Januskis, Stanley Geguzis, Dr. Matas J. Vinikas, Jonas Valaitis, Vincent Rastenis, Vytautas Abraitis, Members.

Waltham Watch Co.

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. Hubert E. Howard, Chairman, Munitions Board, Washington, D. C., to Mr. Harley Hise, Chairman, Reconstruction Finance Corporation, saying "the maintenance of at least a minimum level of operation by the Waltham, Hamilton, and Elgin Watch Cos. is vital to the defense of the United States and should be preserved." I include also an editorial from the News-Tribune, Waltham, Mass., on the same subject. A recent news item quotes the mayor of Waltham as saying the city of Waltham can find other industries to take the place of the Waltham Watch Co. If Waltham does not want the Waltham Watch Co., Watertown or many other cities and towns in that vicinity would be glad to have it. Over 600 employees of the company now reside in Watertown.

MUNITIONS BOARD,
Washington, D. C., February 9, 1950.

MR. HARLEY HISE,
Chairman, Board of Directors,
Reconstruction Finance Corporation.

DEAR MR. HISE: The Munitions Board has heretofore expressed to you the position and importance of the American jewel-watch industry as a resource for national defense.

You were informed that there are approximately 8,000 highly skilled workers in the industry, and that the acquiring of the degree of skill required from 2 to 10 years of intensive training. The essentiality of the maintenance of this nucleus as a basis for expansion in times of mobilization is apparent.

The Waltham, Hamilton, and Elgin Watch Cos. employed 100 percent of their capacity in Government work from December 1941 to August 1945, manufacturing such items as aircraft instruments, chronometers, fire-control watches, time fuzes, etc.

It is considered that the maintenance of at least a minimum level of operation by the Waltham, Hamilton, and Elgin Watch Cos. is vital to the defense of the United States, and should be preserved.

The above information is provided again for your consideration of the application of the Waltham Watch Co. for financial assistance.

Sincerely yours,

HUBERT E. HOWARD, *Chairman.*

[The Waltham (Mass.) News-Tribune of February 11, 1950]

SAY IT ISN'T SO

Government officials and leaders of his own party many times have had cause to be disturbed at President Truman's faculty for saying the wrong thing at the wrong time. The latest outbreak of foot-in-mouth disease on the part of the Chief Executive hit Waltham Watch Co. at a most inopportune moment.

Mr. Truman, it should be pointed out, has promised much to Waltham's precision industry and given less than nothing.

By less than nothing we mean that he has dismissed this vital concern without even waiting for the results of a study he himself had asked for concerning Waltham's essentiality to the national defense.

He has consistently failed to do anything in Waltham's behalf despite his oft-quoted statement that no segment of American industry would be harmed by reciprocal trade.

His off-the-cuff statement that everything possible has been done for Waltham is puzzling indeed. By everything he can't mean tariff or quota relief. Neither the State Department nor the Tariff Commission has acted despite incontrovertible proof the Swiss import flood has strangled the domestic watch industry.

By everything he can't mean RFC assistance. About all the RFC did was to pay off banking indebtedness and enable the firm to capitalize on its inventory—through a half-price sale. That was something to be grateful for, of course. But RFC advanced no reasonable amount of working capital, and is now reluctant to release part of $2,000,000 earmarked for machinery despite the fact that the concern's asset value is far in excess of its debt.

No, Mr. Truman, we don't think everything has been done for Waltham. We believe a tragic disservice is being done the country's security by your casual dismissal, which so ironically came within an hour of the time when the Munitions Board was reaffirming Waltham's vital defense role.

The President's aides say he wouldn't want to be directly responsible for barring the firm from a chance to reopen. Well, Mr. Truman, just say it isn't so. Tell us it really counts to be a 100-percent producer of timing mechanisms during wartime. Tell us that 2,300 jobs mean something.

If Waltham is expendable, won't Elgin or Hamilton be next?

Free Lithuania Shall Live Again

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1950

Mr. O'HARA of Illinois. Mr. Speaker, on this thirty-second anniversary of the independence of Lithuania, I think it is fitting that we in the Congress of the United States should convey as best we can to the people of Lithuania, some message of our abiding friendship and our hope for their attainment in the near and approaching tomorrow, all of the blessings of human contentment under a government of, for, and by the people in the family of free nations in a democratic world.

The inspiring story of the part played by men and women of Lithuanian blood in building the bulwarks of civilization, and in defending the rights of man, gives us assurance that with such a people there can be no backward steps. Free Lithuania shall live again. The guaranty of that is in the quality of the character of the Lithuanian people.

In my own city of Chicago, are many fine men and women of Lithuanian birth or descent. They have made a large contribution to the great metropolis of the American melting pot. In the army of the toilers, in the professions as doctors, dentists, teachers, and lawyers, in the world of business and especially in music, where many great Lithuanian artists have excelled, the sons and daughters of Lithuania have established themselves on a proud pedestal in the city of Chicago. I am happy to number many of them among my warmest friends.

To Miss Euphrosine Mikuzis, executive secretary of the Lithuanian Council of Chicago, whom I have favorably known and admired for many years as a champion of liberty, I send this message to the large mass meeting on February 19 in Chicago, commemorating Lithuania's independence: Free Lithuania shall live again, because the quality of Lithuanian blood has never failed to prove itself when put to the test.

I feel confident that in the sentiment of this message my colleagues on the floor of this historic Chamber would join with me. In this hour it will be heartening for the people in Lithuania to know that with them is the abiding friendship of the people of the United States.

Segregation in the Armed Forces

EXTENSION OF REMARKS

OF

HON. LOUIS B. HELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1950

Mr. HELLER. Mr. Speaker, the time has come to clear the good name of the United States by eliminating the remains of racialism in the military forces. We just fought a war against Nazi racialism and we stand forth as world leaders of democracy and the unique right of every man to be respected, but the United States Army, perhaps the greatest of our public institutions, still retains its little citadel of racial discrimination.

The Navy and the Air Force have by now cleared themselves. During the war, the United States Navy broke the taboo under which it had labored for many years. Formerly Negro sailors could be nothing but messmen; that is, they could serve only in what was regarded as a menial capacity. There were no Negro officers. Then the Navy changed its policy, handsomely, as is the way of the Navy when it does have to make a change, and not grudgingly. It began to admit Negroes as reserve officers for wartime service, and has no complaints to make of the service rendered by these officers. Now the Navy is admitting Negroes to Annapolis and as cadets under the Holloway plan, and is commissioning Negro officers in the Regular Navy. It accepts Negro enlistments, without quota basis, and these enlistees serve on Navy ships completely integrated with white sailors. They sleep, eat, and work as individuals along with members of the majority group, without distinction, and this although it has always been customary for large numbers of the enlisted personnel of the Navy to come from the Southern States, whose inhabitants are supposed by northerners to be far more intolerant than, as individuals, they really are.

The Navy grasped the situation with courage. Authorities thought when they initiated this policy they might have a good deal of trouble. They did not have any trouble. One semiofficial writer describes the situation which ensued in these words:

> The Navy discovered that white and Negro personnel equally competent and trained, berthing, messing, and working together aboard ship and at shore establishments, and relieved of the pressures of home and family environments, and in the absence of local traditional attitudes of prejudice and discrimination, can live and work together harmoniously. It is doubtful if whites desired to make lifelong friendships of Negroes, or that Negroes themselves were desirous of future civilian associations with their white coworkers because of this experience. Nevertheless this experience tended to prove that when pressure realms are reduced, segregation and discrimination break down completely, and integration is made possible.

Since the war, the Navy has confirmed and amplified its policy of nondiscrimination, which has now been stated officially as follows:

> It is the policy of the Navy Department that no distinction be made between individuals wearing the naval uniform or the uniform of any armed service of the United States, because of race, color, or creed. All naval personnel are assigned to the various branches of the service in accordance with their mental, moral, physical, and professional qualifications. The Navy accepts no theory of racial differences in inborn ability but expects every man wearing its uniform to be trained and used in accordance with maximum individual capacity determined on the basis of individual performance.

The Air Force also, the youngest of the services, has cleared itself of its former exclusiveness based on color. This process began, rather grudgingly at first, during the war but has been, as in the case of the Navy, confirmed and amplified since, until at the present time the Air Force claims that no discrimination exists in the service.

The Army alone seems to be seeking to retain all it can of its old policies of discrimination. The Army did not have so far to advance as the other services, but it has done less advancing. There were always Negro units in the Army, at least since the Civil War, and these units have made fine records. There have been Negro officers and Negro cadets. One Negro reached the grade of brigadier general. But the Army still insists on

segregating Negro soldiers in Negro units up to the company level. Until recently, while it educated Negro specialists in Army schools, it would not assign Negroes to the work for which they were specially trained, unless opportunities could be found in Negro units.

It has been the steadfast insistence of the Army that this is in the interests of military efficiency. Negroes make better soldiers, it is said, if they serve in units with other Negroes, and the Army insists that it is not an institution for social reform but for fighting.

The claim of efficiency based on segregation has never been substantiated under modern conditions. The hard core of opposition to any elimination of segregation, which has undoubtedly always existed, and still exists in the Army, has resisted even the formation of experimental unsegregated units. Why is that? It can only be inferred that the military diehards are afraid, not that the experiment will not succeed, but that it will.

There can be no doubt that eventually the military-efficiency argument would work the other way around. Other things being equal—that is, training, leadership, equipment, opportunity, and the like—every man is going to have better morale and serve more efficiently as his individual worth is recognized, his manhood conceded, and the opportunity to make good as an individual is offered to him. All our democracy is built on that, though it has yet to be recognized completely in the United States Army.

The Negro, though in our history he has been subjected to second-hand citizenship or to no citizenship at all, has played a very large and very honorable part in all the wars of the United States except that with Mexico. The first blood shed in the American Revolution was that of Crispus Attucks, a Negro, on the streets of Boston. A Negro fired the first shot at Bunker Hill, killing an English major. George Washington had between 3,000 and 4,000 Negroes in his Continental Army. About one-sixth of the whole Navy personnel in the Revolution were Negroes. There were few Negroes in the Army during the War of 1812, though some Negro irregulars saved the day for Andrew Jackson at New Orleans. The Navy enlisted Negroes in the War of 1812. Union armies in the Civil War were made up one-tenth of Negroes. There were also many Negroes in the Navy. The United States Army began the First World War with 10,000 Negroes already in service as regulars, and ended up with a total of 400,000 in military service. Among the first American soldiers to be decorated for heroism in France, were two Negroes.

Negroes participated largely in the Spanish-American War; there was even a Negro volunteer regiment made up in North Carolina, which had completely Negro officers, including the colonel. Negro Army regulars saved Colonel Roosevelt's Rough Riders from embarrassment and perhaps from destruction at San Juan Hill. In the Second World War all the services began with heavy discrimination against Negroes, which gradually broke down as the war deepened. The Army had more than 690,000 Negroes in 1945 including more than 6,500 commissioned officers. The Air Force had 563 Negro pilots and a total Negro personnel of over 80,000.

We have always asked the Negro to shed his blood for the United States, and he has done so, in spite of frequent shabby treatment. Such loyalty is one of our greatest national assets.

The present situation is far better than it ever was before in the armed services, but—at least in the Army—it is not good enough, and the present international situation points up the inconsistency between our international professions and our erring practice. All over the world, especially among the millions of Asia, communist propaganda against the United States points out to the nonwhite peoples of the world this gap between our principles and our performance. No doubt the situation is exaggerated in these reports. The question for us is, Why should there be anything for them to exaggerate?

Stock-Piling Policies

EXTENSION OF REMARKS
OF
HON. WALTER S. BARING
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mr. BARING. Mr. Speaker, I wish to bring to the attention of the Members a statement made by the Munitions Board in its semiannual report to the Congress, dated January 23, 1950.

The Board says:

> The probability that stock-pile procurement could not be accelerated but would rather decline during some future period of mobilization emphasizes urgency of procurement now while materials are generally available for purchase in large quantities. The unexpectedly prolonged postwar demand for materials eased somewhat during the calendar year 1949, and surpluses appeared in some commodities. Unless the stock-piling program is able to take up a sizable portion of these surpluses as they appear it is probable that production of these commodities—especially by marginal producers—will decline to new reduced levels of demand. Once this decline in output has taken place procurement for the stock pile would become more difficult. It is obviously easier to take a portion of production of a commodity in surplus than one in which the supply-demand ratio is in fair balance. This circumstance is particularly true in the case of domestically produced minerals. The Munitions Board has not taken a position as to the expediency of any action to keep domestic mines in operation. Nevertheless, the Board does realize the impact both on military strength and on stock piling of any decline in domestic minerals production. A strong, prosperous, and efficient domestic mining industry is basic to the national security. Within the limits of a balanced stock pile the procurement program, the purchase of surplus strategic and critical minerals should proceed as rapidly as possible.

Mr. Speaker, I would have you note how logical and how sweetly reasonable these words are. It is, I think, the first time the policy of the Munitions Board has been stated in just this fashion. It will give great mental aid and comfort to the miners in Nevada and elsewhere whose mines are closing down by the score. Even if it pays no bills at the grocery store, we now know the Board means well and understands the problems involved.

Especially, I call to your attention the statement, "The Munitions Board has not taken a position as to the expediency of any action to keep domestic mines in operation." Mr. Speaker, if this responsible agency has not the fortitude to take a stand, I say with all earnestness that the Congress should have. We should pass an adequate mine-incentive bill without delay, save the industry from disaster, and secure this Nation from dependence on foreign sources of supply wherever possible.

Thaddeus Kosciusko

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mr. FLOOD. Mr. Speaker, February 12 is the birthday of Thaddeus Kosciusko, Poland's great patriot and national leader and America's Revolutionary War general and aide to Gen. George Washington.

It is significant as well that today is the birthday of a great American patriot and hero, Abraham Lincoln. Certainly February 12 is emblazoned upon the hearts and minds of the liberty-loving people throughout the world for all time.

How better can we focus attention upon the loss of liberty superimposed upon the freedom-loving Polish people by a foreign Communist power than t bring to the attention of everyone that on the old square at Kraków, Poland, on March 22, 1794, Kosciusko took the following oath which was the signal for the Kosciusko insurrection:

> I, Thaddeus Kosciusko, swear to the Polish Nation, in the presence of God, that I will never employ the power which has been entrusted to me against any citizen, but I will exert it only to defend the integrity of my country, to recover the nation's independence, and so strengthen the general liberty of our country. So help me God.

Is it any wonder that with these sentiments in his heart the news of the outbreak of hostilities in America kindled his imagination, and he determined to go to the aid of America—a Polish knight in the cause of liberty.

It is with justified pride that Poles regard the role played by their hero, Kosciusko, in the American Revolution as a material contribution to the victory and independence of this new Nation.

Little remains of some of the great fortifications designed and built by this master of military engineering, but it is again significant that the monument erected to his memory at West Point by

American youth will remain at the citadel of American qualities of heroism and leadership a grateful tribute forever.

The hand of God must, in some way, have appeared in the selection of February 12 as the birthday of two such defenders and fighters for freedom and equality for all peoples. During the southern campaign of the Revolution, Kosciusko, with his keen susceptibility to every form of human suffering, acquired that profound sympathy for the American Negro, which 17 years later, was to dictate his parting testament to the new world, which was written as follows:

I, Thaddeus Kosciusko, being just in my departure from America, do hereby declare and direct that should I make no other testamentary disposition of my property in the United States thereby authorize my friend, Thomas Jefferson, to employ the whole thereof in purchasing Negroes from among his own as any others and giving them liberty in my name, in giving them an education in trades and otherwise, and in having them instructed for their new condition in the duties of morality which may make them good neighbors, good fathers or mothers, husbands or wives, and in their duties as citizens, teaching them to be defenders of their liberty and country and of the good order of society and in whatsoever may make them happy and useful, and I make the said Thomas Jefferson my executor of this.

It follows that the Great Emancipator, Abraham Lincoln, did, with his heart's blood, write forever an unforgettable memorial to the same sense of justice.

Upon returning to Poland after the American Revolution, there soon flamed under Kosciusko's leadership all through Poland once again the cause of freedom and liberty against a Russian tyrant. And today there still rings clear in the minds and hearts of all the freedom-loving Poles in the motherland the clarion call of Kosciusko when it is realized that once again, under the heel of the Russian tyrant, free Poland lies bleeding.

But it is certain to know that, as ever, with the help of Almighty God, Poland will rise again.

Mr. Speaker, I have in my hand a short biography of Thaddeus Kosciusko, published by one of the outstanding patriotic organizations in the United States, the Polish American Congress, and may I conclude my tribute to the great Kosciusko with this quotation from the said document:

Kosciusko's body now rests in the Wawel Cathedral in Krakow, where lie Poland's kings and her most honored dead; but his heart is in the Polish conquerors. To his memory, 3 years after his death, the nation raised a monument perhaps unique of its kind. Outside of Krakow towers the Kosciusko Hill, fashioned by the hands of Polish men, women, and children, bringing earth from the battlefields where Kosciusko had fought. The act is typical. To this day the name of Thaddeus Kosciusko lives in the hearts of the Polish people, not only as the object of their profound and passionate love, but as the symbol of their dearest national aspirations. His pictures, his relics, are venerated as with the devotion paid to a patron saint. Legend and music have gathered about his name.

"His dust in Poland rests—
His urned heart a shrine!
Poland! He is thy son!
Columbia! Also thine!"

James Dempsey

EXTENSION OF REMARKS
OF
HON. HARRY P. O'NEILL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mr. O'NEILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article which appeared currently in the Scranton Tribune, Scranton, Pa., paying tribute to my constituent, James Dempsey, 1619 North Webster Avenue, Dunmore, Pa., who received honorable mention in the science talent search for Westinghouse science scholarships.

DEMPSEY CITED IN CONTEST—GETS CHANCE AT SCHOLARSHIP

(By Gene Coleman)

How many 17-year-old high-school seniors do you know who can conduct a project delving into the mysteries of the isolation, purification and crystallization of the alpha-hemolysin of staphylococcus aureus and come up with honorable mention in the science talent search for Westinghouse science scholarships?

Well, there is one here, in fact he's the only one in this city.

His name is James Dempsey, son of Mr. and Mrs. James Dempsey, 1619 North Webster Avenue, Dunmore, and he's a member of St. Paul's High School senior class.

Jimmy was awarded honorable mention in the Nation-wide competition sponsored by Westinghouse and a chance for a possible scholarship at a college of his choice.

It all started some time ago, in fact, it was last September. He decided to enter the contest and picked his project—that scientific tongue twister above.

When the reporter regained his composure from the spelling gymnastics involved, Jimmy explained, "It's a study of the bacteria which cause such external infections as boils, carbuncles and the like. It's not really as bad as it sounds," he laughed.

He worked on this project steadily since last September and then on December 12 took the examination, which is open only to high-school seniors pursuing a science course. Of the 13,500 competing, 40 were chosen to go to Washington, D. C., where one girl and one boy will be chosen for scholarships.

There were 260 others given honorable mention—and only 11 were from Pennsylvania. These students' names will be circulated among the colleges which usually offer a scholarship to the student. However, the student has his choice of schools.

Jimmy said he never bothered with scientific pursuits until he came to St. Paul's as a freshman. However, today he has his own laboratory in the basement of his home with equipment totaling about $1,000.

"I needed a lot of special equipment which isn't usually found in school labs," he explained, "so I saved up enough money from working as a life guard at Moosic Lake and tutoring at summer school last year to buy what I needed."

He also stated that he made some of his equipment himself.

In the course of working on his project Jimmy told how he lost three rabbits through his experiments.

"They were the only casualties," he laughed, "outside of myself. I wound up in the hospital for 2 weeks after an explosion in my lab last summer."

How about fellow students' reaction to the embryonic scientist's work? They're so cooperative they even give their blood to help him out.

In the course of his research Jimmy needed human blood—and almost had himself tapped dry.

His plight was soon made known to his fellow students and after some time he had a list of donors.

"Dempsey's taking blood again" would be whispered through the halls as coatless students walked out of the lab rolling down their sleeves.

"They were swell about it—and nobody seemed to mind losing a couple drops of blood," Jimmy chuckled.

In a more serious vein, Jimmy said that his ultimate goal is to become a doctor of medicine. He would like to attend the University of Pennsylvania for his preliminary training.

The young scientist also plans to enter the State-wide competition sponsored by the same organization again this year.

From all indications it seems as if he has a head start.

Anniversary of the Independence of Lithuania

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mr. SABATH. Mr. Speaker, the thirty-second anniversary of the Declaration of Independence by the people of Lithuania finds that brave country and its people still enslaved by the godless Communist dictators. Another year of subjugation has passed, during which unspeakable crimes against religious tolerance, individual rights, and personal liberty have been committed by Moscow's henchmen. But these cruelties and inhumanities have not diminished in the slightest degree the fervor, the yearning, the unquenchable thirst for liberty and freedom so deeply rooted in the hearts and souls of the Lithuanian people. This passion for liberty, so basically imbedded in the very being of all oppressed peoples, cannot be, and never has been in all history, weakened or destroyed by the terrible physical outrages dictators invariably employ in their efforts to bring about complete domination and subservience to their will.

The pages of history will brilliantly portray the gallant struggle Lithuania has made and is making to rise from under the iron heel of her betrayers. The darkness and gloom behind the iron curtain cannot continue forever. Streaks of light are commencing to show through the chinks in the rusting metal, for that metal is subject to erosion and corrosion. Once the decay gains momentum, the time will be short when the free minds and the free souls of an indomitable people will again bask in the sunlight of that cherished liberty which seemed so hopeless during the darkened days of imprisonment.

That freedom will be realized when Lithuania, the Baltic states, and the other oppressed small nations now en-

gulfed by Stalin's Communist tyrants and other dictators are again restored to their rightful places in the family of free nations. It is my fervent hope that we, as the rightful leaders in the universal struggle for democracy, will continue to lend every possible assistance to these unfortunate peoples. Lithuania will rise again to its desired place in the full light of true democracy and complete freedom and liberty.

Again, in the Second Year Since the Civil Rights Commission Reported, the South With No Federal Legislation To Force Action, Made Great Progress in Education and Other Facilities for Its Negro Citizens

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1950

Mr. HAYS of Arkansas. Mr. Speaker, today, on the second anniversary of the President's message on civil rights, I would like to point out that not a single one of the proposals has received congressional approval and we are still engaged in a divisive controversy. The proponents of FEPC, for example, insist that the Congress pass only the committee-sponsored bill, including its penalty and coercive provisions, with the result that a policy of promoting nondiscrimination through proper methods is not entertained.

One year ago, Mr. Speaker, I outlined a program upon which an honorable and just solution of this problem could be based. I repeat the words used at that time:

> The answer we should seek is not the conventional southern answer nor the nonsouthern answer. We * * * must find the right answer.

While my suggestions have received strong support in the South and elsewhere, the advocates of FEPC and other civil-rights bills have refused to consider anything less than the President's program.

Fortunately for the country, the political stalemate is not retarding educational progress in the States, particularly in the South. The events of the past year demonstrate that we are cooperating effectively for the advancement of both races.

Inequalities in school facilities are being rapidly corrected. North Carolina, for instance, has embarked upon a $50,000,000 construction program. In Arkansas, last November, almost every school district in the State voted to increase the tax for school districts considerably above the 18-mill limit which had previously prevailed. Much of the increase will go to finance construction of buildings for Negro students. In all other Southern States similar programs have been inaugurated. Another significant educational development in the South has been the adoption of a teacher-certification plan, under which all teachers, white and Negro, are placed on an equal competitive basis for salaries. The salary is determined by the grades teachers make on national teacher examinations and their years of educational preparation and experience. In North Carolina, as a result of this system, the salaries of Negro teachers average slightly higher than those for white teachers.

Continued strides have been made in making available to qualified Negro students an opportunity for a college education and graduate and professional study. In Arkansas, an increase in the annual appropriation for the State A. M. and N. College for Negroes from $175,000 to $450,000 was voted. In addition, the college board was authorized to issue bonds to construct many needed buildings. The number of students has increased accordingly. Most Southern States maintain a comprehensive on-the-farm training program for Negro veterans—a program that is doing much to build a strong agricultural economy through the encouragement of better farming practices and farm ownership.

I am also proud to report that in my home city of Little Rock, Ark., the citizens voted a $359,000 bond issue for a Negro park and recreational facilities. Under the urban redevelopment and slum-clearance program, the city will use that sum not only to build the facilities contemplated in the bond issue, but also 1,000 new homes for Negro residents.

Mr. Speaker, these are just random samplings of some of the things done in the South during the past year for the benefit of our Negro citizens. There is a growing awareness that much remains to be done, but we can, with the help of both races, achieve wider opportunities for all and a better understanding between the races.

Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of today:

LITHUANIAN INDEPENDENCE

With courage that rises above despair, the Lithuanian nation today observes the thirty-second anniversary of its independence with ceremonies which will unite Lithuanians everywhere except in Lithuania itself. This sturdy people, speaking one of the oldest living languages, proclaimed their independence amid the flames of the First World War on February 16, 1918, ending generations of oppression by the Russian Czars. Today, after another world war against tyranny and in defense of freeom, Lithuania, like the neighboring Baltic countries of Latvia and Estonia, is again under the iron heel of an oppressor. Only those who have escaped from this little country can still raise their voices in its behalf.

The Soviet Government is attempting to "Russify" Lithuania by settling it with Russian Communists. According to charges submitted to the United Nations by the Supreme Lithuanian Committee of Liberation, some 600,000 Lithuanians out of a total population of less than 3,000,000 have already been deported to Russian slave-labor camps, killed, or starved to death, and the deportations are proceeding at the rate of 2,000 to 3,000 each month. A Lithuanian underground is still active, and Lithuanian independence is still recognized by the Government of the United States.

Department of Veterans' Affairs

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call attention to yesterday's action of the national legislative committee of the Veterans of Foreign Wars, when it adopted a mandate calling for Cabinet status for the Veterans' Administration. For a number of years I have been advocating such a move and I am glad that this powerful veterans' organization of 1,200,000 members is lending its support to my measure.

In accordance with permission previously granted, I include the text of my bill, H. R. 1844:

A bill to establish a Department of Veterans' Affairs

Be it enacted, etc., That there is hereby established at the seat of government an executive department to be known as the Department of Veterans' Affairs, and there shall be at the head thereof a Secretary of Veterans' Affairs, who shall be appointed by the President, by and with the advice and consent of the Senate. The provisions of chapter 1 of title 5 of the United States Code shall be applicable to said Department, and in furtherance of such purpose, section 158 of the Revised Statutes, as amended (U. S. C., title 5, sec. 1), is hereby amended by adding at the end thereof the following: "Eleventh. The Department of Veterans' Affairs." The said Secretary shall cause a seal of office to be made for the said Department of such device as the President shall approve, and judicial notice shall be taken of said seal.

SEC. 2. There shall be in said Department an Under Secretary and five Assistant Secretaries, who shall be appointed by the President, by and with the advice and consent of the Senate, who shall perform such duties as shall be prescribed by the Secretary: *Provided*, That one of such Assistant Secretaries shall be the Surgeon General and another of the Assistant Secretaries shall be the General Counsel. Such Assistant Secretaries shall receive compensation at the rate of $12,000 per annum each.

SEC. 3. There is hereby transferred to the Department of Veterans' Affairs all personnel, files, records, property, reservations, and facilities of the Veterans' Administration of both the central office and field stations. The balances of all appropriations and all trust funds of the Veterans' Administration shall be available for expenditure by the Department in the same manner as if originally

specified in the respective statutes authorizing or creating such appropriations or funds.

'SEC. 4. All contracts and agreements entered into, and all orders, rules, regulations, delegations, permits, or other privileges issued or created by the Administrator of Veterans' Affairs, shall continue in effect until modified, superseded, or terminated. All laws relating to the Veterans' Administration, and those relating to veterans' benefits generally, shall remain in effect except as hereby modified and shall be administered by the Secretary of Veterans' Affairs.

An Example of Chinese Brutality and Helplessness

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1950

Mr. WHITE of Idaho. Mr. Speaker, there appears in the February 7 issue of the Oberlin Review, a publication of Oberlin College at Oberlin, Ohio, a shocking report of Chinese cruelty and duplicity which I insert for the information of my colleagues:

CHINA MISSIONARY TELLS OF NATIONALIST BRUTALITY

To the EDITOR:

Those who are interested in the situation in China, or who are concerned about United States policy there, will be interested in the following report on the liberation of Chungking. It is written by Rev. F. Olin Stockwell, a Methodist missionary who was delegated to represent the United States Government in Chungking when the American consul departed:

"The last days of November brought the news of the rapid advancement of the Communist troops, with the assurance that the government was fighting stubbornly and retreating slowly. On Saturday, November 26, Senator WILLIAM F. KNOWLAND, of California, spoke in Chungking, assuring the leaders that the war was not lost if they but took courage and fought to the last. Three days later the last of the troops abandoned the city, and on the evening of November 30 the firing of firecrackers announced the entrance of the Red Star troops. Peace had come at last.

"The troops which came reported that they had no opposition. A few hundred troops had taken the city, without firing a shot. Some reported that in the long miles from Changsha to Chungking the Government's troops fled before them so rapidly that they had not even had a chance to use their ammunition. The rumor that the enemy was approaching sent them scurrying like frightened rabbits, throwing away their equipment and deserting into civilian clothes by the scores. The war had become a victory parade."

OVER 3,000 DIE IN ARSENAL DESTRUCTION

"Not only were men and leaders alike fear-crazed, but they exhibited a brutality that is almost unbelievable. On the night of November 29, the death-like quiet of the city was punctuated with the blowing up of ammunition dumps and arsenals. Not until later did we learn that the blast had wiped out from three to five thousand people—coolies and workmen at the arsenal who were given no warning of the plans and who were blown to pieces by those for whom they had spent their lives.

"In addition to this act was the machine-gunning of between three and four hundred political prisoners at the concentration camp at Tze-chi-keo on the outskirts of Chungking. This camp was organized as a training center during the war, and American personnel assisted Chinese personnel in developing spy work against the Japanese. Since the war the secret agents of the Central Government have carried on at the same center, directing their activities against the Communists. Stories of brutality, of secret arrests and executions, have been whispered about from time to time.

"On the night that the Central Government left Chungking, from three to four hundred men, political prisoners held on the charge of being Communists, were brutally machine-gunned and burned at this one center, their bodies thrown into ditches or left to rot in the open. Several escaped to tell their story. A YMCA foreign secretary (American) visited the center 2 days and saw with his own eyes the ghastly scene. The order for this crime came straight from the top, signed by the generalissimo himself. It is a complete copy, on a smaller scale, of Nazi actions in Germany. Unfortunately, because of America's former relation to this center, the crime is accredited to America, as well as to the dying Central Government.

"In Methodist circles in America, Chiang Kai-shek is remembered as he who gave property and endowment for an orphanage at Chungking, where today there are 200 smiling children. In Chungking circles he will long be remembered as the cruel and despotic ruler who ordered the slaughter of more than 300 political prisoners as a last-minute gesture of helpless defiance."

DON WILLMOTT.

Letter From a Constituent

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 15, 1950

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith a letter from Mr. Fred Crisman, of Salem, Oreg.:

SALEM, OREG., *January 23, 1950.*

Mr. WALTER NORBLAD,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR SIR: In England when the average Britisher feels put upon or has a feeling that all is not right with the "tight lil' isle" he writes a letter to the London Times. In the United States he writes his boy in Congress and tells him what he thinks. This is what I think.

You, sir, are a member of the Military Affairs Committee, I believe, as such, you, in all probability, keep your eye on what is going on overseas. As a vet you are interested in the steady threat that creeps along, both in Europe and Asia. In the past, while I didn't like the troubles in Germany and eastern Europe, I felt that our State Department was in capable hands that knew and understood the people there better than I could ever hope to. I have changed my mind. China has fallen to the Reds. I know China, and when I see what can happen there, Mr. NORBLAD, it makes me stop and think. I met Ho-Chi-Mnh (Ho-Chin) in French Indochina, for my money he was wrong then, and now the French forced by the fall of Chiang must not resist. Indo-China is on the verge and will go soon. What next, Mr. NORBLAD? India? That is what has changed my mind.

The Commies are raising such a fuss in Burma that the country is in chaos, admittedly falling fast to their control. What a dirty shame. I feel this very bitterly. I was badly wounded in Burma. I was shot down in flames over My-Bon, during the small battle for Ru-Wa on the coast of Burma. I left a lot of blood out there and it makes me mad to see it all go, while people I thought were in the "know" grovel and back up before a gang of international brigands whose only difference from the Nazis is the cut of their uniforms.

I no longer think the people guiding our State Department know just what they are doing. They do not seem to rate the "loss of face" in the same manner as those who have spent some little time in the Orient. It is a matter of tremendous importance to a nation as well as to the individual.

I do not have any illusions that this small letter will rate any "big beer" in Washington, but I have it off my chest, and you are the man to tell it to, I feel. I need not tell a Member of Congress that for every single letter one of us will take the trouble to write, there are more than several people who feel the same way. I just happen to feel a bit worse about the CBI—it was "my" corner of the earth during the late ruckus out there.

Yours truly,

FRED CRISMAN.

CIO Urges Congress To Pass the Middle Income Housing Bill

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mr. MULTER. Mr. Speaker, the executive board of the CIO today adopted a resolution urging the early passage of the Spence bill, H. R. 6618, which will provide cooperative housing to the middle-income groups. In that connection the CIO issued the following statement today, which I commend to the attention of the House:

The CIO urges the Congress to pass the middle-income housing bill.

Millions of American families, including the overwhelming majority of the membership of the CIO, now fall within an income group whose housing needs have been ignored by the Congress.

CIO's housing committee has repeatedly urged the Congress to take steps to eliminate this gap and to complete its program by providing for this no man's land in housing.

Banking and Currency Committees of both Houses are now considering the administration's proposal in this area. The proposals, known as the Maybank amendment (to S. 2246) in the Senate, and the Spence bill, H. R. 6618 in the House, provide lower costs through long-term loans of private investment capital at low rates of interest to cooperatives. This program can reduce housing costs by approximately 30 percent. With this reduction in costs most of the gap in the present housing program can be filled without additional expense to the Government.

We are heartened to see the wholehearted support which this program has been given

by widely representative groups and organizations such as the American Legion, the Cooperative League of the U. S. A., the National Housing Conference, the Veterans of Foreign Wars, the National Conference of Catholic Charities, the Jewish War Veterans, and many other organizations.

Major segments of the organized real-estate industry, either out of greed or shortsightedness, have continued to oppose Government action to solve our housing shortage. They seek Federal aids for themselves, they try to deny it to those who would produce more adequate housing at lower costs. Some of them seek to meet the problem by selfishly securing unto themselves, tax exemptions which would be denied the rest of the community. That way leads to the bankruptcy of America's cities.

The CIO urges the Congress to ignore the pleas of the greedy and support the program pending before it on a bipartisan basis reflecting the bipartisan nature under which the program was developed and widely supported.

We urge the Congress to permit this program to go ahead and give it as a new instrument the kind of sympathetic support and administration which will make possible the solution of the middle-income housing problem to as high a degree as the achievements of the REA which brought electricity with all its benefits to 80 percent of the farms in this country.

False Economy in the Post Office?

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mr. O'HARA of Illinois. Mr. Speaker, there is much concern among many people in Chicago over the effect upon workers generally of an order of the Post Office Department assigning laborers receiving less pay to do the work now performed by the Federal postal clerks. It is felt, and I believe with some justification, that while at the present time this would affect a total of only six or seven hundred workers there is the great danger that it will set a pattern by which a general fall of wages throughout the Nation, and not only in the departments of the Government but in industry as a whole, will be effected.

I bring the matter to the thoughtful consideration of my colleagues. No one more sincerely believes in economy in Government than do I, but I do not wish those things to be projected in the name of economy that will wreck our economy. The conditions that preceded the depression of 1929 are too fresh in my memory for me to be blind to the consequences that inevitably result when high economic crimes are committed by those wearing the disguise of economy.

There is a real economy, a sound economy, an honest economy and that is the kind of economy that we in this Congress should be committed to. Merely to reduce in one group the wages of humble workers already underpaid, and thus continue the process of pilfering from the pay envelopes of other underpaid workers is the economy that destroys. It is the signpost on the road to depression. This was the kind of economy that ushered in the depression of 1929 when, to ward off a growing depression, the only remedy that was offered was to cut down wages.

No man in the public life of America is more highly esteemed than the Postmaster General, and justly so. I have confidence that when he has reviewed the immediate effect and the possible repercussions of the order we have been discussing that he will take such action as in his judgment and from his long and rich experience will seem to him proper, and which will be satisfactory to all of us who do not want another depression to start in the germ-beds of false economy.

That my colleagues may know the depth of feeling on this subject among the workers of Chicago, I am including in my remarks the following resolution adopted by the Chicago Federation of Labor on February 7, 1950:

Whereas the Post Office Department has issued orders assigning cheaper mail handler (laborers) help to work presently performed by post-office clerks; and

Whereas this order increases the assignments of the mail handlers at the expense of the post-office clerks; and

Whereas the object of the order is to employ mail handlers in great numbers at average salaries of $600 a year less than the present salaries of post-office clerks; and

Whereas the pay scales and working rules governing the employment of post-office clerks represent the energies and labors of many decades by the trade-unionists who honor their membership in the National Federation of Post Office Clerks and the American Federation of Labor; and

Whereas the many milestones of progress accomplished by the organized-labor movement in Government industry are now currently wiped out by one stroke of the Postmaster General's hand; and

Whereas the order results in a lowering of the standard of living of large masses of post-office workers, resulting in a defeat of the aims and objectives of the organized-labor movement of the United States: Therefore be it

Resolved, That the Chicago Federation of Labor go on record as favoring that the anti-labor orders of the Postmaster General, issued on October 27, 1949, Change Order No. 250, be immediately rescinded and the work restored to post-office clerks; and be it further

Resolved, That a copy of this resolution be forwarded to Senator SCOTT W. LUCAS and Senator PAUL H. DOUGLAS, and the Congressmen of the Chicago area, and urge them to do all in their power to have the order by the Post Office Department of October 27, 1949, known as Change Order No. 250, rescinded.

Adopted by the Chicago Federation of Labor, February 7, 1950.

Gettysburg Address—1950 Version

EXTENSION OF REMARKS
OF
HON. HUGH D. SCOTT, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mr. HUGH D. SCOTT, JR. Mr. Speaker, the biographers of Abraham Lincoln tell many stories of his humor, which sometimes was delievered with the sardonic touch. Nothing in our literature compares to the immortal Gettysburg Address. Yet, somehow I am sure, that if he were alive today he would forgive generously—and perhaps with a smile—this parody which comes to me, the original author unknown:

GETTYSBURG ADDRESS—1950 VERSION

Ten score plus 7 years ago, our fakers brought forth upon this Nation a new tax, conceived in depredation and dedicated to the proposition that all men are surtaxed, unequal.

We are now engaged in a great mass of calculation, testing whether that taxpayer—or any taxpayer—so confused and impoverished, can long endure. We are met on Form 1040. We have come to dedicate a large portion of our income to a final resting place with those men who here spend their lives that they may squander the fruit of our toil.

It is altogether anguish and torture that we should do this. But in the legal sense we cannot evade—we cannot cheat—we cannot underestimate this tax. The collectors, clever and sly, who computed here, have gone far beyond our poor powers to add or to subtract. Our creditors will little note nor long remember what we pay here, but the Bureau of Internal Revenue can never forget what we report here.

It is not for us, the taxpayers, to be consulted here on the tax receipts which the Government has thus far so ignobly spent. It is rather for us to be here dedicated to the great task remaining before us—that from these vanishing dollars we take increased devotion to the few remaining; that we here highly resolve that next year will not find us in the higher income bracket; that this taxpayer, underpaid, shall figure out more deductions; and that taxation of the people, by the President, for the Government, shall not cause our solvency to perish from our hearth.

Thirty-second Anniversary of Adoption of Declaration of Independence of Lithuania

EXTENSION OF REMARKS
OF
HON. B. W. (PAT) KEARNEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mr. KEARNEY. Mr. Speaker, I am happy to join with the other Members of the House in paying tribute to the Americans of Lithuanian descent who today are celebrating the thirty-second anniversary of the adoption of the declaration of independence at Vilnius. This occasion is commemorated not only by our citizens of Lithuanian ancestry but by all like-minded individuals. The good and brave people of Lithuania, existing under the heel of the oppressor, do not sit by passively and accept without resistance the yoke of slavery. Despite the constant persecution and indescribable humiliations to which they have been subjected in their struggle, they have had the fortitude and courage to carry on a resistance against their oppressors. Fighting for liberty and freedom and for the belief in the church of their ancestors is the tradition of Lithuanians. They still hold high the torch of their tradition and do not break faith. They look

forward to the day when the march of communism is stopped; and on that day a new proclamation of liberty will again bring joy to the hearts of the people of Lithuania and all other freedom-loving nations of the earth.

Uncle Sam Plays Santa Claus to the World—Lets Its Native Indians Starve

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mr. O'KONSKI. Mr. Speaker, the neglect and inefficiency by the Federal Government of the native American Indians is a blot on mankind. For a Government that dishes out billions to irresponsible governments and people the world over—the blot becomes a shame.

Mr. Speaker, under unanimous consent, I insert a series of articles by the Milwaukee Journal on this subject:

UNHAPPY HUNTING GROUNDS (II)—INDIANS PRONE TO ILLS BECAUSE OF FAULTY DIET

(This is the second story in a series on Indian conditions in Wisconsin.)

(By Rod Van Every)

The most stark poverty among Wisconsin Indian reservations stalks the Lac Court Oreilles in Sawyer County.

But Lac Court Oreilles is not much different from other reservations.

No one has starved to death at Lac Court Oreilles (pronounced "Cooderay"), and this is taken by many to mean that things can't be too bad. But the diet is inadequate and malnutrition has laid many Indians open to diseases which have killed them. The death certificates do not list starvation as the cause.

There is almost no work in winter in the vicinity of Hayward, Stone Lake, and Couderay. A few Indian men cut pulpwood. A few work for the United States Indian Service, usually the same ones. The old ones get old-age-assistance checks. Some families that have taken in abandoned children get foster-home funds. Almost everyone is getting, or trying to get, relief.

But see for yourself. Step into the home of George Wade, 67, of Reserve, the largest Indian community at Court Oreilles.

CHIEF INCOME IS PENSION

On the outside the house looks pretty good, but inside you find its three rooms bare. There are two beds in the bedroom, one in the living room; another is in the kitchen. Here George Wade lives with his wife and six children. Two of the girls are at St. Paul looking for work. Paul, 21, recently came home after his discharge from the army. He brought with him his 19-year-old bride, a frail, frightened white girl from Missouri.

The chief income for this family is George Wade's $50 a month old-age pension. He was very glad to become 65.

Mrs. Wade sits at a table. There are saucers of beads on the table, and she is working at a small wooden frame over which threads are stretched. Most of the women at Reserve and at the poorer community of New Post, 13 miles away, are at that moment doing the same thing.

They are making strips of beads, about 1 inch wide and 30 inches long. The strips will be sewed to leather belts and sold to the summer tourists in the novelty stores in Hayward and other resort towns. Mrs. Wade sells her work to a white woman living just off the reservation, who sells the strip to a belt company. The white woman furnishes the beads and thread. The beads have been counted, and broken or defective beads must be returned so that there can be no chance of the women selling their work directly to tourists.

WORK AT HARVESTS

The pay for this, one of the main industries of the Court Oreilles Reservation? It is 25 cents a strip. As the Indians tell it, one woman, if she works hard all day and pays not too much attention to the home and children, can make three.

At the white stores the belts cost $3 and up.

In the summer the Chippewas at Court Oreilles pack up and go to the Door Peninsula to pick cherries or farther north to pick strawberries. They also follow the bean, potato, and cranberry harvests. Some guide for fishermen. Others work at summer resorts as handymen or the women as maids. There is some town road work, and some Federal blister rust-control work. Some gather wild rice.

"But you can't save enough for the winter," they say.

The fact is, many do not try. "Too many live for the day," says Father Engelhard Troseken. He has worked with Indians for 40 years, 35 with the well off Menominees at Keshena, 5 at Court Oreilles. He is pastor at the St. Francis Solanus Catholic mission and school at Reserve.

CHURCH IS DOING MUCH

The church is doing much to help the Indians, and the good-looking, 6-foot 2-inch Father Paulinus Groskopf rushes around the reservation in his 1948 Plymouth, concentrating as much on the Indian's empty belly as his soul. Father Paulinus is 36 and a dynamo of energy. Often, very often, Father Paulinus is a scratchy burr on the hide of the Indian Service.

Father Paulinus is a realist. He saw starvation in China, and he recognized the signs at Court Oreilles.

"Sure, he is a fat Indian," the priest said. "But that is potatoes. Or maybe beans or macaroni, all starch. Malnutrition is general here."

The father has many friends over the Nation. He is not bashful about asking them for financial help for the Indians. He gets it, too, but not nearly enough.

Father Paulinus' Indian parish is at New Post, 18 miles from Reserve and the worst slum of Court Oreilles. Take a look.

RELIEF WAS DELAYED

Here is Clyde Miller, 53. His wife, Violet, 34, is in a Federal tuberculosis sanitorium. He must care for the six children. He cannot get out to work. When Violet took sick last June, he applied immediately for relief. He got it in October, he said.

Mrs. Katie Martin, 67, lies in bed in a cluttered, dirty room on the second floor of her rickety house. She has been ill most of the winter.

Her two daughters and their four small children live there. There is no man. Katie's husband died 3 years ago, and her daughters' husbands are not around.

They have been getting $10 worth of relief groceries a month for 3 months, Katie said. While she lies in her bed, Katie Martin keeps working at the beads and the buckskin.

POPULATION UNKNOWN

Walter Thayer, 42, and his wife and four children live in a one-room tar-paper shack. His cupboard contains flour, a can of green beans, potatoes, raisins, one can of condensed milk, and some coffee.

Nine children live in another two-room shanty. A 17-year-old girl is in charge while the mother is having her tenth baby in the Hayward Indian Hospital. The husband left last September—not an uncommon Indian custom—and he won't be back.

There's Charlie Wolf, 49, who has one of the best and cleanest houses at New Post. He attended Oshkosh State Teachers' College and now guides and does carpenter work in the summer. Bill Conger, 31, deep in debt, lives in a one-room hut with his pregnant wife and two children. Hank Smith, 45, who wanted to start a grocery, says it took him 1½ years to get a $900 tribal loan.

No one knows exactly how many Indians are living on the Court Oreilles Reservation (or any reservation, for that matter). Father Paulinus thought there were about 1,000—perhaps 250 families. Two Indian-service sources said 900 and 700, respectively. On the tribal roll are 1,707 names, but many of the people are scattered throughout the State.

SKINNY WINTER DEER PROVIDE LITTLE FOOD

Few homes at Court Oreilles have electricity. Kerosene lamps provide light. There are only a couple of telephones. Water must be brought from one of several community pumps. Toilet facilities? The privy is at the rear of the house.

Deer are not much of a source of winter food at Court Oreilles. The heavy snows drove them far into the swamps, and they have grown skinny and their meat is strong from eating bark and pine needles. When you can get through the deep snow a deer can be a good source of income. The white man will buy it, but you are a violator, and the game warden cannot be very understanding.

At Reserve, "the Farmer" says that the Indians have a way of taking care of each other, of sharing what they have. The farmer is Walter M. Bagley, district agent for the Indian service. He is liked by most of the Indians. The title derives from the old treaties which gave reservation Indians the service of "a farmer" or adviser on agriculture.

Bagley has some surplus commodities—potatoes and cans of dried eggs—in a back room, but not nearly enough. One day the newspapers had stories about how the Federal Government was going to dump 50,000,000 bushels of surplus potatoes. But there are no Indian Service funds to pay for shipping them to the reservations.

Last week end the people of Rice Lake, 50 miles south of Court Oreilles, sent two truckloads of food to the reservation.

Although the Indians believe that Bagley is doing all he can to help them, they look with some suspicion on the Great Lakes Consolidated Indian Agency at Ashland. The agency oversees Indian affairs, except for the Menominees, in Wisconsin, Michigan, and Iowa. Jesse C. Cavill is the general superintendent. Many of the things the Indians complain about are the result of policies made in Washington, D. C., he says. He explains that the agency funds are strictly earmarked and he cannot spend them for such things as food, even though it may be needed badly.

Actually, the agency did provide a small relief fund by a year's end saving in other funds. Most of it went to Court Oreilles, Cavill said, but other reservations needed it, too.

CHILDREN GET LUNCHES

The amount of food on hand at Bagley's headquarters at Reserve was pitifully small.

Bagley issues it on an emergency basis, often to tide over a hungry family before it receives relief food through a joint tribal town fund.

From time to time there have been surplus commodities. Many Indians did not know until very recently that they could get surplus foods and Federal relief packages.

The school free-lunch programs are a godsend to underfed Indian children. No matter what the condition at home, they are assured of at least one substantial meal a day.

The clothing situation generally is good. Many families fit themselves out for the rugged winters with summer earnings. Others get clothing from the church, at such prices as $1 for an overcoat, 15 cents for a dress or 20 cents for long handled underwear.

CRANBERRY PROJECT DESIGNED FOR WORK

The land of the Court Oreilles Reservation, the backbone of any Indian economy is poor. It is sandy and very dry in the summer.

There is little good timber in the area. It is mostly poplar, good for pulpwood and perhaps barrel staves. Everyone thinks that the solution to the Indian poverty would be a small mill or factory of some kind, but efforts by the tribal council to bring something to the reservation have been halfhearted. And there hasn't been much help from the Indian service.

The Federal Government has financed, on a $105,000 loan, a 32-acre cranberry marsh project at Court Oreilles. The plants will be set out this spring but they will not bear for several years. The project is designed to give some Chippewas work and to build up the shaky tribal fund.

Henry Joe La Rush, 67, chairman of the tribal council, is very proud of the cranberry project. It took some doing to get a small majority of the tribe to vote for it.

LIQUOR IS PROBLEM

La Rush, one-quarter Indian, is pretty well off compared with most other Indians of the reservation. He has a 15-acre farm and three cows. He rents boats to fishermen in the summer.

One of the big problems in getting a community project going or in bringing an industry to the reservation is the varying ownership of land. Some is in heirship, some is delinquent; there is tribal land, Federal land and allotted land. To get timber rights on any large tract would require long negotiation and hundreds and hundreds of signatures. There is little reforestation because of the land title mess.

Liquor is a problem on every reservation and in every nonreservation community. Some Indian leaders minimize it, but it is always there and it is always serious. Under Federal law no Indian may be sold liquor, yet they get it easily. Some buy it openly in taverns; some have it bootlegged to them at higher prices.

Indians everywhere believe that they should be allowed to buy liquor when and where they choose. Indian servicemen and many other whites who know the ways of the Indian agree with them. They believe there will be less drinking when the law is changed.

HOSPITAL IS NEARBY

Much of the white prejudice against the Indian in communities around a reservation comes from contact with the drunken Indian who is in town on a spree and frequently is in fights. "The Indian is moral until he drinks," Father Paulinus said. Then he is very much like a white drunk, committing assaults, burglary, and petty theft.

"We don't have much Indian trouble," said a Hayward policeman. "But what trouble we got is Indian. In hard times there is less money and less trouble. There hasn't been much trouble lately."

There has not been an unusual amount of sickness at Court Orielles this winter. The fine Indian agency hospital at Hayward, with its one doctor, is nearby. The doctor is far too busy to get to Court Orielles, but the one ambulance is available for emergency cases. However, it is not always on hand. It also is on call for all reservations in Wisconsin, and the hauls may be 100 miles or more.

If you do not own one of the old jalopys that clank around the reservation, you must pool up with friends to pay a neighbor to drive you to Hayward. The total cost may be $5 to $7 and your share $1. The $1, even if you have one, is needed badly for food.

So you don't go to the Hayward doctor.

Statement by Lt. Gen. Ernest O. Thompson, Texas Railroad Commissioner, Before the House Ways and Means Committee

---

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mr. TEAGUE. Mr. Speaker, we have been very fortunate to have such a qualified person of the oil industry to come to Washington and explain to the House Ways and Means Committee the reasons that the depletion allowance on our oil and gas production should be maintained. Lt. Gen. Ernest O. Thompson is a member of the Texas Railroad Commission and in this capacity acts as the State's conservation agency for natural resources. He has had an outstanding military career and at present is the commanding general of the Texas National Guard.

I believe that General Thompson's explanation is a very well thought out argument to maintain the incentive plan for a progressive oil industry. I trust that the Ways and Means Committee will see fit to take favorable action on his recommendations.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the statement made by Gen. Ernest O. Thompson before the House Ways and Means Committee:

Mr. COMBS. Mr. Chairman, may I take a minute to introduce General Thompson, and explain how he happens to be here?

The CHAIRMAN. All right.

Mr. COMBS. On Monday I called General Thompson, who is a member of the Texas Railroad Commission, which is our conservation agency, and requested him to come here. I doubt that he has had time to prepare anything like a formal statement, but I asked him to come this morning in order that he might testify and subject himself to questioning because I regard him as one of the best informed men in public life. He is an elected official and not a representative of any particular group or company. I think he has served 17 years in this position.

General THOMPSON. My name is Ernest O. Thompson and I am and have been a member of the Texas Railroad Commission since June 1932. I might also say that I am representing Governor Allan Shivers, of Texas, who requested that I appear here on his behalf.

Among other duties of the Texas Railroad Commission, is that of conservation of oil and gas, administering our statute, waste prevention statutes, and so forth.

In addition to being a member of the railroad commission, I have long been a member of the Texas National Guard. I served in the first war as commander of a machine-gun battalion in the Ninetieth Division. I remained in the Guard all the time between the two wars and trained two regiments in this war. President Roosevelt sent me as his representative to the World Petroleum Congress in Paris in 1937. Secretary of War Robert Patterson sent me on a survey of oil and gas supplies throughout the European theater in March 1945 and then to make a survey of the oil fields in the Middle East, which I did.

My efforts have always been as a citizen-soldier. Today I am the commanding general of the Texas National Guard. We have in our State an infantry division, the Thirty-sixth Division, and an armored division, the Forty-ninth Division, an air wing and an antiaircraft battalion with 15,000 enlisted strength. I mention that because my speech today will be as a railroad commissioner and as a citizen-soldier.

My thinking, naturally, is of national defense. It is in this way that I have always approached the conservation of oil and gas. In the final analysis, oil is a munition of war. It used to be that an army traveled on its stomach. Today an army travels on gasoline and oil. Our ships, planes, tanks, trucks, and missiles depend upon oil and gasoline for their motive power.

Ten long years of strict conservation of oil and gas and proration of production in Texas, prior to Pearl Harbor, made it possible for our Nation to have all of the oil it needed for the war effort in World War II. We were never short of oil, although I must say that we were severely taxed in our producing ability many times during the war. We produced our fields to the limit. We had no extra capacity to produce and rationing of civilian needs was necessary in order to conserve the oil.

Just last week, speaking at Baylor University, one of our great colleges, a 100-year old school, Secretary Symington came down with our distinguished junior Senator, Senator LYNDON B. JOHNSON, whom I am happy to see in attendance here this morning, to make an address and to receive a degree at Baylor University. Secretary Symington, who certainly ought to know and be in a position to know, said, among other things, "Russia has the atomic bomb. Russia has the means of delivering it. I am not so sure that we are prepared."

The late Secretary for Defense, Secretary Forrestal, who gave his life fighting for the preparedness of our Nation, is my authority that we need 2,000,000 barrels per day extra oil-producing capacity above peacetime requirements. We do not have one-half of that extra reserve capacity today.

If you gentlemen of this committee ask the Military Defense Department how much reserve oil-producing ability is enough to guarantee the security of this Nation, they will tell you, as they told Senator Johnson when inquiry was made by him at my request on this very question, they will tell you that we must have a virile, active, prosperous domestic oil-producing industry, constantly expanding to meet the ever-changing and ever-greater necessity for motor fuel.

I have kept closely in touch with the oil requirements for our defense. Only a week ago I made a personal inquiry of the Secretary of Defense and asked Secretary Johnson how much reserve daily oil-producing ability was enough. I simply wanted to know how much was enough to be ample for our national requirements in case of an emergency. The reply was again, as I have stated before, that we need an active, virile, prosperous domestic oil-producing industry for our defense. That is sound defense policy. It is not safe to do anything that would hamper or impede this prime requisite for our defense.

Oil, gentlemen, is ammunition. In defense, oil is prime mover. The proposed saving here put forward by the Treasury Department of $200,000,000 by the Government, by cutting depletion allowance from 27½ percent down to 15 percent, would, in my opinion, be poor economy. Why tamper with a system which has twice in a generation brought forth a drilling which is the only way to find oil and has made oil available in such quantities that we have been able to win two wars? Men venture in risky drilling for the reward which follows success. Remove the rewards and our domestic supply in oil will shrivel, and we will become dependent upon foreign oil. Foreign oil, of course, could be denied us.

We know that certain people are concentrating on submarines and we would be denied foreign oil. Especially is this true of the great Persian Gulf area, the Middle East, Iran, Saudi Arabia, Kuwait and Bahrein Islands where they have discovered more than 47,000,000,000 barrels of oil with just a few wells having been drilled. Their production in that area has already gone up to 1,400,000 barrels a day.

These great Middle East fields, gentlemen, lie under the shadow of the Russian bear right at the border. I have heard it testified in the committees of Congress by the high military officers that, the Persian Gulf oil fields could not be counted upon by us if war should come. Therefore, I urge the members of this committee not to change the 27½ percent depletion not to reduce it in any way. The system is working, it is producing the oil. It means national security. It is my considered opinion, gentlemen of the committee, that we cannot afford as a nation to tamper with a system of incentive, namely, the 27½-percent depletion allowance on our oil and gas production that is getting the job done.

We do not yet have enough ready reserve oil-producing capacity for our national security, not half enough. Revenue, however badly needed, cannot be considered when our national security is at stake. Our very freedom is involved. Come war there will be no time to drill oil wells. To be useful for defense, gentlemen of the committee, the oil wells must have already been drilled. Reserves lying undrilled are of no value, and there would be no time to drill them, there would be no steel available for the drilling. The oil wells must have already been drilled, equipped, and ready to produce, hooked up and connected to the pipe lines and to the refineries of ample capacity, ready to make the products required in sufficient quantities and of proper quality.

Since the close of World War II the oil industry has gone faithfully forward with new drilling, new pipe-line construction, new refineries to the amount of more than $7,000,000,000, perhaps even more. I know that is a conservative figure. They have done that in order to keep up with the ever-expanding American economy and to help get ready for the national defense in time of possible emergency. I feel that we should not now imperil the progress in this field and become dependent on foreign oil.

That, gentlemen, is my statement. I have tried to stay within the time limits I gave. I shall give to the clerk of the committee, with your permission, some charts and tables and data that brings the situation up to date.

Here is a book written by a man named Wallace Pratt, one of the great authorities in this country on geology, entitled, "Oil in the Earth." I simply have two pages marked here showing how much drilling is necessary to discover an oil field through all the years from 1920 up through 1938 and 1940. I have other data here which supplements it and brings it up through 1949.

Gentlemen, I appreciate the opportunity of appearing before you.

Mr. BOGGS. General, I know that you were here yesterday when we were questioning the representatives of the Treasury Department?

General THOMPSON. Yes, sir.

Mr. BOGGS. You probably listened to my questions which were put to the representatives of the Treasury Department in connection with the statement that depletion was the same thing as depreciation. Now, of course, I do not subscribe to that theory at all and I do not think that the Treasury Department can establish any such theory.

I should like for you to explain to the committee the difference between depreciation and depletion.

General THOMPSON. Depreciation, Congressman BOGGS, in my opinion, is a method of setting aside money to rebuild something that can be rebuilt. Depletion is a consideration which the Congress has wisely provided to take the place of an irreplaceable natural resource. You cannot replace it. Man did not make oil and man cannot make it. It is an irreplaceable natural resource, expending the capital as it comes out of the ground, never to be replaced by man.

Mr. BOGGS. And the whole theory of depletion is the replacing of capital, is it not?

General THOMPSON. So you can search for more oil; yes, sir.

Mr. BOGGS. General, in your opinion, is it fair, in view of the fact that 27½ percent depletion has been in our law since 1926 and some similar arrangement has been a part of our law since 1918, to say that the character of percentage depletion is a tax loophole?

General THOMPSON. It certainly would not be a tax loophole, Congressman BOGGS. It is the secret of the oil-producing business. The reason that oil men go out and hunt for oil is because they hope to get a reward. This depletion is the thing that has kept the oil business going. As a matter of fact, the profits in the oil business are less by statistics than 400 industries in the Nation and in my papers here, I set them out and show that the amount that they make is less than the amount made by ordinary business.

Mr. BOGGS. You have been the railroad commissioner for Texas for 17 or 18 years. I know you have had a long and distinguished career. I know you are equally familiar with the entire Southwest. What in your opinion would be the effect upon the economies of Texas, Oklahoma, Louisiana, California, if this Congress took action which adversely affected the continued expansion of the oil business?

General THOMPSON. Congressman BOGGS, Texas has at this time 117,439 producing oil wells. We produce 2,000,000 barrels per day and we have the well shut down tight half the time because our statute says that production of oil in excess of market demand is waste. So our State is already suffering from the shut-down because of the fact that we are producing more than market demand. Now if you cut off the depletion allowance, drilling will stop and we will again be faced with a shortage of oil.

The economy of our State depends almost entirely upon revenue from oil, 56 percent of the revenue that comes into our State, the State government, comes from oil taxes. We call it a severance tax.

Mr. BOGGS. That supports your schools, welfare programs and your highway programs and 56 percent, or whatever percentage you mentioned, goes to the State government?

General THOMPSON. More than that. Fifty-six percent is from oil production, Congressman BOGGS. Then you have the oil refining, the pipe-line work, thousands of people who work for the oil companies in pipe lines are in the fields. If this oil business should drop in Texas, Louisiana, Oklahoma, Kansas, California, and all of the 22 States that produce oil, it will stop the advancing economy of this Nation and the impact would be terrific. Other industries would topple, such as steel for example and many, many other industries.

Mr. BOGGS. How much would you estimate as the total employment directly and indirectly in Texas and in the Southwest generally is dependent upon the oil business?

General THOMPSON. I would say eight or ten million people are dependent on oil for their livelihood.

Mr. BOGGS. Directly?

General THOMPSON. Directly, sir. One hundred and seventeen thousand wells are scattered from east Texas clear out to El Paso and from the Panhandle all the way down to Corpus Christi. Three-fourths of the counties in our State produce oil.

Mr. BOGGS. General, has anything happened since 1942, when the Congress investigated this very subject quite thoroughly to justify an arbitrary reduction in percentage depletion at this time?

General THOMPSON. On the contrary, if it was good in 1918 and in 1942, when it was started and when it was reinvestigated, it should be even more so at this time, because of the fact that costs of drilling have constantly increased. We are going deeper and deeper all the time to get oil.

As you go below 8,500 feet the costs go up not only arithmetically, but geometrically. You can hardly get a contractor to go below 8,500 feet. Many of our discoveries are being made below 10,000 and 12,000 feet. Many of them are dry holes and cost as much as $500,000. I know one well which was drilled in Florida at a cost of $1,500,000, and was dry. Of all the wells drilled, 36 percent are dry. Exploratory wells, 81 percent are dry. You do not hear about the fellows who hit dry holes. You just hear about the fellows who, like the man who hit the daily double, hits oil.

Mr. BOGGS. General, do you have any figures on the approximate amount of money which has been spent by the industry in developing or attempting to develop the offshore areas in Louisiana and Texas?

General THOMPSON. Congressman BOGGS, those off-shore operations are terrific in cost. Some of the platforms where they drill cost a half million dollars, just to build the platform from which to drill, and then they have converted LST's, these ships that hauled equipment during the war, big tanks, they converted these to barges for drilling at terrific cost. I would say that off-shore drilling would certainly be $500,000 a well.

Mr. BOGGS. Yesterday in the testimony of the Treasury Department did you find in that testimony any scientific basis for the reduction of the allowance from 27½ to 15 percent?

General THOMPSON. I certainly did not see any scientific reason for it. I will say this that the conservation of oil, gentlemen, is being practiced in a most exacting manner. We allow oil to be produced all over the Nation only at that rate which will cause the greatest possible amount of oil to be produced.

Mr. BOGGS. The figures given yesterday struck me as being arbitrary figures. Did you get that impression?

General THOMPSON. Certainly they were arbitrary figures and I did not think they had a proper grasp of it, if I may be pardoned for saying so.

Mr. BOGGS. I thought so too. Thank you.

General THOMPSON. I thought your questioning yesterday was to the point and Mr. Mason put some questions right to the point too.

Mr. COMBS. I have just a few questions, General, to amplify a few points that Mr. Boggs brought out. For one thing, you brought out the point that peacetime is the time to continue your explorations and bring your wells in because in wartime, you cannot drill because you have neither the time nor the steel or other equipment and manpower needed to develop new wells in wartime in large number?

General THOMPSON. That is right.

Mr. COMBS. And to keep up production and to have potentially more production you have to keep up the drilling and exploration during peacetime?

General THOMPSON. Yes, sir; that is correct. That is the only time you can do it.

Mr. COMBS. Now when you bring in your wells under proration, your actual production is kept down to the point where the oil is needed theoretically at the time?

General THOMPSON. We do that to preserve the pressure, Congressman COMBS, so that you will not have to put the wells on pump.

Mr. COMBS. That is the conservation feature, but I say from the standpoint of having available oil, you do keep the production down, regardless of the number of wells to

the total of what is needed from time to time?

General THOMPSON. We prorate among all the wells in the State and the different fields so that each field gets its pro rata share of demand; that is a technique of conservation. Prorating is a tool of conservation and a necessary one.

Mr. COMBS. I brought that out to emphasize this point. Under that system, if you have the wells and the deposits in the wells available, you can rapidly step up production if the wells are there?

General THOMPSON. Yes, sir; you can open them up as needed and produce them at that rate which is the maximum efficient rate. The maximum efficient rate is that rate beyond which you dare not go to keep from harming the reservoir.

Mr. COMBS. In that connection then, in the interests of national defense, it is advisable to develop every possible deposit and have the wells there ready?

General THOMPSON. You must have the wells drilled and all hooked up so that you simply turn a valve. If you do not do that you will not have oil.

Mr. COMBS. That is necessary to national defense to have this oil in an emergency?

General THOMPSON. You could not fight a war without it.

Mr. COMBS. You think the proration allowance is one of the main encouraging factors that make possible that kind of development?

General THOMPSON. Judge, I can best explain that by giving you our experience in the East Texas field. There are 22,000 oil wells in that field. It is 19 years old. The expert said when that field was discovered and outlined with dry holes, when the limits were defined, that the total production would be in the nature of 1,000,000,000 barrels. By reason of conserving the pressure, we have kept those wells flowing 19 years and we have already produced and saved 2,600,000,000 barrels of oil and the pressure still stands at 1,028 pounds. If the pressure is protected in the future as it has been in the past, that field will produce another 2,500,000,000 barrels, making 5,000,000,000 barrels of oil where 1,000,000,000 was expected.

Mr. COMBS. Now General, does that type of operation put an added burden on an oil company to operate under the conservation practice?

General THOMPSON. Those wells in east Texas, Judge, as you well know, because you have tried many cases and I have been before you, we have wells at east Texas that can produce 30,000 barrels of oil today, if opened wide open but they are only allowed to produce 12½ barrels per day because the market demand is such that we can only make room for 12½ barrels from a 30,000-barrel well. That is building up an arsenal of ammunition come war. Does that answer your question?

Mr. COMBS. That answers the question. Would you explain the oil commission of which you are a member?

General THOMPSON. Through the permission of Congress in 1935, the conservation agents of the various 20 States that produce oil got permission of the Congress to enter into a treaty each with the other, the Interstate Oil Compact Commission. That gives the States the right to coordinate their police powers in waste prevention. As a result, the idea developed in one State can be quarterly transmitted to the authorities and the engineers of the other States. We meet four times a year and exchange freely technical information, one with the other. It has been a great blessing to get uniform waste prevention measures. We are grateful to the Congress for that treaty between the States where we can coordinate the powers. It has made Federal control unnecessary.

Mr. COMBS. One other question that suggests itself. You are familiar through that relationship with production problems and exploration problems, you might say, throughout the oil-producing area in the United States?

General THOMPSON. That is correct, sir.

Mr. COMBS. You have seen oil brought in in States that heretofore have not had any oil, like Mississippi?

General THOMPSON. All over the country, 22 States now produce oil.

Mr. COMBS. In most instances enormous sums were spent drilling and testing and searching for those deposits before they were found?

General THOMPSON. Millions and millions of dollars have been spent, unsuccessfully in many cases.

Mr. COMBS. I will ask you if those great reserves were not in large part made possible by the fact that the producing companies could retain a sufficiently large operating fund after payment of taxes in order to do it?

General THOMPSON. I think the 27½ percent depletion has made possible the finding of field after field after field. At the close of World War I we had 5,000,000,000 barrels reserved in this Nation. Since that time we have used tweny-seven billion out of that five billion and now we have twenty-five billion. It is working, is a fine system, and should not be tampered with.

Mr. COMBS. Do you think that an attack upon the system, on the principle of proration allowance as to each individual lease would be proper?

General THOMPSON. You could not do that, Judge.

Mr. COMBS. One particular lease might show rather large profits.

General THOMPSON. You have to take all of the properties and throw them into one pot. You could not take separate properties and proceed on that basis because you would break the little fellow, and he is the man that goes out and gets the oil.

These stripper wells could not exist. Out of 439,000 wells in this Nation, 200,000 of them produce less than 6 barrels per day, but they are the backlog of our oil supply of the Nation because every well will be a stripper by and by.

Mr. COMBS. That is all, thank you.

Mr. REED. You are a great expert in this line and I just want to ask this brief question. If they were to reduce this 27½ percent, or wipe it out, it would be absolutely devastating to the stripper wells, would it not?

General THOMPSON. It would put them out of business and make us dependent on foreign oil and would also make oil go up; it would be higher than a cat's back.

Mr. KEAN. General Thompson, the Treasury has testified that the benefits of percentage depletion have tripled since the original depletion provision was put into the law owing to the increase in the corporation tax and the personal income tax, is that not so?

General THOMPSON. You mean that they testified that, Congressman?

Mr. KEAN. Yes.

General THOMPSON. Well, I do not know whether you meant dollars or what.

Mr. KEAN. The corporation tax having increased so greatly since the bill was passed, the benefits to the taxpayer have tripled, dollarwise, since that time?

General THOMPSON. I would say that the cost would more than absorb any such difference. The cost of drilling has gone up so greatly, in other words. As I said awhile ago, it increases geometrically. You cannot get a contractor to work below 8,500 feet. It works against the little independent who is the fellow who finds the oil. They said yesterday that a little fellow can discover it and sell it to somebody. Why should he sell it? Why in a free nation could he not produce? All these companies were little at one time. The Texas Co. started in Texas, the Gulf Co. started in Texas and the Humble Co. started in Texas. Many big companies started there and why can we not keep an opportunity open for the little man today? Why say that he should sell out to somebody else? Let him grow and prosper to the wise and beneficent law you passed here. It is a wise law and gives a little man a chance to live.

Mr. CARROLL. I have just one question. You placed great stress upon the cost of drilling?

General THOMPSON. Yes, sir.

Mr. CARROLL. All that you testified to applies with greater force to the Rocky Mountain area?

General THOMPSON. Your costs in the Rocky Mountain area are terrific. Getting stuff up there costs as much as it does to drill a well in a lot of places.

Mr. CARROLL. Thank you.

The CHAIRMAN. Thank you very much, General Thompson.

Uncle Sam Plays Santa Claus to the World, Lets the Native Indians Starve

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1950

Mr. O'KONSKI. Mr. Speaker, the neglect and inefficiency by the Federal Government of the native American Indians is a blot on mankind. For a Government that dishes out billions to irresponsible governments and people the world over—the blot becomes a shame.

Mr. Speaker, under unanimous consent, I insert a series of articles by the Milwaukee Journal on this subject:

FOOD AND JOBS SCARCE FOR WISCONSIN INDIANS

(By Rod Van Every)

Most of the 14,000 Indians living in the progressive State of Wisconsin exist deep in degrading poverty.

No one has starved. Many are hungry. There is general malnutrition.

Serious illness is not apparent, but State statistics show that the Indian health record is far worse than the white's.

Most Indians are poorly but warmly clothed. The clothing comes from charities and surplus army warehouses.

Jobs are scarce. It was better in the black depression of the thirties.

L'CKY HAVE PENSIONS

The lucky ones draw an old-age pension of $30 to $50 a month.

But still the diet is potatoes and bread, macaroni and rice, spaghetti and beans, potatoes and bread, maybe with some lard on it.

We're back now after 1,200 miles over old tote roads, crisp and crackling at 30 below; icy town roads, plowed too late; fast, dry highways with frost heaves that fling you through the air.

We're back to furnaces, television sets, orange juice, and hypertension.

But we wonder about the Winnebago woman near Wisconsin Dells. Her man had left her and the six children 2 weeks before. There were potatoes and bread for breakfast; potatoes, bread and bacon grease at noon. She had 50 cents. The woodpile was gone and the temperature then was 15 below zero. She had laughed as she said she guessed her

time had come. Her labor pains had started during the night. We'll have to telephone to the Dells and find out about the baby.

THIS WINTER IS "WORST"

And what about the old Chippewa woman at New Post on the Lac Court Oreilles (pronounced "Cooderay") Reservation? She had been lying ill in the shivery loft of her rickety home for many weeks. She was nearly blind, nearly deaf, and the pains hurt.

Everywhere the Indians say that this winter things are worse than in other years. Industrial conditions in the cities have tightened, and the Indian has lost his job. Right or wrong, most Indians believe they are the last to be hired by the white boss in good times and the first to be fired in bad. There is no doubt that prejudice against the Indian exists among the whites in cities and villages near Indian communities.

JOBS AND MONEY SCARCE IN WINTER

Except during World War II, winter economic conditions among the Indians have been bad, to one degree or another, for many, many years. There was work in the cities during the war, and many men left the reservations and Indian communities. Many more went in the Army, Navy and marines. Their departures relieved the pressure, and so did the pay checks they sent back.

Now, the Indian wage earner and his family are trekking from the cities to the reservation, back to the old folks, back to the only roof they can be sure of. Families double and triple up. It makes no difference that they are penniless now that the wonderful unemployment compensation has been used up. They are welcome, and there always is room for one more.

The summers are relatively kind to the Indians. There is work. There are the harvests to follow and the gardens to plant. Some men guide for fishermen at $10 or $12 a day. Women work at resorts. The sun is warm, and there is money. It is hard to remember that winter will come, as surely as tomorrow's sun.

HEALTH RECORD POOR

In the winter, there may be some pulpwood cutting, a little timber cutting, trapping, town work on roads and in woodlots to earn the relief food, odd jobs when you can find them. Depending on the locality, the women may work off and on while caring for the home and children at basket weaving, bead crafts and buckskin sewing. The white tourist will be outraged by the price, which, broken down, may have brought an Indian family a wage rate of 10 cents to 25 cents an hour.

The Indian health record in Wisconsin is far below that of whites, Indian service officials do not have readily available statistics—although Indian health is one of the service's prime functions—but they thought it was good.

"The Indians in Wisconsin have a better health service than the average white, believe it or not," said Jesse C. Cavill, general superintendent of the Great Lakes Consolidated Indian agency at Ashland, in charge of about 19,000 Indians in Wisconsin, upper Michigan, and Iowa.

Statistics of Dr. Allan Filek, of the State board of health show a different picture. They are for 1945–47. On a comparison with whites, the figures show that the Indian birth rate is slightly higher, infant deaths are two and one-half times higher (75 of every 1,000 Indian babies die in their first year, compared with 29 for the State as a whole).

PNEUMONIA TOLL HIGH

Indian mothers die at the rate of 2.9 per 1,000 live births, compared with 1.2 for white mothers; 94 of every 100,000 Indians die of pneumonia, compared with 34 whites; the Indian death rate from tuberculosis is six times that of whites, but the Indian death rate from heart disease, cancer, and cerebral hemorrhage is lower than that of the whites.

When the average citizen thinks about Indians, he often thinks in terms of a reservation. To many whites that means security, a free home, a comfortable dole, and happy year-around hunting and fishing.

The reservations were set up in treaty agreements. The Indians signed away vast, rich lands at low prices. They reserved certain lands for themselves—the reservations. The agreements also called for cash payments and other types of payments—teachers, blacksmiths, and agricultural assistance. Those agreements still are in force.

RESERVATION DOESN'T MEAN SNUG SECURITY

There is no security on an Indian reservation. You live there and your land is not taxed. You must pay all other State and Federal taxes. You must finance your own home, make your own living. You do not have to live there, but it is the only place to return in time of stress.

There is no dole. Because of some old treaties there may be a tiny cash payment once a year. In one instance it is 52 cents.

There is no Indian service appropriation for relief of Indians in Wisconsin. But the service spends about $713,000 in the State yearly. Some is for forestry practices, construction of roads and looking after the financial and land problems of reservation Indians. But much goes to the State and counties for Indian education, health, and hospitalization and boarding dependent children.

Hunting and fishing the year around? Just step out the back door of your shack and bag a deer? Drop a line and pull up a muskie? Not quite. Fish and game are no longer on the reservations in great numbers. You must walk many miles to kill a deer, and when the big snows come and the deer go deep into the swamps, it is very tough work, even on snowshoes, to find them.

RELIEF IS PUBLIC PROBLEM

Relief is handled on the town or county system, just as it is for whites. Some towns strongly resent the financial burden placed on them by down-and-out Indians, but at the same time make no objection to giving relief to whites. But the Indian has the same citizenship status as a white man, even though he may contribute little to the economy of the community.

George M. Keith, director of the division of public assistance of the State public welfare department, estimates that fewer than half of Wisconsin's Indians need some kind of financial or medical help. Over-all that figure might be right although Keith is asking all county welfare departments for exact figures. But on a reservation basis, the figure probably is low.

If a town or county is in such a bad financial situation that it can't take care of needy Indians and whites, it can get money from a special State emergency fund, just as the town of Sanborn in Ashland county has done. Forest and Florence Counties also are getting such help. Failure to request special funds is taken to mean that everything is all right.

LAC COURT OREILLES WORST

Conditions vary a lot from reservation to reservation, from community to community.

The worst is the Lac Court Oreilles Reservation, just like old Michael Wolf told the legisative subcommittee several weeks ago. Probably 1,000 Indians live there. It is hard to tell. Families come and go. There are deaths and births, slow to be recorded.

The Red River Reservation runs a close second. The Winnebago Indians, scattered from Wisconsin Dells to Black River Falls and as far east as Wittenberg, have no reservation. They are desperately poor. The Chippewas, on the beautiful lake-dotted Lac du Flambeau Reservation, are in somewhat better straits, and the Oneidas west of Green Bay, with no reservations, are about the same.

At the northernmost tip of Wisconsin is the Red Cliff Reservation, near Bayfield. Things are not too bad there. The Indian service says the Chippewas in Burnett, Polk, and Barron Counties, the Mole Lake (Forest County) Chippewas and the Potawatomis in Forest County are having a tough time. They were not visited. They are so few.

The aristocrat of the Wisconsin Indians is the Menominee. His reservation, heavily timbered, is near Shawano. There is a lumber mill, and regular wages. The white man's ax did not get a chance to whack off the miles and miles of towering white pine and hemlock. With selective logging, the timber will last for many years, perhaps forever. The Stockbridge Indians, neighbors of the Menominees, share some of their good fortune.

Indians live in many other places in Wisconsin. There are about 300, mostly Oneidas, working in Milwaukee County.

The Security and Strength of America

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1950

Mr. ANGELL. Mr. Speaker, I include as a part of my remarks an article entitled "The Security and Strength of America" appearing in the current issue of Liberty, a magazine of religious freedom, by C. S. Longacre, an associate editor of the magazine, which is a most excellent discussion of the critical problem of the security and strength of our Nation facing us today. In considering this article it is worth while to have in mind the declaration of principles of the Religious Liberty Association, the publisher of this magazine, which are:

We believe in God, in the Bible as the word of God, and in the separation of church and state as taught by Jesus Christ; namely, that the church and the state have been placed side by side, each to work in its respective sphere (Matthew 22:21; John 18:36).

We believe that the Ten Commandments are the law of God, and that they comprehend man's whole duty to God and man.

We believe that the religion of Jesus Christ is comprehended in the principle of love to God and love to our fellowman, and thus this religion needs no human power to support or enforce it. Love cannot be forced.

We believe in civil government as divinely ordained to protect men in the enjoyment of their natural rights, and to rule in civil things, and that in this realm it is entitled to the respectful and willing obedience of all.

We believe it is the right and should be the privilege of every individual to worship or not to worship, or to change or not to change his religion, according to the dictates of his own conscience, but that in the exercise of this right he should respect the equal rights of others.

We believe that all legislation which unites church and state is subversive of human rights, potentially persecuting in character, and opposed to the best interests of the church and of the state; and therefore, that it is not within the province of human government to enact such legislation.

We believe it to be our duty to use every lawful and honorable means to prevent the

enactment of legislation which tends to unite church and state, and to oppose every movement toward such union, that all may enjoy the inestimable blessings of religious liberty.

We believe in the individual's natural and inalienable right of freedom of conscience, and the right to profess, to practice, and to promulgate his religious beliefs; holding that these are the essence of religious liberty.

We believe that these liberties are embraced in the golden rule, which says, "Whatsoever ye would that men should do to you, do ye even so to them."

The following is the article to which I refer:

THE SECURITY AND STRENGTH OF AMERICA

(By C. S. Longacre)

What constitutes the real source of American security and strength? A British poet tells us in his graphic style what a state is not, and what really constitutes a state:

"What constitutes a state?
Not high-raised battlements or labored mound,
Thick walls or moated gate;
Not cities proud, with spires and turrets crowned,
Nor bays and broad-arm ports
Where, laughing at the storm, rich navies ride;
Not starred and spangled courts,
Where low-browed baseness wafts perfume to pride—
No! Men, high-minded men,
With powers as far above dull brutes endued,
In forest, brake, or den,
As beasts excel cold rocks and brambles rude—
Men, who their duties know,
But know their rights; and knowing, dare maintain,
Prevent the long-aimed blow,
And crush the tyrant, while they rend the chain—
These constitute a state."

—*Sir William Jones.*

Many mighty nations with walled cities and moated gates, with splendid navies and thick-walled fortresses, with unrivaled armament and numberless soldiers, have gone down into defeat and passed into oblivion. Will our American Republic, which every true and loyal patriot loves so dearly, meet the same fate as did the world powers of Egypt, Assyria, Babylon, Persia, Greece, and Rome? There are certain tendencies operating in our Government, and unless they are checked and corrected the United States is headed for a similar fate.

The one and only hope of the American Republic's maintaining its unique position of true greatness, strength, and security lies in its preserving the ideals and fundamental principles of liberty, justice, equality of rights, equality of opportunity, individual initiative, the free exercise of the conscience in religious concerns, the separation of church and state, freedom of speech and the press, and the inalienable right of the individual to propagate his religious convictions without interference from the Government so long as he respects the equal rights of his fellow beings in the exercise of his God-given prerogatives. The moral sense and character of the American people constitute the greatest asset of our Republic, and as long as the majority of the people maintain the ideals upon which our forefathers founded our constitutional form of government, our heritage of liberty will be secure.

We hear that our greatest defensive weapon is the atomic bomb or the poison-gas bomb that can wipe out all the inhabitants of a large city within a few moments. There is no one who doubts or who belittles the fantastic, destructive power of these deadly weapons. But the security and strength of America is not found in the exclusive possession of these terrible instruments of destruction which, we are told, can wipe out whole nations.

We must never forget the divine admonition that "the race is not to the swift, nor the battle to the strong." "Except the Lord keep the city, the watchman waketh but in vain" There is nothing more deceptive, more misleading, or more dangerous to the security of any nation than for its people to put their trust in princes or in the son of man, in whom there is no help. But, as the psalmist says, "Happy is he whose hope is in the Lord his God." The strength of a nation lies not in its superior armaments but in its superior ideals and principles of government, reflected in the lives of its rulers and its people.

George Washington and a weak, ragged, impoverished army of the American Revolution demonstrated that fact in their conflict with superior forces. It is possible for a boomerang to smite the head of its hurler. The cause of right, however inferior in numerical strength, is mightier than the cause of wrong, however superior. What has made America so strong, prosperous, and invincible is the ideals, the virtues, and the faith and character of the rulers of the people who have believed in and protected the precious heritage of liberty and essential justice that is for all the people.

Liberties once surrendered are exceedingly difficult to regain. Eternal vigilance is the price that has to be paid for our security and our blood-bought liberties. Every citizen must view with alarm the first attempt to encroach upon our liberties and our inalienable rights. Our weakness and our danger lie in our apathy and indifference toward our American way of life. We are weak in the same proportion as we lose faith in the ideals upon which our Republic was founded and which have made us as a people a great and influential nation in a short period of time.

The greatness of America does not lie primarily in military strength, nor in American thrift and free enterprise, nor in economic soundness and reform legislation in the field of morals and religion; it lies rather in the strength and vitality of our ethical and spiritual ideals, promoted and fostered on a voluntary basis without governmental sanction and support. As long as the people of America place the conscience of the individual in all religious matters above the supremacy of the state, and safeguard the inalienable rights of the individual above the exercise of human authority in government, both the dignity and the safety of the individual and of the state will be maintained, and governmental stability will be insured. This is the only basis upon which liberty, peace, and security both for the individual and for the state can possibly be maintained.

Here the rulers are not the masters but the servants of the people. The actions of government officials may be freely criticized without reprisal. The right of dissent is sacredly guarded so long as the individual does not indulge in malicious libel or slander. Diversity of opinion, diversity of religious creed, diversity of political faith, and diversity in the practice and propagation of divergent views in religion and politics is the unique distinction between a republican and a totalitarian form of government. As long as ethical, moral, and spiritual standards function on a voluntary basis, without interference or molestation on the part of the government, religious freedom is safe.

For liberty to be secure, it must be so deeply engraved upon men's hearts that they would rather surrender their lives than to give it up. This love of liberty must be woven into the warp and woof of the fabric of the character of the people, or it will be lost—given up for promised gain or through fear of suffering.

Double Taxation

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1950

Mr. TEAGUE. Mr. Speaker, I want to call to the attention of the members of the Ways and Means Committee and also to all the other Members of the House of Representatives an article which appeared in the Mexia Daily News, Mexia, Tex., regarding double taxation. I realize that our Ways and Means Committee is studying this problem of Federal revenue revision and I hope that serious consideration will be given to this matter of taxing both the profits of a corporation and the dividends which are paid out to the stockholders. This has proved to be a considerable drain on the small corporation and on the stockholders with their small investments.

Under leave to extend my remarks in the RECORD I wish to include an article written by Mr. E. C. Deane, of the Mexia Daily News:

THE WAY IT SEEMS TO ME

(By E. C. Deane, editor)

Facts of life sometimes make a bitter pill that's mighty hard to swallow.

This is true whether we're fruit growers in California, fishermen in Massachusetts, newspapermen in Texas—or farmers anywhere.

Yesterday, on invitation of my friend Barney Davis, I had the pleasure of eating lunch with about 60 stockholders of the Mexia Production Credit Association. They're farmers and ranchers from Limestone, Freestone, and Leon Counties.

After lunch came a most informative talk on PCA achievements by a man from Houston. The achievements he outlined are things that PCA stockholders—and the general citizenship of Texas as well—can take pride in.

You see, Texas production credit associations have paid off their debts to Uncle Sam, who financed PCA originally. Texas is the first State in the Nation to attain this goal.

The PCA, it should be explained, is the organization set up by Uncle Sam to provide money on credit to farmers and ranchers for various approved operations.

While PCA was in debt to Uncle Sam, the association's profits were exempt from Federal taxes.

Now that the debt is paid off—and the association is owned solely by its stockholders—the association's profits are subject to Federal taxation just the same as those of any other corporation.

That's where the bitter pill came in yesterday—when the talk got around to Federal taxation on the association's profits.

One stockholder asked this question:

"If our association makes profits on its operations, and then splits up those profits into dividends for its stockholders, can't we charge off the dividends as operating expenses—won't that lower the Federal taxes on the profits?"

No, sir; explained the man from Houston, Uncle Sam takes his share of profits before you pay any dividends. In Uncle's eyes, dividends aren't counted as operating costs.

It doesn't take any genius in mathematics to figure that if Uncle dips his big hand into the association's profit pot, the dividends the stockholders get will be smaller as a result.

Well, asked another stockholder, Uncle Sam won't charge us individuals any personal income tax on dividends we might get from our association's profits, will he?

Oh, yes, sir; Uncle certainly will do that very thing, the man from Houston said.

That's double taxation, somebody suggested.

It sure is, said the man from Houston, adding "that's what a lot of corporations have been complaining about."

I wish Mr. Truman could have seen the looks on the faces of some of the PCA stockholders when that bitter pill went down.

Everybody who gets his hopes and his money invested in a corporation these days soon learns how bitter that pill of double taxation really is.

The sooner more of our citizens, newspaper men, housewives, farmers, city slickers, politicians, rich, poor, mild, and meek, get personally acquainted with this damnable evil of double taxation, the sooner we'll be rid of it.

Let nobody mistake me, please.

I feel just as concerned about the matter personally as those good farmers and ranchers did at that meeting yesterday.

I don't think stockholders of the PCA, who are anxious for their corporation to prosper and to pay them a return on their investments, are being treated right when they are hit by double taxation.

And I don't think we fellows who publish newspapers, or make peanut sacks, or sweat blood over any other little business, are being treated right, either. I wish I knew what to do about it, besides complain and pay.

If any of my New- and/or Fair-Deal friends think I'm taking a Republican or Dixiecrat attitude on this, I ask 'em to think again.

I consider myself a good Democrat, and a danged sight better one than a lot of jokers who are parading under its banner these days, promising everything to everybody and let the devil take the hindmost.

Lithuanian Independence Day

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mr. RODINO. Mr. Speaker, this thirty-second anniversary of Lithuanian independence finds those who love the cause of liberty for this proud land cloaked in sorrow and anxiety. Lithuania, once a great kingdom extending from the Baltic to the Black Sea, now suffers the oppression of a foreign power.

The history of Lithuania for over 900 years has been the story of a nation fighting for freedom. Struggling against centuries of Polish and German and Russian rule, throughout the years the yearning grew ever stronger for a land of their own in which they could live in their own traditions and mold the future with their own hands.

In 1918, when the great nations of the world were exhausing themselves in a world war, the chance came; and their leaders seized the moment to declare their land a free and independent nation.

The two decades of independence that followed are as splendid as any period in Lithuania's rich history. She established a government based on the will of the people. She created an independent state as progressive and enlightened as any in the family of nations. International trade increased. A program of agrarian reform was inaugurated. Education and cultural pursuits multiplied in a free and prosperous land.

But just as its people were receiving the benefits of liberty, the Second World War broke out and almost at once Lithuania was overrun by first one invader and then another. At the close of hostilities and after a series of violations of national integrity seldom equalled since Napoleonic times Lithuania found itself annexed to the Soviet Union. In 1944 the iron curtain closed around her and the nation was cut off from the rest of the world.

However a passion of liberty as deep and vigorous as theirs is not to be crushed so easily. In the past 6 years we have received word of an almost superhuman struggle being fought to maintain their freedom under the smothering oppression of communism. Guerrilla warfare, stubborn civil resistance, and a determined refusal of the people to accept Russification has thwarted the Soviets at every turn. Few nations have fought so valiantly to resist the Communist power as have the Lithuanian people.

But in the past year we have also heard of the savage methods invoked by the conquerors to stamp out this attempt at freedom and individuality. Mass deportations to the interior have drained the population away. Punishment and retaliation are imposed on those who resist the collectivization programs. The most brutal methods of the dictatorial state are being invoked to bring about conformity and submission.

And yet it is right that we are commemorating this anniversary of independence today. Thirty-two years ago, the people of Lithuania did more than establish a new government. In their declaration of independence, they set forth a solemn dedication of a courageous people to the principles of liberty. And it is this spirit, so sorely tried today, which we honor.

Lithuania has been conquered before but never for good. Today she lives only in the hearts of her sons and daughters, and with the freedom-loving people of the world, but we must look forward to the day when her representatives will again join us as equals around the world's conference tables.

For the present we have certain responsibilities. We must keep her name alive and we must strengthen her people's faith in a future of freedom ahead. We must continue America's refusal to recognize the Soviet claims to this land; and we must extend our sympathy and support to the Free-Lithuanian legations in this country.

Above, all we must do everything within our power to strengthen the United Nations until it becomes a world agency of such influence that such brutal subjugation of small nations will not be tolerated, and the rights and traditions of the Lithuanian people will again be recognized and respected in the family of nations.

Lithuania's Independence

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an address which I delivered at the anniversary of Lithuania's independence, St. Francis Church Parish Hall, Lawrence, Mass., Sunday, February 12, 1950. This annual affair sponsored by Rev. Father Francis M. Juran, pastor, was very well attended and many enlightening and educational addresses were delivered by the able and capable speakers on the program.

The address follows:

Friends of freedom, we meet, not in celebration, but to recall the days when your homeland belonged to you and not to strangers, when men and women were happy at their work, and fear did not walk in the night.

From these recollections of better times, we fortify our determination to rescue this world from the evil which threatens it, so that no man or nation shall be the downtrodden slave of another.

It is fitting that this anniversary should begin with religious ceremonies for the great struggle going on in this world is between those who believe in God and the dignity of man, and those who would destroy the last best hope in human life.

The only effective resistance to the red terror in Lithuania and other countries behind the iron curtain is centered in the clergy and the faithful. We are pained when we think of the sufferings endured by Archbishop Stepinac and Cardinal Mindzenty and a host of lesser martyrs. We grieve for the millions of your countrymen who sacrificed their lives rather than yield to the Fascist and Communist barbarians.

But this terrible price is a warning to us, telling us that we must wake up before it is too late. Communism is the anti-Christ that will not be satisfied until it has the whole world in chains to satisfy the power lust of a few men. It is clever, it is without conscience, and it is working at its diabolical conspiracy night and day.

And the pity is that some otherwise good people are deceived by its sugar-coated falsehoods.

This is the supreme danger.

This is what we must guard against with unceasing vigilance.

If the tide of communism is to be stopped and rolled back, it must be done with superior faith and intelligence.

Already it has a large part of the world in its grip. It has economic and military power, but these things we can see and measure and offset by security provisions of our own making.

We know, also, that we must work to improve our own society; to encourage production and full employment; to provide security for the individual in time of sickness, disability, and old age; to open up greater opportunities for all so that, by example, we prove that freedom offers the highest material advantages.

But man does not live by bread alone.

He has a mind and a soul.

If these can be enslaved all is lost.

The Communists understand this. If they can first confuse a man by causing him to

lose faith in himself and in his God, the rest is easy.

This is one of the prime objectives of their propaganda.

This is what they are trying to do within the United States. By spreading false rumors they try to arouse antagonism among Protestants, Catholics, and Jews. They try to set race against race, knowing that if they can break down our tolerance and our unity, and get us to fight among ourselves, they can seize control in the resulting chaos.

They even tried to disrupt our economy by working their way into key posts among a few labor unions, but American labor leaders exposed this conspiracy and quickly eliminated these treasonable elements.

Mr. J. Edgar Hoover, Director of the Federal Bureau of Investigation, estimates that there are close to half a million Communists in this country. Of course, they are not so proud as to identify themselves, but I can assure you that the FBI is not asleep on the job. Once they transgress the law the Communists find themselves in trouble.

But there is no law against what appears to be harmless gossip, and that is where you and I have a job to do. Stop any rumor in its tracks, refrain from criticizing any race or creed, and we will be helping to stall the "divide-and-conquer" strategy of the Reds before it gets started.

Remember that the day-to-day practice of democracy is the way to strengthen it.

Perhaps most of us had the good fortune to be born in the United States. We are apt to take our blessings for granted because we do not know what it is to be deprived of them. If we did know the dark side of the picture we would be more earnest in our devotion to the Christian-democratic standards of our society because we would really appreciate them.

In this audience today, there are some displaced persons who have escaped from the Red terror. With their own eyes they have seen churches despoiled and homes violated, freedom of conscience and freedom of thought crushed by a brutal power that knows no law but that of its own appetite.

These victims have escaped to a land where, in spite of minor imperfections, the state is the servant and not the master of human life. Where men deal with one another as men and not as animals. Where men have faith in God and in one another and are encouraged to develop their talents without fear.

I have talked with some of these displaced persons and I have seen how difficult it is for them to believe that the freedoms we enjoy are a fact, and not some trap to ensnare them. So vivid is their recollection of oppression that they had almost lost all hope.

I have been humbled as I listened to them and watched the pathos in their eyes as they seemed to plead for reassurance that this freedom of ours is not a bubble that might burst.

It will not, if we listen to them and learn from their experience that eternal vigilance is the price of liberty.

I am sure that, as they become citizens, they will become better than those who never had to earn it. In so doing they will help to rouse many from the complacency which unintentionally allowed communism to undermine so many other countries.

Thirty-two years ago, the people of Lithuania declared their independence. For the next 22 years, the young republic surged with joyous effort, and the liberated people accomplished more during that time than at any other generation in their history.

Then the darkness came, first from one side and then from the other, until Lithuania was forcibly taken over by the Soviet Union. Since then, more than 50 percent of the Catholic clergy has been annihilated by the ruthless conquerors. In 1948 alone, more than 200,000 civilians were sent as slave laborers to Siberia.

The United States Government has never recognized the annexation of Lithuania and its incorporation into the Soviet Union. And I am sure that it never will.

There are holes in the iron curtain, tiny though they may be. Even if Russia had 50,000,000 troops, they could not stifle the religious zeal and sturdy independence of the Lithuanian people. They have outlived other tyrannies and their spirit will finally prevail over those who now oppress them.

The news that leaks through to us tells of brave resistance. The one thing that the Communists fear above all else is the truth. They realize that if people get to know each other as fellow human beings, the fabric of lies upon which communism is built will topple like a house of cards.

The hydrogen bomb could kill millions of people, but it is the truth that will finally win. And the truth put to work now could immobilize this hideous weapon of destruction and all others like it.

Eventually, the free peoples of the world will get their message through the iron curtain, even to the people of Russia, and then they too will rise up against these who keep them in bondage.

The light is dim in Lithuania, but it has not been extinguished.

It glows in every Lithuanian heart where the Communists cannot reach it. It glows in their resistance. It glows as they think of the United States and its fine Lithuanian citizens who have not forgotten their homeland.

It is prophetic that Lithuanians and non-Lithuanians assemble on this day to share in our mutual dedication to the cause of freedom. For this is the birthday of the Great Emancipator, Abraham Lincoln.

He led the fight to free the slaves just as we must exert ourselves to keep the light of freedom burning brightly until it illuminates the whole world. Then Lithuania will be herself once more and we will meet again to celebrate the rebirth of her independence with hearts overflowing with joy.

February 16, 1918, is a date whose anniversary will be celebrated in festival and song throughout Lithuania, when black fear is lifted from the earth.

That happy time may be nearer than we dare to think.

Food Prices

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mr. MURRAY of Wisconsin. Mr. Speaker, an article in the Sunday Star includes the following sentence:

But the nutritionists don't like the milk situation. They said less whole milk and cream were being used for the fifth consecutive year and this was reducing the amount of calcium in the American diet.

Calcium is a mineral people need for teeth, bone, and other body equipment.

With constantly less milk produced per capita for year after year it is not surprising that the nutritionists are worried. The subsidizing of vegetable oil substitutes that have infiltrated into the dairy-products business is constantly making this situation more serious.

Good News From RFC

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mr. RICH. Mr. Speaker, this morning's papers announce that the Reconstruction Finance Corporation has ordered foreclosure on the $37,500,000 loans to the Lustron Corp., of Columbus, Ohio.

The RFC is to be commended for this action. No matter what will be lost through foreclosure proceeding, one rat hole down which the taxpayers' money has been slipping will be plugged. On January 14, I received a letter from Mr. Carl G. Strandlund, enclosing certain "Facts About Lustron."

An analysis of the facts, shows that on each Lustron home built up to December 1949, the loss, which was the cause of the foreclosure, amounted to $9,403.85 per home. The analysis of Lustron's operating losses follows:

LUSTRON CORP.'S LATEST ALIBI

Lustron Corp., of Columbus, Ohio, borrowed $37,500,000 from the Reconstruction Finance Corporation. The loans were made over a period of 2½ years, starting from June 30, 1947.

As of October 29, 1949, principal in the amount of $22,000,000 was in default, and with but a small amount of cash on hand the corporation was unable to meet its obligations to RFC as agreed.

MR. STRANDLUND'S LETTER

Under date of January 14, 1950, Mr. Carl G. Strandlund, president of Lustron Corp., addressed a letter to each Member of Congress, stating:

"In order to help clarify the conflicting stories about Lustron and its operations, I am glad to attach a summary statement outlining the financial status of Lustron Corp. at the present time."

Analysis of the financial data accompanying Mr. Strandlund's letter reveals that the financial status of Lustron, as of November 30, 1949, was as follows:

Assets:	
Cash	$1,603,356.43
Accounts receivable	916,950.25
Inventories, material, etc.	3,039,042.96
Machinery and equipment	14,360,381.62
Cash deposits, etc.	471,787.59
Total	20,391,518.85
Liabilities:	
RFC loan	37,500,000.00
Current accounts payable	538,480.59
Capital stock	[1] 841,000.00
Total	38,879,480.59
Apparent deficit	18,487,961.74

[1] Represents income from stock sales. Mr. Strandlund reportedly received 86,000 shares, par value, of the capital stock for himself and wife, on an original cash investment of $1,000.

In the Facts About Lustron it is stated that shipments of houses to 35 States, Alaska, and Venezuela totaled 1,952, and that 14 completed houses were in inventory. Since when have the American taxpayers been financing the production of houses for

Venezuela? No explanation was included in the facts.

Receipts from customers shown at $11,206,044.06, indicates that the houses produced were sold for an average of $5,740 each.

The deficit from operation, distributed on the basis of houses produced indicates an average loss on each house of $9,403.85.

A former chief accountant for the Government, in reading the Strandlund letter and accompanying facts, said:

"This appears to be a compilation intended to confuse and deceive the Members of Congress."

Lustron is being operated with less than 3 percent private capital and more than 97 percent of Federal funds. The plant leased by the corporation was built during the war at a cost of over $28,000,000.

Here is a chance to trim operation loot by denying more Federal funds to Lustron.

A Community Sorrow

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a eulogy delivered by Archbishop Richard J. Cushing, of the archdiocese of Boston, Mass., at the solemn high funeral requiem mass for Mrs. Mary Curley Donnelly and Leo Curley, daughter and son of our former colleague, the Honorable James M. Curley, who also served as mayor of the city of Boston on several occasions, and Governor of the Commonwealth of Massachusetts. I know that each and every one of us share the feelings expressed by Archbishop Cushing in his expression of sympathy on this occasion.

A tragedy such as that which has befallen James Michael Curley transcends any political, personal, or other private considerations. It immediately becomes a community sorrow and the hearts of all, without any possible exception, go out to the devoted father of a family so suddenly, so overwhelmingly visited by the angel of death.

I am conscious that I speak for all our citizens, for every class and condition of persons in the community, when I pause for these few minutes before the final absolutions of the church are given to speak a word of Christian comfort to the bereaved father of Mary and Leo Curley, to their relatives and their friends.

Chosen by our city as its mayor on numerous occasions thoughout his long life, chosen by the people of the commonwealth as their governor, elected to other offices in both local and national political life, the chief mourner in the tragedy of the Curley family has more than once demonstrated personal qualities which have endeared him to millions in moments of good fortune and which have enabled him manfully to bear adversity in seasons less propitious.

Never has Jim Curley more genuinely won the hearts of his neighbors, however, than in those hours, recent and remote, when death has visited his family. On these occasions, past and present, he has inspired us all with the firmness of his personal faith in the promise of our Blessed Lord that with those who die in Him life is only changed, it is not taken away; for with the dissolution of the earthly body of our mortality, a new and eternal dwelling place is opened up to the souls of all who love God and believe in His Christ.

That conviction, guaranteed by Christian faith, argued by sound reason, confirmed by the experience of the devout heart, must be the consolation of Mayor Curley as he gives back to God two more of the children to whom he has been so affectionate a father.

I want to say to him this morning that everyone, everyone whose mind believes in divinity and whose heart beats with humanity, is grateful to him for the example of faith and fortitude which he has given in the face of death. In this he has taught a truly inspiring lesson to a generation so often feeble in that faith or too selfish, too ungenerous to accept death in its proper perspective.

More than one person has said to me in the last 2 days that Mayor Curley had spoken in the spirit of Holy Job himself in the public pronouncements which he made when it must have been so difficult for him to speak for public ears out of the heart of his private, personal grief.

I want him to know that we are all grateful for his demonstration, under difficult circumstances, of the truth that the Christian, confronted with tragedy, must not languish in fruitless and unavailing grief, nor sorrow as those who have no hope. Rather, he must take the loss of his loved ones as itself a passing thing, a necessary condition of their own salvation in God and of his eternal reunion with them in the land where sin and sorrow have no part.

Meanwhile, the firm believer, even through his tears, will look meekly up to God, the God of all consolation. He will not be ashamed of his tears of human grief, but he will know how to transmute these tears into something much more precious, into prayers to almighty God that God may grant these children, their souls, and all the souls of the faithful departed, eternal pardon, peace, and life. Through Christ our Lord. Amen.

Triangular Margarine Tangle

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1950

Mr. MURRAY of Wisconsin. Mr. Speaker, this news item from the Washington News indicates that our oleo friends do not wish to sell their product as oleo. The reason they give for their dislike of the triangle is just as phony as was their experiments that didn't prove what they claimed to be proven. The claim of costs of a triangle cutting machine is ridiculous. Why should a machine cost more to make triangles than squares?

The following is the article:

TRIANGULAR MARGARINE TANGLE

House-Senate conferees are deadlocked on margarine tax repeal bill. Majority of Senate group—TAFT, MILLIKIN, BYRD—is holding out for amendment which would force all yellow margarine to be made triangular before sale. Majority of House group opposes this. Next conference is scheduled for February 20, more than a month after Senate passage of the bill.

Some margarine people say they'd rather have Federal law as it is, tax and all, than have to buy new machinery to make triangular margarine.

Our oleo friends evidently show their hand. They do not want any law or any regulation that would disturb the process of passing off oleo as butter.

Asia's Challenge to Us

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, February 16 (legislative day of Wednesday, January 4), 1950

Mr. LODGE. Mr. President, in the New York Times magazine for last Sunday there appeared an article by Raymond B. Fosdick, containing some very sage observations in regard to why things have gone so wrong for us in China. In the article Mr. Fosdick makes some interesting and, I think, well-considered recommendations as to the future. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ASIA'S CHALLENGE TO US—IDEAS, NOT GUNS

(By Raymond B. Fosdick)

No one can begin to understand what is happening in the Far East today without an appreciation of the vast revolutionary forces that are on the march in Asia. From Manchuria to Indonesia, from the Mediterranean basin eastward to the south Pacific, explosive ideas have awakened millions of people from an age-old fatalism. For these millions a new faith has been born that poverty and misery are not the unavoidable attributes of human life, and that disease, flood, and famine can be controlled. A rice bowl that is never full enough, an intolerable system of land tenure, illiteracy and ignorance, a life expectancy of 25 or 30 years—it is against these conditions that the floods have risen.

In this upheaval which is long overdue, the old lethargy and acceptance of the inevitable on the part of the masses has been supplanted by a belief that an era of wider justice and greater abundance lies ahead, and by a determination to follow those leaders who promise to guide them there.

This revolutionary movement is not only an economic awakening; it is a social and political awakening as well. It is rooted in rebellion against colonialism; it is linked to a passionate nationalism, to an ambition for freedom and independence and sovereignty that will not be denied. This is the tide that proved to the British the wisdom of withdrawing from India and Burma, and that led to the separation of Indonesia from Dutch control. This is the tide, too, that threatens the half-measures with which the French have tried to stem it in Indochina.

These revolutionary forces which have been unleashed in Asia go back at least to the opening of the century. They precede the bid by Russia for the political hegemony of the continent. In China they were beginning to stir before Sun Yat-sen vitalized them into overt rebellion. In India they were moving under the surface before Gandhi whipped them into flame. Slowly and irresistibly they have been growing over the years, occasionally smothered by military force, sometimes betrayed by their own leaders, often thwarted by the inexperience and ineptitude of the people

themselves, but in the end rising in a flood of protest and demand which has inundated the continent.

It is a tragic misconception to think of this mighty movement as inspired solely by communism, and thus to try to write it off as a tactic in the cold war. What has happened is that the Communists have captured the revolution, or are in danger of capturing it; but the revolution itself, and all that it stands for, stem far back to ideas and principles which we here in the United States helped launch in the world. For our Nation was born in revolution, and the echo of our trumpet, sounding around the globe, has brought the walls of kingdoms crashing down.

The concept of liberty, equality, and fraternity of the French Revolution was forwarded by our example, and for 175 years governments and charters have been patterned from our design. Resistance to tyranny is in our blood, and the right of people to throw off alien yokes and build themselves up into sovereign nationhood is the tradition we live by.

Always in our thinking and often in our action we have identified ourselves with the sufferings and aspirations of our neighbors overseas. Our sympathies instinctively and ineradicably are with the underdog. We do not like to see big people push little people around. When the Latin-American countries revolted against Spain we erected a Monroe Doctrine as a shield against other European attempt to reenslave them. When Napoleon III was overthrown in 1870 we recognized the Third French Republic within 48 hours. When the Spanish monarchy was upset by revolt 3 years later our minister at Madrid, on instructions from the State Department, paid his respects to the new republic the day after its proclamation.

We gave asylum to Kossuth and Carl Schurz and to the leaders of revolution in foreign lands, including those from Imperial Russia. The Chinese revolution of 1911 under Sun Yat-sen stirred the imagination of America, and although we resented the anti-American features of the second revolution of 1926, China's attempts to become a modern state had our complete sympathy.

This is not solely our tradition; it is, of course, the tradition of the western world, but our example and precept have helped mightily in its building and shaping. Over decades our missionaries and teachers in the Far East, Protestant and Catholic alike, have been telling the story of Lincoln and Washington and the faith that sustained them. Our textbooks and our courses of instruction in scores of schools throughout the area have spelled out the inalienable privileges of liberty and the pursuit of happiness, and the right of people to govern themselves. It is not without significance that when the Allied troops took over the area in September 1945, they found the streets of cities like Saigon and Batavia plastered with mottoes taken from the Declaration of Independence and the writings of Jefferson and Lincoln.

In brief, the revolution in Asia is rooted in western traditions. In a real sense, it is our revolution with which American sympathies and creative capacity ought now to be actively identified. Instead of that, communism has moved in to take the initiative away from us. It has appropriated both the economic and the political goals of the revolution, so that when we attempt—as we should—to discover workable methods by which the imperialistic designs of Russian communism can be contained, we find ourselves in the unhappy position of seeming to oppose some of the objects of the revolution which, because they are flesh of our flesh, should have our complete understanding and support.

This is the bitter aspect of our dilemma, and it comes to a tragic climax in China. Here is a great and sturdy people to whom over the years we have felt ourselves intimately bound, and whose struggles with internal and external handicaps and foes have compelled our admiration and often our assistance. From the days of John Hay, and even before, we have felt it a duty and a privilege to serve as a friend and a protector of China's welfare and integrity. Today we are regarded by the new regime and millions of its followers as their enemy No. 1, and we are execrated over large areas of the country. Even Great Britain, whose occupation of Hong Kong has long symbolized to the Chinese all that was evil and sinister in imperialism, now appears in almost friendly guise in comparison with the United States.

It is easy to say that the Communists did it with their propaganda, and certainly the Communists have had their fair share in producing the result. But it is an oversimplification to pin the responsibility on the cleverness of Mao Tse-tung and his associates alone. America has herself played a part in forfeiting her own position in China, because she has not understood the desperate character of the economic situation and the mounting determination of influential segments of the Chinese to get on with the revolution.

For example, we have lost our hold on a large part of the intellectual class and practically the whole of the student population, people who were brought up on our ideas in institutions which we supported. They have gone over to communism because it, rather than the Western democracy, appears to them to be the more promising vehicle for accomplishing the objectives of the revolution. Many of them do not like communism, particularly its freedom-curbing, thought-control aspects, but for the moment at least, in their minds, it offers the most effective means of ridding the nation of its colonial backwardness, and making it strong and self-reliant.

We are shutting our eyes to the realities of the complete picture when we think of China as another Czechoslovakia, or talk about "acquiescence by rifle butt." There is undoubtedly an element of truth in this characterization, but it is based on inadequate perspective. From many unimpeachable sources in China—business, missionary, and governmental—the reports are coming that in the desperate thinking of millions of people communism represents a new hope, a chance for escape from incredible poverty, a promise of dignity and independence for the nation. We cannot shrug off this development, and if in our perplexity we turn our backs on it, we do so at our peril.

But how did we lose our position in China? Why do we seem to be so hated by large elements in a nation which we still admire and still desire earnestly to help? The question has no single or simple answer, and the situation is streaked with controversy. The vast war-weariness of the Chinese people undoubtedly reacted against what seemed to be the efforts of the United States to keep the war going. As has been indicated, Communist propaganda, probably inspired from Moscow, also played its insidious role. But a gross error of judgment on our part, based on an ignorance of the forces that were moving in China, gave the Communists an opening which they have been quick to exploit.

That error of judgment was our continued support of Chiang Kai-shek long after he had lost the confidence of all classes of the people of China, Communists and non-Communists alike. Chiang is undoubtedly a perplexing character to understand. Ambassador Leighton Stuart, who is his friend, describes him as "a completely sincere and completely mistaken man." Our own difficulties with him have been thoroughly documented in the white paper issued by the State Department last July.

It is not, however, what we think of Chiang that counts, but rather what the Chinese think of him. To them, or to most of them, he has betrayed the revolution. He has forgotten all about its objectives—the economic and social reforms involved in the platform of Sun Yat-sen: the correction of the odious land-tenure system, the agricultural rehabilitation, the schools that were to be built, the clinics that were to be established. Whether the judgment is just or unjust, Chiang and his government have become a symbol of reaction and moral bankruptcy.

It is this disillusionment which has been one of the potent influences in driving the progressive elements of the country into the Communist ranks. There has been no other alternative; and between Chiang and the Communists the latter, in spite of their ties with the unpopular Russians, seemed to promise far more for the future of China. In brief, to use the phrase of the Chinese, Chiang has "lost the mandate of Heaven." Expressed in our idiom, Chiang is through. Indeed, in the opinion of the Chinese, as it has come to us from many creditable and objective sources, he has been through for 4 years or more.

But we here in the United States refused to admit it, and we went ahead with the business of trying to restore the sovereignty of a discredited regime to an obviously reluctant nation. Our persistent military assistance to Chiang, of which the chief item was the $125,000,000 voted against General Marshall's advice by the Eightieth Congress, was worse than futile. To the legions of Chinese who were our friends and wanted to remain our friends, it seemed to be the final and conclusive proof of the Communist assertion that by standing behind this reactionary regime, America was herself betraying the revolution.

The British, far wiser in this matter than we were, stayed aloof from this ill-starred attempt to bolster Chiang's tottering rule—and so did all the other powers. Our unilateral action not only cost us the support of a substantial fraction of liberal opinion in China but has had unfortunate repercussions in southeast Asia as well. It has alined us in popular opinion with the maintenance of the status quo rather than with the forces making for a new Asia. It has awakened suspicions that we regard the people of Asia as pawns in a chess game with Russia, and that their advancement and welfare are secondary to our considerations of strategic interest.

No program in Asia today has meaning or promise which does not integrate itself with the struggle of the common people for a better life. As far as American relations with Asia are concerned, one, and only one, door is open to the future: we must identify ourselves with the just and humane purposes of this revolution, and make them our own. They are part of the heritage which the democratic West has given to the East, and they do not belong in the hands of those who would use them for devious purposes.

Our task is clearly defined, although the techniques to be employed are not yet wholly in hand. That task is to make sure, as far as we can, that the aspirations of the people of Asia for freedom and justice and more abundant living have a fair chance. We must prove to the East our traditional concern for the deprived people of the world and the sincerity of our desire to be of help. We have the skills and technology, the cultural values and ideals, to make us the friend and counselor of revolutionary Asia. What we must now demonstrate is that we have the determination and vision to use them.

That is why point 4—an unemasculated point 4—is of such vital significance to our far-eastern policy. It is a positive declaration of our faith in mankind and a practical application of that faith to underdeveloped

areas. It clears the way for a new approach. It gives us our most effective weapon in halting the spread of communism. For communism grows in tissues made gangrenous by disease, poverty, and exploitation, and the cause of the malady does not readily respond to a therapy of guns and tanks.

Of course, the United States by itself cannot underwrite the ambitions of Asia for a better life. In a sense, no outside nation or group of nations can underwrite them. The initiative and leadership must come from the Asians themselves. As Secretary Acheson said, we can help only where we are wanted and only where the conditions of help are sensible and possible. 'But acting on this principle, the Commonwealth nations at the Colombo conference have already taken a realistic step in relation to Burma, and we have demonstrated through the ECA how effective and revolutionary rural reconstruction work can be in China. These various efforts must be coordinated; this is a conception which requires team play and the pooling of resources in terms both of money and of men. Many nations and agencies will collaborate in the undertaking—particularly the United Nations with its world-wide contacts—and private capital will share in the enterprise.

The idea behind point 4 is to prime the pump, to get people into a position where they can help themselves. There are pilot plants to be developed, rural areas to be built up, an agricultural economy to be modernized, schools to be built, hospitals and medical care to be established, local personnel to be trained in the creation of adequate governmental civil services. Let us not minimize the quality of patience required in the undertaking, or the paucity of tested methods for dealing with it. The concept is daring and bold, and it requires imagination and courage to back up our belief that men are capable of planning and achieving a better life.

But what has all this to do with China? Probably very little at the moment, except as our example in the countries of southeast Asia, and in Korea, Japan, and the Philippines starts a genuine rehabilitation in the people's interest which reverberates through the entire continent. If we can help to demonstrate in countries like Siam and Indonesia and Korea that we are alive to the dangers of a world half prosperous and half slum, the news of what we do there will flow back into China like a refreshing tide.

As far as the Chinese Government is concerned, difficult days undoubtedly face us, and no one can foresee the pattern of events. It is to the advantage of the Communist regime to maintain the specter of American hostility in order to keep popular sentiment at white heat against capitalist imperialism. This gives them the opportunity to charge us with the responsibility for their mistakes and failures, as well as for the hardships which will undoubtedly harass the Chinese people in the months ahead. To the extent that we blindly accept this role of hostility we play into the hands of the Communists. Whether there is among the Chinese people a reservoir of good-will toward America which can outlast the attempts of their Government to drain it, remains to be seen. But no provocative acts on our part should help them drain it.

Certainly through missions and schools, through commercial and cultural exchange, through the United Nations, we should keep open the channels of ideas and influence, to the extent that the Communist regime will permit and we ourselves consider desirable.

And there is one other service we can render. Because of our long historic relationship in which we have consistently championed the territorial integrity of China—and no one knows this better than the Chinese themselves—we are in an excellent position to point out to her the danger she runs in involving herself in the ambitious design of the U. S. S. R.

That design, cloaked in the beguiling promises of Marxism, stems directly from the old Czarist policy of territorial aggrandizement. It is a type of imperialism far more lethal to national hopes than anything which the people of Asia have thus far suffered. It is the kiss of death to the political and economic independence and freedom to which the Chinese aspire. What is happening in Manchuria and Outer Mongolia is a palpable example of Russian intentions. The relationship between China and the U. S. S. R. is in its honeymoon stage, but it does not take a prophet to foretell the disillusionment which lies ahead.

This we can bring home to China as an old and loyal friend who wishes her well, and whose hopes for her future are genuine and deep, even though we believe that her present alliance is for her, and for the free world to which she belongs, a tragic mistake.

What confronts us is a war not with armaments but with ideas. It is a war to determine which of two systems is really dedicated to the people's welfare, and which of the two, in terms of concrete results, is better adapted to promote it. We must prove to the nations of Asia that in their struggle for freedom and for a fairer share of the rewards of labor and the good things of life, western democracy can offer them far more in the way of understanding and championship than can communism. Only as we carry this demonstration to a successful conclusion, and make these hopes come alive, can we recapture the initiative which communism has gained.

Those who talk of arms and a display of power as the principal counters in the game misunderstand what the game is about. Arms undoubtedly have their place, but we are up against a set of ideas, and ideas cannot be stopped with bombs or battleships. The only way to beat an idea is with a better idea, and that better idea has got to be an idea that works.

It is our high faith here in America that we have that better idea. Over long years we have proved it to ourselves. We now have the chance to prove it to Asia.

Is the A & P Suit in the Public Interest?

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Thursday, February 16 (legislative day of Wednesday, January 4), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have included in the RECORD the very timely and interesting discussion entitled "Is the A & P Suit in the Public Interest," which was recently presented on the American Forum of the Air by Theodore Granik, founder and moderator. The Senator from Wyoming [Mr. O'MAHONEY] ably presented the question in the affirmative and the negative side of the issue was equally well taken by Carl Byoir, public relations counsel for the A & P Co.

There being no objection, the discussion was ordered to be printed in the RECORD, as follows:

Senator O'MAHONEY. Bigness itself is not a crime, Mr. Granik. I would not pretend to say when business is too big. The description of the difference between bigness in business which is good for the public and bigness which is bad was best made by the only man in the history of the United States who ever served both as President of the United States and Chief Justice of the Supreme Court. I quote from William Howard Taft.

"If they use no other inducement than the constant low price of their product and its quality to attract custom, and their business is a profitable one, they violate no law. But if they attempt by a use of their preponderating capital and by a sale of their goods temporarily at unduly low prices to drive out of business their competitors, or if they attempt by exclusive contracts with their patrons and threats of nondealing except upon such contracts or by other methods of a similar character to use the largeness of their resources and the extent of their output compared with the total output as a means of compelling custom and frightening off competition, then they disclose a purpose to restrain trade, and to establish a monopoly and violate the act."

That is what William Howard Taft said to the Congress of the United States. It is the basis of this suit.

Chairman GRANIK. Mr. Byoir, do you want to answer Mr. TAFT or Mr. O'MAHONEY?

Mr. BYOIR. I think I would rather answer Mr. O'MAHONEY. Because I can see that the Senator, who in my book has been one of the great liberals in the United States over a long period of years, has been listening to the Antitrust Division, because the Senator through all those years has never made any bones of the fact that he thinks that big business is too big. He hasn't maintained it was criminal, but he has maintained that it was too big and that something ought to be done about it.

Senator O'MAHONEY. You have not listened to me. I have never said it was too big.

Mr. BYOIR. I will quote you for 2 hours and 40 minutes——

Chairman GRANIK. Not today; we are not in the United States Senate.

Mr. BYOIR. About big business being too big and the concentration of assets and 7 percent of the companies, and how many they employed.

Senator O'MAHONEY. But that is a very different matter.

Mr. BYOIR. I don't want to get away from this. I am perfectly in accord with the idea that no American business should be allowed to grow big by the violation of any law—State, Federal, or local.

Senator O'MAHONEY. Why not accept the injunction in which the Department of Justice seeks merely to restrain you from doing the things again of which your company was convicted?

Mr. BYOIR. Let's look at that. The antitrust laws are very vague laws. They don't tell you, like the automobile law, that you must not pass a stop light or that you mustn't go 40 miles an hour. They say, in effect, you must not drive an automobile in an improper manner. So you don't know whether you are violating the antitrust laws in many cases—and you can ask all the lawyers in the United States—until some court has told you what the law is. The Antitrust Division——

Senator O'MAHONEY. The court of appeals has told you what the law is.

Mr. BYOIR. That is right.

Senator O'MAHONEY. It has found you guilty of coercion. It has found you guilty of blacklisting. It has found you guilty of unduly low prices to drive out competition, and then fixing prices after you have driven it out.

Chairman GRANIK. You don't agree with the charge that the real basis of the attack on the A & P is the Government's theory that it has been able to undersell competitors?

Senator O'MAHONEY. Not at all, not at all. If A & P will abandon these practices and

undersell competitors only by efficient methods, believe me the Department of Justice wouldn't have a leg to stand on, and no attorney general would bring a suit, but that is not the case. In this Danville case in which the A & P was found guilty, and which it appealed to the circuit court of appeals, there was a unanimous decision rendered by that court of appeals, a fine of $175,000 was assessed, the A & P paid the fine, and now the Department of Justice says, "Let's not have any more offenses of this kind." Why doesn't the A & P accept that injunction?

Mr. BYOIR. Wait a minute, Joe. Let's get the story straight and the record straight. The story of the Danville trial is not the whole story of the A & P and the Antitrust Division.

Senator O'MAHONEY. How about——

Chairman GRANIK. Let him finish.

Mr. BYOIR. The identical case that was tried at Danville was brought on originally in Dallas, Tex., and in the sworn statement of the representatives of the Antitrust Division it was identically the same case. In that case the judge said that even if they proved everything they alleged, there was no violation of the law. So the Government appealed to the circuit court, and two circuit court judges said, "This is vague, it is inflammatory, but you can go back to Dallas. There is enough to have a trial about."

One circuit judge said, "It is no good. There ought not even to be a trial. There is nothing here that violates the law." So we went back to Dallas, Joe. I think we ought to obey the circuit court. The court said, "In conformity with what the circuit court has decided, we are striking out this inflammatory matter and we are asking the Government to tell the defendants what they are charged with."

The court gave them 75 days to bring in that bill of particulars, and it hasn't been delivered yet. They went into court and dismissed their own suit.

Chairman GRANIK. Maybe you will get it now.

Mr. BYOIR. This time they said all the judges are wrong, the three circuit judges and the district judge.

Senator O'MAHONEY. May I ask a question?

Mr. BYOIR. Let me tell you one more thing.

Senator O'MAHONEY. All right.

Mr. BYOIR. The peculiar advantage that these people have. With all the power of all the people of the United States, which ought to be used carefully against American citizens, they could look all over the United States for any judge that they thought agreed with their theories about what the Congress meant when it said you must not restrain trade. They went up to Dallas, and there was a judge who didn't throw it out, but, Joe, he didn't bring in any such decision as you say.

Chairman GRANIK. Let's ask the Senator what Congress meant.

Mr. BYOIR. Yes, let's see what the judge said. I have it right here.

Senator O'MAHONEY. Here is your story, sir. Assuming that everything that you have said about Dallas is absolutely correct, you must acknowledge that what I have said about Danville, Ill., and the circuit court of appeals' decision is correct.

Mr. BYOIR. No.

Senator O'MAHONEY. Why did you then not take that case to the Supreme Court of the United States instead of paying your fine? If you were not guilty there, what about those 23 cases in the District of Columbia, in the police court, in which the A & P was found guilty of short weight, weighing the butcher's thumb when selling the steak? How about that?

Mr. BYOIR. In the first place, I sat through the Danville case and Judge Lindley made no such decision. Judge Lindley said the A & P did one thing which, if they had not done, probably everything else they did would have been legal. He said there was one thing that tainted the operation of the A & P, and that one thing was that our subsidiary dealing in fresh fruits and vegetables accounted as both a buyer and a seller. He said that was wrong. He said that was a violation of the law. I am not prepared to say to you that Judge Lindley wasn't right, but all I can say to you is that under the Perishable Commodities Act which was passed by the Congress of the United States, nobody can engage in trading in fresh fruits and vegetables without a license from the Department of Agriculture, and the Department of Agriculture had not only issued such a license, had not only never made a single complaint that there was any violation of properly trading under that license, but they even issue licenses so people can engage as dealers, as brokers, and as commission merchants. I think they know something about the agricultural business.

But, Joe, let me answer your question about the circuit court. I admit that Judge Minton adopted a good deal of language of the Government and said we did some things that were pretty bad. You say why didn't we appeal to the Supreme Court. We read the decision of the court and we said, "The best thing to do here—and this will be all over and we won't be in court and won't be spending millions in legal fees—is to assume that the judge is right even though we think he is wrong, and to do everything that he says we ought to do and to discontinue every practice that he thinks we ought not to indulge in." We did that and paid the fine.

Chairman GRANIK. Senator?

Senator O'MAHONEY. Is that the reason why in Massachusetts, in another case in Connecticut, in another case in Rhode Island, in another case in the State of Maine, when you were charged with fixing prices, you pleaded nolo contendere and paid the fines? Is that the reason why——

Mr. BYOIR. Wait a minute.

Senator O'MAHONEY. You pleaded nolo contendere in the southern district of New York and why you also acknowledged the correctness of the Government's case in the District of Connecticut? There is case after case, including the case of the Federal Trade Commission which ordered A & P to cease and desist from its violations of the Robinson-Patman Act, and while this Danville case was being tried and that cease-and-desist order was outstanding against you, you were rebating, taking rebates from the Borden Dairy Co. and from the Bowman Dairy Co. in Chicago to the tune of a million two hundred thousand dollars?

Mr. BYOIR. We are not even a defendant in that case. The Department is suing those companies, and if they thought we had done something wrong, they could have sued us.

Senator O'MAHONEY. The grand jury found that that was the fact.

Mr. BYOIR. No. There hasn't been any decision in that case. You know as a lawyer—

Senator O'MAHONEY. You and I could spend the whole 15 minutes saying, "You did," and "you didn't."

Chairman GRANIK. That is right. Let's get to the public interest.

Senator O'MAHONEY. My first statement to you is, you ought to accept the injunction and say, "We won't do these things any more." If you didn't do them, the injunction does you no harm. If you don't intend to do them, the injunction does you no harm. Now what are the other—

Mr. BYOIR. Now let's debate that.

Senator O'MAHONEY. Are you willing?

Mr. BYOIR. A & P has never had an opportunity to say whether it would accept the injunction. The boys down there said what you must do.

Senator O'MAHONEY. You have the opportunity to say it now. Are you willing to do it now?

Mr. BYOIR. I am sure that the A. & P. will accept a consent decree in which they undertake not to violate ever any law of the United States, and they don't believe they ever have.

Senator O'MAHONEY. And that will be specific? You will accept such an injunction?

Mr. BYOIR. I am sure they will. I am neither their legal counsel nor the trustee of the company.

Senator O'MAHONEY. It will include the Federal Trade Commission, will it, sir?

Mr. BYOIR. Do you want me to tell you about the Federal Trade Commission?

Senator O'MAHONEY. Will the injunction include the Federal Trade Commission?

Mr. BYOIR. Did you vote for the Robinson-Patman bill, Senator?

Senator O'MAHONEY. I did.

Mr. BYOIR. And you don't know that it cost the American people 6 or 7 or 12 billion dollars in the food and clothing and the drugs that they do not get?

Senator O'MAHONEY. Oh, nonsense. That is perfect nonsense.

Mr. BYOIR. I am not against the Brannan bill for the small retailer. I am for the small retailer.

Senator O'MAHONEY. You are talking about something very different now.

Mr. BYOIR. No, I am not. I am just keeping you on the beam, you see, because you and the rest of the Congress, and it is within your power——

Senator O'MAHONEY. If the courts could keep A. & P. on the beam, it would be a great benefit for the consumers of the United States.

Mr. BYOIR. We say we are on the beam. We paid the fine, and we have discontinued all those practices. We say this is like a case where you fine a man $10 for passing a red light in the traffic district, and then you say, "And now we must cut off the man's arms and legs and prohibit him from ever being able to drive an automobile again."

Senator O'MAHONEY. All right, now, Mr. Byoir.

Mr. BYOIR. That is what they ask for in this complaint, not an injunction, Mr. O'MAHONEY.

Senator O'MAHONEY. You come here defending an organization which has been found guilty in the Federal courts, in the trial court, in the Court of Appeals—you haven't appealed to the Supreme Court—in the Federal Trade Commission, and in the police court of the District of Columbia. Now you talk as though this were an organization, just a beneficent organization, created for the purpose of distributing food to the housewives of the Nation. You are representing, sir, an organization of holding companies, piled one upon the other, an operation under 17 or 18 different aliases, manufacturing, distributing, warehousing, brokerage, and tea companies, operating in 39 different States, with sales totaling about $2,000,000,000.

Mr. BYOIR. The figure is $2,700,000,000.

Senator O'MAHONEY. $2,700,000,000?

Mr. BYOIR. Eight hundred million.

Senator O'MAHONEY. Isn't it wonderful. In the trail which has been followed, you have been crushing competition, you have been operating at a loss in New England and in the eastern district, operating at a great profit in other States. I have your exhibit here——

Mr. BYOIR. I gave them to you.

Senator O'MAHONEY. The exhibit which your company filed in the trial. In the case this is defendant's exhibit 499, at page 1, showing that you planned in 1938 to operate in New England throughout the year 1939 at a loss.

Mr. BYOIR. At an operating loss?

Senator O'MAHONEY. At a loss, and that in the Central Western States, where you were doing exactly the same number of sales—122,000,000 sales—you were planning to operate at a profit.

Chairman GRANIK. Let Mr. Byoir answer that. Go ahead, Mr. Byoir. It will take a long answer.

Mr. BYOIR. I think you get reduced here to a de minimis. Here is a company that has ten to twelve million, fifteen million individual sales transactions a week, with ten or twelve million women. In one instance it was found that in 29 sales out of the total of all the billions of sales a weight inspector said somebody was shorted.

Senator O'MAHONEY. In the District of Columbia.

Mr. BYOIR. In the District of Columbia; and in the District of Columbia the same people said we conspired to reduce the price of bread, and Judge Alan Goldsborough said, "This is the worst case I have heard in 40 years. Any good trial lawyer would have told you there is no evidence at all." They accused us of conspiring to reduce the price of potatoes in Carolina, and the judge said, "You can't make a case without facts."

Senator O'MAHONEY. Of course, all the $2,000,000,000 worth of sales weren't wrong. I will acknowledge that.

Mr. BYOIR. I want to ask you, Joe, if we are putting all the retailers out of business with these unfair methods, how is it that there are 400,000 of them in the United States and that they are rushing forward literally by the hundreds to tell the Antitrust Division that they don't need any help, that we are the best friend they ever had?

Chairman GRANIK. And advertising to that effect.

Mr. BYOIR. And advertising in the newspapers.

Senator O'MAHONEY. May I answer you?

Mr. BYOIR. Just a minute. The farm organizations that we are supposed to hurt, including the Farm Bureau Federation, are passing resolutions representing millions of farmers, that this case is no good. The consumers have increased our business $2,000,000 a week. So, evidently they don't think we are a lot of crooks. I want to tell you that if any lawyer or any political leader or anybody else thinks that 50,000,000 American women don't know whether they are getting the right weight or fresh fruit or spoiled meat or good meat, they just don't know the American woman. She gets her money's worth, and she has made the A. & P. the greatest retail company in the history of the world.

Senator O'MAHONEY. Why not try it in the courts?

Chairman GRANIK. Gentlemen, how about letting the consumer ask some questions? Go ahead, Miss Penuel. You have a question there.

QUESTION. Mr. Byoir, do you believe that the fine paid by the Atlantic & Pacific Co. is a sufficient deterrent to prevent a recurrence of the violation of the antitrust laws?

Mr. BYOIR. No, I don't but I don't think the people who run the A. & P. need that kind of deterrent, although they paid the fine. In the first place, I know they went to the Department and said, "You tell us what to do, and we will do it to obey this law," and the Department said, "There isn't anything you can do. It is so terrible, you have to break this company up and quit manufacturing and have seven different companies. Nobody who ever had anything to do with the company before can be in the new company."

Let me answer your question about the $175,000. As the courts have said over and over again, and the antitrust lawyers have said over and over again, there is only one motive to violate this law, and that motive is greed. You want to make more than I. You get together with your competitor and try to raise the price. The whole history of the A. & P. negates greed. I just want to show you something here. What kind of people are the people who run the A. & P.? John Hartford, 77 years old, works 5 days a week. George Hartford, 85 years old, works 5 days a week. Rich beyond the dreams of avarice because the American people have made them rich.

What have they done for the American people? I think the best test of an employer of a big business is how he treats his people. Does he try to make his profit out of the sweat of the brow of the people who work for him? Just take a look at these charts for a minute. There is the picture of A. & P. employment. I showed these to Senator O'MAHONEY. He is familiar with them. In 1933 this company had 87,000 employees. Today it has 112,000, or the number has increased 29 percent. The cost of living for the American people in that period has gone up 82 percent. Do the Hartfords just try to keep a little ahead of the cost of living? No. Their pay roll has gone up 195 percent over that period of years, and they are paying an average in the grocery business, which was the worst paid business in America a generation ago, $60.50 a week to all employees, not including any executive employees.

Chairman GRANIK. Go ahead, Senator. Do you want to comment on that chart?

Senator O'MAHONEY. Let me say this, Theodore. The Standard Oil of New Jersey had just such a monopoly as this. The Supreme Court of the United States decreed that it should be broken up. The result of it was more business and lower prices to the consumers, more profit to the operators. Instead of one gigantic company, out of the Standard Oil trust we had almost a dozen new companies.

The Congress of the United States when President Harding was in the White House passed a law compelling the packers to give up their ownership of the stockyards. It was signed by Mr. Harding. It was unanimously passed by the Congress. The result was cheaper prices for meat to the consumer and better prices to the producers of cattle.

The same thing will happen if the A. & P. were compelled to separate manufacturing from retail, if it were compelled to divide into its seven divisions so that it could not throw its losses into one area of the country to sell temporarily at a low price and make profits in an another area of the country so as to suppress competition and work over the consumer.

Chairman GRANIK. Let's see what another consumer has to say. Go ahead sir.

QUESTION. Senator O'MAHONEY, if A. & P. is hurting competition, why are so many small independent grocers rallying to its aid?

Senator O'MAHONEY. I have no evidence that so many are. Of course, I might say to you that the Department of Justice has been following A. & P. for 10 years, and that has been very helpful to little business in competing.

Chairman GRANIK. Do you want to comment on the Senator's point of view?

Mr. BYOIR. The fact is that competitors all over the country, at their own expense, have run advertising in newspapers stating that they don't need any help from Uncle Sam or from the antitrust lawyers. There is a typical advertisement from farmers. Down on the Jersey coast more than 1,200 Atlantic County farmers protest Government action against A. & P. and strangely enough, they say they rise to the defense of the best friend the farmer ever had. The fact is that the A. & P. has benefited its competitors in the retail field, and not hurt them.

Senator O'MAHONEY. What bothers me about this, Carl, is that if your company is such a perfectionist as you describe, if it is so beneficient, so kind, so concerned in the interest of the public, what have you got to fear in going to court? Why do you have to spend $5,000,000 in advertising in the newspapers and here in the city of Washington the newspapers into which you place the advertisements decline to receive the advertisements of the little business people?

Mr. BYOIR. No, they have run them.

Senator O'MAHONEY. Are you trying to do anything about getting the trial in the papers instead of in the courts?

Mr. BYOIR. What a minute. We are not afraid of the trial in the courts, but we have 10, 12, or 15 million women dealing with us every week. I don't think the American women are the kind of people who would want to deal with that kind of company. Suppose we had waited a year in Washington, where they said we were raising the price of bread, that we were the kind of people who would take bread out of the mouths of poor people. It took a year for that to come to trial. What would have happened to our business in Washington, when Judge Goldsborough said at the end that the evidence showed that we sold bread cheaper than anybody else in Washington, not higher. What would have happened to our relations with the farmer?

I don't think we have to sit silent under these, plus the fact that we are not spending $5,000,000, Joe. We are running stories about this in the regular space that we would use if we were running our price ads; and, strangely enough, the public is so interested in it and believes us against our adversaries, that business gets better every day.

Senator O'MAHONEY. Now will you prepare an ad—you are a skilled public relations man.

Mr. BYOIR. Thank you, Senator.

Senator O'MAHONEY. Prepare an ad tomorrow or next week on the southern New York case where you pleaded guilty, a story on the Massachusetts case, on the Rhode Island case——

Mr. BYOIR. Keep the record straight. We didn't plead guilty in any of these cases.

Senator O'MAHONEY. You filed a nolo contendere. You said, "No, we don't contest it." On the short weighting in the District of Columbia you had a trial, and you were found guilty in the police court.

Mr. BYOIR. That is right.

Senator O'MAHONEY. Well, put an ad about that in the papers, won't you?

Mr. BYOIR. That is right.

Chairman GRANIK. Do you want to answer, or do you want to go into the summary period? You each have a minute. Senator O'MAHONEY, do you want to sum up?

Senator O'MAHONEY. Let me say just that we are struggling here with the great question of centralization. The United States is either going to have decentralization, self-government in the regions and in the States, or it is going on the road to big government. The A. & P. a typical national organization operated from a central office in such a manner that little competitors can't keep pace with it, is leading down the road to socialism. That is why I am for competition and for little business and for restraints upon predatory big business.

Chairman GRANIK. Thank you very much, Senator. Mr. Byoir?

Mr. BYOIR. I say to you with all the sincerity of which I am capable, I have represented many American companies, and I have never known a company that tried as hard to obey every facet of every law, local, State, and Federal, as the Great Atlantic & Pacific Tea Co. I say to you with all the sincerity of which I am capable that no little retailer has been hurt. The little retailer who used to work 7 days a week and who worked 5 and 6 nights a week, today has a big supermarket and makes $250 or $500 a week. Due to this competition he gets his groceries cheaper, and the wholesaler gives him a better and cheaper service.

I would just add that the proof of all this, that we have not restrained competition, that the charge emanates against us because we

are too competitive, is that in all things you buy your wife takes a dollar to any store—clothing, household utensils, anything for the children or the husband—and she gets 62 cents worth of goods and gets 38 cents worth of the cost of distribution. She can go into any grocery store in the United States and, due to the competitive pressures of the A. & P.—everybody in the grocery business will tell you it is so—she will get 85 cents worth of food and she will pay only 15 cents for all the costs of distribution. She can do it in a thousand grocery stores that are not A. & P. grocery stores.

Chairman GRANIK. Thank you very much, gentlemen.

You have been listening to a discussion on the A. & P. case. Our speakers have been Senator JOSEPH C. O'MAHONEY, of Wyoming, and Carl Byoir, the noted public relations counsel.

Resolutions Adopted by the Ladies of the Grand Army of the Republic

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mr. JENKINS. Mr. Speaker, one of the most highly respected and greatest patriotic organizations of our country is the Grand Army of the Republic. There are only a few members of that great organization still left. The Ladies of the Grand Army of the Republic is a great organization that will carry on the work of the Grand Army of the Republic long after the last member of that organization has passed away.

On January 21, 1950, the Ladies of the Grand Army of the Republic in regular convention assembled here in Washington adopted a set of resolutions which are well drawn and which are firm in their defense of the United States of America and its institutions.

I am glad to have these resolutions printed in the CONGRESSIONAL RECORD as a part of my remarks. These resolutions were offered by Mrs. Margaret Hopkins Worrell, chairman of the resolutions committee of the Ladies of the Grand Army of the Republic. Mrs. Worrell is a resident of the district which I have the honor to represent and also of my home city of Ironton, Ohio. The resolutions are as follows:

Whereas for several years there has been moving throughout these United States of America a very stealthy scheme for a "one world" government, which if put into effect would abolish the United States of America; and

Whereas the principal leaders of this scheme are the World United Federalists, Inc., and Union Now, propagandizing for a world government in which they have been so successful that the legislatures of 21 States have favored resolutions to repeal the Declaration of Independence; and

Whereas the legislatures of six States—California, Connecticut, Florida, Maine, New Jersey, and North Carolina—have approved a resolution which "calls for a constitutional convention to amend the Constitution to expedite and insure the participation of the United States in a world federal government, open to all nations"; and

Whereas approval by 32 States would compel Congress to call a convention for that purpose; furthermore, action favoring world government has been suddenly instituted in our Congress itself, with 91 Members of the House of Representatives (64 Democrats and 27 Republicans) introducing a concurrent resolution whereby Congress would declare that world government is the fundamental objective of American foreign policy"; and

Whereas the United World Federalists says: "World law shall be enforceable directly upon individuals—that means we give up the right to make our own laws, but would obey laws made by foreign politicians, tried by a foreign court with no enforceable appeal by our United States, which would have but one vote against hundreds of foreign votes—it means said world government would direct and decide how much taxes we Americans should pay without consulting our own Government (we would be taxed to support the world)—it means that our Nation could not possess armament or forces unless approved by world government and that we would strip ourselves of all power for self-defense and be at the mercy of well-armed international, mercenary forces, under the heel of some political clique, possibly Communist—it means that world government would take our gold hoard at Fort Knox and spend it for the enrichment of their own countries and themselves—it means that they would cancel any debts owing to the United States. In consequence of the above proposals, the United States would cease to exist as a free Nation—our Constitution destroyed—our liberties destroyed, and that we become slaves of a world superstate government founded by the socialist totalitarian philosophy that the individual is the servant of the government and not its master; and

Whereas our elected members of the United States Congress took an oath to defend the American Constitution, therefore the loyal citizens of the United States cannot sit silent while they listen to such outrageous proposals for the destruction of our Nation: Therefore, be it

Resolved by the Ladies of the Grand Army of the Republic in regular convention assembled this 21st day of January 1950, and in the name of our forefathers who saved the Union of these United States, That we call upon each and every patriotic organization, every loyal supporter of our Constitution and Bill of Rights to inform their Senators and Representatives that they are absolutely against any form of world government or superstate, that we have prospered and grown rich under our system of government and will not tolerate any change; and be it further

Resolved, That we hold each and every Member of our elected body to cast their vote in the interests of the United States and not on international foreign policy.

Whereas for the last 2½ years a Senate committee has been investigating our entire immigration and naturalization system; and

Whereas their report shows that the floodgates of our Nation are opened for the entrance of millions of aliens from all over the world who are coming in as displaced persons; and

Whereas certain pressure groups have been lobbying in the Congress for the repeal of all our safeguards on immigration and are spending millions of dollars for the dissemination of propaganda for that purpose; and

Whereas our country operates under an immigration quota system, whereby approximately 154,000 quota immigrants may be admitted every year for permanent residence, also United States citizens may bring in their relatives on a nonimmigration quota; and

Whereas certain pressure groups are trying to drive the Celler bill (H. R. 4567) through the Senate, which provides the admission of some 15,000 persons from behind the iron curtain who have not yet been displaced; and

Whereas an official of our principal intelligence agency (operating abroad), expressed his opinion that this provision of the Celler bill would constitute a dangerous threat to the security of the United States, and would be another loophole for the infiltration of Communist agents; and

Whereas upon uncontested evidence of a complete break-down in the administration of the immigration law which has opened the gates to persons who will not become good citizens, but will become ready recruits in subversive organizations to tear down the democracy of the United States; and

Whereas during the first 6 months of 1949, illegal entries over the Mexican border were at a rate of 25,000 a month, and a former American consul on the Canadian border estimated the number of illegal aliens in the United States to be from 3,000,000 to 5,000,000: Therefore, be it

Resolved, by the Ladies of the Grand Army of the Republic, Department of the Potomac, in regular convention assembled this 21st day of January 1950, That we will oppose with all our strength and will immediately inform our Members of the United States Senate that they must protect our immigration system and promptly provide funds for the detection and deportation of these thousands upon thousands of aliens who have illegally entered our borders; be it further

Resolved, That a copy of this resolution be transmitted to Senator PAT MCCARRAN, with the request that he place it in the CONGRESSIONAL RECORD.

Coercive Unions

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. HOFFMAN of Michigan. Mr. Speaker, as of today, February 8, 1950, some unions are following a practice directly contrary to their pronouncement. Some union labor officials insist, and rightly, that no man can be forced to work at a particular job.

Then they go to the other extreme and insist that a man shall not be permitted to work at a job where the wages and the working conditions are satisfactory to him, unless he belongs to the union, pays the union initiation fees, union dues, and special assessments levied by the union.

Unions claim and exercise the right to ban a union man from membership in the union if he violates a union rule or if he exercises his right to free speech. They may be correct in insisting upon the right to expel a member who does not comply with their rules, but under no circumstances should they have the right, nor should they be permitted to exercise the right to expel a man or prevent his employment when he honestly expresses his own opinion.

The public is rapidly approaching the conclusion that if unions insist upon the right to clog the telephone service, to refuse to dig coal, to cut off transportation, the citizen's supply of light, heat,

water, food or clothing, by the calling of a strike, as a union might well do by calling out the teamsters, we will shortly get a law curbing that union power—a law which will provide that when a man goes on strike and that strike results in injury to the public health, welfare, or safety, that man on strike, if he persists in refusing to work, shall have his status as employer-employee taken from him.

Stating it in different words—the proposition is this—an employee shall have the right to refuse to work at any time, at any job, but he shall not have the right, by picket line, show of force, abuse, or in any other manner, to prevent another man from taking that particular job.

Union officers will best serve their organizations when they discover, as they ultimately will, that they have no right and will not be permitted to exercise power to drive any man from his job.

Answering a union official, who is a good citizen but just does not understand the term "democracy," an editorial from the Allegan Gazette, published in my home town of Allegan, Mich., reads:

DEMOCRACY NOT MAJORITY RULE IF IT VIOLATES INDIVIDUAL RIGHTS

In a recent letter to the Gazette, published in the January 19 issue, Robert Gibson, president of local 709 UAW-CIO Allegan, took exception to our criticism of certain union activities and stated that we have been kicking the wrong dog.

A review of our editorials reveals that we have never found any fault with the fundamental principles of unionism in general, but that the Gazette has repeatedly and consistently criticized the illegal and oppressive actions of the large vertical unions, the methods that they have used to extort money from industry, the public, and their members, the dictatorial actions of their leaders, their destruction of property and assaults upon individuals in connection with their strike activities, their usurpation of the rights of individuals and of the functions of our courts, their interference with the political freedom of their members, their own disregard of contracts with their employers, their wildcat strikes, and their blind assumption that their first and only loyalty is to their union.

We do not believe for one moment that Mr. Gibson approves, for instance, the raid by union members, on the Shakespeare plant, in Kalamazoo, and the personal attacks upon individual workers at that plant by members of the goon squad. We do not think for one moment that if we had trouble in Allegan, Mr. Gibson would himself commit assault and battery upon anyone or that he would willfully destroy property. But why, if he doesn't believe in such illegal union activity, doesn't he come out and condemn it and why should he criticize us because we do condemn such practices?

Frankly we think the reason is that the unions are not democratic, that he is afraid to engage in any criticism of the activities of the CIO or of their policy because he feels that he would be jeopardizing his standing with the CIO.

In his letter Gibson writes of the high profits realized by many of our large corporations and the effect those profits have in increasing our standard of living. It is significant that Gibson does not mention that these profits are subjected to a very high rate of double taxation, and that if he and other employees of these large concerns are to remain employed, some money must be retained by these concerns for expansion, for replacement costs, for experimental purposes, in general to not only keep the industry operating but to improve its product and its methods of production. If all the profit of any year was paid out in salaries, wages, and in dividends to its stockholders, how long could these concerns continue to employ the union members, continue to produce the best and the cheapest goods of any country on earth?

If Gibson has any complaint against the present high cost of living he should take it up with Harry Truman and his Fair Deal; the Government is responsible for the high cost of living, not the large corporations.

Did you know, Mr. Gibson, that the people of the United States are paying out more money for interest on our indebtedness today than it took to operate our Government in 1932? Reduce our governmental expenditures, balance our budget, quit kidding ourselves that the Fair Deal will work, reduce our national debt while we still have a chance and you will discover that the cost of living will go down and that the working man will be a lot better off than he is now.

Mr. Gibson also speaks of having been discharged from some position that he held because of a difference of opinion regarding politics. Of that, of course, we have no knowledge but we do know that in unions there are many members afraid to express their opinions because of union coercion and the power of some union official to blacklist them. We know of instances where union officials have sat in judgment upon the individual members and fined them just as a court would fine an individual for disobeying some law.

The unions today have acquired power because of the pressure that they exert. Fear is one of their weapons. Men must join unions in order to obtain employment, they have no choice. Men often go out on strikes not because they want to, but because they have to. Many persons stay away from work because they are afraid they will be beaten up by some union thug. Many newspapers refrain from voicing an honest opinion of unions because of union pressure. National unions today are guilty of the same kind of treatment that you complain of when you say that you lost your job on one occasion because you expressed a political opinion, and on a scale such as never witnessed in this country before.

In your letter you indicate that you are not familiar with the meaning of the word "democracy" as practiced in this country. You assume that the "majority rule." You disregard one of the main principles of our country as established by our Constitution and that is that the individual has certain rights and privileges which if the law is enforced cannot be violated by the majority.

In fact you belong to an organization, that would, if it could, take over complete control of the Government and rule the people for the benefit of the unions and their members.

We remain of the opinion that some of present-day vertical unions as now operating are detrimental to the general welfare of the country. They have assumed too much power, they have become too large, they no longer respect the rights of individuals and of the minority within their ranks, they disregard the law, commit acts of violence, they have, and in some instances still do, harbor Communists working for the destruction of our Nation, in some instances their leaders are known criminals.

No, Mr. Gibson, we don't believe that these unions you defend are the underdogs of today, and we are firmly convinced that the average workingman would be better off if unionism was limited to that particular plant where he was employed.

Thirty-second Anniversary of the Signing of the Declaration of Independence of Lithuania

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mr. McCORMACK. Mr. Speaker, today as the forces that would destroy freedom move in an attempt to enslave the world I would like to pause and notice a special anniversary of freedom. Thirty-two years ago today the Council of Lithuania signed their declaration of independence. I would like to join with all free Lithuanians, and invite all free people throughout the world to recall this declaration. I would like to join the enslaved, liberty-loving people of Lithuania in their hope for future freedom. In establishing an independent state, Lithuania received her chief external support from United States and today people of America solemnly hope that Lithuania will soon enjoy the cherished independence she seeks.

Lithuanian history is clear during the last 700 years. It is a history of war and a constant fight for freedom. During the Middle Ages Lithuania established a powerful state and successfully defended her independence against the Germans, the Mongols, and the Tartars. They knew and appreciated the fruits of freedom and governed themselves by the philosophy of freedom. They fought and died to preserve their freedom. In 1795 Lithuania lost her freedom under the occupation of Czarist Russia. From 1795 to February 16, 1918, Lithuania was at constant war with Russia and Germany in an attempt to recover her lost liberty.

On February 16, 1918, Russia and Germany, as did the United States and other nations, recognized the Declaration of Independence of Lithuania. Russia gave up all claim to Lithuania and Lithuania was seen to grow and progress with remarkable achievement until Russia enslaved her again in 1940.

During the years of true independence Lithuania contributed much culture and industry to civilization. Her people were truly happy, self-supporting, and justly proud of their independence.

Since the Soviet occupation Lithuania has seen her soil abused and her forests wasted. Families have been separated, deportation has reached appalling heights. The personal freedom, the inherent rights of all people are denied the people of Lithuania. But the spirit of freedom is not dead, it is enlivened and activated by the very denial of actual freedom.

In view of the splendid record and generous contribution to humanity given by this small country we cannot but recognize her plight and hope for her quick recovery.

We extend best wishes to Lithuania on this anniversary. We hope that Lithuania who has suffered for the cause of

freedom will soon enjoy what she deserves and be delivered from her present plight which she does not deserve. We hope that Lithuania will soon take her seat among the family of democracies and contribute freely to her own internal peace and to the peace of the world.

The Mindszenty Trial

EXTENSION OF REMARKS
OF

HON. LOUIS B. HELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1950

Mr. HELLER. Mr. Speaker, prior to my election, a year ago today, and within a matter of hours after Cardinal Spellman delivered his crusade sermon, I publicly called upon our distinguished President, requesting that he direct our Secretary of State to release to the world all the facts our Government must have in the Mindszenty case, feeling confident that such disclosure would completely exonerate the cardinal. I also urged that the entire matter be referred to the United Nations, with a view of obtaining the cardinal's liberation.

I have closely followed the events in this case, and commend to the reading of my colleagues the following article which appeared in the New York World-Telegram on February 4, 1950, entitled "The Mindszenty Trial: A Chapter in Infamy," which justifies my stand and continued protest against Soviet religious intolerance:

THE MINDSZENTY TRIAL: A CHAPTER IN INFAMY—PROSECUTION OF CARDINAL CONVICTED RED JUDGES IN EYES OF FREE WORLD

(By Gabriel Pressman)

A year ago today, I saw brought to trial a brave man who acted like a coward. I saw a people's court from which the people were barred. I saw an ex-Nazi sitting as a Communist chief judge. I saw a defense attorney outprosecute a prosecutor.

On February 4, 1949, second day of the trial, I was admitted to a dimly lit courtroom in Budapest, where Joseph Cardinal Mindszenty and six co-defendants sat before the bar of Communist justice. Edward Korry of the United Press and I were the only American correspondents representing American publications admitted to the trial.

There was one catch: I could not choose an interpreter, I was told by Ivan Boldizar, pudgy, nervous-eyed government press chief. The government would supply a bright, young Communist to translate for me.

GUNS GUARD COURT

The courtroom was two flights up—with six checkpoints of submachine gunners from the door of the dirty, red-brick courthouse on Marko Street to the door of the trial room itself.

It was a small, dark room. Not much light pierced the huge windows. On the dais sat the people's court president and four associate judges. On the first bench beneath were the seven defendants, charged with a royalist conspiracy to overthrow the government.

Their faces were drawn. Their attitudes ranged from indifference to resignation. Alongside each sat a militiaman. Throughout the courtroom, militiamen stood or sat among the carefully screened spectators. Only seven relatives of defendants were present.

FROM NAZI TO RED JUDGE

Through an American's eyes, it was a trial of paradoxes. There was Vilmos Olti, before and during the war one of Hungary's foremost Nazis, now playing Communist chief judge.

Olti fired an endless stream of questions at the defendants, methodically building up the case against them with "yes" and "no" answers. He allowed seven prosecution witnesses, no defense witnesses. As he carried the case through in a lightning 3 days, the hard-faced prosecutor-juror seldom looked up from the papers he read.

The "trial" seemed a little academic. The defendants had confessed everything days before at the headquarters of the dread secret police, 60 Andrassy Street. And the government had the confessions bound neatly into a "yellow book" for the convenience of Red propagandists.

EAGER TO CONFESS

The defendants vied constantly to confess. Once it was even too much for the court. The Cardinal tried to read a repudiation of his prearrest warning against any future "confession," but Olti silenced him: "You don't want to read that now." So the Cardinal sat down and read it when directed.

Young Andreas Zakar, the Cardinal's secretary, was once his stubborn, good right arm. Now he stood, weak and timid, most pathetically trying to follow wherever Olti led. And the judge coached him benignly, like a teacher with a backward child.

Zakar used the word "democratic" in the Western sense. "Liberal, bourgeois democratic or people's democratic?" Olti demanded.

Zakar (searchingly): "Er * * * liberal."

Olti (with fatherly severity): "That means against progress."

Zakar: "Yes, sir."

ROLE FOR CARDINAL

The Cardinal, an excellent orator before his arrest, spoke monotonously, reading from prepared papers. Under prodding from the rasp-voiced director, the Cardinal said: "I'm very sorry" about everything—the book he had written, letters, money manipulations.

The script called for a Mindszenty of repudiation, confession, and apology. And this, the Communists wanted the world to believe, was the same man who in a last interview said staunchly: "I will never take back anything I have said against the Communist government * * * Hungary has degenerated into a gigantic chamber of horrors, a den of robbers and thieves."

Crudest of the crudities was the attitude of the so-called defense attorneys. They spent most of the trial twiddling their mustaches or gazing into space. I didn't see them take a single note, nor consult each other once.

Kalman Kiczko, a Communist of 30 years' standing, "defended" the cardinal. Joseph Groh, prominent Catholic lawyer, had been jailed for offering to serve.

Kiczko pleaded well * * * for Kiczko. Most of his final speech told how much he, Kiczko, loved the people's democracy.

Then, removing his spectacles, he denounced western newspapers: "The foreign press has written numerous calumnies against Hungary." He disputed that the trial was unfair: "Nobody either at home or abroad can accuse us of restricting freedom." He cringingly thanked the prosecution for bringing up the charges against his client. And, when he sat down, even Olti smiled.

A year has passed and the world still wonders what made the defendants act as they did? Was the cardinal tortured, drugged, or hypnotized?

Pro-Communist correspondents reported the cardinal seemed perfectly normal in every respect. It was hard to agree when you saw a man weak and cowardly, whose actions for 4 years had spoken strength and courage.

CHANGED MAN AT TRIAL

Was he in his right mind when he offered to resign if the charges against him were dropped? Only the Pope could accept such a resignation. Before his arrest, he could deliver a perfect sermon from a few notes. At the trial he forgot frequently and—the interpreters did not hide it—had to be prodded by the court.

The key to what happened is, of course, the 38 days the cardinal spent with the secret police before the trial. I did not speak to the cardinal—the Government forbade it—but I have spoken to others educated to confess at 60 Andrassy Street. The Communists have a standard curriculum: questioning for days on end under bright lights, standing with arms overhead until faint, repeated blows with blunt instruments on the kidney, electric shock treatments.

It is possible that all the standard methods and perhaps more were used on the defendants. Perhaps Zakar was tortured to arouse the cardinal's pity. Zakar's white face and trembling impatience to please marked him a likely graduate of the torture chamber.

Not all the clues were outside the court. In the cardinal's final speech, he spoke with some feeling for the first time:

"I stand here with half a century of basic principles * * * principles that guide us as railway tracks guide trains. * * * I was not and am not an enemy of the Hungarian people * * * worker or peasant."

Perhaps the cardinal here revealed his true thoughts—that he believed as he always did, that he still loved the people but not the Communist government.

REFUSE TO BOW TO REDS

Significantly, the Hungarian press and radio did not carry the statement. For weeks before the trial, these government-controlled media trumpeted the cardinal's guilt. "A pitiable worm, a scared scoundrel, a blood-thirsty beast of prey," they called him.

Meanwhile the government had nightly press briefings to tell correspondents what to write. Boldizar, the press czar, said: "Tell your readers that the cardinal is not a brave hero of freedom, but a weakling and a coward." The second night Mr. Korry and I refused to sign a Communist-sponsored resolution, signed by the others, affirming there was no censorship and translations were accurate.

A Hungarian journalist secretly applauded our stand: "There are two kinds of censorship: one where the censor's pencil scratches out the words, the other where the fear in your heart scratches them out." He told me how every Hungarian-speaking person in that courtroom had been intimidated.

After my refusal to sign, the government pretended I did not exist, withdrew even its slanted help. I had to scrape together at least the official version of what was happening—and that was damning enough.

FINAL COURT SCENE

Time will never dim that last, sad scene of February 8. The defendants stood for more than an hour while Olti issued an anti-western political tirade and their sentences.

The cardinal's head was slightly bowed, his hands clasped before him. As he was sentenced to life imprisonment, his cheek twitched. Princess Esterhazy knelt in prayer. A Government camera's flash bulb exploded.

There was a weird moment when Laszlo Toth, almost deaf Catholic editor, stepped forward to hear Olti shout his fate—10 years.

Then it was over. The heavily guarded defendants filed out. In the corridor I stopped gray-haired Hildegarde Zakar, the defendant's sister. Glancing nervously at detectives, her eyes moist, she said in French:

"My brother is a good boy. He has always served God. If God wills it, then this must be."

The reaction of the people in the streets and coffee houses was bitter. Through a Hungarian-speaking American, they told me: "They were afraid to give him the death sentence because they know his hold on the people is too great."

HAS PLACE IN HISTORY

The cardinal, says the Hungarian underground, languishes today in Gyujtofoghaz jail, 10 miles north of Budapest.

Whatever happens, Cardinal Mindszenty's place in history is assured. A Hungarian student friend expressed it well that last night in Budapest as we strolled along the banks of the Danube. I had just come from a final press conference at which Boldizar said: "The trial is over, but the trial of you correspondents has just begun. You must tell the world the truth about this traitor."

My friend looked up at the sky. "You know, for once Boldizar is right," he said. "This was more than the trial of Cardinal Mindszenty. In the court of world public opinion, a cardinal has convicted his judges and communism stands condemned."

One World a Fantasy

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mr. AUCHINCLOSS. Mr. Speaker, under permission granted me, I am glad to have printed in the Appendix of the RECORD an editorial entitled "One World a Fantasy," which appeared in the Oil, Paint, and Drug Reporter, on February 6, 1950.

This editorial was written by the editor, Mr. Craig, and it appealed to me as being a penetrating and thought-provoking article which I thought would be of interest to the Members of the House.

ONE WORLD A FANTASY

Altogether too much is being said by tongue and typewriter about how we can't get along with Moscow. It is time that consideration was given to getting along without those for whom that name popularly stands.

It should be clear to everyone that the high-minded, optimistic idea of melting all the peoples, or merging all the countries, of the man-inhabited globe into one world has faded into fantastic nothingness. The United Nations should recognize that it has a much better purpose in enabling friendly folk to live as they would.

It is unquestionable that there is going to be, while man exists, various numbers of worlds, depending on the characteristic on which group divisions are based. All sorts of characteristics, race, color, creed, for example, will be the dividing lines among worlds, even as they are now within existing countries. But, the characteristic which calls most loudly for consideration—and disposition—is that of political ideology. It is beyond all question that there is going to be a red world. That is no reason why the other main division of the inhabitants of the globe should be blue.

United Nations and individual governments—at least the human instruments thereof—are greatly bothered over what will be the result of the childish refusal of the reds to participate in an increasing number and variety of UN deliberations. Much solemn pondering is being directed to the discovery of ways and means of getting their participation. It would be far better for those who believe in the UN purposes to proceed in the pursuit thereof as though there never had been any reds in the organization.

It may be argued that decisions made and actions taken without the participation of the uncooperative Reds would not be accepted by the latter. What of it? That acceptance at best is wholly a matter of expediency. It must be admitted that, if they were not in on any program, it would be clear where they stood. When they are in, there is no such clarity.

The world can get along without being red if it will but not be blue. But, it must be ready. It also must be realistic in facing the fact that not all who now are averse to being red are white. Expediency, as a road to advantage, has not lost any of its popularity. There must be also a clear recognition of the extent to which the profit motive transcends all color lines, whether dermal or political.

The peoples of this globe are not ready for world singleness. They are going to continue to be divided politically into at least two entities. There is a deal of substantiation for the belief that the group which aspires to a world brotherhood cannot get along with the other. There is much reason to feel that it is largely, if not wholly, a waste of time to endeavor to remedy that condition. So, the white world should quit being blue, carry on in pursuit of its ideals—and be ready, able, and willing to kick out those who may try to block its progress. It can get along without them, politically, socially, and commercially. And it wisely should quit moaning and begin to demonstrate its independence.

James Patrick McGovern

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article which appeared in the National Naval Medical Center, Bethesda, Md., on February 13, 1950:

POET, LAWYER CELEBRATES SEVENTY-FIRST BIRTHDAY HERE

Friends, fellow patients, corpsmen, and nurses gathered for a party recently up on Tower 11, to help James Patrick McGovern celebrate his seventy-first birthday. Mr. McGovern is a well-known person in the hospital. His bombastic nature and Celtic conviviality are always rife.

Here is a fighting man from way back. During the First World War he became a captain in the Army.

He is a poet, a lawyer, a crusader, and an ardent Irishman; his poems have been included in the CONGRESSIONAL RECORD for many years. His first poem attacked Wall Street interests, and found him expelled from school for promoting the spirit of anarchy. Unabated he went forward to become a brilliant lawyer and the originator and founder of the Coconino Sun, a paper that is a collector's item today.

When asked to recite a poem, he chose Too Old, a piece written when he was refused entrance into the service for World War II:

"The surge of battle rises everywhere,
From cap and field to office, home, and street;
The soldiers' vibrant step, the drum's deep beat,
Stir the blood even as they fill the air.
But who are they that, chafing, stand and wait,
Though speed is victory and men's the need?
Why must they press, while none will pay them heed,
To serve at any cost, in scorn of fate?
Scarred veterans whose valor shone before,
They have stepped forth to take their posts again;
'Too old, too old,' they hear in a refrain,
As their steeled honor urges them the more.
Faith with their past, which knew no compromise,
Calls them to fight until their life tide dies."

The Need To Combat Interstate Crime and Rackets

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Friday, February 17 (legislative day of Wednesday, January 4), 1950

Mr. KEFAUVER. Mr. President, it is a pleasure for me to offer for inclusion in the RECORD a statement of Mayor de-Lesseps S. Morrison, of the city of New Orleans, which was made on February 15, 1950, before the Attorney General's conference to combat crime and rackets. Mayor Morrison's discussion of the growing menace of organized Nation-wide gambling syndicates is very timely. It is forthright action such as Mayor Morrison suggests that will do much to aid in our fight against widespread crime and gambling.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

STATEMENT OF MAYOR DE LESSEPS S. MORRISON BEFORE THE ATTORNEY GENERAL'S CONFERENCE TO COMBAT INTERSTATE CRIME AND RACKETS

My name is deLesseps S. Morrison. I am the mayor of the city of New Orleans and the immediate past president of the American Municipal Association, whose viewpoint and recommendations I have been asked to present here today. The AMA speaks directly and indirectly for 10,152 towns and cities of America.

On September 20, 1949, our association addressed to Attorney General McGrath a letter expressing concern over the growing menace of organized Nation-wide gambling syndicates. We proposed Federal Government coordination and cooperation with local agencies in coping with this problem.

This conference is a most significant milestone in the history of crime fighting in the United States. Certainly it marks the first coordinated step to be taken by the Federal Government in recognition of the growing power of organized crime syndicates in our country.

On behalf of the American Municipal Association, I should like to express our genuine

appreciation to Attorney General McGrath for his interest and initiative in calling this meeting. And to President Truman, certainly, for his presence. Both the conference and the stature of the participants offer the greatest encouragement to public officials and civic-minded citizens who are sincerely concerned with the problem and who believe that an immediate, strong, and effective plan of coordinated action is necessary.

Before going further I would like to make plain and clear two important points. We of the AMA recognize fully the responsibilities and duties of local officials for local law enforcement. We do not ask the Federal Government to take over this task—nor do we condone the failure of indifferent or inefficient local officials to work for enforcement in their communities.

But we do say, however, that when local officials wage war on nationally organized underworld elements whose supply lines, communications, and general operations cut across municipal, county, State, and even national lines—then this problem is no longer a local one to be handled solely by local officials whose jurisdiction and information is so limited.

Secondly, I would like to say that we do not pretend to be experts on this subject. There are many gaps in the information available to us and to the other municipal officials present—gaps which we hope will be corrected to some extent by this conference.

For instance, the Federal Government agencies have an extensive data on Nationwide operations of racing-wire services, the slot-machine syndicates, and allied activities. Yet much of this is not available to municipal officials, and some not even available to other United States departments.

A few days ago we learned of an extensive report on racing wire services compiled several years ago by the FBI. Yet, when our police superintendent asked for a copy he was told that none was available in New Orleans. And, even if there were, the FBI said, it could not permit us to see such a confidential document. (Mr. Morrison explained that the FBI did not have jurisdiction to do so; that the FBI had cooperated in every way possible.)

There is an urgent need now of central coordination for such information among Federal departments, making same available to law-enforcement agencies of the cities and States.

We do not have the whole picture, but each of us present—and hundreds of other mayors, public officials, and crime commissions in various States—have seen small segments of this national scene of organized interstate crime. These pieces fit together in a pattern of mounting evidence concerning several highly organized gambling and racketeering syndicates whose wealth, power, scope of operations, and influence has recently grown to gigantic and alarming proportions. It is an ugly, vicious, un-American picture of systematic law violation, huge profits, corruption of public officials who can be bought—and operations outside the jurisdiction of those who cannot be purchased.

According to our information, there are two major criminal syndicates operating in America today. One controls the large slot machine industry and engages in allied gambling rackets; the other dominates the racing wire service. On the basis of checkable information, these activities are the largest steady sources of income in the underworld.

Their shrewd and efficient overlords have adopted the techniques and methods of business. They operate in a loose confederation of mutual respect, cooperation, allocated territories, and huge profits.

Here are the most conservative figures on these operations:

The annual slot-machine take in the United States is estimated by the best authorities from $1,000,000,000 to $2,000,000,000 a year. This figure is based on the fact that 105,000 gaming machines, mostly one-armed bandits, were registered in 1949 with the Bureau of Internal Revenue. The total number operating is considered double or triple that figure. The average net take of each machine is $10 to $15 a day.

The principal racing wire service in the country is Continental Press Service, which is the key to the multi-billion-dollar-betting business. Its 16,000 miles of leased wire service over 300 key handbook areas. It is difficult to pin down the annual take of this industry but the best estimates put it at double or treble the volume of pari-mutuel betting at legalized race tracks—or from $3,000,000,000 to $8,000,000,000 per year.

There is an abundant fund of facts which point to control of this wire service by the old Capone gang. Although the wire service has been domiciled in Cleveland since its late operator James M. Ragan was killed, the Chicago Crime Commission and other sources believe that Continental is dominated by the Chicago and underworld interests.

We have good reasons to believe that the slot-machine syndicate is controlled by Frank Costello. The shy and retiring czar of the slot-machine racket always understates his interest in rackets and governments in his public denials of the facts about his potency and influence.

The numerous case records of his interstate operations could take our entire day. For the record I will briefly sketch a well-documented case and the one with which I am most familiar—the Costello syndicate operations in Louisiana.

According to his own Federal grand jury testimony some years ago, Costello moved his New York slot machine operations to New Orleans in 1936. He said that he sent down Dandy Phil Kastel, exconvict and one time associate of Arnold Rothstein, to incorporate and run the business. Today he lives and operates in Jefferson Parish above New Orleans beyond our jurisdiction.

Kastel first formed the Bayou Novelty Co. which later became the Pelican Novelty Co., and which today is the Louisiana Mint Co., to handle the distribution of slot machines and other coin devices.

From 1936 until 1946 the Costello-Kastel interests operated in New Orleans under an exclusive monopoly.

Some idea of their profits may be seen in the figures revealed during the income-tax evasion trial of Costello, Kastel and five associates in the New Orleans Federal court in 1939. The Government charged that they had conspired to evade payment of about $500,000 taxes on income approaching $3,000,000 from their New Orleans slot machine business in 1936–37. That was before they installed their maximum amount of 5,500 slot machines in New Orleans. We have no figures on their take between 1937 and 1946, but at $10 to $15 a day per machine it must have been enormous.

With the election of the present city administration in 1946 the syndicate retreated across the parish line. No slot machines have operated in New Orleans since that time.

One day in 1947 our police superintendent learned of a cache of new slot machines stored in New Orleans for shipment to nearby distribution points. Police raided the place and destroyed 390. Kastel, as an owner of Louisiana Mint Co., promptly filed a suit against us for $117,000. Listed in the suit as company manager was Dudley Geigerman, brother-in-law of Frank Costello.

Their suit was dismissed, but the Louisiana Mint Co. continues to thrive and prosper outside of New Orleans. They own most of the 8,000 gambling devices for which the Bureau of Internal Revenue issued $100 tax stamps in Louisiana last year.

Meanwhile, Kastel was following another of the syndicate's recognized techniques—that of entering into allied businesses. This syndicate built the Beverly Club in Jefferson Parish, La., a luxury gambling house. Its charter, copy of which is attached, shows its registered agents to be Phil Kastel and Carlos Marcello. The latter is a local ex-convict and syndicate man. In addition to operating the Beverly Club, this group finances bar and tavern proprietors at lower interest rates than the banks charge—with the understanding, of course, that these places must install their machines.

The Continental Wire Service, as already noted, does not come into New Orleans. Its leased Western Union wires do service their Louisiana distributor at several points just above and below our city. Through batteries of telephone relays they service handbooks below and above our city limits. Despite the continuing enforcement efforts of our police there are still sporadic bookie operations in our city. But the lack of direct wire service and our insistence that the telephone company pull out telephone lines of all raided establishments has held these operations down to a minimum.

To our knowledge, the Costello syndicate and the wire-service heads today are not personally violating any municipal or State law in New Orleans. But they are doing it all around us. And they are causing the law to be violated in our city.

Mayor Bowron, of Los Angeles, and the California Crime Commission, headed by Admiral Standley, have called attention to similar situations in the far West. The Citizens Crime Commissions of Chicago and Greater Miami have compiled almost identical facts. So has the Massachusetts Crime Commission. Others present, including Mayor Darst, of St. Louis, and Mayor Cobo, of Detroit have similar corroboration.

Mayor Dorothy Lee of Portland, Oreg., has publicly stated:

"Seven weeks after my election, slot-machine operators sought to organize in Portland and at the same time get me out of office."

Municipal officials everywhere will tell you that in investigations of local criminals we continually run into frustrating blind alleys and dead ends—and the trail often winds out of the local jurisdiction over a city, county, or State line.

Does all this not point up the very vital fact that the great need is not to get at the small fry, but the absentee syndicate bosses who direct the financing, supplying, strategy, and rapid movement of law breakers back and forth across the country? All States and cities are not yet infected, but no State or community is immune from invasion.

It should also be made a part of this record that for several years the United States Immigration and Naturalization Department has had complaints in its files that Costello committed perjury in swearing to his final citizenship papers in 1926. When he swore that he was not in violation of any United States laws, it is our understanding that he was at that time the Nation's top-ranking rum runner.

The American Municipal Association proposes to attack the problem on three levels: at home, within the States, and through joint efforts of city, State, and Federal Governments. In presenting our recommendations, I wish to make three preliminary comments.

The first goal of the AMA is to assure the basic honesty and integrity of municipal officials, so they will deserve the respect of the people. One of our major efforts will be to strengthen the backs of those municipal officials who have the courage to uphold the law.

Here questions of State laws arise—laws designated to protect individuals and free

enterprise from undue governmental interference—but laws whose loopholes have been exploited for years by high-priced legal talent defending illegal operators. The attorneys general are the most competent authorities to go into this point. Then there are Federal-city problems.

I should like here to express the admiration and implicit confidence of municipal officials in the law enforcement agencies of the Federal Government. We believe that they are doing the best possible job under conditions laid down by Congress and within the limits of their budgets.

Insofar as permissable, there exists today excellent teamwork between local and Federal enforcement agencies. Many of the best city police are graduates of the FBI academy, or have served actively with the Bureau—and this suggests a further expansion of this type of training.

Wise legislation in the recent past has extended the jurisdiction of the Federal authorities so that they may assist local police in combatting crime. For example, kidnaping, bank holdups, interstate transportation of stolen cars. No responsible persons would consider this a usurpation of local power.

If the Federal Government can invoke its power against those who use its mails to defraud, does it not follow logically that similar powers should be invoked against those who use interstate shipments and communications against the public interests.

Today it is a Federal offense to traffic in prostitution across State lines, but responsibility for suppressing prostitution remains local. Similarly, unauthorized possession of narcotics is a Federal offense, but the local war against the dope traffic goes on strong as ever.

This all adds up to the fact that the last major area of big profits from illegal enterprise in which the jurisdiction of the Federal Government has not been extended is that of interstate gambling operations that violate the laws of 46 States.

Here is where Federal action truly seems to be indicated—not to invade home rule, nor to centralize police power—but to move into a field that needs its help.

We must conclude that for the world's best investigators to materially help us in this problem there must be new legislation to extend their jurisdiction and fill in the gap that now exists.

We know, too, the political power of the underworld lies primarily in its financial strength. And its financial strength stems largely from the syndicate operation of slot machines and the control of racing and sports pool news.

The key objective before us is an attack on the supply lines and income of organized gambling as a Nation-wide industry.

Today the records of any collector of internal revenue will tell you who has bought gaming tax stamps and where the business is situated. We believe that it would be equally valuable to know who owns the machines as well as those in whose place of business they are installed.

Finally, if we can deport those who have fraudulently obtained their priceless American citizenship, we will rid the country of undesirable elements who are a menace to American democracy and our way of life.

The American Municipal Association endorses and will actively support these concrete recommendations:

1. Development of a coordinated master plan of action on the whole system of Nation-wide rackets by Federal, State, local governments and citizens' groups. The Attorney General for the United States should be coordinator for the entire effort.

In that connection, it would be of tremendous help if we could receive a confidential quarterly or semiannual report from the Attorney General, correlating all available data—giving municipal officials a continuing, complete picture which cities do not have the facilities or jurisdiction to obtain ourselves.

2. Support of the Kefauver bill to investigate the entire problem of interstate gambling rackets and allied operations. A Senate investigation that can call witnesses and make them tell the truth under threat of perjury indictments is the only way some of these dead ends can be routed out.

3. Legislation to outlaw dissemination of race results across State lines by telegraph, telephone, or radio for illegal gambling purposes. Such a law would not be designed to prohibit dissemination of sports information through the generally accepted press associations and newspapers.

4. Legislation to prohibit the interstate shipment of slot machines, other gambling devices, and their parts; requiring Federal registration of all such machines sold within States, and prohibiting foreign export of such devices. The Preston bill to prohibit shipment of gambling devices in interstate or foreign commerce has been endorsed in principle by FBI Director Hoover.

5. Amending the Bureau of Internal Revenue tax regulations on gaming devices to require registration of owners of devices on which tax stamps are purchased, as well as the user of such gaming devices. Penalties for failure to register gaming devices should be stiffened.

6. Legislation to extend the jurisdiction of the FBI to permit that agency to lend needed assistance and information to State and local officials.

7. Amending the immigration and naturalization laws providing that aliens obtaining citizenship by fraud or perjury may have that citizenship revoked at any time after discovery of said fraud or perjury.

8. Complete and continuing tax investigations of the head bosses of the rackets syndicates.

9. Amending Bureau of Internal Revenue regulations to provide that the now closed income tax records of known police characters and ex-convicts may be inspected by law enforcement agencies of the Federal, State, and local governments.

10. Inter-city cooperation, exchange of information and action. This was begun some months ago through the AMA by Mayor Bowron, myself, and the Chicago Crime Commission, Mayor Lee, of Portland, and several others. We will work to strengthen and improve the facilities for exchange of information among local police departments, through AMA as a coordinating agency.

11. While all the recommendations above are important, if we are to accomplish all of our joint objectives, there needs to be a thoroughly coordinated Federal effort or agency through which the cities and States can work.

To sum up—I wish to acknowledge the interest and assistance of numerous mayors and the crime commissions of Chicago, Greater Miami, and of Massachusetts.

The American Municipal Association believes that the flourishing existence of these nationally operated gambling-racketeering syndicates presents one of the greatest threats to society and to good government. At the very least, the alliances between the wealthy organized criminal element and local gamblers make more complex and difficult the problem of law enforcement at the local level. At the very worst, these underworld czars, through entrenched special privileges in a community, can wield tremendous influence over its government. From profits and power in one locality they go on to another. That is a danger and threat to our democratic way of life hardly less real than the Communist menace. Indeed, nothing could please the Russians more than the crumbling corruption of democratic government from within and consequent loss of faith in democracy by large segments of the American people.

I do not believe that the combined resources of the organized underworld rackets are greater than those of the Federal, State, and municipal governments of the United States.

It is our firm conviction that if everyone in this room determines to do something about the problem it can and will be conquered. Our cooperative action must not end when this meeting adjourns.

In this objective we pledge you the full and active cooperation of the American Municipal Association.

Lincoln Day Address by Hon. Robert C. Hendrickson, of New Jersey

EXTENSION OF REMARKS
OF
HON. H. ALEXANDER SMITH
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES

Friday, February 17 (legislative day of Wednesday, January 4), 1950

Mr. SMITH of New Jersey. Mr. President, on Saturday, February 11, 1950, before the Queens Village Republican Club, at Queens, N. Y., my colleague, the junior Senator from New Jersey [Mr. HENDRICKSON], made the annual Lincoln Day address. I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the adress was ordered to be printed in the RECORD, as follows:

Mr. Toastmaster, distinguished guests, ladies and gentlemen, it is indeed a pleasure to meet with you tonight in this Republican stronghold of the sovereign State of New York.

We gather together for a dual purpose; first to honor the name of the greatest American of all time, the founder of our Republican Party, who was born 141 years ago tomorrow and, second, to commemorate another important birthday.

Certainly this magnificent audience before me is aware that 1950 marks the seventy-fifth anniversary of the founding of the Queens Village Republican Club, the oldest club of its kind in the Nation in continuous existence.

I am honored more than I can say in having been asked to speak to you on such an auspicious occasion.

And that isn't all—I consider myself fortunate in sharing this rostrum with Bill Groat, your very able district leader.

My respect for Bill began when I first met him; it grew in 1948 when he invaded New Jersey to preach the gospel of Dewey and Warren and Hendrickson to the voters of my State, and is even greater now that I have watched him serve as an outstandingly capable administrative assistant to a Senator for whom I have the greatest admiration and affection, your own IRVING IVES.

I wish to speak to you tonight about Abraham Lincoln as viewed from two different vantage points: First, President Lincoln, the wartime leader who brought this Nation successfully through its most crucial test, and secondly, as the leader of a new and struggling political party which became the most potent force ever known for the welfare of a great people and the development of our now great constitutional Republic.

To review Lincoln's humble origin, his struggles for mere existence and for an education, and his rise to fame would be "carrying coals to Newcastle," for I realize that this audience knows as well as I that stirring and inspiring story.

But I do want to impress upon you, my good friends and neighbors of Queens, that his devotion to the cause of common honesty and simple decency, his unimpeachable integrity, and his love for his fellow man were the traits of character which have enshrined him in our hearts and in the souls of free men everywhere—it was these humane qualities, not the power that he wielded as a wartime President or the authority he exercised as the Chief Executive of the Nation.

On the other hand, it was these very virtues which gave birth to our party and which saved the Union; it is these virtues alone which can be our salvation today as we struggle for domestic fortitude and strength and international peace and prosperity.

The Republican Party was born to make men free. It was conceived in a period in our Nation's history when vested interests were in complete control—when property rights were absolute.

When Lincoln was a boy, a man was only as important and powerful as the wealth he possessed, and, of course, a part of that wealth was often the possession of other human beings, of slaves or chattels.

The Republican Party, therefore, originated as the Liberal Party; its lofty purposes and high ideals gave it victories at the polls for almost a half century with very few interruptions and it was the hope of progressive forces in the United States and throughout the world during that entire period.

Under Republican leadership, all men were made free and welcomed into the company of American citizens; public land in our Western States was given to all who would care for it and live on it; the Department of Agriculture and the Department of Labor were established; the Sherman Antitrust Act was passed to meet the challenge of big business to free government—all of these were Republican achievements which led the United States from its position of a divided second-rate world power to a unified, powerful Nation whose natural wealth and industrial might combined with its concern for individual dignity and freedom, made it the beacon light for all the people of the world who desired the better things of this world.

As has happened often in the past, however, the dominant faction for good in a country sometimes goes off the beam and ignores the well-charted course it has so carefully plotted.

This happened to our own party shortly after the beginning of this century and, as we lost our vision, we lost our momentum.

Then the desire for unqualified services to mankind at all levels, was greatly impaired.

We became smug and lazy and content to enjoy our sense of superiority and invincibility. Our leaders forgot that the Republican Party was established to serve all people and that the GOP was only as strong as the place it occupied in the hearts and minds of the voters of the Nation.

We lost the confidence of the people; we overlooked some of their just demands for betterment in their working or living conditions, and we fell under that axiom uttered by the Great Emancipator himself "* * * you can't fool all of the people all of the time."

As the Republican Party became overconfident and less observant, a second political party held us on downs, took the initiative, and became first in the hearts of our citizenry and first at the ballot boxes.

But now we find that that party itself is less vigilant and virile and that our great party has another opportunity to prove to the Nation that we are competent to serve all the people without regard to race, creed, or color.

That our party can meet the challenge of an industrial society in an uncertain world; that it can give honest and intelligent government to millions of people, that it can effectively guarantee civil liberties to all citizens regardless of their origin is demonstrated beyond doubt in the neighboring States of New York and New Jersey.

Your Governor, Thomas E. Dewey, and my Governor, Alfred E. Driscoll, have functioned most effectively as chief executives of two of the most important and diversified States in the Union.

They have been able to operate on a sound financial basis; they have been able to provide clean government, administered by men of integrity; they have been able to cooperate with other governmental units in planning, constructing, and operating jointly-used facilities without Federal aid or contributing to the ever-growing trend which is fast reducing State and local governments to mere fictions.

I refer, of course, to the present very dangerous and parasitical system of Federal grants-in-aid on a hand-out basis.

Above all, Governors Dewey and Driscoll exemplify the sort of leadership that the revivified Republican Party can provide for a Nation which demands statesmen of great stature as never before in its history.

Incidentally, speaking of New York, as I was, and of Democrats, as I was not, brings to mind a little story Representative Abraham Lincoln told the Congress in 1848:

"I have heard some things from New York, and if they are true, one might well say of your party there, as a drunken fellow once said when he heard the reading of an indictment for hog stealing. The clerk read on till he got to and through the words 'did steal, take, and carry away 10 boars, 10 sows, 10 shoats, and 10 pigs,' at which he exclaimed, 'Well, by golly, that is the most equally divided gang of hogs I ever did hear of.' If there is any gang of hogs more equally divided than the Democrats of New York are about this time, I have not heard of it."

One of the greatest shortcomings of the fat and incompetent Democratic administrations down in Washington is their policy in treating with those who would betray their Nation.

Lincoln, as a wartime President in a divided Nation, found that there were those in his immediate circle who wished him ill and who gave aid and comfort to their country's enemies.

But President Lincoln never reacted as has our present national leadership to the threat of treason and disunity.

After some 10 or 11 years of hiding behind his benefactors' official skirts and his White House entree, the high New Deal and Fair Deal officer, Alger Hiss, who would sell his own country down a Volga River, has been brought to justice.

This conviction was made against the wishes of the administration and despite the efforts of those men who have sworn to serve their Nation faithfully and to protect it against all enemies, foreign and domestic.

They have protected Hiss; they have secreted vital and damning evidence; they have procrastinated; they have lied. What faith can we have in such leaders?

We Republicans reject the soft and kid-glove treatment of communism—or of any foreign ism.

We repudiate the Democratic Party's handling of this specific case and their entire philosophy in this regard.

We condemn this record.

In 1858, when he was asked to define his position, Lincoln said, "I hope to 'stand firm' enough not to go backward, and yet not go forward fast enough to wreck the country's cause."

I feel that this could very well be the GOP's watchword for the 1950 and 1952 elections.

We cannot hope to prevail if we are content to look complacently back at our past record of achievements, but we reject a rapid rise to socialism and un-American schemes engineered by the Democratic Dealers.

Those now in power would give their programs a trace of respectability by allowing it to bask in the sunshine of Lincoln's progressive ideals, but it is too deeply pocked with the scars of intolerance, reckless and extravagant spending, hypocrisy, and the rankest demagogic appeals to the selfish instincts in man to be able to breathe that exalted air.

Its extreme efforts to maintain itself in control are marked with such atrocious examples of summary dismissals from high military posts as Admiral Denfeld's removal which can only demoralize young and efficient officers who want to serve their country with honor and distinction.

The administration's hypocrisy is nowhere better indicated than in the President's recent message to the Congress on taxes which is a masterpiece of double-talk and plain simple untruths.

You may remember that he said "we must continue to exert rigid economy" at the very time that his extravagance was bringing about a record peace-time deficit of some five or six billion dollars. This despite the fact that there is a high level of employment and a near-record national income.

These practices must end and in lieu thereof, we must have a positive and vigorous course of action based upon sound and staple principles. Such a program was ably "spelled out" by our great party at its convention in Philadelphia in 1948.

That platform was and is a masterpiece.

It is a progressive document which minces no words in its treatment of the problems of the day. It uses as its central motif, a quotation from Lincoln, and I quote: "The dogmas of the quiet past are inadequate to the stormy present. The occasion is piled high with difficulty and we must rise with the occasion. As our case is new, so must we think anew and act anew."

Clearly any mind which can conceive such a forward-looking philosophy in respect to a nation's purposes and objectives according to the standards of our times, is a great liberal.

What, I ask, did Mr. Lincoln mean by this statement?

How, I ask, would he apply this terminology today?

Would he use its broad and noble meaning to usurp the legislative and judicial powers of his Government?

Would he permit its generality to be a guise to allow foreign ideologies to seep into and destroy the basic principles of his great charter of constitutional government for which he gave his life?

Would he allow such a noble utterance to be the means of wasting our great natural resources for the advancement of nations who would one day destroy us for their own ends?

Would he permit an interpretation of such eloquence to advance and establish a program which could only lead us to national bankruptcy and internal collapse?

Would he so use his own utterances to entrench himself and his party in power so firmly that he and his successors might one day dominate his people as the Roman emperors of old in complete disregard of his constitutional powers and prerogatives?

Would he, I ask you, as men and women who have enjoyed the blessings of Lincoln's mold and greatness, have ever done any of these things because of the high and lofty vision which inspired him to say and repeat:

"The dogmas of the quiet past are inadequate to the stormy present. The occasion is piled high with difficulty and we must rise with the occasion. As our case is new, so must we think anew and act anew." The answer is "No."

Then, my dear friends, what did he mean when he said it?

Your great party in convention assembled in Philadelphia not only interpreted the meaning of this now historic utterance, but they also applied it.

One has but to read these solemn pledges made by our party to the people of America to realize that this pronouncement of Mr. Lincoln was the inspiration for the enlightened approach and the course of action promised by the delegates to that gathering.

Let me say that our failure then was not due to our aim, but to our methods.

We will again prevail if we are only as courageous in deed as we were in words.

I can assure you that there is no tendency in our ranks in Washington to ignore the present through gazing at the past.

We reject the trend toward centralism, toward Government control of every aspect of our lives, and toward statism.

I feel that Abraham Lincoln expressed these ideals well 96 years ago, when he said:

"The legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all, or cannot so well do, for themselves, in their separate and individual capacities. In all that the people can individually do as well for themselves, government ought not to interfere."

And—

"I think a definition of 'popular sovereignty' in the abstract would be about this: That each man shall do precisely as he pleases with himself, and with all those things that exclusively concern him. * * * That a general government shall do all those things which pertain to it, and all the local governments shall do precisely as they please in respect to those matters which exclusively concern them."

Of course, these are not definite answers, and there are other questions which must be answered, but I feel that they do mark out a course of action and a basic philosophy of the role of government.

On some things, there can be no compromising.

The record of civil-rights legislation in New York and New Jersey has won praise for our party throughout the Nation, and must be supported with equal vigor at the Federal level.

Sound fiscal policies based on a "pay-as-you-go" premise are a "must" if the United States is to remain strong and vigorous. The excessive spending, the tremendously high level of taxation, and the red ink of deficit financing are inexcusable.

America is the hope of free men throughout the world and we cannot escape our responsibilities all over the globe.

To meet these needs, our foreign policy must be nonpartisan and aboveboard.

Of late, it has been neither and we propose to make it a truly bipartisan and cooperative undertaking.

I have given you what I feel to be the proper stand for the Republican Party to take on a few of the momentous issues of the day.

In a large part, I feel that our party is fostering these ideals and striving diligently for these ends.

We are back on the right road; we are the truly progressive and liberal party—certainly no statist or centralist supporter of economic and social bondage can claim that creeping socialism is either progressive or liberal.

Lincoln said: "In this age, and in this country, public sentiment is everything. With it, nothing can fail; against it, nothing can succeed."

Our task, then, for 1950 and for 1952, is to convince the people of this Nation that our purpose is as steadfast as our aims are worthy.

It is to this end that all of us must work; it is to this end that we must all give more of ourselves and our precious time than we have ever given before.

There is no more important mission left to us than that of saving our way of life for the generations yet unborn.

Let us then here highly resolve that through our party, the spirit of Abraham Lincoln shall live on in this land of ours; that "it is for us the living, to be dedicated to the unfinished work" which he "so nobly advanced"; that from his life we shall take "increased devotion" to those things for which he "gave his last full measure of devotion" that his party of the people "shall not perish from the earth" but shall have a "new birth" of vigor, courage, and vision with which to meet the challenges of the day.

Lincoln Day Addresses by Hon. Edward Martin, of Pennsylvania

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, February 17 (legislative day of Wednesday, January 4), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two addresses delivered by me.

There being no objection, the two addresses were ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. EDWARD MARTIN, OF PENNSYLVANIA, AT A LINCOLN DAY DINNER SPONSORED BY THE WARD COUNTY REPUBLICAN EXECUTIVE COMMITTEE AT PARKERSBURG, W. VA., FRIDAY EVENING, FEBRUARY 10, 1950

It is most appropriate to pay tribute to the greatness of Abraham Lincoln in the State whose whole history has been one of loyalty to our Republic.

In the tragic days of crisis, when the fate of the Union hung in the balance, West Virginia took its stand with Abraham Lincoln.

True to the tradition of its sturdy and courageous pioneers the Mountain State severed relations with the Old Dominion. The gallant sons of West Virginia rallied to the Stars and Stripes. They fought and died to preserve the ideals of freedom—one nation and one flag.

We are assembled tonight as true Americans and loyal Republicans. We meet to honor the memory of a plain, humble, God-fearing man of the people who rose from a life of poverty and hardship to become one of the outstanding figures of world history.

We celebrate the birthday anniversary of one of the greatest of Americans, one of the founders of the Republican Party and first Republican of the United States.

The principles of Abraham Lincoln's Americanism were firmly rooted in profound and abiding faith. In the face of disappointments, defeat, and discouragement he never lost faith in the common sense and wholesome instincts of the people. He held firmly to faith in God, faith in himself, and faith in the future of America.

As a young lawyer, less than a year after he was admitted to practice, he summed up his philosophy in a speech at Springfield, Ill. He declared that the future support and defense of the Nation depended upon general intelligence, sound morality, and, in particular, reverence for the Constitution and the law.

Those principles were given further expression in the first resolution ever adopted by the Republican Party in national convention.

That resolution is one that can be adopted without reservation by every good American today. It touches upon the vital issues of our own time. It was as follows, and I quote:

"*Resolved*, That the maintenance of the principles promulgated in the Declaration of Independence and embodied in the Federal Constitution are essential to the preservation of our republican institutions; and that the Federal Constitution, the rights of the States, and the union of the States must be preserved."

The delegates to that history-making first convention, held in the city of Philadelphia 94 years ago, were summoned by a call which could be echoed today.

It was addressed, and again I quote: "To all the people of the United States, without regard to past political differences or divisions, who are opposed * * * to the policies of the present administration * * * and in favor of restoring the action of the Federal Government to the principles of Washington and Jefferson."

The words of that Republican platform are just as timely and just as inspiring today as they were in the crisis of Lincoln's time.

Republican devotion to individual freedom, to the Constitution, and the Bill of Rights has never faltered or diminished.

Republican programs and policies are those of Washington, Jefferson, and Lincoln. The platforms of the Republican Party have charted all the expansion and all the prosperity which this Nation has enjoyed in the half-century of its greatest progress.

The prosperity of that period was produced by the inventive genius, the resourcefulness, initiative, hard work, and thrift of the American people.

It was encouraged and stimulated by government through economical administration, sound fiscal policies, a stable currency, and national solvency.

Freedom of the individual was the door to opportunity for every American, no matter how humble his birth or origin.

Slavery was the great question that inflamed the passions of men in Lincoln's day.

Today, another form of slavery threatens the future of America and all its people.

The creeping paralysis of socialism is spreading through our country. If allowed to run its course, it means slavery to the Government. It means the destruction of individual freedom and the loss of all liberty.

And the great tragedy of it all is that we are being bribed with our own money into the bondage of the socialistic state.

You will note that the first Republican convention was organized under a call to all the people of the United States who were opposed to the policies of the Democratic administration then in power.

Let us examine briefly the policies of the Democratic administration now in control at Washington.

Let us consider its plans and proposals and see what awaits us at the end of the road over which we are being driven.

Recently we have had three messages from the President dealing with the state of the Union, the economic plans of his administration, and its fiscal program. In none of them was there a mention of socialism, but all the elements of the socialistic state were outlined in unmistakable terms. Mr. Truman advocated and demanded increased taxation, unlimited spending, deficit financing, and the piling up of more billions on top of our staggering national debt.

He submitted a budget of $42,500,000,000—the largest peacetime budget in the history of the world. Then he told the American taxpayers they would have to go in the red $5,100,000,000 more, just to pay the expenses of the Federal Government.

But that's not all. He proposes that Congress enact laws and appropriate funds to place education under Federal control, to socialize the practice of medicine, and for political dictatorship of agriculture through the Brannan plan.

No one, in the administration or out of it, has been able to estimate how much these dangerous proposals would cost. But we do know that they would add billions of dollars to the already swollen cost of Government. They would place an additional back-breaking burden upon the worker, the farmer and every other taxpayer.

These are just some of the schemes that spell socialism under the cruel and discredited theory that an all-powerful central government can manage the people's lives better than they can for themselves.

What are the American people offered in return for this proposed surrender to Government control and regimentation?

President Truman has given us a beautiful picture of the bright-colored, rosy prosperity and happiness that he envisions some time in the future.

A dream world of health, happiness, and security awaits us in the year 2000, he said in effect. At that time, 50 years from now, every wage earner would enjoy an income of $12,000 a year.

We were told also that this fabulous income of $12,000 a year would result from an expanded industrial plant and an expanded economy.

We were not told, however, that the whole philosophy of the proposed program would dry up investment capital and would prevent industrial and economic expansion.

We were not told that the enormous increase in the cost of government and the tremendous increase in the national debt would so greatly reduce the value of the dollar that it would have less than one-third the purchasing power of today's dollar.

The dollar buys much less today than it did 50 years ago. Expert economists have figured that 50 years from now we will have an 18-cent dollar if the Government's present spendthrift course is continued through that period.

Nevertheless, we are promised ease and security for all. No one will have to take the hard knocks that so many of us have encountered upon the road of life.

But first—and always keep this in mind—first, we must go broke. We must spend ourselves into national bankruptcy. We must forget all about economy and a balanced budget. We must not worry about taxes that become more and more oppressive every year. We must not care a rap how high the national debt climbs.

Spend, spend, spend—that is the order of the day in President Truman's program for the Nation.

My fellow Americans, I say it is a dangerous, dishonest, and immoral program.

It is stealing and squandering the savings of the people. It is destroying initiative and all incentive. It drains off savings that might be invested in job-creating productive enterprise. It is robbing youth of this and future generations of the opportunities America has held out so generously in the past.

And most important, it must result in national bankruptcy and the slavery of the socialistic state. It must place our people under the same strangling controls and regulations that have brought ruin to every nation where socialism deprived people of their freedom.

The Truman socialistic spending program, to which so many of our people have been attracted, recalls the warning of Lincoln when he said, and I quote:

"If destruction be our lot we ourselves must be its author and finisher. As a Nation of freemen we must live through all time or die by suicide."

The Truman socialistic-spending program is contrary to the teachings of Thomas Jefferson, whom those in control of the present administration pretend to follow. It is contrary to the philosophy of Lincoln who declared, and again I quote:

"The principles of Jefferson are the definitions and axioms of a free society."

When these self-styled followers of Jefferson hail him as their patron saint at their $100 dinners they neglect to recall his words of solemn warning. Jefferson said and I quote:

"I place economy among the first and most important of republican virtures and public debt as the greatest of dangers to be feared."

They likewise conveniently forget that it was Thomas Jefferson who said, and again I quote:

"When all government * * * in little as in great things shall be drawn to Washington as the center of all power * * * it will become venal and oppressive."

Those were the definitions and axioms of a free society in which Abraham Lincoln believed. They are principles to which the Republican Party has subscribed throughout its history. They are American principles, not a socialistic pattern based on the false teachings of Marx and Lenin.

Lincoln based the critical period of his administration on a text from the Bible: A house divided against itself cannot stand.

That quotation from scripture applies with equal force to the critical situation of the present day.

We can have socialism—or we can have liberty and freedom of the individual.

We cannot have both. One or the other will be destroyed.

We are, therefore, faced with these overall questions:

Do the American people want a socialistic system of government?

Would they vote for socialism in a free election if the issue was presented under its true label?

Are they willing to be bribed with their own money into accepting socialism because it promises an easy way of life?

Are they willing to surrender the dignity and freedom of the individual in exchange for so-called free hand-outs from an all-powerful central government?

Let us pray to Almighty God that the time shall never come when these questions will be answered except by a loud and resounding "No."

And that time will never come if we take Lincoln as our guide and face the menace to American freedom with general intelligence, sound morality, and reverence for the Constitution and the law.

Prosperity has never been achieved through tricky political promises. The happiness of the people has never been advanced by the Government taking away their earnings and then giving them so-called free hand-outs.

Security has never been established for any people on earth through the demagog's deceptive offer of something for nothing.

The free spender of other people's money is always popular. But his wasteful, extravagant course always ends in financial and moral bankruptcy.

Our first line of defense must be a strong, stable, solvent America. We want a self-reliant, prosperous dynamic America.

We need as a definite policy of Government control of spending, not control over people.

America was built on a dream of liberty. Let us fight as Americans and Republicans against turning that dream into a nightmare of socialistic slavery.

Today as Republicans we are fighting to preserve the concept of life as laid down by Thomas Jefferson and Abraham Lincoln.

As an army of truth and righteousness let us go forth to battle to save America and to preserve the God-given rights of free men.

ADDRESS BY HON. EDWARD MARTIN, OF PENNSYLVANIA, AT A LINCOLN DAY DINNER OF THE LINCOLN REPUBLICAN CLUB OF OAKLAND COUNTY, MICH., AT PONTIAC, MICH., MONDAY EVENING, FEBRUARY 13, 1950

I am sincerely and highly honored by the privilege of joining with you in this Lincoln Day celebration.

Just 5 years ago tonight it was my extreme pleasure to welcome your distinguished ex-governor, the Honorable Harry F. Kelly, as the Lincoln Day speaker in the city of Pittsburgh, Pa. His eloquent and forceful presentation of Lincoln's service to America and to mankind was a real inspiration.

Later in the same year, as Governor of Pennsylvania, I attended the Conference of Governors at Mackinac Island. On that occasion I experienced the warmth and cordiality of Michigan's generous hospitality. I was thrilled by the unforgettable beauty of your great recreational areas.

Michigan holds a proud place among the States of the Union. It exemplifies the American system of free enterprise at its best.

Here you have created a vast empire of production. Your giant industrial strength was a bulwark of national defense in time of war and makes a mighty contribution to world progress in peacetime.

Most noteworthy is the fact that your unparalleled industrial growth had its beginnings in the dynamic energy of plain men of the people, skilled mechanics and craftsmen who worked with their hands.

Here the miracle of mass production was brought to its highest stage of development. Great names stand out in your industrial history, Ford, Olds, Chalmers, Durant, Willys, Chrysler, and many others.

It is important to remember that their wonderful achievements were accomplished without looking to the Government for help when difficulties were encountered.

Neither were they hampered by bureaucratic controls or regulation. They planned and worked in an atmosphere of individual freedom which has given America the highest standard of living and the highest level of opportunity the world has ever known.

Since I have been a Member of the United States Senate, nothing has given me greater satisfaction than the fine association I have enjoyed with your courageous and able Senators, ARTHUR VANDENBERG and HOMER FERGUSON.

They are not only great Senators, but they are great American patriots. They are statesmen in the tradition of Abraham Lincoln. They are imbued with the same love of liberty and devotion to American ideals.

The principles of Abraham Lincoln live on in the honorable career of your distinguished Representative in Congress, GEORGE DONDERO. He is a credit to your State and the Nation as one of the ablest Members of Congress.

A profound student of American history he has gained national recognition as an outstanding authority on the life of Abraham Lincoln. No man in America is better qualified to apply the ideals of Lincoln to the problems we face today.

Michigan's Republicanism stems from that outpouring of patriotic spirit that took place in July of 1854 at Jackson in your own State. There the name of the Republican Party was formally adopted and Michigan took her place in American political history as the first State to give the Republican Party victory at the polls.

I am proud to recall that my own Commonwealth of Pennsylvania shares with

Michigan the honor of participating in the founding and development of the party of Abraham Lincoln.

In February of 1856, courageous and patriotic Americans met at Pittsburgh and formulated plans for the first Republican National Convention.

That convention, dedicated to the ideals of human rights, individual freedom, the maintenance of the Constitution, and the preservation of the Union, was held, most appropriately, in the birthplace of American independence, the city of Philadelphia.

The delegates were summoned by a call that can be echoed today. It was addressed and I quote:

"To all the people of the United States, without regard to past political differences or divisions who are opposed * * * to the policies of the present administration and in favor of restoring the action of the Federal Government to the principles of Washington and Jefferson."

I repeat, that call can go out today, renewed in strength and vigor by the greatness of Abraham Lincoln and the proud record of the Republican Party in three generations of American progress.

We face a crisis today just as challenging as that in Lincoln's time.

We, too, in our day, must fight to restore the action of the Federal Government to the fundamental principles that have come down to us from the founders of our Republic.

Lincoln's great task was the preservation of the Union. The great duty before us is to preserve freedom of the individual and the God-given right of every American to live in liberty, free from the strangling dictatorship of state socialism.

We must defend our country from the destructive blight that is corrupting American morality with its false promise of something for nothing.

We must resist the ever-increasing centralization of governmental power and authority at Washington by insidious grants of so-called aid to the States.

We must awaken the American people to the dangers of deficit financing and a continued policy of taxing and spending that means bigger debt and more oppressive taxes year after year.

We must summon all the patriotic strength of an aroused people to prevent a headlong plunge into national bankruptcy.

The party of Abraham Lincoln is committed to these things and will continue the fight because we know that freedom depends upon a sound, strong financial and spiritual structure. An insolvent nation cannot be a free nation. Economic bankruptcy is the road to political and moral disaster.

My fellow Americans, that is the perilous road over which we are being driven with no thought of the price we must pay.

The paramount issue before us is whether we are to continue on the primrose path to disaster or whether we are to return to the road of constitutional government and individual freedom.

One leads to the slavery of socialistic regimentation and control. The other is the way to real progress and prosperity. It is plainly marked with the signposts of sound fiscal policies, stable currency, economical administration, and national solvency.

Let us survey briefly the program of the Truman administration and see over which road the so-called Fair Deal is taking us.

Recently we have had three messages from the President dealing with the state of the Union, the economic plans of his administration, and its fiscal program.

In none of them was there a mention of socialism—but all the elements of the socialistic state were outlined in unmistakable terms.

Mr. Truman advocated and demanded increased taxation—unlimited spending, deficit financing, and the piling up of more billions on top of our staggering national debt.

He submitted a budget of $42,500,000,000—the largest peacetime budget in the history of the world. Then he told the American taxpayers they would have to go in the red $5,100,000,000 more, just to pay the expenses of the Federal Government.

But that's not all. He proposes that Congress enact laws and appropriate funds to place education under Federal control, to socialize the practice of medicine, and for political dictatorship of agriculture through the Brannan plan.

No one, in the administration or out of it, has been able to estimate how much these dangerous proposals would cost. But we do know that they would add billions of dollars to the already swollen cost of government. They would place an additional back-breaking burden upon the worker, the farmer, and every other taxpayer.

These are just some of the schemes that spell socialism under the cruel and discredited theory that an all-powerful central government can manage the people's lives better than they can for themselves.

What are the American people offered in return for this proposed surrender to Government control and regimentation?

President Truman has given us a beautiful picture of the bright-colored, rosy prosperity and happiness that he envisions sometime in the future.

A dream world of health, happiness, and security awaits us in the year 2000, he said in effect. At that time, 50 years from now, every wage earner would enjoy an income of $12,000 a year.

We were told also that this fabulous income of $12,000 a year would result from an expanded industrial plant and an expanded economy.

We were not told, however, that the whole philosophy of the proposed program would dry up investment capital and would prevent industrial and economic expansion.

We were not told that the enormous increase in the cost of government and the tremendous increase in the national debt would so greatly reduce the value of the dollar that it would have less than one-third the purchasing power of today's dollar.

The dollar buys much less today than it did 50 years ago. Expert economists have figured that 50 years from now we will have an 18-cent dollar if the Government's present spendthrift course is continued through that period.

Nevertheless, we are promised ease and security for all. No one will have to take the hard knocks that so many of us have encountered upon the road of life.

But first—and always keep this in mind—first, we must go broke. We must spend ourselves into national bankruptcy. We must forget all about economy and a balanced budget. We must not worry about taxes that become more and more oppressive every year. We must not care a rap how high the national debt climbs.

Spend, spend, spend—that is the order of the day in President Truman's program for the Nation.

My fellow Americans, I say it is a dangerous, dishonest, and immoral program.

It is stealing and squandering the savings of the people. It is destroying initiative and all incentive. It drains off savings that might be invested in job-creating productive enterprise. It is robbing youth of this and future generations of the opportunities America has held out so generously in the past.

And most important, it must result in national bankruptcy and the slavery of the socialistic state. It must place our people under the same strangling controls and regulations that have brought ruin to every nation where socialism deprived people of their freedom.

The Truman socialistic spending program, to which so many of our people have been attracted, recalls the warning of Lincoln when he said, and I quote:

"If destruction be our lot we ourselves must be its author and finisher. As a Nation of freemen we must live through all time or die by suicide."

My fellow Americans, if we are guided by the wisdom and the example of Lincoln, America will not die by suicide but will survive as a nation of freedom and opportunity.

If we are to help save America we must all take a more active interest in politics. The kind of government we have is decided at the ballot box.

In reviewing the greatness of Abraham Lincoln we must remember his genius as a politician. He was a strong party man. He believed in party loyalty and party discipline. His statesmanship represented political action at its best. He believed in good government, honest government as the best politics because it truly advanced the welfare of his fellow Americans.

Lincoln's birthday should be celebrated wherever men rejoice in the ideals of freedom. His devotion to true Americanism guided him from a life of poverty and hardship to a place among the world's immortals.

True Americanism is just as important in our day as it was in Lincoln's time. The great issue confronting us is to drive the Reds out of the Government and to get our Government out of the red.

As Americans and as Republicans, we can pay no greater honor to the memory of Abraham Lincoln than by planning and working to preserve the Republic he so nobly served.

National Health Insurance

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, February 17 (legislative day of Wednesday, January 4), 1950

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a discussion entitled "Do We Want National Health Insurance in the United States," in which the Honorable Harold Stassen, president of the University of Pennsylvania, and the distinguished Senator from Florida [Mr. PEPPER] participated, on Sunday, January 29, 1950. Senators will find this an illuminating discussion on the subject of adequate medical care for the people of the United States.

There being no objection, the discussion was ordered to be printed in the RECORD, as follows:

ANNOUNCER. The National Broadcasting Co. presents the American Forum of the Air, founded 21 years ago by Theodore Granik and dedicated to the full and public discussion of all sides of all issues, coming to you today before a large crowd in the famous Continental Room of the Wardman Park Hotel in Washington, D. C.

Now here is your moderator, Theodore Granik.

Chairman GRANIK. The current issue of Reader's Digest magazine carries to its 50,000,000 readers throughout the world a vital and dramatic report, the second of a series of articles on the British national health program written by Harold E. Stassen, former Governor of Minnesota, and now president

of the University of Pennsylvania. Commenting on the services performed by London hospitals Governor Stassen says:

"The conclusion would be that Londoners are now getting less than they once did and at higher costs."

He quotes a British doctor as saying, and I read from the Digest:

"Please tell our friends in America, 'Never, never, never adopt such a program.'"

However, Oscar Ewing, United States Federal Security Administrator, while in London recently, heard that most of the critics tried to mislead the American people on facts about the British National Health Service. "What we have seen in England," said Mr. Ewing, "confirms my deep conviction that the national health insurance proposal will be good for America."

So today the American Forum of the Air, in cooperation with Reader's Digest, presents a discussion on this timely subject. We are privileged to have as our speakers Governor Stassen and Senator CLAUDE PEPPER, Democrat, of Florida, member of the Senate Committee on Labor and Public Welfare, and coauthor of the administration's bill proposing national health insurance for the United States.

Now, Senator PEPPER, if you met this British doctor what would be your answer to his "never, never, never"?

Senator PEPPER. Mr. Granik, in the first place, I would tell the British doctor that we do not propose to adopt the British plan in the United States. Under the British plan the Government pays about 90 percent of the cost of the medical care dispensed under the plan. In this country about eight-ninths or seven-eighths of the cost of the plan would be paid for by those who are covered, who pay the required payments periodically.

In the second place, I would say that our plan is not state medicine or socialist medicine. It is a national health insurance plan, which the British plan is not.

Then I would say to this doctor that in the United States there are about 40,000,000 people, roughly, who are part of income groups who make less than $2,000 a year, and about 60,000,000 people who are part of income groups who make less than $3,000 a year; that all our data show that these people and many more simply cannot pay, without ruinous cost to themselves, the cost of the hospital and medical care they require in this expensive age of excellent medicine.

Chairman GRANIK. Would you care to comment on that, Governor?

Senator PEPPER. Therefore, what we propose to do, in the language of Winston Churchill, who proposed the basis of the British plan in the House of Commons in 1911, to use his words, is "to bring the magic of averages to the rescue of millions," through giving an opportunity to participate in national health insurance to these people who need the care they don't now generally get.

Chairman GRANIK. Governor Stassen.

Governor STASSEN. Of course, I immediately would have to say that Senator PEPPER has misquoted Mr. Churchill. In other words, he has gone back to the Lloyd George proposal of 1911, which was something entirely different, which was private and not governmental in its nature. So I first want to clear up his misquotation.

Then I want to point out that the statement that they are not trying to copy the British program is definitely not correct. In fact, Mr. Ewing, the commissioner, has indicated that that is the program they are following.

Senator PEPPER'S statement simply was that they are going to raise the money in a different way. It doesn't change the nature of the program whether you collect the taxes one way or another.

The key point is that under the program that President Truman and Senator PEPPER have presented for adoption by the American Congress, you would bring a large sum of money, perhaps $3,000,000,000 to $8,000,000,000, under the direction of a national committee appointed by the President, of different men, and you would bring all the doctors and the nurses and the hospitals and dentists under the thumb of this committee of five. All the experience in the world says when you do that you injure the health of the people rather than promote the health of the people.

Chairman GRANIK. How about that, Senator?

Senator PEPPER. In the first place, I am quoting from the Evening Star in Washington, excerpts from the text of Churchill's broadcast on war progress and postwar hopes, March 22, 1943. This is Mr. Churchill's language in 1943, when he thought what he said in 1911 was pertinent because here is what Mr. Churchill said:

"Here is a real opportunity for what I once called 'bring the magic of averages to the rescue of millions.' Therefore, you must rank me and my colleagues as partisans of national compulsory insurance for all classes, for all purposes, from the cradle to the grave."

Furthermore——

Chairman GRANIK. Do you want to comment, Governor?

Senator PEPPER. Let me continue. Furthermore, this same Hon. Winston Churchill in a radio speech on January 23, 1950, said the following:

"As head of the wartime government I proclaimed the 4-year plan of social reform, education, family allowances, and the national-health scheme. Although mu"ed and twisted a bit by ministerial ineptitude, this program has now largely been carried through."

The first sentence under the title "The Health Service," in the pamphlet This Is the Road, of the Conservative and Unionists Party for the elections of this year, which is Churchill's party, reads:

"We pledge ourselves to maintain and improve the health service."

So they are not going back on their national health service.

Mr. STASSEN. The Senator is very clearly quickly shifting between talk of the health service or talk of the national compulsory insurance system. I think that when we definitely analyze what has happened under the British system, we realize that it is a system that we should never, never follow. The facts are that the death rate has increased in England under this new national health program. It went up rather sharply. The facts are that illness and sickness and absence for illness increased in the first year of the plan.

It is true that the coalition government during the war appointed the so-called Beveridge Commission, and that out of that arose in the postwar situation the adoption of the plan. It is also true that they clearly aren't going to make any major change in their plan until they have tried it out for a few years, certainly not in the first year. But there has been one significant reversal already which the coalition of both parties have already adopted, and that is when they started out to give away all medicine, they found the abuses so extensive that Mr. Attlee on October 24 reversed that policy and began to make a change.

I think in quoting specific Britishers we are getting a bit off the point. The point is, we want to advance the health of the American people. We want better health in America. How can we get it? The main point would be some constructive moves, but definitely we do not want to take the move that has caused so many other countries to go down in their health programs.

I have here the statistics of all the nations in the world, the point presented by the United Nations. These statistics show that the United States today has the best health record of any major country in the world; in other words, more favorable death statistics, better situations as to maternal deaths, as to illness, and all of those major factors of health. When we have the best health record in the world, why don't we improve the system we have rather than start to copy countries with records not as good as ours.

Chairman GRANIK. Senator? Go ahead, Senator.

Senator PEPPER. Let me say in the first place that we are talking in respect to Mr. Churchill and the British health scheme which the Governor had so severely criticized in his two articles in Reader's Digest. We are both talking about the same thing.

In the second place, the governor, in his Reader's Digest article, has attributed to the health insurance service of Great Britain greater sickness and more deaths. The distinguished Governor pointed dramatically at the conclusion of his first article to 72,000 more tombstones in the cemeteries of Britain, which he clearly inferred, if he didn't charge, were attributable to this national health service. The Governor and I are in politics, or we have been. He may still be—both of us. I would like to ask my distinguished friend if it is likely that Winston Churchill, slashing as he is at the Labor Government, if he believes and if the British people believe that a national health scheme in effect was causing more tombstones in the cemeteries and more illness, if the British Conservative Party which Churchill leads would have said "We propose to maintain and improve the national health service," and if Dr. Charles Hill, who is to the British medical profession what Dr. Fishbein used to be to the American, before the American Medical Association let him out, if Dr. Charles Hill would say that no political party dares to propose the repeal of the national health service.

Mr. STASSEN. Senator, may I point out when you quoted Mr. Churchill, he said, "We will improve the health service to the British people." He did not say "We will hold onto this complete compulsory system that was put in." The manner in which the British will proceed, in my judgment, will be that after they have had 2 or 3 or 4 years' experience, they will again appoint a coalition commission, which is the way the British do things, and on a bipartisan basis they will review and study what has happened, and then you will begin to see the major change in the British approach. They never have and they do not make issues in their campaigns of things of this kind. They study them. Then they move together and then if they find they are mistaken they will study them again under a bipartisan commission and move again.

Let me point out that it was the Churchill government that received the Beveridge Commission report. Obviously, as I say in those articles in the Reader's Digest, you shouldn't expect a conclusive judgment in 1 year's time, but when President Truman and yourself are proposing that we should copy the British, then I say let's look at the 1-year record, and when the 1-year record shows more deaths than the year before, shows more illness than the year before, shows this discontent among the doctors and hospitals and nurses, then I say that means, let us not do it. Let's continue to watch the British, but let's move on some of the problems that definitely need action in America and upon which we can all agree and upon which we can cooperate with the American doctors.

Senator PEPPER. The Governor means that the British political parties don't raise issues when they don't think it would be politically wise to raise those issues.

Mr. STASSEN. That isn't what I mean, Senator, and you know it.

Senator PEPPER. You as Governor know that the British Conservative Party issued this statement on the health service, and then we will pass on.

Mr. STASSEN. Let's get to our own pattern here. Do we want it here?

Senator PEPPER. Let's get one fact. Do you say that the British Conservative Party proposes to repeal the compulsory health service in existence at the present time?

Mr. STASSEN. Of course not. Neither party proposes it now. I merely say——

Senator PEPPER. Having settled that, now let's go——

Mr. STASSEN. There are other important issues in this British election that is coming up. They will reexamine their health plan in a few years by a commission similar to the Beveridge Commission.

Senator PEPPER. We are examining ours, and having examined it, we are discovering the deficiencies we are trying to correct by national health insurance. That is where we are today. As I said a while ago, ours is a national health-insurance program. It is not State medicine; it is not charity. The individual covered under our proposal would simply pay, as he does under social-security coverage at the present time a percentage of his income up to a maximum amount. For example, it is proposed now that a covered worker would pay when the program is in operation 1½ percent of his income, not to exceed $400 a month. The maximum he would pay would be $6 a month, if he made $400 a month income. If he made $100 a month in income, he would pay $1.50, 1½ percent of the $100. His employer would pay the same amount. That fund would go into the health fund, as it were, out of which hospital and medical costs would be paid, with the distinct and the very clear reservation that the covered individual, the patient, would have the free choice of his doctor, and the doctor would have the free choice of determining whether he would accept a given patient or not.

I ask the question, if it is found important and no political party proposes to repeal it, to establish social security, where in order to provide retired people something like an annuity at 65, we require them to make a periodic deduction from their income, then surely the importance of life and health to those people would justify the extension of that social-security principle so that they would always be assured of adequate hospital and medical care.

Chairman GRANIK. Governor Stassen.

Mr. STASSEN. Senator, you present, of course, President's Truman's and your own proposal in a very appealing way, and it sounds good on the surface, but this is what actually happens. When you provide a central fund which is billions of dollars, and you say you are going to pay all the hospital and medical bills out of that fund, the experience in every country in the world has been that then abuses arise; in other words, that a small percentage of the people who are malingerers or hypochondriacs, call up the hospitals, call up the doctors' offices, and the doctors cannot perform as good service as they did before. The result of these abuses is that rather than having better health service, you have a depreciating health service, and, as I said, a higher death rate and more illness. So the people who think they are going to get something better and cheaper find that actually they are paying through taxes a higher cost for something available in greater quantity but of lower quality, and that that has been the result throughout the world. That is the evil of your compulsory health service.

The other thing is that you bring all the doctors under the politicians. You bring the political situation into the patient-doctor relationship. I say that clearly under such a system it would become more important for a doctor in Florida to know Senator PEPPER or for a doctor in Missouri to know the Democratic leaders there, than it would be for him to make progress in his own profession and do a better job. When that political situation comes about, when you bring the political aspect into medicine, then the health of the people suffers.

Senator PEPPER. I think the quality of medical service that we get out at Walter Reed and at the Naval Hospital at Bethesda and generally the quality of medical service being given in the Veterans' Administration hospitals over the country and in the Public Health hospitals, it might be called political in that it is provided by the Government, but it is of a quality that I think commends itself to the people.

The Governor has stated the assumption that the quality of British medical service was impaired by this plan. I have here a letter dated the 20th of January 1950, from the secretary of the British Medical Association. When I quoted to him the governor's statement about "more medical care, lower quality for more people at higher cost," here is what Dr. Hill, who, as I said, corresponds to what Dr. Fishbein was in this country, said:

"Lower quality. We do not admit this."

The gist of the whole matter is that we have all readily admitted that there would be many administrative problems to be overcome. I have here what the British Conservative Party proposes to do. It proposes to improve the administration of this bill, but not to change its basic essentials, so that all the British people will get the medical and hospital care they require. But surely it is easier to overcome that than the people to be denied service they need and can't pay for.

Chairman GRANIK. Let's take some questions from our audience. Miss Penuel has a gentleman there with a question.

Question. Senator PEPPER, basically isn't the shortage of hospitals, clinics, nurses, and doctors the fundamental problem facing us today, and not the need for compulsory national health insurance, in your opinion?

Senator PEPPER. No; that is not the exclusive problem. However, the Senate passed a bill—and I was the principal author of the bill and handled it in the Senate, which is now awaiting passage by the House—under which for the first time the Federal Government gives aid in the establishment of medical schools, and I hope Florida will get one from it, and I hope some Florida people are listening in. It provides a Federal assistance fund to aid in the operation of medical schools so as to train more personnel and other aid to train more dentists and nurses and hospital administrators and technologists. However, even when we have more professional people and more hospitals—and the Federal Government is now contributing $150,000,000 a year to do that, and I am one of the authors of that bill, and that is in effect—we are also expanding vastly our research programs, and I have been identified with nearly every one of them. But when we get the doctors and professional people, the hospitals, and these expensive drugs, I say to you that the simple income facts of the people of this country show that the major part of our people simply cannot pay the cost without being ruined or without having to accept charity.

Chairman GRANIK. Governor Stassen?

Mr. STASSEN. The facts of the matter are that the greatest deficiency in medical service now is for the Negro population of the South. Those are the people who are most being denied health services, and that rests directly with the discrimination on the part of the leaders of the Senator's party in the South. That is one of the problems that we ought to move on to correct.

In this matter of providing facilities for them, the facts are that the great advance that has been made is under the Hill-Burton Act. The Hill-Burton Act was a bipartisan act passed some 5 years ago and, of course, when Senator Burton, now a Justice of the Supreme Court, was in the Senate. That was a bipartisan measure upon which everybody agreed, and 1,000 local hospitals and facilities have been increased through it. That is the kind of constructive American type of action I want to see.

Likewise we have this measure to assist in medical education, and yet it doesn't get passed. Why don't the President and Senator PEPPER, instead of asking for something which all the doctors and all the experience of the world say is bad, bring through some of these constructive measures for improvement of medical education, for more medical education, and opportunities in hospitals for the Negroes of the South, and for an advance in the sound medical program in mental health which we all agree is a governmental problem, instead of trying to upset the whole medical profession and the whole, great, magnificent health service in this country?

Senator PEPPER. The Governor is certainly overlooking the obvious non sequitur which must appear in my distinguished friend's argument. We are not trying to upset anything, unless it upsets the doctors a little bit to have to agree to a reasonable schedule of fees if they perform services for this health-insurance fund. They are performing services already for the Veterans' Administration. They are working on salary at Walter Reed and at the Naval Hospital. I find Senators and Congressmen who speak very loudly against national health insurance are quite ready to go out and take the services of a salaried doctor at Walter Reed.

Chairman GRANIK. A question from a lady over there.

Question. Governor Stassen, can there be an effective alternative to a national health insurance program?

Mr. STASSEN. Yes; definitely. We can move on a constructive program, and it could be worked out on a bipartisan basis and with the doctors. In fact, the third and fourth articles in the Reader's Digest will come forward strong on the constructive side. The important thing is first to conclude that we don't want to go into a program which causes all these other countries to have bad health statistics. We want, rather, to work out an American type program. When Senator PEPPER speaks as if the veterans' medicine program is an example for it, he knows that that is not a correct example. In the first place, you are talking about a service limited in a total free profession, and the voluntary deans committees and things of that kind that have helped in the veterans' medical program have built it up. But the facts of the matter are that the great advances in medicine in the United States have not come under Government medicine. They have been made by the free medical profession and by the great universities of the country, such as Harvard Medical School, Chicago Medical School, and our own University of Pennsylvania Medical School, which was the first one established in this country. We will give due credit for a fairly good job in the veterans' hospitals, but that is certainly not any argument for taking over the whole of the medical profession and putting them under the thumb of a group of politicians appointed by the President.

Senator PEPPER. Nobody proposes to take over any part of the medical profession or any hospital in the country. Contrasting our proposals with that of Britain, they have taken over practically all the hospitals, but we do not propose to take over a single hospital. We only give Federal assistance in the establishment and in the construction or in the enlargement of hospitals. So, if doctors didn't wish to come under the other plan by accepting a reasonable schedule of fees, they could stay out from under it.

Mr. STASSEN. Senator, may I pick you up on that?

Senator PEPPER. Just one minute. You made a statement or two, Governor. Allow me to speak of one other fact.

The Governor has mentioned the question, why do we fly in the face of experience. I am prepared to show here that even Sweden who, like most other countries, started off with the ordinary private fee for service system, finally moved along to the next step, the voluntary system, as England did for a while, found those were inadequate because the people who needed to be in it didn't join and they dropped out before they should have. Then they moved on to the compulsory, and that is exactly the evolution here. Now we are up to the voluntary stage, and we are seeing the necessity, as the American Medical Association did in 1932, of moving on to the compulsory to protect the masses of the people.

Chairman GRANIK. I am sorry, gentlemen, we just have time for summaries. I understand you want to comment. Will you comment in your summary, Governor?

Mr. STASSEN. Yes. First of all, your reference to Sweden. The facts of the matter are that under the semisocialist medical program in Sweden, they are not making as good a record as they are in a similar place in the United States. Let me put it this way so you understand it: A Swede in Minnesota lives longer and is healthier than a Swede in Sweden. That is an extreme way of putting it, but it is true. In other words, an American of Swedish background in Minnesota has a better health record under the American system than do the Swedes in Sweden under the semisocialist system which doesn't even go as far as the Senator's proposal.

Now on your statement that you were not taking over the professions, let me quote you section 717 of the bill which you and President Truman are proposing. This says that every doctor, every nurse, every individual, every hospital that comes under this act shall enter an agreement "which shall contain an undertaking to comply with this title and with regulations prescribed by the National Health Board thereunder."

In other words, everybody in all these professions would have to comply with all the regulations and rulings of this five-man board appointed by the President. If that wouldn't bring them under the thumb of the politicians, I don't know what would.

Chairman GRANIK. Thank you, Governor. Your summary, Senator.

Senator PEPPER. Governor, it has been made very clear in the hearings and in the discussion of this measure that the administration of this measure will be in local hands, not only the State levels but down at the local level, and affecting all professional matters that every local committee which has decisive authority shall be composed of a majority of professional people.

Mr. STASSEN. The bill does not so provide.

Senator PEPPER. There is a sentence in there that would allow any other effect? All your Republican member has to propose is to amend it, and he will have a sympathetic hearing. On the subject of Sweden, the Governor evidently didn't recall that the Swedish system, the voluntary plan, goes into effect in 1951, so he is not talking about the same thing that they are going to have over there a little bit later.

Mr. STASSEN. Semisocialist system, I said.

Chairman GRANIK. I am sorry, gentlemen, the time is up.

Our speakers have been Gov. Harold E. Stassen, president of the University of Pennsylvania, and Senator CLAUDE PEPPER, Democrat, of Florida, who have been discussing the question, "Do we want national-health insurance in the United States?"

Thank you gentlemen.

Happenings in Washington

EXTENSION OF REMARKS
OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, February 17 (legislative day of Wednesday, January 4), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by me on February 13.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HAPPENINGS IN WASHINGTON

(Program No. 18)

This is ED MARTIN, speaking to you from the Nation's Capital, and bringing you another discussion of Happenings in Washington.

As you know, in these broadcasts I have always tried to discuss matters in which the people of our State have indicated they are vitally interested.

In recent weeks my mail has been unusually heavy on the subject of communism and the Alger Hiss case. I have had dozens of letters from all parts of Pennsylvania condemning the Secretary of State, Dean Acheson, for his statement following the conviction of Hiss.

Certainly this whole matter is timely and important. It must be given prompt, serious, and sober attention.

Certainly Americans are wise to ask whether our Government has been properly purged of seditious elements. Certainly they are right in insisting that nothing be done or said in high circles that would give encouragement to those who conspire to destroy this Nation or surrender it to foreign ideologies.

My own stand on communism is well known to you. For years—for many years—I have fought communism and I have warned our people to be on guard against it.

I was in the forefront of this fight at a time when it was decidedly unpopular to take a stand against communism. Not so many years ago, you will recall, those who were trying to explain to Americans that communism was a cancerous growth, a deadly menace to American freedom, were sneeringly called red-baiters. We were ridiculed. We were laughed at. Some were even smeared as Fascists.

Today, I am happy to say, we have come a long way toward winning that fight. Today I believe most Americans are alert to the danger. Not many are fooled by claims that communism is a better system of government than our own plan of individual freedom in a self-governing republic.

Today most Americans understand that communism is another form of ruthless dictatorship which denies God and destroys liberty. Today a man can say these things without being called a black-hearted Fascist.

There is no doubt that the disclosures of the Alger Hiss trial have been tremendously important. Now no one can fail to be convinced—despite official denials—that Communists had worked their way into high places in our Government and were coloring our foreign and domestic policies.

I don't know whether these men have all been rooted out yet. I do know that much of their influence remains.

I do know that some of the policies which the Administration has been following at home and abroad are policies which Communists, or fellow travelers, or their innocent dupes, would set in motion and support.

Think that over. I'll come back to it later.

I want to talk briefly about Dean Acheson, the Secretary of State. In the press and in my mail there have been many demands for his impeachment.

First of all, I am sure he is not a Communist. But I do believe he made a bad and indecent blunder when, after the conviction of Alger Hiss, Mr. Acheson said in effect that this traitor was his friend, and that even if the Supreme Court should uphold the conviction, he, Acheson, would not desert his friend.

Had Dean Acheson first resigned as Secretary of State, and then made that statement, it might have been a courageous and noble thing. He, as a private individual, would be standing by a friend. But Dean Acheson did not resign. He is not merely a private citizen.

Dean Acheson stands at the head of the department which makes, directs, and carries out the foreign policy for this Nation of 150,000,000 men, women, and children. Dean Acheson speaks not only for that department, but to the rest of the world he is the official spokesman for the United States.

Alger Hiss was formerly a high official of the State Department. Alger Hiss betrayed his country by stealing secrets of the State Department and transmitting them to a foreign dictatorship whose sole aim is to enslave the world by climbing over a prostrate America.

Thus we have the head of our State Department endorsing and supporting a man in his own department who resorted to perjury and hide his part in a disloyal conspiracy.

And, as I said earlier, Dean Acheson's policies regarding China and other places strongly indicate that he is the victim of policies laid down by Communists and Communist sympathizers, like Alger Hiss.

Now, my fellow Pennsylvanians, it seems to me that this entire Administration is tarred with the same brush in this case.

Let me remind you that 1,336 Federal employees resigned while being investigated, rather than face questioning by a loyalty board, and another 848 quit their jobs before the board could issue rulings in their cases. Only 123 were fired for disloyalty in the weeding-out process which began in 1947.

Not only has the administration been riddled with Communists but at the very top it adopted a policy of evasion and concealment, scoffing at protests and denying that Communist infiltration in the Government was a serious matter.

Up to the very top, this administration joined in the smears against those who tried to arouse the Nation to what was going on. It ridiculed those who warned America that Communists had wormed their way into high places.

I don't imply that the administration leaders realized they were aiding a foreign conspiracy. I am certain they had no realization of it.

But I point this out because they are the people who ask you to trust their judgment, their good sense, and their inside information to run your country and to protect you.

Let me remind you of just a few incidents of the many that happened.

As Pennsylvanians you will remember that George H. Earle, a former Democratic Governor of our State and a former diplomat under President Roosevelt attempted, early in 1947, to warn Mr. Truman against the Communist dangers at home.

But President Truman did not accept the warning. In his reply to George Earle he said—and I quote—"People are wrought up about the Communist bugaboo, but I am of the opinion that the country is perfectly safe as far as communism is concerned."

At that time, back in February 1947, the administration was liberally sprinkled with

Communists and fellow travelers. At that time domestic and foreign policies were being formulated under the influence of these people.

At that time, every Government department was under orders from the White House to withhold its files from a congressional committee seeking to ferret out communism.

Mr. Truman was certain it was nothing but a "bugaboo." Let me remind you that more than a year later, when public clamor had risen to a high pitch, the President reluctantly, and for the first time, ordered the FBI to check the loyalty of Federal employees.

In 1948, you will remember, when the House investigating committee asked cooperation in its probe which led to uncovering the disgraceful Alger Hiss case, the President only ordered his departments to lock up their files, but he said in a public statement—and I quote:

"The public hearings now under way are serving no useful purpose. On the contrary, they are doing irreparable harm to certain persons, seriously impairing the morale of Federal employees, and undermining confidence in the Government."

That was what Mr. Truman said. One of the persons who was being done "irreparable harm," I might advise you, was Alger Hiss.

Then Mr. Truman went on to make another charge. He declared that these investigations into a spy system working right here in Washington, in Government agencies, was—and I quote—"a red herring."

Surely you all remember that. It was the considered judgment of an administration which asks you to trust it to make foreign and domestic policy in your best interests.

There was still another Presidential statement in June 1948, when Mr. Truman was pooh-poohing what he called a red herring. He said—and I quote:

"I went to Potsdam in 1945 * * * with the kindliest feelings toward Russia and we made certain agreements, specific agreements. I got very well acquainted with Joe Stalin and I like old Joe. He's a decent fellow." End of quote.

Do you folks all remember that?

My fellow Pennsylvanians, I have a confession to make.

I like old Harry. I believe that deep down he's a decent fellow.

But let me add this. I'd like old Harry a lot better if he would just confess error once in a while.

I'd like him a lot better if he'd admit to the country that he was wrong about the red herring and wrong about Joe Stalin.

I'd like him a lot better if he'd clamp down on his high officials so they would not go around extending the hand of friendship to traitors to our country.

I'd like him a lot better if he'd admit that a terrible blunder was made at Yalta—that a sick Franklin Roosevelt, influenced by Communist Alger Hiss, sold out anti-Communist China to Joe Stalin and the Soviet Union.

I'd like him a lot better if he would admit that he, Harry Truman, blundered terribly when, fooled by his pro-Communist advisers, he made a deal which gave us a zone of Berlin but without a highway leading to it, so that we had to use the airlift, and are having more trouble even now.

I'd like old Harry better if he'd admit error in the Chinese policy which caused us to sell out the Nationalists to the Communists.

But I guess he won't.

The disclosures of the Hiss case and the more recent revelation that atomic secrets have been betrayed to Soviet Russia make it imperative for every American to be on his guard.

From all parts of our country indignant and aroused citizens and organizations have demanded a full investigation.

I shall support that demand.

You have a right to know the full story of Communist infiltration into places of trust and importance in our Government.

You should know what hidden influence made it possible for disloyal conspirators against America to gain access to secret security information and to deal with Communist agents and spies.

Let us demand a thorough search to determine whether the Hiss influence still prevails among those who guide national policy in domestic and foreign affairs.

Let us open the files of the State Department and the records of the Department of Justice and let the FBI bring out the evidence it has to support the statement of J. Edgar Hoover, which I now quote:

"Communism, in reality, is not a political party. It is a way of life—an evil and malignant way of life."

As free Americans let us proclaim our loyalty to the American way of life.

This is ED MARTIN, speaking to you from the Nation's Capital. I will be with you again in 2 weeks. Thank you for your attention.

Law-Enforcement Problems

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Friday, February 17 (legislative day of Wednesday, January 4), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix an address by Hon. J. Howard McGrath, Attorney General of the United States, on law-enforcement problems. General McGrath delivered this very excellent speech at the Attorney General's conference on February 15, 1950, which was attended by State law-enforcement representatives. I think General McGrath's approach to this pressing problem is one that should be widely discussed and seriously considered.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Civic leaders as well as lawyers are accustomed to look for and benefit from precedents. In arranging this conference of municipal, State, and Federal law-enforcement officials, we observed that in recent years, since the First World War, this country has had a number of challenging crime problems, Nation-wide in scope, which have lent themselves to the technique of cooperative conference, study, and action, by cross-section of the country's enforcement agencies.

Beginning in 1929, the lawlessness precipitated by war and prohibition was examined into by the National Commission on Law Observance and Enforcement. In 1934, the fast-moving, violent gangster and racketeer, successor of the bootlegger, was the cause for concern, and resulted in the calling of a conference on crime. In 1940, enforcement problems relating to national defense caused the summoning of the Federal-State Conference on Law Enforcement Problems of National Defense. In 1946, Attorney General Clark summoned the National Conference on Prevention and Control of Juvenile Delinquency. All of these conferences resulted in notable developments in law enforcement.

Today, a new phase of the old problem is upon us, requiring the concentration of the combined efforts of all our law-enforcing agencies. The mobsters of the 1930's have not been entirely eliminated. But their leadership is being supplanted. The modern version combines the worst features of big-business manipulations with violence and corruption to clamp a monopoly or monopolies on the illegal businesses of bookmaking, slot machines, policy, or the numbers game, and other forms of commercialized gambling. These operations of the American public cost billions of dollars and threaten to make a mockery of respectable local self-government. There is reason to believe that such operations are tied in with prostitution and narcotics, and the more violent forms of underworld criminal activity.

Bookmaking, slot machines, numbers games, and the like are illegal in almost every State. It is, therefore, an inescapable conclusion, evidenced by the surveys of a number of local crime commissions and a few successful prosecutions, that in this modern society gambling as a private business cannot operate on its present gigantic scale without corrupting what it touches.

In organized gambling, we are dealing with the biggest illicit traffic since prohibition. Everywhere the pattern is the same—struggling and double-crossing, to eliminate competitors for the right to cheat the public. The racket produces nothing. It contributes nothing to society but trouble.

As an example, the modern numbers racket has been built upon the nickel and dime bets of hundreds of thousands of our poorest people. In more recent years it has moved into offices, shops, and factories where the money wagered makes it a business estimated by investigators to yield $2,000,000,000 dollars annually. Employee absorption in the play has so affected production in plants in some localities as to cause company and union investigations, and combined action to drive out those employees acting as numbers runners.

Businessmen's associations are concerned, not only with the numbers racket, but with bookmaking, slot machines, punch boards, and all forms of lotteries. They find that in communities where the business of gambling openly flourishes the clientele of the legitimate businesses are not paying bills and are dissipating their earnings.

I need not dwell on the demoralizing effect upon our children, who are everywhere bombarded, by sight and by hearing, with the temptations of gaming and lotteries. Benjamin Franklin wisely said, "Keep flax from fire, youth from gaming."

The people of this country, State by State, painfully and painstakingly evolved a public policy against the gambling business. At one time public gambling in lotteries was an accepted means of raising funds for public use. The State legislatures, and even Congress, authorized lotteries and chartered private companies to conduct them. The corruption that flowed from lotteries, marked by the bribery of public officials, and the mere trickle of funds into the public treasuries as compared to the huge sums raised, led gradually to the prohibition by the State of lotteries and other forms of gambling. This policy was capped by congressional legislation in 1890 forbidding the sending of lottery tickets in the mails, and supplemented 5 years later by legislation forbidding the transportation of lottery tickets in interstate commerce.

Still later, in 1934, Congress forbade radio broadcasting of advertising and information concerning lotteries.

This basic Nation-wide public policy against the gambling business, which grew from local roots, has remained steadfast. The only substantial deviation has occurred in the situation where, by judicial decision or direct legislative action, approximately half the States have made an exception for betting at the track on horse or dog races, usually in connection with the so-called parimutuel system. This has not been accom-

panied by validation of the professional off-the-track betting, generally described as bookmaking. And, except for a very few States which have allowed local option in permitting the licensing of certain kinds of gambling, I believe we are justified in taking the view that throughout the United States there is, and has existed for many years, a public policy that condemns organized gambling and makes its activities criminal.

Are we then to allow that policy to be set at naught?

The President has expressed his grave concern with the increase of crime. We know that there are many sources and causes from which this condition arises. From information that has been coming to me, from your letters, and from the resolutions of your organizations forwarded to me, I believe we are in agreement that if there is a single most prolific source, constituting one of our greatest dangers, it is the continued flourishing of organized gambling, about which, as the most lucrative of the illegitimate enterprises, revolves many nefarious activities of the underworld. Out of this conviction, and in order not to dissipate our energies in a 1-day session devoted to exploration, I have felt constrained to focus attention without delay upon this major problem.

This is your meeting, called principally at your request. It is your views that will be most important. You are free to discuss all phases of organized crime. Our interdependence in matters of law enforcement, our need and determination to cooperate and help in our mutual problem will carry us forward.

I believe the agenda will develop clearly what are the fundamental problems, and from the discussion we will perceive the means for studying their solution. As part of our thinking upon solutions, we cannot avoid being acutely aware of the division of governmental responsibilities in dealing with crime. Let it be stated at once on behalf of the Federal agencies that it will not be the purpose of the Federal Government to usurp the functions of the State and local police, or to conduct activities that extend beyond constitutional limitations or the usages of our people. We must never lose sight of the fundamental principle that local responsibility, fully realized, makes for sound government and healthy law enforcement. That is the true meaning of "States rights" and "home rule." Conditions which breed contempt for law can only become worse if we allow ourselves to be lured away from sound principle by the temptation to pass off State and municipal responsibilities to the Federal Government. Nevertheless, adherence to this view will not detract from the common purpose to assist and complement the law-enforcing agencies charged with primary responsibility, and to devise means of aiding each other, within the limits of law, however responsibility is vested. In this connection, I draw your attention to the presence here, not only of representatives of the United States attorneys and the various divisions and bureaus of the Department of Justice, but of the several specialists in particular kinds of law enforcement representing, among others, six units of the Treasury Department, the Post Office Department, and the Federal Communications Commission. The enforcement programs of these Federal agencies and their programs of cooperation with local authorities are known to you; but their representatives have promised to be available to inform you further, and to consult on means of advancing the purposes of this meeting.

It may be that the discussions today will reveal the need for new legislation of a municipal or State or Federal character. I believe that there is much that can be done by way of reexamining and modernizing local codes which the pressure of the past war and related absorptions have caused us to neglect. In fields where cooperation among the States is required it may be useful to review and strengthen what has been done in the field of interstate compacts pursuant to the blanket congressional consent given in advance to all compacts entered into by any two or more States for the prevention of crime or the enforcement of criminal laws and policies. There should also be a complete review by both Federal and State authorities of the present so-called Fugitive Felon Act. If it is found that Federal legislation is needed we must take care that we do not recommend laws which will bring back the prohibition era. We must at all times be conscious of the need to present a program acceptable to our people and capable of effective enforcement. And certainly, I think we would all prefer to see that the methods adopted represent a direct approach to the problems requiring solution rather than any indirect or disguised method of prosecution. I would judge that the detailed study and continuing efforts necessary for the development of the various phases of a program of work can best be handled by committees, or a similar form of continuing machinery, to be provided by this conference. It may be that a further and broader conference will be required, when the detailed preparatory work is ready, in order to consolidate these efforts.

But whatever be the methods or techniques propounded in this fight against crime, we must not lose sight of the big, vital factor—the need of public support. I have already mentioned the insidious and clever propaganda activities of the organized gambling fraternity to legalize some of their operations. The American Municipal Association and others have informed me of well-organized and financed drives, now under way and conducted by the same fraternity, to oust mayors and other public officials who have had the temerity to stand for enforcement of the law. These activities and this kind of attempted intimidation indicate powerful opposition, which is being unwittingly aided by perhaps well-meaning but misguided appeasers, who believe that since the desire to gamble is found in many persons it must be a virtue which should be legalized and permitted to flourish commercially. It will take fertile minds and strong backs to plan and disseminate a campaign of persuasive education, which will interpret for the public the work you public officials are undertaking to do. Until the psychology of our people is so affected with an abhorrence of the kind of crime we are seeking to eliminate, high-minded public officials will continually be fighting an uphill battle.

I think the time is ripe for the drive for public support through press, radio, motion pictures, civic clubs, business leaders, churches, schools, labor unions, and every form of decent organization. The stage is set for you to capture the popular imagination in a stirring campaign to crush organized crime in your communities. I want you to know that in this effort I stand ready to give you every possible assistance.

Labor-Management Cooperation

EXTENSION OF REMARKS

OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Friday, February 17 (legislative day of Wednesday, January 4), 1950

Mr. O'CONOR. Mr. President, today labor-management disputes are once again front-page news. This would seem an appropriate occasion to consider the basis of labor-management cooperation. On November 1, 1949, a resident of my State discussed this subject in a speech that has attracted wide attention and much favorable comment. The address by Millard Cass, assistant to the Under Secretary of Labor, on the Basis of Labor-Management Cooperation is still being reproduced almost 4 months after it was delivered. Numerous labor and industry magazines and newspapers have carried it. I believe that my colleagues in the Congress will find Mr. Cass' address both interesting and challenging. I ask unanimous consent to insert it in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE BASIS FOR LABOR-MANAGEMENT COOPERATION

One hundred and one years ago Marx and Engels declared that society as a whole is more and more splitting up into two great hostile camps, into two great classes directly facing each other—the class of modern capitalists and the class of modern wage-laborers. They asserted that property in its present form, is based on the antagonism of capital and wage-labor. Their one sentence cure was the abolition of private property.

Since 1848 crackpots all over the world have been attempting to divide and alienate management and labor. Occasionally dictators have managed to take advantage of this and to subjugate both management and labor to serve their undemocratic and barbaric purposes.

Yet in over 100 years Communists have been unable to prove their charge that management and labor have antagonistic and irreconcilable interests. They have been unable to prove their point because it is just plain false. In the United States we have built the greatest industrial machine and the highest standard of living the world has ever known. We have produced more than any other nation in history and have distributed it more widely among our people than has any other nation. This dramatic record was achieved by labor-management cooperation. It would have been impossible had there been a class struggle such as Marx and Engels declared was inevitable. In America the whole people, not a class, is the tree on which the fruit is to be borne.

Recently a businessman wrote Secretary of Labor Maurice J. Tobin that as a result of the industrial revolution there has developed in this country a division into definite classes, namely the employer and the employee. This ever-increasing struggle has in the past few years gained tremendous momentum. If the tempo of this conflict is not reduced, we will eventually end up with a caste system of society.

Secretary Tobin's reply reflected his deep faith in our system. He said: "I should like to express my own strong belief that American society is not crystalizing into a caste system. Actually, un-American, totalitarian forces have based their hopes largely on such a division. It seems to me that the cleavages they have attempted to create do not exist, and that we have an extremely fluid and mobile society."

Promoting labor-management cooperation is a cardinal objective of the Labor Department. It is for that reason that Secretary Tobin asked me to speak to you.

It is a pleasure to meet with you tonight to discuss human relations in industry. You are to be commended for your constructive attitude toward this problem. When important business groups like the Rotary Club and the chamber of commerce seek means

of promoting industrial peace, they make a valuable contribution to our economy. I am always happy to speak to any group sincerely interested in labor-management cooperation. This voluntary cooperation of free p rtners in our industrial democracy is our strength. It is an enlightened capitalistic society's answer to the totalitarian philosophy of force, restriction, and abolition of freedom. The record speaks for itself. We find no need to hide behind an iron curtain. Let any honest observer judge which system provides greater benefits for its people.

Incidentally, I feel confident that we can cope with the threat of communism both domestically and internationally. The continued strengthening of democracy and democratic economies at home and abroad is the most effective blow we can deal to communism. We have already taken a number of important steps to strengthen and assist democratic governments. The foresight and courage which President Truman and Secretary of State Dean Acheson have demonstrated in the conduct of our foreign policy is assurance that it is in good hands. Secretary Acheson is now an adopted son of Maryland. His farm home near Sandy Spring gives the Free State first claim to him, and I know all Marylanders are proud that he is a resident of this State.

During recent weeks big strikes have made front-page headlines. The issues involved have been tried in advertisements and on the editorial pages. This publicizing of labor disputes is nothing new. From such publicity, however, many Americans have over the years gathered the impression that there is no such thing as industrial peace and that labor-management cooperation is a contradiction in terms. Nothing could be further from the truth.

There is a high degree of labor-management cooperation in our country. Every year about 100,000 collective-bargaining agreements between management and labor are peacefully negotiated. Tens of thousands of disputes and grievances are settled annually without a strike or lock-out. Hundreds of joint labor-management committees are still operating effectively. There are, under the auspices of the United States Department of Labor, 6,500 local joint apprenticeship committees. The 33,000 members of these committees, representing management and labor, work together to promote apprenticeship. Hundreds of persons from the ranks of management and labor are working together to promote industrial safety through the President's Conference on Industrial Safety. This is a continuing program sponsored by Secretary Tobin at the request of President Truman. In all of these fields workers and employers are working together to develop good human relations.

These instances of labor-management cooperation do not even get newspaper publicity, much less front-page billing. Disagreements get better coverage than agreements—and the more violent the disagreement, the more widely it is publicized. It is no wonder that we sometimes get a distorted impression of ourselves.

In the international field the same situation exists. There too we have a high degree of labor-management cooperation that receives extremely limited publicity. The United States has been a member of the International Labor Organization for 15 years and spends more than a million dollars a year on this account. Yet I should be surprised if many of you ever heard of this Organization. How many of you know that it is not a labor organization at all, but a specialized agency of the United Nations? How many of you know that management and labor are voting partners with governments in this Organization?

Outstanding Americans have been associated with ILO. Samuel Gompers helped found it. John Winant was once director general, and former Under Secretary of Labor David A. Morse is its present head. American Government, management, and labor have sent capable and conscientious representatives to the ILO. On the business side has been J. D. Zellerbach, president of the Crown Zellerbach Corp., and now chief of the United States special mission to Italy of the ECA. Your own fellow businessman and Marylander, Charles McCormick, president of McCormick & Co., of Baltimore, is the present representative of American employers. At the 1949 conference the junior Senator from Maryland, Hon. HERBERT R. O'CONOR, was United States Government delegate.

Over the years American employers and workers have found a large area for agreement in ILO deliberations. Yet these achievements have received comparatively little attention.

It is axiomatic that it takes two to make a bargain. It takes only one to start a fight, but it takes two to make a contract. There can be no industrial peace without the cooperation of both management and labor.

While we seek industrial peace, we recognize that the right to strike is important in a democracy. It is a badge of freedom. Only in totalitarian countries is the right to strike denied to workers in private industry. We are anxious for industrial peace, but recognize that there are instances when free people will disagree. At such times non-Government employees must be free to walk out. Compulsory arbitration is equally opposed by management and labor.

The basis for labor-management cooperation would appear to be threefold: the desire to have industrial peace; mutual understanding; and a community of interest.

The desire to have industrial peace is shared by management and labor generally. There are very few persons on either side who will not make sacrifices to achieve this end. Employers and workers are both well aware of the cost of strikes and lock-outs. The public suffers from labor disputes, but it is the parties who suffer first and most. Consequently, it is their own needs, rather than public pressure, that will in the first instance drive the parties to seek agreement.

Workers do not like to see wives and children hungry, to incur debts, and generally to imperil their economic security. A man does not treat lightly the stopping of his income, with all its attendant consequences. Employers also can seldom afford the luxury of strikes and lock-outs. They too may find themselves without income but with continuing responsibilities and expenses. Stockholders expect profits. Markets for products can be lost during a prolonged cessation of operations. Economic necessity requires that both management and labor seek industrial peace. It creates the desire for good human relations which is a basic element in their cooperation.

Mutual understanding is clearly a prerequisite to labor-management cooperation. It has been stated that: "Industrial warfare will plague America until leaders of labor and management understand and respect the survival needs of each other." That need for understanding is a fertile ground for all who are really interested in industrial peace. There is still much to be done to bring the story of labor to management and the story of management to labor. Let's consider it both ways.

Many employers have spent much time and energy and huge sums of money fighting unions. Yet some of them know little about the unions they condemn. For example, how many employers have attended union meetings before they became experts on democracy in unions? I need not tell you how wrong some of these experts have been. The Christian Science Monitor stated in an editorial published January 17, 1949:

"A lot of water has rolled under the bridge since the wave of big strikes and the framing of the Taft-Hartley Act in 1946 and 1947. A few widely held assumptions have been swept down the stream of experience. It ought to be clear by now that American workers, by and large, want to join unions and do so of their own free will; that, by and large, the rank and file dictate the acts of their leaders and back them up, and that, with very few exceptions, American labor doesn't like political strikes or Communist machinations any more than do Americans in general."

The accuracy of this statement was underscored by the votes of workers in National Labor Relations Board union-shop elections under the Taft-Hartley Act. In more than 94 percent of these elections the employees voted for a union shop.

Mutual understanding must be based on facts. Many workers think the boss coins money and gets an inordinately high return on his investment. What do employers have to fear from giving the true facts to their employees? How many employers attempt to explain to their workers pertinent facts about the company's financial position? There is, after all, a close relation between the company's economics and the worker's personal economics.

There are some serious omissions on the other side too. When workers talk of the company's ability to pay, how often do they first try to ascertain the facts? Some workers fail to consider the employer's investment. Thousands of employers have worked their way up from the bottom. Many risked their life's savings and put in long, hard hours to build the business. Yet some workers believe that employers are concerned only with their own self-interest. How many realize their own job is dependent upon the soundness of the company's economic position?

Workers need food, clothing, housing, and recreation, and look forward to saving something for old age or illness. How many employers know whether their workers can feed their families and live decently and healthfully on their wages? Some employers opposed raising the Federal minimum wage above the obsolete 40-cents-an-hour figure. Can you imagine raising a family today on $16 a week? Actually the higher minimum wage will help businessmen and farmers as well as workers because it will increase purchasing power and provide a strong, broad base of consumer demand.

While some employers are overlooking the needs of their employees, some workers are overlooking the needs of the business. Thus, in some instances workers do not feel any pride in the accomplishments of their company. A recent survey demonstrated that some workers do not even know the company's products, the location of other company plants, the name of the top officer, or the operations which precede and follow their own.

Employers are, without exception, proud of their products. They constantly advertise the merits of the things they sell or produce. I wonder how many employers are equally proud of their human relations. How many have such good employee relations that they are willing to advertise their human-relations programs?

Mutual understanding must be based upon knowledge as opposed to ignorance—facts as opposed to fiction. I have mentioned some of the areas in which additional facts are needed by management and labor. It is up to employers and workers to supply each other with the information necessary to an understanding of their respective problems and needs.

The third prerequisite to labor-management cooperation is a community of interest. There can be no doubt that employers and workers have a common interest in the economic well-being of each other. There is

a tendency in some quarters to forget that from time to time. Nevertheless, wages, purchasing power, sales, and profits are all interrelated. Both management and labor benefit from high levels of income. High wages create heavy consumer demand. Strong demand for goods and services supports high wages. There can be no prosperity for workers if there is none for employers. On the other hand, depressed wages mean reduced sales and lower income for business. The depression was rough on management and labor alike, while in 1948, for example, was good to both. The prosperity of both employers and workers is a matter of their mutual concern.

To be sure, the economic interests of workers and employers are not entirely the same. While both have a common interest in maximum production, there are conflicting interests in how the income from that production will be divided. There are only so many slices of the pie, and both management and labor cannot have all of them. At that point, their economic interests do conflict—since each wants as large a share as possible. If the pie is large enough, however—that is, if the gross national product is great enough—it would appear that both groups can get all they need. Consequently, instead of merely fighting over the division of a small pie, management and labor should be primarily concerned with producing a larger one.

I am not a Pollyanna. I cannot share the philosophy of Voltaire's Dr. Pangloss that "all is for the best in this best of all possible worlds." Nevertheless, I do believe that industrial peace is clearly within our grasp. It is required by the mutual interest of management and labor. It awaits only more widespread mutual understanding.

Naturally, in a democracy there will always be some labor disputes. From time to time economic tensions and adjustments may temporarily upset the delicate balance upon which successful bargaining depends. Moreover, human frailties may cause transitory disturbances based on irritations, bad judgment, personal ambition, or greed. In the main, of course, labor disputes will continue to reflect honest disagreement in spite of all good faith efforts to come to terms Nevertheless, men of good will usually can find a way to make and keep agreements.

Two recent examples of industrial statesmanship will demonstrate what can be done. A union bargaining committee did not feel satisfied with the employer's offer. Nevertheless, they felt that the offer was made in good faith. They invited the employer to come to the union meeting to explain to the workers his side of the case. This is not an area for compulsion or legislation. It is, however, an area for statesmanship. How much better off we would be if more employers were invited to union meetings and union leaders were invited to stockholders' and board of directors' meetings.

In another instance, after a strike over a different issue, a company's board of directors continued the plans to institute pensions for the workers. You can imagine the surprise of union leaders who returned from a strike to be asked to bargain concerning a pension plan. This refusal to be deterred from high humanitarian purposes is most commendable. It could well be emulated by employers and workers generally. It is a practical application of the Golden Rule.

In a democracy employees of private enterprise must retain the right to strike. It is up to both workers and employers, however, to eliminate the need for exercise of this right in as many cases as possible. We do not want to sacrifice or curtail the democratic freedoms of management and labor in order to obtain industrial peace. Peace at any price is too high a price. An honorable peace fair to both sides is, however, fully consistent with democratic freedoms.

It has often been said that it is harder to wage peace than to wage war. This is as true in the field of labor relations as it is in the field of international relations. The fruits of peace are infinitely more satisfying than the spoils of war. Consequently, it behooves all of us to continue to seek the road to industrial peace.

The Coal Shortage in New York

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Friday, February 17 (legislative day of Wednesday, January 4), 1950

Mr. IVES. Mr. President, as an indication of the seriousness of the coal shortage in New York, I ask unanimous consent to have printed in the Appendix of the RECORD a message to the legislature by Gov. Thomas E. Dewey, under date of February 14, 1950, certifying to the necessity of an immediate vote on a bill before the legislature entitled "An act providing emergency measures for the controlling of coal supplies."

This bill was passed by the legislature and approved by Governor Dewey on the 14th of February, and is now chapter 15 of the laws of 1950 of the State of New York. As soon as a copy of chapter 15 is received by me, I shall request that it be inserted in the RECORD, believing that it may be of interest to the Members of Congress.

There being no objection, the message was ordered to be printed in the RECORD, as follows:

STATE OF NEW YORK,
EXECUTIVE CHAMBER,
Albany, February 14, 1950.

To the Legislature:

Pursuant to the provisions of section 14 of article III of the Constitution and by virtue of the authority conferred upon me, I do hereby certify to the necessity of an immediate vote on assembly bill, introductory No. 2050, print No. 2151, entitled "An act providing emergency measures for the control of coal supplies."

The facts necessitating an immediate vote on this bill are as follows:

The long-continued partial strike of miners in the present Nation-wide strike in the production of coal has reduced the supplies in this State to the point of grave peril. There is generally on hand in the State less than 10 days' supply. In some communities, the supply will last only 3 or 4 days.

If coal mining should resume tomorrow, it would take some 8 to 12 days for coal to reach our consumers. There is presently a small amount of coal moving into the State from strip mines in Pennsylvania but this source is dwindling rapidly.

Many hospitals in the State have no coal reserves and depend upon dealers for daily deliveries. In many communities dealers no longer have sufficient coal on hand even to meet the needs of hospitals and vital public services.

In Jamestown, electricity is now being rationed. In Buffalo and other cities night schools have been canceled. In the southern tier counties, a number of milk-processing plants are finding it extremely difficult to get enough coal to operate their pasteurizing facilities.

Further reduction in the coal supply would cause many schools to close. It would also threaten the continued operation of water and sewerage systems, as well as other services essential to the welfare of the health of the people of the State of New York.

Industry has already curtailed production in many cities and a number of plants have been forced to close down.

If we knew that coal mining would be resumed within 2 or 3 days and that coal would be delivered within the State in 12 to 14 days, we could meet the existing emergencies by voluntary plans of rationing and sharing.

We have no means of knowing whether coal mining will be resumed in 2 days, 2 weeks, or 2 months. If the present strike should continue longer than a few days more, our State would face a catastrophe. Industry would be forced to close down widely and unemployment would spread rapidly, Rail transportation of food and its processing would be gravely imperiled, and many of the services essential to the maintenance of life would be curtailed or terminated.

Fortunately, most of the public utilities of the State have been farsighted in their accumulation of coal reserves, but if the strike should continue even these reserves might not be sufficient and it might be necessary for the State to profit by their foresight and take from them coal essential to the maintenance of the milk supply and other food processing, and the operation of hospitals, water and sewerage systems.

Since we presently face an immediate and serious danger to the health and welfare of our people which will become a grave emergency if the coal strike is not immediately brought to an end, I ask that your honorable bodies establish the office of solid fuels administrator.

I ask that you confer upon this office the power to regulate the distribution of coal still remaining in the possession of coal dealers in the State and to establish a system of priorities for the use of that coal. I further ask that you give the administrator authority to restrict the use of electric power, manufactured gas, and other products of coal, to the extent that he deems necessary.

I do not at this time seek power to appropriate coal in private hands and I hope the emergency will not require it. In the event that it becomes that grave, I shall not hesitate to return to you for all authority which may be needed to cope with whatever problems arise.

Given under my hand and the privy seal of the State at the capitol in the city of Albany this 14th day of February in the year of our Lord 1950.

By the Governor:

THOMAS E. DEWEY.
R. BURDELL BIXBY,
Assistant Secretary to the Governor.

Lights Stop Truman; He's Law-Abiding Man—Truman Flits Past 20 Red Lights

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES

Friday, February 17 (legislative day of Wednesday, January 4), 1950

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article

entitled "Lights Stop Truman; He's Law-Abiding Man," appearing in the Thursday, February 16, 1950, issue of the Washington Post.

I also ask unanimous consent to have inserted, immediately following it an article entitled "Truman Flits Past 20 Red Lights," appearing in the next day's issue, February 17, 1950 of the Washington Post.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post of February 16, 1950]

LIGHTS STOP TRUMAN; HE'S LAW-ABIDING MAN

President Truman told some of the Nation's law-enforcement officers yesterday that he was a law-abiding man.

"I never infringe a traffic rule," Mr. Truman said, bringing smiles. "I never exercise the prerogatives which I sometimes have of going through red lights. * * * I believe, first, that I am a citizen, and that, as a citizen, I ought to obey the laws."

Reporters who traveled behind the President on his way to the Department of Justice Building for his address noticed that his new Lincoln stopped for all red lights.

[From the Washington Post of February 17, 1950]

ENVIOUS GO GREEN AS TRUMAN FLITS PAST 20 RED LIGHTS

President Truman, who told a crime conference Wednesday he never exercised the prerogatives of his office to crash red lights, went through 20 of them yesterday.

It was all perfectly legal though. It occurred while the President was en route from Blair House to the Democratic Jefferson-Jackson Day shindig at the local armory under a police and secret service escort.

As other motorists waited enviously for the green, Mr. Truman's escort hit 28 traffic lights. Twenty were red.

Reply by Fact-Finding Mission on Jerusalem to Article by Dorothy Thompson

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, February 17 (legislative day of Wednesday, January 4), 1950

Mr. LEHMAN. Mr. President, recently a fact-finding mission on Jerusalem, under the auspices of the American Christian Palestine Committee, made an extensive visit to Israel and reported on the situation with regard to the Holy places in Jerusalem.

Some days ago, Miss Dorothy Thompson, an eminent and distinguished columnist, wrote an article about the findings of this mission. I have at hand a statement written by this mission, composed of six outstanding American Christian ministers and scholars, in reply to Miss Thompson's column. I ask the unanimous consent of the Senate to insert this statement in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT ANSWERING DOROTHY THOMPSON

As the members of the Fact-Finding Mission on Jerusalem which made an extensive visit to Israel in January under the auspices of the American Christian Palestine Committee, we wish to record our protest against the statements regarding our mission made by Miss Dorothy Thompson in a recent syndicated column. Miss Thompson states correctly enough that we have "reported against UN internationalization of Jerusalem as dangerous and unnecessary," and that we are not in agreement even with the less inclusive Garreau scheme to internationalize a smaller area of Jerusalem. Then, Miss Thompson proceeds completely to ignore the positive recommendation made by us for international supervision and safeguarding of religious interest in Jerusalem. She categorically states: "In short, it would appear that the mission wishes to keep the United Nations out of Palestine altogether." This is a dangerously untrue statement of our position. Our report cautions against the drafting of a Jerusalem statute by the United Nations that would interfere with the just territorial sovereignty of any nation, in this case the territory of Israel and Jordan. Both of these nations properly object to the UN plan on this ground. Freedom of access and protection of the holy places can easily be secured without the internationalization of territory or people. Though we so clearly opposed international administration of territory or people in Palestine, we quite as clearly proposed the setting up of a United Nations commission, with no territorial sovereignty, but with full right to seek the removal of existing limitations of access to the old city of Jerusalem and the holy places, all of which are in Arab territory. We went on to add the guaranties should be given to such a commission by both Jordan and Israel assuring the freedom and sanctity of the sacred places within their territories. It is difficult for us to understand how this proposal can be interpreted by Miss Thompson as indicating a desire to keep the United Nations out of Palestine altogether. The basic distinction we made between international control of the city and people of Jerusalem and international supervision of the sacred places, was quite clear to editorial writers in a great number of American newspapers, all of whom viewed our proposal with sympathy. It should have been quite as clear to Miss Thompson, particularly since in a column of hers printed in the latter half of December 1949, she herself set forth a similar approach to the problem of international control of Jerusalem: "It would, it seems to me, have been wiser (however unsatisfactory)," she said, "to have confined United Nations supervision and protection to the holy places of all religions and to have left the secular and political solution to negotiations between Israel and Transjordan." The passage of time and continued reflection upon the issue have merely reinforced our conviction that the true interests of Christianity and the progress of peace in the Middle East would best be served by United Nations adoption of a plan guaranteeing the sanctity of the holy places without infringing upon the territorial sovereignty of the nations occupying Jerusalem. Christian spokesmen in Israel with whom we spoke are, we found, in substantial accord with this point of view.

Signed by Dr. John W. Bradbury, editor, the Watchman-Examiner, national Baptist magazine; Dr. Samuel Guy Inman, former adviser on Latin-American Affairs to the State Department, and member of the Federal Council of Churches Commission of International Good Will; Dr. Victor Obenhaus, of the University of Chicago, Department Church in Agricultural and Industrial Life, and national chairman of Council for Social Action, Congregational Christian Church of America; Dr. Ralph W. Riley, president of American Baptist Theological Seminary; Mrs. M. E. Tilly, member of President Truman's Commission on Civil Rights, and field representative of the Southern Regional Council; Dr. Charles J. Turck, president of Macalester College, St. Paul, Minn.; members of Fact-Finding Mission on Jerusalem.

The Patriotism of a Catholic

EXTENSION OF REMARKS

OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Friday, February 17 (legislative day of Wednesday, January 4), 1950

Mr. O'CONOR. Mr. President, in these times when there are current divergent ideas as to what constitutes patriotism in the truest sense, a significant contribution to the discussion is made in an address delivered by the Honorable James A. Farley, before the Calvert Province, fourth degree Knights of Columbus jubilee banquet in New York on February 12.

Never have I seen the topic discussed in a more forthright and convincing manner. It so well deserves to be given widest attention that I ask unanimous consent that it be published in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE PATRIOTISM OF A CATHOLIC

If the American Philosophical Association had asked me to address one of its sessions on the works of Aristotle, I should feel about the same as I feel addressing fourth degree Knights of Columbus on the subject of patriotism of a Catholic. Who would know more about the topic than the listeners themselves? Who could enlighten them further, except possibly some renowned scholar out of their own ranks, full of years and learning?

In any gathering of fourth degree Knights of Columbus the whole atmosphere is charged with the spirit of patriotism in its high and historic sense. Your first three degrees pledge you to universal qualities—to charity, which seeks the good of all—to unity, which makes you stand shoulder to shoulder in defense of the one truth—to fraternity, the spirit of the brotherhood of all men under one Father. Your fourth degree, patriotism, gives a local direction to these universals, applying them first to the land in which you live.

The very name of this province—Calvert Province—summons up memories of the great Catholic Lord Baltimore, who founded the State of Maryland and left it a patriotic tradition celebrated ever since throughout the Republic. The names of assemblies gathered here commemorate patriotic laymen like Dr. John G. Coyle; Thomas Dongan, first Catholic Governor of this State; Joyce Kilmer, convert, poet, and war hero; and Charles Carroll of Carrollton who pledged the greatest fortune in the Colonies to the cause of the American Revolution. They also commemorate patriotic members of the hierarchy, such as Father Duffy, Archbishops Corrigan and Hughes, and Cardinal Farley.

Who am I to hope to enrich the tradition of Catholic patriotism typified by those illustrious names?

Yet perhaps I can make some simple offering. The university of practical politics bestows no degrees, but it does contribute a certain rough erudition of its own. I have been exposed to that rude learning, and I hope it is not immodest to say that some of it has been rubbed into me. If I speak to you as the representative of that university, I cannot be sure whether I come as faculty member, alumnus, or student. There are those who would say that I am a professor emeritus. I should not like to think that is so. There are, I think, really no alumni of the university of practical politics. I regard myself as one who is and always will be a student.

Many years of faithful attendance in the classroom of government have taught me some things about practical politics. As all students should, I reflect on what I have learned. One of the things I have learned is that you can find among the citizens of this country all degrees of patriotism, ranging from complete and true devotion to the Nation and its welfare, through indecision, indifference, and disrespect, down to concealed and even open contempt and hostility. I have also learned something about why that is so. Lastly, I have learned that the reasons for it are the very reasons why a high and pure degree of patriotism is and always will be found among our true practicing Catholic citizens—why, in particular, the public order in America has no more vigilant and militant defenders than the Knights of Columbus themselves.

This fact itself needs no proving. The time is past and gone when there was any organized belief among non-Catholic Americans that Catholics are alien in sympathy or aim. It may be that in a few perverse and stubborn souls there is still a conviction that the first allegiance of American Catholics is to a foreign sovereign plotting on a Roman hill. It may be, though I doubt it. We still hear these things said from time to time but they have all the flavor of hate and conscious falsehood. They have no flavor of honest conviction. It is certainly true that when some one like Commander John J. Shea, of the United States Navy, writes from abroad to his small son, "Be a good Catholic and you cannot help being a good American," and the admonition is broadcast after the commander's untimely death, the emotional response throughout the entire Nation is that it rings profoundly true.

But I would not think that I had said anything of great value if I cited only the recognized quality of Catholic patriotism and its proof by common consent. Inquiring minds are always asking the reasons for things. When you know the reason why a thing is what it is, you feel that you have an intelligent and satisfying knowledge of the thing itself. When someone says, "It isn't so," you can answer not only that it is so, but that you know why. If the reason is good, you have won the argument.

Why is it that the patriotism of a Catholic is intense? Why is it firm? Why is it immune to the infections that have played such havoc with the old-fashioned love of country in the hearts of so many citizens not of our faith? As I have seen it, the basic cause is the sound sense of values which every Catholic youngster absorbs with his catechism and which never leaves him so long as he remains true to his faith. The basic fact on which every Catholic orders his whole life down to the smallest detail is that the supreme and absolute value—the value on which all other values are built and to which they are all referred—is the will of God. To the secular society of the twentieth century, as to the pagan Greeks, man is the measure of all things. To the Catholic, God is the measure of all things. The will of God, revealed to us through Christ, puts everything in its proper place. Man is a creature of body and soul. Man has certain direct relations with God. A spiritual organization—that church—was established for the purpose of regulating man's spiritual activity in relation to God. Man also has relations with other men. A political organization—the state—was established to regulate those relationships, so that each man can satisfy his needs and be free of undue interference by others.

The Catholic knows that both organizations were established by God and that each is given its specific function and authority. His keen sense of the divinely established order in all things impresses on him that the authority of the state in temporal affairs is as much a part of the order of creation as the cycles of the planets. The natural reason which shows to the Catholic the hand of God in all his intimate personal affairs, also makes him feel the hand of God in the laws imposed by the state, and tells him that his moral obligation to give respectful obedience and devotion to the state in matters relating to its proper field of action is no different in substance from his moral obligation to accept the injunctions of the church in spiritual matters.

Natural reason might well be enough to make the Catholic a dutiful and patriotic citizen. But he has more. He has a positive edict from Christ himself, probably the most celebrated and dramatic edict in all Scripture, "Render to Caesar the things that are Caesar's and to God the things that are God's." This was no mere ironic reprimand. The Eternal Light never spoke an idle word. He was giving a vivid reminder of where the temporal and eternal authorities stand with reference to each other, and He was making clear that though the temporal authority stands infinitely below the eternal authority, it has a legitimate claim upon the conscience of its subjects. As I have said, all this, in one way or another, is in the catechism. Is it surprising, then, that Catholics hold themselves bound, as a matter of lifelong habit, to a standard of proper behavior as members of the temporal society, just as they hold themselves bound to a proper observance of their spiritual duties? No one would say that exceptions cannot be found, yet, in the main, the reverence and love of our Catholic citizens toward the temporal authority and society, symbolized in the Nation, is a natural and characteristic expression of their reverent submission to the will of God in all things.

Where in the world will you find a clearer perception of the whole order of creation and the place which temporal authority plays in that order? Where in the world will you find a more lively sense of moral obligation strictly binding in conscience?

And one thing more—where else will you find a more constant and keener realization that the same moral law governs temporal and spiritual affairs—that the same moral standards which the Catholic knows he must maintain for his own soul's salvation, are also the standards that the state must maintain in order to secure a peaceful and orderly life for its citizens? The Catholic is as loyal and faithful a supporter as the state has. He is, in the main, a supporter with the integrity and courage to profess publicly that just as he must serve the state, so the state must serve God, and that if the state acts immorally it will destroy itself.

Make no mistake about it, the state is in grave danger of destroying itself. As Professor Toynbee's celebrated works on history clearly prove, every civilization that has perished in the history of the world, has destroyed itself in very much the same way that we see our own society beginning to cut itself to pieces. We don't even have to take it from Toynbee. There are other forceful witnesses. In the university of practical politics we do hear of ancient happenings and classical authorities. We have heard of the disintegration of Rome and we have heard what the Roman historian Tacitus had to say about it. He said:

"We are entering upon the history of a period rich in disasters, gloomy with wars, rent with seditions and savage in its very hours of peace—there was defilement of sacred rites, adulteries in high places, the sea was crowded with exiles, island rocks drenched with murder * * * all was one delirium of hate and terror; slaves were bribed to betray their masters, freedmen their patrons. He who had no enemy was destroyed by his friends."

Who was to stop it? Not the Christians, for they were yet no moral force in that society. Who is to stop it now? Who cares about the defilement of sacred rites? Who protests adulteries in high places? Who pleads against the barbarous contempt for the dignity of the human soul which makes the seas and the air tragic roads for displaced persons? Who is horrified at murder, and especially at the new and polite kinds of murder like euthanasia and abortion? You know the answer. The voices of the Catholic clergy and laity—of the Holy Father—of the hierarchy of America—of the Knights of Columbus—cry out above all in the name of Christ against this coming darkness which a pagan society is bringing down on itself.

That is true patriotism, the patriotism which yearns with religious fervor for the truth and morals in our society, for integrity in government and for the happiness and prosperity of our beloved America.

Balance the Budget

EXTENSION OF REMARKS

OF

HON. RUSSELL V. MACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 9, 1950

Mr. MACK of Washington. Mr. Speaker, our national debt, today, is $257,000,000,000. Despite that staggering debt load, our Federal Government is spending at the rate of $5,000,000,000 a year or $15,000,000 a day more than its total income from all taxes. These taxes, this year, are several times those of any prewar peacetime year.

A family that is heavily in debt and which, despite its debt, continues year after year living beyond its income, inevitably will become bankrupt. Similarly, a government that is heavily in debt, which continues spending beyond its income, piling deficit upon deficit, is headed, as all history will reveal, for devaluation of its currency and inflation.

There is only one way to avoid the ruinous disaster to which our present fiscal policies inevitably will lead. That is by balancing the Federal budget. We can balance the budget in only two ways. Either we must raise taxes by $5,000,000,000 annually to make our income equal our outgo or we must reduce our Federal spending to bring it into balance with our tax income.

Local, State, and National taxes even now confiscate 30 percent, or almost one-third, of the national income. Can we

increase these taxes higher without undermining the incentive and thrift of our people? I think not.

Demagogs say that we will take the additional taxes from the rich and the rich alone. We cannot do that for taxes on the rich are already so high that if we took all of what they now have left after paying taxes, we would not get enough, at the present rate of spending, to balance the budget.

The latest year for which income-tax figures are available is 1947. In 1947, according to the Treasury Department, there were 195,675 individuals in this country who had incomes of $25,000 a year or more. After paying their personal income taxes these 195,695 individuals had $2,037,000,000 left. If the Government confiscated all of the income above $25,000 of all of these people, the Federal Government, at the present rate of spending, still would have a deficit of $3,000,000,000.

Obviously, if we attempt to balance the budget by increased taxes the little fellow, as well as the big one, will have to dig up more money. The little fellows would have less to spend on themselves and their families. If they have less to spend on their own needs and those of their families, buying will decrease. When buying decreases unemployment increases.

The surest way to throw business and employment of this Nation into a tail spin would be by raising taxes.

But we can and should balance the budget of this Nation by reducing wasteful and extravagant spending.

This year, we paid out $100,000,000 of taxpayers money to buy up potatoes, and then we destroyed these potatoes while at the same time importing 10,000 carloads of spuds from Canada.

The Hoover Commission Report says that the Post Office Department by spending $10,000,000 to modernize its equipment and methods would effect savings of $170,000,000 a year. Yet nothing is done to bring about those savings.

Of the Nation's postmasters, 22,000 of them never had a day's experience in a post office prior to their appointment to the highest salaried job in their home town post office. Meanwhile regular postal employees, with years of experience in post office work, were denied consideration for promotion to the position of postmaster. The Hoover Commission has recommended that the post office be taken out of politics for the efficiency and good of the service, but nothing is done about that, either.

Twenty years ago there were 570,000 civilian employees in the executive branch of the Federal Government. Today there are almost 2,000,000 or about four times as many as in 1930. In 1930 the pay roll of the civilian Federal employees was about $1,000,000,000 a year. Now it is nearly $7,000,000,000 a year. Is the service of the Federal Government to the average citizen seven times what it was in 1930?

Most of the recommendations in the Hoover report are good. Most of them should be adopted as quickly as possible. But it will require more even than the Hoover report recommendations to bring economy and efficiency to our Federal Government. There must be a will for economy and a will for efficiency in the executive branch of the Government before the great goals of efficiency and economy can be accomplished. That will for efficiency and economy is not there now.

Manistee County Reports Real Soil Progress

EXTENSION OF REMARKS
OF
HON. ALBERT J. ENGEL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1950

Mr. ENGEL of Michigan. Mr. Speaker, under leave to extend my remarks, I include a portion of the annual report of the Manistee County Soil Conservation District for 1949, and to make a few comments on it.

I am extremely proud of the progress that has been made in my district in recent years in soil-conservation work. Ours was one of the areas that needed such a program badly, for much of our area has suffered from wind and water erosion and from that type of one-way farming which took everything from the soil, put nothing back, and forgot that our young people had a right to just as glorious a future for themselves as their forefathers before them.

The Manistee district is only 5 years old. But I think no district any place within that short period has had such practical results. Today the soil conservation district there is one of the liveliest organizations in the area. It cannot begin to keep up with the demands being made on it. The present directors are: Ro. S. Anderson, chairman; Forrest Chrestenson, treasurer; Wayne I. Crompton, secretary; Floyd Beers, Harry Taylor, and Edward Swanson, Jr.

I have fortunately been with these men on several of their inspection tours. I admire the program they have created and to point it up I offer the following brief quotations from their 1949 report, just published:

Since its organization in the late summer of 1945 the Manistee County Soil Conservation District has been working aggressively to halt erosion and depletion of the soils of its farm lands and forest areas. The actual work on the land has been done through the assistance of soil-conservation technicians loaned to the district by the United States Soil Conservation Service. These men have worked with many of the farmers of the county helping them in the understanding and application of conservation practice. It is this down-on-the-land work which is the real purpose of the district. However, in order to facilitate the work of these technicians, the board of directors of the district have been working steadily at the task of acquainting the people of the district with soil conservation, its purpose, and its benefits. This report is the record of 1 year's work by the Manistee County Soil Conservation District. It has been prepared by your board of directors with able assistance from Wayne Crampton, county agent and secretary to the board; D. Z. Balog, unit conservationist, United States Conservation Service assigned to the Manistee district; and Lindo Bartelli, district conservationist, Soil Conservation Service, who supervises technicians in this region. The several sections of this report have been prepared by the several directors as shown.

Of particular interest to the directors has been the way the farmers have turned to better land-use practices. During the past year more time has been spent on development of natural resources than the healing of old scars or gullies.

Our cooperators seem to have learned which of the two ways of farming is best. The conservation way, which requires the farmer to keep putting something back into the soil instead of mining it for all it's worth. Thus managed, the soil's earning capacity can be maintained indefinitely at a high level. They seem to find that most class 7 land can be put to a better use than the growing of row crops. As an example, one cooperator, Richard Linke, with considerable acreage, asked for a woodland-management plan and plans for fish ponds instead of clearing the land.

We also have five irrigation ponds built during the past year. These have furnished water to irrigate both row crops and pastures.

The Ashcraft irrigation outfit saved a crop of strawberries that would have otherwise been frozen. Also in a few cases the pond lowered the water level a few inches and made it possible to develop some muck acreage. About 3 miles of open drains were constructed on cooperator's farms.

The interest in sod waterways seems to continue. Almost 4 miles of waterways were constructed during the year. It seems that farmers like to drive across a strip of sod better than across a gully.

There have been nearly 4 miles of terraces built. Most of them with regular farm equipment, a few with an old road grader, and a few with a grader attached to the tractor. Of interest was the group enterprise that tackled building terraces on the Ed Lingg farm. When the day was done, almost a mile of terraces was finished. Also about one and a third miles of diversion terraces were constructed to prevent gullies and eliminate wet spots in fields.

In the past, orchard practices have consisted mostly of heavy cultivation; the spreading of barynard manure, if available; some nitrogen and lime; very little phosphorus and potash. As a result, considerable topsoil has been lost and soil fertility has gradually been decreasing.

This year, cooperating fruit growers of the district have made a definite step forward in orchard practices through the use of more complete fertilizer, lime, and better soil management. They have been able to hold or build soil fertility and produce a good quality of fruit, along with good terminal growth. The district has furnished technical assistance in laying out 50 acres of contour cherry orchards. The contour rows were 26 feet apart and the trees in the rows were spaced 23 feet apart.

We are able to report this year that we have had some encouraging results from planting cherry trees on a site that had been laid out and mulched 2 years previously.

Approximately 325 acres of orchard and strawberry beds have received mulching material in the past year. The materials used were sawdust, shavings, and straw.

Orchard covers of various types were again used by cooperators. Rye, rye and vetch, or rye and oats were used for annual covers. Some permanent covers are being used and old sod covers were trashy cultivated in the early growing season and then allowed to come back in late July or early August. A complete fertilizer is used on the covers.

Some very good frost prevention was carried out on strawberries by the use of irrigation systems. One grower was able to pro-

duce over 900 crates to the acre on a frost protected patch.

In 1949, the Manistee County Soil Conservation District cooperators have planted 159,000 pine trees or approximately 159 acres. These plantings were on class 6 and 7 lands, consisting of about 50 percent red pine, 25 percent jack, and 25 percent white pine.

The district's aim is to promote the planting of about a million trees per year as soon as the trees are available. The Manistee district has about 36,000 acres of class 6 and 7 land which will take about 36 years to complete or area that is definitely marked for reforesting.

At the present time we have about 1,150 acres under woodland management, such as thinning, selective cutting, and restriction from grazing. There are approximately 60,000 more acres that can be put under this same kind of management.

Mr. Speaker, in addition to the above there was a year-around educational program sponsored by the district, including articles in the newspapers and broadcasts over the radio, programs in the schools and various demonstrations and public meetings throughout the year. In the way of planning, during the year 12 study clubs were formed which were attended by 72 farmers. These farmers have applied their knowledge of conservation and land-use fundamentals to the development of 61 farm conservation plans designed to stop erosion and depletion on 8,643 acres of land within their district.

The real barometer of success for this Manistee district lies in the fact that 1950 will see a snowballing of its work load. Success likes company and the farmers in that area are really climbing aboard the soil conservation band wagon so much so that the directors are now warning their people that there is bound to be a backlog all through 1950 in the demands for technical assistance. I want to say again that I am proud of this Federal service which is making such progress and doing such constructive work in my district.

Brotherhood

EXTENSION OF REMARKS

OF

HON. H. ALEXANDER SMITH

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, February 20 (legislative day of Wednesday, January 4), 1950

Mr. SMITH of New Jersey. Mr. President, on Friday night, February 17, I had the privilege of speaking before an interdenominational brotherhood meeting, attended by citizens of all faiths, at the synagogue of the Congregation B'nai Israel, of Elizabeth, N. J. The subject of my address was Brotherhood, and I endeavored to relate the principle of human brotherhood to world conditions today and to American responsibilities both at home and abroad.

I ask unanimous consent that my address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is an inspiring experience for me to be a part of this gathering of Americans of all faiths, joined together here to rededicate ourselves to our ideal of human brotherhood. Brotherhood Week symbolizes the fundamental moral principle on which our Nation was founded—a principle which all of us, in our churches and our synagogues, hold in common. This principle was stated in our Declaration of Independence in words which changed the course of human history for all time: "All men are created equal."

I want to examine those simple and profound words for a moment, because in this secular age we are inclined to think of them as nothing more than a political principle. Actually, what gives these words their power is that they state a basic moral and religious principle.

I call your attention to one word in that famous sentence: the word "created." The self-evident truth which our American forefathers proclaimed was not simply that all men are equal, but that they are created equal. They are equal because they are all equally creatures of one Creator—God—a just and loving God who commands them to be just to one another and to love one another. And so, by that one word, "created," this principle is elevated above the idea of mere equality to the idea of brotherhood. There is a world of difference.

Let me restate this thought. Human brotherhood is more than mere human equality. Human brotherhood flows from the belief that we are all equally the creatures of one God. I think it is appropriate today to stress this point, because, to my mind, it sums up the vital, fundamental difference between the faith we hold in common and the other great movement at large in the world today, which is called communism.

The presence of communism in the world faces us with an entirely different set of problems from those with which our Revolutionary forefathers had to contend. We were the revolutionaries of those days, and because our ideas were powerful we carried the world before us. Today the dynamic revolutionary movement is in the hands of others, and it is sweeping many countries with its ruthless force. It is up to us to oppose it, not only because it threatens our safety but also because it is fundamentally evil.

I think it is vital for us to understand what the essential evil of the Communist movement is, and why it has become so powerful. We are all aware of its ruthless violence, the setting of class against class, its suppression of freedom, its distortion of truth, its mad drive for power. With all these ugly features, it is astonishing to us to see how this doctrine has managed to command the allegiance of various misguided idealistic souls who somehow hoped that communism was the road to social justice.

I think we can clarify our understanding of this amazing movement if we remember that communism as a doctrine does preach the idea of human equality. It appeals to the oppressed and hungry peoples of all lands who think they see in it a promise that they will no longer be oppressed and will receive under communism the same equal treatment as everybody else. To those submerged classes of the world who have experienced this oppression, the appeal of communism to class warfare seems the only way out of their difficulties. In their misery and despair, the Communist doctrine spreads before them a vision which is the very reverse of their unhappy experience—the vision of a so-called classless society in which all men are equal.

Now, obviously, the evils of communism do not stem from this idea of equality itself. In my mind, they stem from the fact that the equality which communism preaches entirely omits the proposition that all men are creatures of God. In other words, communism is completely materialistic and atheistic. It denies God altogether. And in denying God it also denies the moral basis of equality.

Without that moral basis, the idea of equality is bound to be empty and vain and frightfully destructive. Communism perfectly illustrates this fact. The equality it preaches leads to strife and hatred, envy and malice. It denounces justice, mercy, and love as fatal weaknesses. It ignores the priceless value of the individual soul and looks upon man as a mere instrument of the state. It denies brotherhood and all the noble motives of the mind, and in the end it brings on the very antithesis of brotherhood—the ruthless domination of man by man.

Yet it is not enough for us to condemn this evil atheistic force of communism. Our condemnations do not change the fact that it is on the march in the world today, and I believe it is our duty to assume our share of responsibility for that terrible fact. If we can understand why we of the Western World share the responsibility for this tragic state of affairs, then we may gain some insight into the question of how to stop it.

The successes of communism, I think, directly represent the shortcomings of the free, democratic world. We of the West, in our concept of human equality and brotherhood, with its profoundly moral and religious basis, have evolved an idea of incalculable power—an idea which could have become the moral basis for the ordering of human society all over the world. Our failure was that we did not manage to apply that idea throughout the world. Even in our own countries, in western Europe and America, we have shown certain weaknesses, we have tolerated injustice in various ways, and as a result we have seen the growth of extreme and ruthless movements under the banners of both fascism and communism. And even more, in the colonial areas of the world, the principles of brotherhood which we professed at home have often been totally ignored.

Today the most urgent crisis in the struggle with communism is in the Far East. That should not surprise us too much—for it is in the Far East that the western nations for centuries past have failed most tragically to carry out their own principles of human brotherhood. This has been the great area of the supposed supremacy of the white man, the great area of colonial subjection, and the great area of economic exploitation. We are challenged today to show the peoples of the Far East that we represent not racialism, colonialism, and exploitation, but their very opposites: Individual human dignity, national independence, and free economic development for the benefit of the people.

In my travels in the Far East last fall, I was profoundly impressed with the power of these ideals in the minds of all Asiatic peoples. Everywhere I went I found a yearning for nationalism and freedom.

But the problem I am discussing is not confined to the Far East or to any one region. It is world-wide. The fact is that nowhere in the world can we Americans afford to ignore or condone human misery. This is not only because misery is a breeding ground for communism—that is one reason, and a very vital one, but it is the negative reason. We have a higher and more positive reason for being concerned with human misery, and that reason is our fundamental belief in the brotherhood of man. We are our brothers' keepers. We are interested in them for their own sakes, simply because we view them as human beings, creatures of the same God who created us.

It is vitally important that we succeed in bringing the peoples of the world to an understanding of this moral attitude of ours. No nation is likely to welcome an American policy if they think that policy is a mere

defensive move designed to strengthen America against communism. No nation will be happy over the idea of being used as an American shield. Therefore we must show that we seek the development and freedom and prosperity of these nations for their own sakes, in order to carry out our ideal of human brotherhood. If we proceed on that basis, then I feel sure we will have the strongest alliance against Communist tyranny that it is possible to have—an alliance based not on fear but on mutual understanding, and on hope for the future of mankind.

But if it is vital for us to make clear our ideals and our motives, it is equally vital that we keep our actions in line with those ideals, both at home and abroad. America is being carefully watched all over the world, and especially the Communists are eager to seize on our shortcomings for propaganda purposes. I would like to mention two or three areas in which I think it especially vital that we in the United States live up to our professed ideals of brotherhood.

The first of these areas is the matter of our program for European displaced persons. In the welter of world events this may seem a very small question, but in reality it is of the highest moral significance. In 1948 Congress passed an act by which the United States assumed a share in the job of resettling these unfortunate victims of Nazi aggression. It was clear from the beginning that the Displaced Persons Act of 1948 was very inadequate both in the numbers of displaced persons to be admitted and in the unfortunate restrictions and hidden discriminations which were placed in their way. Many of us in Congress have been urgently trying since that time to amend the act so as to make it more adequate and more just. It seemed most unfortunate to us that a program inspired by feelings of brotherhood and compassion should be hedged about with all these intimations of distrust and unfriendliness.

The time for action to improve the displaced-persons program is at hand in Congress. I believe there is an excellent chance of amending the bill on the Senate floor in order to bring it more into line with the original purposes of the program. For my part, I shall do all in my power to bring about this result, because I believe this program is a moral imperative for the United States. Our solution of the displaced-persons question will be watched by all those in the world who want to see whether the United States is willing to live up to its high ideal of human brotherhood.

A second area in which our American ideals are on trial is the area of civil rights. This is a dramatic test of whether or not we in the United States are ready to practice in our own homeland the ideal of brotherhood which we seek to promote in the world. From the standpoint of our fundamental morality I can see only one solution to this question, and that is a solution based on our common belief that we are all equally the creatures of one God.

But perhaps we can gain an added sense of the importance of this question if we remember once again that the whole world is watching us. Especially in Asia and Africa, where the peoples of vast former colonial areas have known the humiliation of being treated as inferior races, the way in which the United States acts to implement the rights of its own Negro citizens is of the highest significance. I know of no other field in which the quality of our own actions at home so directly affects our moral power in the world.

Enlightened men may differ in detail as to the best way for us to proceed, but I think none of us can deny the importance of acting quickly and vigorously. This is a question on which there should be no conflict between our political parties. Naturally, I am most anxious to see that my own Republican Party continues to maintain its historic advanced position on this question.

In this connection I cannot conceal my disappointment that the recent Republican statement of principles and objectives, issued on February 6, did not speak out decisively and clearly on civil rights. For my part—and in this I think I speak for many Republicans in Congress—in my attitude and voting on civil rights I shall continue to feel bound by the words of the Republican platform of 1948:

"Lynching or any other form of mob violence anywhere is a disgrace to any civilized state, and we favor the prompt enactment of legislation to end this infamy.

"One of the basic principles of this Republic is the equality of all individuals in their rights to life, liberty, and the pursuit of happiness. This principle is enunciated in the Declaration of Independence and embodied in the Constitution of the United States; it was vindicated on the field of battle and became the cornerstone of this Republic. The right of equal opportunity to work and to advance in life should never be limited in any individual because of race, religion, color or country of origin. We favor the enactment and just enforcement of such Federal legislation as may be necessary to maintain this right at all times in every part of this Republic.

"We favor the abolition of the poll tax as a requisite to voting.

"We are opposed to the idea of racial segregation in the armed forces of the United States."

That is a strong statement, and I still support it in its entirety. As many of my friends know, in the field of fair employment practices I believe that the primary emphasis should be on education and conciliation. But I am extremely anxious that we get ahead with Federal fair employment legislation, and I myself plan to work and vote for the very best law that we can possibly achieve in this field. I earnestly hope that we will get a good and workable law in this session of Congress. I am keenly aware that the eyes of the world are upon us in this matter.

Lastly, I want to mention briefly a third area of American action in which I think our ideal of brotherhood is involved. I refer to that whole complex of our domestic affairs which comes under the heading of welfare. I believe that we cannot stand effectively as champions of social and economic progress in the world unless we are prepared to grapple with the problems of social and economic progress in our own country. This is not the place for me to outline my ideas on the proper role of government in promoting our objectives in this field. But I do want to make it clear that in my judgment government—on the Federal, State, and local levels—cannot ignore the demands of the people for economic security and opportunity, for better health and housing and education. These are the concerns of all of us, and it is right and proper that all levels of government in this country should take a hand in solving these problems.

Yet it is of the highest importance that the actions we take be compatible with the principle of freedom for the individual. I cannot for a moment subscribe to the proposition that the salvation of the American people lies in the erection of a monumental, centralized, monopolistic government machine. On the contrary, it seems to me that our way of progress lies primarily in the enlightened creative efforts of the people themselves, aided and encouraged by a government which acts not as a master but as a servant—and perhaps as a partner.

The United States stands before the world as a living proof that economic and spiritual welfare for the people can best be attained in an atmosphere of freedom—an atmosphere where the free inventive capacities of every individual citizen are allowed the fullest possible play. In this atmosphere we have maintained a society which has no sharp class divisions and which spurns the Marxian idea of class warfare.

I think this is a tremendously hopeful fact for the peoples of the world to contemplate. In the United States we are all middle class. Our system is far from perfect, but the fact remains that we are committed to a system of equal opportunity, equal justice, and social progress for all the people. We have managed to make that system work, not by the dominant power of government but by the moral power of our faith in the principle that all men are brothers.

We must have the courage to maintain and continuously perfect this system of ours in an atmosphere of individual freedom. The peoples of half the world are being courted today by the insidious appeal of communism. It is not enough for us to show them that the Communist doctrine of so-called equality is vain and frightfully destructive. We must show them also that there is an alternative way of life. The fundamental principles of this alternative of human freedom have been established by the blood, sweat, and tears of generations of our forebears. These fundamental principles will work for all humanity as they have worked for us here in America. We must persuade these people, who earnestly aspire to be free, that the way to freedom lies not through hatred and conflict but through the practice of human brotherhood. We must show them, as clearly as we know how, the true meaning of the words in our Declaration of Independence: "All men are created equal."

Flood Threat in Louisiana

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

FLOOD THREAT IN LOUISIANA

The flood menace is growing more acute in those Louisiana areas in the watersheds of the Mississippi, Ouachita, Black, and Red Rivers. On the Atchafalaya also there is an increasing threat.

There has been no loss of life so far and a great measure of credit for this can be given those governmental agencies charged with early warning of oncoming high waters and with construction and maintenance of our levee systems.

But more than 1,500 families have been routed from their homes and countless head of livestock have been endangered or lost to the flood waters.

The National Guard has thrown amphibious military vehicles into the struggle to remove residents of low-lying areas. Refugees are being taken to 10 camps on high ground in the stricken sections. The Red Cross is aiding them with warm clothing and food.

The rivers are still brimfull and forecasters are eyeing the Midwest for rainfall which would further increase the danger in the lower Mississippi Valley. It is felt that river stages of the Mississippi, the principal controlling factor, will continue to be near or at flood stage for most of the month of March.

The crisis then is real in all flooded areas, is imminent in others now threatened, and will be continuous for some weeks ahead.

No workable method of reducing these high levels can now be used. Opening of the Bonnet Carre spillway near New Orleans will afford a measure of protection to that city which in years past has been under recurrent threat of flood. The city of Alexandria is on high ground, protected by levees and will probably not suffer any more than in past years. Monroe too lies under the protection of a system of levees that extends up into Morehouse Parish. Baton Rouge is also free of threat.

Our chief cities in the flood area seem able therefore to escape any serious damage. But in many other parts of the State bordering the swollen rivers, residents are hourly awaiting the warning to flee.

If the rains continue upstream, flood stages exceeding the disastrous overflow of 1927 have been predicted. If this forecast actually materializes, it would represent a real calamity to our State.

Apparently the only possible plan to prevent further flood-water damage would be opening of the Morganza floodway. This would turn the waters of the Black and Mississippi Rivers into a leveed channel to the Atchafalaya River and thus to the Gulf. By providing an alternate route for the flood to follow, pressure would be relieved in New Orleans and a quicker, more direct route for the water to follow would be provided.

There is one hitch to this. The Morganza floodway is not yet completed. The giant levees and other structures are finished as far south as Morgan City. Below that, the Morganza spillway does not exist or exists in only partially complete form. Engineers say that if the spillway is opened now to relieve the flood threat of the Black and Mississippi, a seven-parish area south of Morgan City would be inundated.

If further evidence were needed, the present flood situation surely is proof that completion of the Morganza spillway should be rushed with a minimum of delay and red tape. It is, of course, too late to do anything about the present flood, or so the engineers say, but residents of the State should take such action as seems necessary to obtain quick completion of the spillway. This could easily be the chief factor in effecting a practical solution to the high-water problem in the Red and Black Rivers and the areas affected by their juncture with the Mississippi.

International Conference on Control of Atomic Energy, World Disarmament, and Revision of United Nations Charter

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, February 20 (legislative day of Wednesday, January 4), 1950

Mr. WILEY. Mr. President, we are all agreed that the most critical single problem in the world today concerns our relations with the Soviet Union, particularly now that she possesses the secrets of the hydrogen and atomic bombs. In this connection I released on Sunday a statement urging the Department of State to request a poll of the members of the United Nations on their reactions to the idea of a new international conference which would consider control of atomic energy, world disarmament, and revision of the United Nations Charter. The hunger of the world is for peace, and this hunger must be met by constructive action—realistic, yet imaginative.

I ask unanimous consent that the text of the statement I issued, together with a copy of a letter I wrote to Secretary of State Acheson, be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the statement and letter were ordered to be printed in the RECORD, as follows:

WILEY SUGGESTS UNITED NATIONS POLL COUNTRIES REGARDING WORLD CONFERENCE TO REVISE CHARTER, DISARM

A poll of members of the United Nations to determine their reactions to world federation, atom control, and disarmament proposals has been suggested by Senator ALEXANDER WILEY, Republican of Wisconsin.

The Wisconsin Senator, second ranking Republican on the Foreign Relations Committee, made public a letter which he has written to the Secretary of State suggesting the United States ask United Nations Secretary General Lie to make such a poll.

Senator WILEY stated that the United States should make this request, rather than "proceed unilaterally and suggest outright, without any preliminary consultation with anyone else, an international conference. We must determine whether the nations believe a new conference would accomplish anything that the United Nations could not of itself right now accomplish."

The full text of Senator WILEY's letter reads as follows:

"The Honorable DEAN ACHESON,
Secretary of State,
Washington, D. C.

"DEAR MR. SECRETARY: I am writing to you both in my capacity as a member of the Senate Foreign Relations Committee and as a member of the special subcommittee which has been evaluating World Government, Atlantic Union, and other resolutions and informal proposals designed to meet the current critical situation throughout the world.

"It is agreed among all thinking men that the present course of events, if left unchecked, can potentially lead to disaster for the entire world because of the specter of the hydrogen and even worse bombs to come.

"I feel that there are two major shortcomings of the various proposals thus far presented to the subcommittee:

"WE CANNOT ACHIEVE MILLENNIUM BY A MERE ORGANIZATION

"1. All of them may lead to a sense of false security on the part of the American people; may lead to the creation of an illusion that by simply setting up the framework of another international organization, or calling another international conference, we would automatically be accomplishing the millenium and resolving all differences between ourselves and the Soviet Union.

"I have consistently questioned all witnesses to this effect; assuming that some form of new international structure were set up, suppose the Russians continued to refuse to cooperate—would we not be then in the very same situation, and, in fact, far worse a position than we are now?

"WE CANNOT ASSUME WE AUTOMATICALLY KNOW WORLD OPINION

"2. A second shortcoming is that all of the proposals would have the United States in effect drag the rest of the world behind it, without first ascertaining what the other nations think about these ideas. While we are a leader among nations, we cannot presume on so important a subject as this that we automatically know the opinion of the member nations without even asking them as to whether or not they feel any of these proposals are at all feasible and desirable.

"MY TWO SUGGESTIONS

"May I respectfully suggest, therefore, that as Secretary of State you—

"1. Instruct the United States delegate to the United Nations General Assembly to contact the Secretary General of the United Nations, Mr. Trygve Lie, and Mr. Lie proceed to poll the member states to determine whether or not they believe it would be both desirable and feasible for a new international conference to be called at which the member states, represented on the highest possible level, would discuss (a) proposals for revision of the United Nations Charter or setting up some new form of international organization; and (b) in connection therewith to consider ways and means of ironclad international inspection of atomic energy and other weapons and possible disarmament, so as to halt the armaments race now existing.

"2. I believe that simultaneously the Department of State through its own embassies, ministries, and missions abroad should contact foreign governments to learn directly what the opinion of those governments are in relation to an internation conference and the other proposals which have been made. By determining at the outset Russia's position, we would avoid building up any false illusions.

"I OPPOSE WORLD GOVERNMENT RESOLUTION

"May I indicate at the present time that I for one believe that it would be premature and foolhardy for the United States to consider abandoning its constitutional prerogatives and sovereignty and to enter into a world government at the present time. I do, however, believe that further cooperation and coordination between our country and other lands is necessary and that is why I submit the above suggestions.

"THESE ACTIONS WOULD BE A PART OF OUR PEACE OFFENSIVE

"I believe that in taking these actions the United States would be demonstrating its good faith in consulting with foreign powers and that this demonstration should be communicated by the Voice of America to the peoples of Russia and those countries behind the iron curtain, as well as to the rest of the world. This would be a part of an over-all peace offensive designed to mobilize the spiritual power of the peoples of the earth for constructive actions leading toward peace. Years ago, I introduced legislation to establish a cabinet department of peace for this very objective.

"WE NEED A PEACE BOMB

"It has been well stated that we possess an A-bomb, are working toward an H-bomb, and what we now need is a peace-bomb which will create rather than destroy and scatter blessings rather than havoc.

"I know that you will agree that every American parent feels a deep anxiety over the future of our children and our children's children in this atomic age and that any step we may take to relieve that fear is that much to the good.

"Sincerely yours,

"ALEXANDER WILEY."

Lincoln Day Address by Hon. John Davis Lodge, of Connecticut

EXTENSION OF REMARKS
OF
HON. ROBERT C. HENDRICKSON
OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, February 20 (legislative day of Wednesday, January 4), 1950

Mr. HENDRICKSON. Mr. President, on Monday, February 13, 1950, before the New Haven Republican organization's

annual Lincoln Day dinner, held in New Haven, Conn., the distinguished Congressman from the Fourth District of Connecticut, Mr. LODGE, made a stirring Lincoln Day address.

Because of its enlightened approach to many of the pressing problems of the day, it merits careful study by every Member of the Congress. To this end, I ask unanimous consent that it be inserted in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, it is a privilege to have been asked to address such a distinguished gathering. And it is a pleasure to meet with you here to celebrate the great Republican principles of which Abraham Lincoln was the founder and is the living and inspiring symbol.

It is particularly appropriate that we should celebrate this occasion in the historic city of New Haven, the city of elms, the city of industry, the site of Yale University, the city which recently reelected as their Republican mayor, our good friend and able administrator, William Celentano.

Surely as Abraham Lincoln leans over the battlements of Heaven and watches the Republican Party in its efforts to preserve intact the two-party system on which our freedoms depend, he must be particularly interested in what we say and do in celebration of his birth 141 years ago. And assuredly at this stirring and challenging time in the story of man it is not sufficient for us simply to commemorate Lincoln's birth. Rather, it seems to me this banquet should be an occasion for solemn rededication to the timeless truths for which he fought and worked and died. This is no time for doubt, defeatism, and despair. We are confronted with great issues, and we must meet these issues with vigor, with imagination, and with courage.

In Lincoln's own words, "The dogmas of the quiet past are inadequate to the stormy present. The occasion is piled high with difficulty and we must rise with the occasion. As our case is new so must we think anew and act anew." Indeed, the sayings of Abraham Lincoln constitute a veritable bible for the present-day guidance of the Republican Party. It is altogether fitting that we should be reminded of his wisdom and understanding at this difficult and dangerous time.

Now it has been the fashion in some quarters to think that our party is on the horns of the dilemma of choosing between a philosophy which some have called me-tooism and a point of view which others have labeled as reactionary. But this is not our choice. Certainly we must not follow and imitate while others lead and create. But neither must we be obstructionists. We must not disagree for the sake of disagreement. We must not come out against the Ten Commandments just because they are favored by the Democrats.

In its policies and in its actions our party must reflect the fundamental divisions of thought among the American people.

That does not mean that we must be horse-and-buggy die-hards. It does not mean that we should advocate the doctrine of laissez-faire. Nor does it mean that we must follow in the recent tradition of a small segment of the Republican Party who classify themselves as isolationists rather than in the older and more widespread Republican tradition that what goes on outside our borders is of great concern to us. It does mean that we must produce feasible alternatives to the schemes of the Democrats which, if they were adopted, would destroy the very welfare of which the Democrats are the self-styled champions. It does mean encouraging the large number of independent voters to express themselves politically through the medium of the Republican Party. It does mean that our party must convince a majority of the people who vote that it has a constructive plan of action which will respond more effectively to the needs and aspirations of all the people than the tired clichés, the reckless promises, and the special-interest appeals with which the Democrats have in recent years preyed upon the fears and apprehensions of the voters.

As a matter of fact, if one could believe Democratic oratory, the Democratic Party would be the me-too party. A curious example of this attempt to be all things to all men is found in the President's recent message on the state of the Union which, I may say, contained a minimum amount of comment on the state of the Union and a maximum quantity of cynical political bait strangely reminiscent of the promise to reduce prices for the Connecticut housewife made by our present Governor during the campaign of 1948. The speech is interesting because the President, wishing to reassume a growing body of aroused Americans, resorted to the very me-too philosophy which he has often attacked on those occasions when certain Republicans have agreed with him. In an effort to attract the support of those who are alarmed by the increasing cost of Government, by deficit spending at a time of high national income, and by the growing might of the Washington bureaucrats, the President stated that "businessmen must continue to have the incentives necessary for investment and for the development of new lines of enterprise."

Yet in the same breath he recommended a program which would go far toward eliminating these incentives, preclude the development of new enterprises, and concentrate more power in Washington.

In his message on the state of the Union, the President also reiterated his desire for the repeal of the so-called Taft-Hartley law which he used last week in connection with the coal strike. He advocated repeal in spite of the fact that this law was favored by a large majority of the Democrats in the Eightieth Congress, and in spite of the further fact that the overwhelming majority of the Democrats in the Eighty-first Congress are opposed to repeal. Indeed, when repeal of the Taft-Hartley law came before the first session of the Democrat-controlled Eighty-first Congress, out of 263 Democrats only 30, none of whom were from Connecticut, voted in favor of repeal. In spite of the President's request for repeal, the Democrat leadership has apparently decided to keep this issue for the 1950 campaign. I believe that this is a grave disservice to labor. I believe that labor is entitled to be influential in both parties. I believe that the welfare of the working men and women of America is entitled to the same bipartisan consideration as that which is accorded to the welfare of the Europeans.

Let us see what Lincoln has to say about this question: "Capital is only the fruit of labor—could never have existed if labor had not first existed. Labor is the superior of capital and deserves the much higher consideration." And he went on to say: "That men who are industrious and sober and honest in the pursuit of their own interest should after awhile accumulate property, and after that should be allowed to enjoy it in peace is right. The prudent penniless beginner in the world labors for wages a while, saves his surplus with which to buy tools or land for himself, then labors on his own account for another while, and at length hires another to help him. This is the just and generous and prosperous system which opens the way to all, gives hope to all, and consequently an improvement of condition to all."

Lincoln said: "I believe each individual is naturally entitled to do as he pleases with himself and the fruit of his labor, so far as it in no wise interferes with any other man's rights."

Labor and capital are component parts of what is essentially a cooperative effort. It should be the mission of the Reupblican Party to take labor legislation out of politics.

Furthermore, in order to provide more jobs and higher wages, in order to raise our standard of living, we must increase and improve our tools of production. This we cannot do if incentives are stifled, if risk investments are made so risky that people won't take a chance. This is the paramount interest of all of our citizens, and in particular of labor. It has been estimated that the average job in America requires a $6,000 investment. It is a disservice to labor to discourage such investments.

The Republican Party should also point out to what degree the working men and women of our country are weighted down with taxes. Our Federal Government annually costs the average American between $275 and $300. It now owes the average American family of four somewhere between seven and eight thousand dollars. The average American citizen is plagued by dozens of invisible taxes. Yet the President talks of substantial tax increases.

And at this very moment while the people of our country are carrying this great tax burden the Democratic administration is in possession of 65,000,000 bushels of potatoes, 219,000,000 dozen eggs, and 96,000,000 pounds of butter. This food was bought with the taxpayers' money in order to keep prices up.

A notable omission from the President's message is that it contains no reference to the Hoover Commission reports and recommendations which hitherto had been thought to have substantial bipartisan support. This is sad indeed particularly in view of the budgetary deficit because I believe that the overwhelming majority of the American people, including those who want the Government to do so much, want it done without waste, and with efficiency.

And while the Hoover Commission reports and recommendations are not a partisan matter; while they are supported by many citizens in both parties and by independent voters, certainly there is a tendency in some administration bureaucrats to prevent a proper streamlining of our Government. The Republicans should assert themselves to the utmost in order that the President and the Democrat-controlled Eighty-first Congress should with such adjustments as may seem desirable proceed with dispatch to the implementation of these recommendations.

With regard to what is often referred to as social legislation, there is no need to embrace the solutions offered by the Democrats. However, neither should we ignore these problems where they exist. It is up to us to demonstrate our imagination and our intellectual vigor by coming out with better solutions. Principally, however, the difference between our point of view and the view of those who are in power is that for us it should be an effort to respond to a human need while for them it is usually part of a plot to concentrate additional power in Washington. Such centralization is, of course, pleasing to the Communists since it enables them more easily to undermine the morale of our people and to destroy the political fabric of our country.

Because the Government must be the servant of the people it must also be strong enough and wise enough to respond effectively to the problems of the day. While we provide incentives for the creation of new wealth, we must also intercede on behalf of those for whom lief is particularly difficult in order that the people should retain their enthusiasm for the private property system. While, in order to raise our standard of living and buttress our economy, we should reduce the national debt, effect large-scale

economies in government, and return to sound fiscal policies, we must also assist those who have no more than a substandard on which to eke out a meager existence.

Abraham Lincoln said: "The legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all, or cannot so well do, for themselves, in their separate and individual capacities. In all that the people can individually do as well for themselves, government ought not to interfere."

But we should burn into our brains the incontrovertible truth that the ultimate, the essential welfare of the American people depends upon the continuation and increase of the vital opportunities inherent in our free society. Aid to the needy, to the unfortunate in our society, is right and just and feasible. But if every family receives housing, food, clothing, medical care, and education from Washington, we shall have embarked upon a course which will cause a break-down not only in the American economy but also in the American character. And when a government attempts to redistribute to the citizens more than the citizens can produce, inflation and dictatorship are the inevitable result.

Acting in the clear and vigorous tradition of Abraham Lincoln, we Republicans should take a forthright stand on the question of civil rights. This is in keeping with our platform. It is in accordance with the first article of the constitution of Connecticut, which declares "that all men, when they form a social compact, are equal in rights." It is in furtherance of the Constitution of the United States. And it is in keeping with the enlightened principles and vigorous leadership shown by our late great Gov. James McConaughy, when, on March 14, 1917, he signed the Connecticut Fair Employment Practices Act.

On this matter the Democrats have been arguing among themselves while the Republicans have been acting—not only in Connecticut but in seven other States—New York, New Jersey, Wisconsin, Indiana, Oregon, Washington, and Massachusetts.

With regard to this issue, the Democrats are hesitant, apologetic, and ineffective. We can and must be united and strong. We should carry the banner on the civil-rights program. This is not only right and just and in the best Republican—Lincolnian—tradition, but it will also be of great help to us in the battle for men's minds which we are waging throughout the world with the godless forces of Communist aggression.

And this brings me to the primary issue which faces our Nation—the issue of war and peace. For it is relentlessly true that any social gains we make will melt like snow in the sun if we have war. Concerning our intercourse with other nations, Abraham Lincoln said: "* * * in the case of a long and threatening misunderstanding let us prepare for the worst and work for the best." It can hardly be said that we are preparing for the worst when we reduce our national defense establishment and use these unwise savings not to give tax relief to the American people but on further Government extravagance during an election year. And while we have reduced our forces to a mere fraction of the Soviet military strength, the Russians have improved and modernized their striking power so that today they have a more effective fighting force than they had during the war against Germany.

The possibility of large-scale destruction and loss of life by terrible new weapons does not change the fundamental issue. It does underscore the urgency of the problem of peace. We must not allow ourselves to be stampeded into ill-advised actions and panic-stricken statements by these new engines of destruction. The road to a less precarious peace is hard and long and requires steady nerves and firm resolve. All right-thinking people agree as to the desirability of peace. It is my conviction that in the world of today peace is a product of strength and war is a derivative of weakness. Certainly World Wars I and II bolster that conviction. Statements by members of the administration party which attempt to bait and bribe the Russian people to disarm do not reach the Russian people but may well convince the Kremlin that we are leading from weakness.

It is well to recall that at the end of the war we offered Russia a loan of some $10,000,000,000 for rehabilitation. There were no strings attached to this loan. All we desired was continued collaboration in the cause of peace. All we wanted was a reduction in armaments. The offer was not accepted. And in 1947 the Soviet Union was invited to share in the Marshall plan. Molotov, who was asked to participate, tried to wreck the plan. This has been established Russian policy ever since.

In 1948 Henry Wallace proposed before the Foreign Affairs Committee the creation of a global Marshall plan to include Soviet Russia and involving an expenditure of $50,000,000,000 over a period of 10 years. Now, after the Communist forces have overrun huge territories in Asia involving the subjugation of 450,000,000 people, there is another $50,000,000,000 proposal to include the Russian Communists. Although the suggestion is no longer original, intervening events have not endowed it with greater validity.

The fact is that there is no easy solution to the great dilemma with which we are faced. There are no pat answers to these problems. There is no open sesame by which we can suddenly emerge from the dark clouds of oppression which are crowding down upon us into the bright sunlight of a secure freedom. There is no sudden deed of excellence which will guarantee for us overnight the peace for which we recently sacrificed so much. We are inextricably involved in a conflict of titanic proportions, and it will take all the energies, all the stern resolve, all the balanced judgment and all the spiritual fervor and spirit of sacrifice of which we are capable to surmount our difficulties. We cannot afford to grow tired at this time.

In addition we must recognize that the world crisis cannot be solved solely in terms of dollars and commodities, military equipment and personnel, plans and agreements. It is also most emphatically a question of moral leadership. In fulfilling this exacting role we must bear in mind that while men and women the world over yearn for safety from war and from want they are also interested in how and why they are living. We who take sharp issue with the Marxian theory that man lives by bread alone must realize that the problem is not simply one of matériel. It is not just a battle of industrial potential, of things. It is also a battle of ideas.

And while this overriding issue of war and peace should be met without regard to party advantage, it is more important to be right than to be bipartisan. And it must be increasingly clear to the people of America that it will be to their advantage to have in Washington a Government which devotes its time not to a justification of its errors in the Far East but to correcting them; not to covering up mistakes but to policies which will safeguard the peace. We have a right to demand of our officials that they place loyalty to America ahead of loyalty to their friends and cronies.

In the words of Abraham Lincoln, "Revolutionize through the ballot box, and restore the Government once more to the affections and hearts of men by making it express, as it was intended to do, the highest spirit of justice and liberty."

This is the Republican Party's opportunity for distinguished service. This is the challenge to us in Connecticut. This is the challenge to America.

Government Spud Muddle

EXTENSION OF REMARKS
OF

HON. MARGARET CHASE SMITH

OF MAINE

IN THE SENATE OF THE UNITED STATES

Monday, February 20 (legislative day of Wednesday, January 4), 1950

Mrs. SMITH of Maine. Mr. President, I ask unanimous consent to place in the RECORD an excellent statement by Mr. George B. Buck, a Maine potato grower, in a letter written to the Belfast Maine Republican Journal, and published in that newspaper on February 2, 1950.

His observations of the "spud muddle," I believe, accurately reflect a growing sentiment among Maine potato farmers. I invite the attention of all Members of this Congress to his statement.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

HITS AT GOVERNMENT SPUD MUDDLE

(EDITOR'S NOTE.—The following letter, addressed to the editor of the Republican, is written so clearly by George B. Buck that we commend it to the attention of our readers. So many with whom we have talked—while trying to blaze a mental trail out of the wilderness of the potato muddle—have voiced quite similar opinions, but we didn't take down their words.)

This is the first time I ever undertook to write anything other than an advertisement for your paper, and there isn't much doubt in my mind but it will be the last.

There is so much discussion about the potato situation, perhaps a better word would be a mix-up. And having raised potatoes for over 60 years, and shipped both hay and potatoes for 40, I can truthfully say I was never any more discouraged. But, perhaps I will feel a little better when I get this pill off my stomach.

We do not seem to know where we are at. Personally, I would rather sell cheaper and not be bothered with the Government. I do not like this dictatorship.

It seems too bad, after years of such hard work here in this county and State to build up a market and then give it to the Canadians. And we cannot blame them. We would do just as they are doing if we had a chance. When you let the bars down the cattle are going to come out and seek better food. That is the law of nature.

Many times, both last year and this year, when we wire any of our old customers they reply, "Sorry, Mr. Buck, but we can do better in Canada." For example, I am going to quote what a chain-store manager in Derry, N. H., replied when I wrote about hay. Just a few years ago we shipped them around 165 cars. Read what they say now:

"The writer found your letter of January 16 on his desk, and in reply I wish I could tell you something definite about hay. Our sales are still slow, with the bulk being on real good quality out of Canada. The market on other quality is very mixed, with quotations spreading $4 per ton on comparable lots. The low figure is quoted by truckers out of the Maritimes who will sell to dealers when they can, and deal directly with consumers if they have to."

This is a good sample of letters and telegrams we have had during the last 2 or 3 years. We cannot compete with them because, for instance, they can press their hay for five or six dollars per ton where it costs us nine and ten dollars per ton. Then, too,

there is the 10 percent discount in the exchange of money. That in itself is quite a profit.

As it is, our Government is cutting our quota while the Canadians are planting more and more to put on our market. I call this real tough medicine. And it isn't only potatoes and hay, but other things. At present they are even bringing over eggs. And they bring over meat, dairy products, whatever it may be. All these things have a tendency to hurt the farmers here.

As I see it, the high ceiling has cost us a lot of money. It has made some people all around us wealthy, but it hasn't helped the small fellow raising 25 or 30 acres. Only just recently I heard a young farmer say in our store that he didn't know what he was going to do. He has been raising 30 acres. They are cutting him down, and he has quite a large family. He has a daughter who wants to go to college, and he wants her to go, but he can't see how in the world, in planting so few acres, he is going to do it. This is only one case in many.

And then another thing about this high ceiling. It has taught some States, that you might say are right in the market, to go into potatoes. They, too, are hurting us. They have no such advantage, about $1 difference per barrel in freight. We are way up north here with a heavy freight—but we can raise the potatoes.

I personally feel confident that after World War II every producer should have been allowed to go right back the old-fashioned way, on his own risk, planting as much as he wanted to. It was all right when they gave us a goal to encourage production when we were feeding the world. There was no cut then.

I would just like to try it—to go back the old-fashioned way, every producer taking his own chances and I say to you, in all fairness, I sincerely believe that the law of supply and demand will fix it better, fairer, than any man or men. That is the way this great Nation was built up.

GEORGE B. BUCK.

Basing-Point Legislation Directed Against the South

EXTENSION OF REMARKS
OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1950

Mr. BOGGS of Louisiana. Mr. Speaker, on February 9, 1950, Dr. George Stocking, head of the department of economics of Vanderbilt University, met with a group of Senators and Congressmen for the purpose of discussing informally the effects which the basing-point system would have, if restored by S. 1008, upon the South. He was invited to give us the benefit of his views by Senator KEFAUVER, of Tennessee, who felt that unless we knew what the effects of this proposed bill would be on our region we would be more or less in the position of legislating in the dark.

At the end of the discussion I asked Dr. Stocking whether he would be good enough to put his remarks in the form of a statement. This he has been good enough to do, and it is this statement which I now wish to include in the RECORD.

Briefly his statement shows, in cold figures, that the steel mills of Birmingham, Ala., although constituting probably the lowest-cost mills in the entire country have been able to secure only a relatively small share of their own home market. Under the basing-point system it makes no difference to the ultimate buyer located in the South or anywhere else which mil. he buys from since all mills offer him the same delivered price. Consequently the Birmingham mills have not received the benefit of their natural location, and they have been forced to sit idly by while orders which should have been theirs have gone to distant northern mills. Since the Birmingham mills have thus not been able to gain the benefit of their natural market, their expansion has been held down. Similarly, since the steel users in the South have been unable to obtain the benefits of the Birmingham mills' natural location and cost advantages, their expansion has also been retarded.

I think the figures set forth in Dr. Stocking's statement should make it clear to every southern Senator and Congressman that S. 1008 is a bill aimed directly at the South and should be opposed with all the resources at our command.

The statement follows:

EFFECTS OF BASING-POINT PRICING ON THE SOUTH'S IRON AND STEEL INDUSTRY

The following analysis was made by Dr. George W. Stocking, of Vanderbilt University, as part of a study of the significance of basing-point pricing to the South, which he is making for the Committee of the South. The basic data were compiled by the Temporary National Economic Committee from questionnaires covering shipments of major iron and steel products for the month of February 1939. TNEC hearings, part 27, give a description of the questionnaire and a statement of its coverage at page 14133 and following pages, and 14350.

STRUCTURAL SHAPES

This analysis shows that during February 1939 nine Alabama counties surrounding Birmingham received from all sources included in the TNEC study, 1,623 tons of heavy structural shapes. Birmingham mills supplied only 1,017 tons of this or 62.6 percent of the total. Far away Chicago supplied 453 tons or 27.9 percent; the Pittsburgh-Johnstown district supplied 122 tons or 7.5 percent; eastern Pennsylvania supplied 31 tons or 1.9 percent. Average freight charges on shipments by Birmingham mills to buyers in that area were 94 cents a ton; on shipments from Chicago, $11.62 a ton; on shipments from Pittsburgh-Johnstown district, $12.82 a ton; on shipments from eastern Pennsylvania, $15.16 a ton.

All other Alabama counties bought only 52.5 percent of their heavy structural shapes from Birmingham. They got the remaining 47.5 percent from Chicago, Pittsburgh-Johnstown, Buffalo, and eastern Pennsylvania districts. Freight charges on the Birmingham shipments averaged only $6.55 a ton; on the shipments from northern mills they ranged from an average of $11.91 to $16.67 a ton.

Mississippians bought only 27.9 percent of their heavy structural shapes from Birmingham. Average freight charges on these purchases were only $6.83 a ton. This compared with $12.17 and $14.86 freight charges on shipments from Chicago and Buffalo. Despite higher freight charges, Mississippians got 72.1 percent of their requirements from these remote production centers.

Georgians got 66.5 percent of their heavy structural shapes from Birmingham on which freight charges averaged only $6.29 a ton; they bought the balance from Buffalo, Chicago, and Pittsburgh-Johnstown districts which average freight charges ranged from $13.20 to $14.59 a ton.

Birmingham's second best market for heavy structural shapes during February 1939 was Tennessee. Tennesseans bought a total of 502 tons from Birmingham on which average freight charges were only $5.40 a ton. They bought the balance of their requirements—45.6 percent of the total—from the Chicago, Pittsburgh-Johnstown, northern Ohio, and Buffalo districts on which average freight charges ranged from $9.44 to $11.70 a ton.

Sharing their nearby markets with far distant suppliers under a basing-point pricing system that robbed them of their advantages of location, Birmingham mills reached out for more distant markets. Other southern markets took a part of their surplus but these, too, had to share with less advantageously located mills. Florida bought 63.4 percent of its requirements of structural shapes from Birmingham on which freight charges averaged only $10.03. It bought the remainder of its requirements from Chicago, eastern Pennsylvania, Pittsburgh-Johnstown, and Buffalo districts on which average freight charges ranged from $12.64 to $20.33 a ton. South Carolina bought only 36.7 percent of its requirements from Birmingham, although average freight charges were only $9.70 a ton. This compared with $12.01 and $13.30 a ton on shipments from eastern Pennsylvania and Pittsburgh. Despite the higher freight charges, these two districts supplied most of South Carolina's requirements.

Birmingham supplied only 8.6 percent of North Carolina's requirements of heavy structural shapes, although average freight charges on shipments from Birmingham were $8.53 a ton as compared with average freight charges ranging from $9.19 to $11.43 on shipments from eastern Pennsylvania, the Pittsburgh-Johnstown and northern Ohio districts whose mills supplied the bulk of North Carolina's requirements.

Birmingham's sales in Kentucky were negligible—24 tons, or 5.32 percent of Kentucky's total requirements. Average freight charges on Birmingham shipments to Kentucky were only $2.25 (apparently water shipments) as compared with average freight charges ranging from $5.71 to $12.44 on shipments from the St. Louis, Chicago, Buffalo, Pittsburgh-Johnstown, and eastern Pennsylvania districts.

On shipments to the Texas market—more than twice as large as that of any other Southern State—Birmingham had the lowest average freight charges on structural shapes of any supplying area. Yet it supplied only 12 percent of Texas requirements. The eastern Pennsylvania, mountain, St. Louis, Chicago, Pittsburgh-Johnstown, and Buffalo districts shared the other 88 percent.

Unable to dispose of its output in nearby markets under the share-the-market program of a basing-point system, Birmingham shipped 223 tons, or 5.3 percent out of its total, to northern California. Freight charges on these shipments averaged $21.99 a ton. The Birmingham mills absorbed $21.49 of this amount.

STEEL PLATES

Mills of the Birmingham district shipped 12,836 tons of steel plates in February 1939. These shipments exceeded total purchases of all consuming districts in which Birmingham mills had a clear freight advantage. Birmingham mills supplied most of the southern market, but not all of it. Georgia shared 29 percent of its market with the eastern Pennsylvania, the Pittsburgh-Johnstown, and Baltimore districts. Yet average freight charges on shipments from the Bir-

mingham district were only $4.75 a ton compared with average freight charges ranging from $10 a ton to $12.87 a ton on shipments from the northern mills. While sharing the Georgia market, in which it had a freight advantage, Birmingham mills were forced to go far afield to dispose of their surplus. They sold 486 tons of steel plates in northern California on which they absorbed an average of $16.21 freight a ton.

PLAIN DRAWN WIRE

Birmingham mills shipped only 321 tons of plain drawn wire during February 1939. Freightwise their best markets were Alabama, Tennessee, and Georgia. Although they had a sharp freight advantage in both the latter States, they supplied only 27 percent of Georgia's requirements, at an average freight charge of $6.45 a ton and 26 percent of Tennessee's requirements at an average freight charge of $4.21 a ton. Georgia got the balance of its requirements from the Baltimore, Pittsburgh-Johnstown, Indiana, Illinois, and New England districts. The average freight charges on shipments from these mills ranged from $12.52 to $16.50 a ton. Tennessee got the balance of its requirements from St. Louis, Indiana, Illinois, and Pittsburgh-Johnstown district mills, with average freight charges ranging from $9.40 to $11.73 a ton. Birmingham supplied none of the big Texas market, although most Texas shipments were priced on a Birmingham base; that is, they were destined for points in Texas, freightwise nearer to Birmingham than to any other mill. Neither did South Carolina buy any plain drawn wire from Birmingham, although it was freightwise nearer to Birmingham than to the mills that supplied it.

Apparently Birmingham output was kept below that necessary to supply its natural markets.

HOT-ROLLED STRIP

Birmingham mills shipped 528 tons of hot-rolled strip during February 1939. Freightwise their best markets were the Alabama, Birmingham, Georgia, South Carolina, and Tennessee consuming districts. Yet the Youngstown district supplied 81 percent of shipments into nine counties constituting the Birmingham district, 31 percent of the shipments into Georgia, and 65.9 percent of the shipments into Tennessee. On shipments into Georgia average freight charges from the Birmingham district were $1.93 a ton; from the Youngstown district, $13.31 a ton. On shipments into Tennessee average freight charges from Birmingham were $6.67 a ton; from Youngstown $10.97 a ton.

Sharing its nearby markets with distant producers, forced Birmingham mills to go farther afield for business. They supplied 84 percent of North Carolina's requirements at an average freight charge of $8.21 a ton. The Pittsburgh-Johnstown area and Youngstown supplied the balance with freight charges of $10.75 and $12.60 a ton respectively. Birmingham mills absorbed an average of $6.76 a ton freight to ship 55 tons, representing 10.4 percent of their total shipments to Ohio. They absorbed an average of $3.09 a ton freight to ship 98 tons, representing 18.6 percent of their total shipments into Kentucky.

HOT-ROLLED SHEETS

Birmingham mills shipped 6,572 tons of hot-rolled sheets in February 1939. These shipments went to 19 different States—small shipments being made to both the Pacific coast and northern Atlantic coast States. Had Birmingham supplied only the six States (Alabama, Georgia, Tennessee, Mississippi, Louisiana, and portions of Texas) on which freight charges from Birmingham were lower than shipments elsewhere and in supplying which Birmingham had a freight advantage over all other mills, it would have had to expand its output.

Assembly cost of raw materials for production of 1 long ton of basic pig iron and 1 long ton of finished steel at different centers, 1939 [1]

[Dollars]

Sparrows Point	6.17	3.19	.57	9.93	7.16	5.65	1.05	13.86
Birmingham	1.26	1.35	.08	2.69	1.46	2.39	.15	4.00
St. Louis	4.90	1.20	.14	6.24	5.68	2.12	.27	8.07
Pueblo	3.85	1.73	.43	6.01	4.47	3.06	.79	8.32
Provo	3.06	2.18	.14	5.38	3.55	3.86	.26	7.67
San Bernardino	3.35	6.60	(3)	9.95	3.89	11.68	(3)	15.57

[1] In deriving these assembly costs, blast-furnace practices shown in table 26 for Youngstown were used for Pittsburgh, Cleveland, Buffalo, Weirton-Steubenville, Ashland, Hamilton, and St. Louis; those for Chicago-Gary were used for Detroit and Duluth; those for eastern New York were used for Bethlehem and Sparrows Point and those for Provo were used for Pueblo and San Bernardino.

Following are the proportions of iron ore and coal from the different sources which were used. They are those used by Marion Worthing in Pittsburgh Business Review, Jan. 31, 1938, p. 23, and they are also found in Beaver and Mahoning Rivers, Pa. and Ohio, hearings before the Committee on Rivers and Harbors, House of Representatives, 77th Cong., 1st sess., 1941, pp. 47–48:

Iron ore: 75 percent Minnesota, 25 percent Michigan (100 percent direct ore at points on Lakes: at inland points, 80 percent direct ore and 20 percent dock ore).

Coal: Pittsburgh and Weirton-Steubenville, 100 percent western Pennsylvania by barge. Chicago, 70 percent eastern Kentucky and West Virginia, 30 percent Pocahontas—50 percent rail-lake; 50 percent all-rail for coking; southern Illinois for other coal. Cleveland, 80 percent Pittsburgh field by barge-rail, 20 percent Pocahontas, all-rail. Detroit, 80 percent eastern Kentucky and West Virginia, 20 percent Pocahontas—80 percent rail-water, 20 percent all-rail. Buffalo, 60 percent Pittsburgh and central Pennsylvania, rail-water; 20 percent Pittsburgh field, all-rail; 20 percent Pocahontas, rail-water; Youngstown, 85 percent western Pennsylvania, barge-rail, 15 percent Pocahontas, all-rail. Duluth, same as Chicago, except none from southern Illinois. Other points obtained materials from the cheapest available source.

[2] This figure applies at Middletown, which is 12 miles from Hamilton. Hamilton does not make steel and Middletown does not make pig iron.

[3] Negligible.

Comparative value and cost ratios for blast furnaces, 1939 [1]

	Value of blast-furnace products per ton of pig iron (1)	Value added by manufacture per ton of pig iron (2)	Wages per ton of pig iron (3)	Fuel cost per ton of pig iron (4)	Cost of material and supplies per ton of pig iron (5)	Fuel and power cost per ton of pig iron (6)	Total, columns 3, 5, and 6 (7)
Pennsylvania	$17.29	$2.84	$0.78	$3.71	$10.72	$3.73	$15.23
Ohio	16.07	2.49	.88	4.13	9.42	4.17	14.47
New York	15.81	3.91	.87	4.35	7.42	4.48	12.77
Illinois	15.97	2.15	.74	5.65	8.10	5.72	14.56
Indiana	14.01	1.50	.73	4.83	7.66	4.85	13.24
Alabama	12.48	3.00	.90	3.14	6.31	3.18	10.39
Average[2]	15.27	2.65	.82	4.30	8.27	4.36	13.44

[1] Blast furnaces produce byproducts including gas, slag, and ferro-alloys. The importance of byproducts is relatively small compared with pig iron, its value representing more than 90 percent of total output value in 1939. In computing the ratios for each State, the pig iron tonnage reported by the census for that State was utilized.

[2] Represents an arithmetic average for the 6 major producing States shown here.

Estimated per ton assembly costs in production of basic pig iron, 1934

[In dollars per long ton]

	Material			Total
	Iron ore	Coal	Flux	
Birmingham	1.250	1.635	None	2.885
Buffalo	3.257	2.807	0.270	6.334
Cleveland	3.257	3.057	.270	6.584
Pittsburgh	5.771	.650	.337	6.758
Detroit	3.257	3.265	.270	6.792
Chicago	3.245	3.349	.270	6.864
Wheeling	5.771	.796	.373	6.945
Youngstown	5.131	2.070	.189	7.390
St. Louis	4.336	2.901	.180	7.417
Ashland	5.966	1.155	.315	7.436

NOTES. Material ratios used:

1.94 gross tons of ore per gross ton of pig iron, except for Birmingham for which a ratio of 2.5 gross tons was used.

1.54 net tons of coal (producing 1 ton net coke, i. e., 65 percent yield from coal) per gross ton of pig iron, except for Birmingham for which a ratio of 2.07 net tons was used.

0.45 gross ton of limestone per gross ton of pig iron, except for Birmingham for which no limestone ratio was used (Birmingham was generally self-fluxing).

Source: Special computations made for bureau of business research, University of Pittsburgh, by H. R. Moorhourse, of Arthur G. McKee & Co., Cleveland, Ohio. Based on rail, rail-water, and water transportation according to typical routes over which the materials are transported to their districts. Costs are based on a 100-percent ore burden of 51.5 percent iron content.

Table is from C. R. Daugherty, M. G. de Chazeau, and S. S. Stratton, The Economics of the Iron and Steel Industry (New York, McGraw-Hill, 1937), vol. I, p. 378.

BIR, Economics of Iron and Steel Transportation, p. 116.

Relative cost (in dollars) of transporting raw materials for the production of 1 ton of basic pig iron in various districts, 1939

	Material			
	Iron ore	Coking coal	Limestone	Total
Cleveland	3.512	3.130	0.270	6.912
Buffalo	3.512	2.975	.270	6.757
Detroit	3.512	3.434	.225	7.171
Pittsburgh	6.150	.734	.374	7.258
Youngstown	5.452	2.021	.207	7.680
Wheeling	6.150	0.887	.414	7.451
Ashland	6.344	1.340	.414	8.098
Chicago	3.415	3.485	.270	7.170
Birmingham	1.375	1.760	None	3.135

NOTE.—Assumptions: (*a*) 1.94 gross tons (2,240 pounds) of ore per gross ton of pig iron, except for Birmingham, for which a ratio of 2.50 gross tons of ore per gross ton of pig iron was used.

(*b*) 1.54 net tons (2,000 pounds) of coal, 65 percent yield of furnace coke from coal, per gross ton of pig iron, except for Birmingham, for which a ratio of 2.07 net tons of coal per gross ton of pig iron was used.

(*c*) 0.45 gross ton of limestone per gross ton of pig iron, except for Birmingham, for which no limestone ratio was used (Birmingham ores are generally self-fluxing).

(*d*) The computations are based on 100 percent ore burden of 50 percent iron content and on rail, rail-water and water transportation according to routes over which materials are usually transported to the several districts.

(*e*) No scrap used in burden except that produced at furnaces.

BIR, Economics of Iron and Steel Transportation, p. 117.

***Ton-miles required to assemble raw materials for 1 long ton of pig iron*[1]**

Producing center	Iron ore		Coal		Limestone		Total		Total rail equivalent[2]
	Rail	Water	Rail	Water	Rail	Water	Rail	Water	
Pittsburgh	338	1,366	0	79	[3] 21	0	359	1,445	832
Chicago-Gary	142	1,550	435	750	0	98	577	2,394	832
Youngstown	230	1,366	127	0	5	0	362	1,366	507

[1] Railway mileages were obtained from Handy Railroad Maps of the United States (Chicago, Rand McNally & Co., 1942) and the Official Guide of the Railways and Steam Navigation Lines of the United States, Puerto Rico, Canada, Mexico, and Cuba (New York, National Railway Publication Co., January 1942). Mileages for the Great Lakes were obtained from Transportation of the Great Lakes, Transportation Series No. 1, 1937, Corps of Engineers, U. S. Army. Mileages for rivers were obtained from Light List: Mississippi and Ohio Rivers, 1942, U. S. Coast Guard.

[2] In reducing miles by water to their cost equivalent in rail miles the following ratios were used: Lakes, 9.4:1; rivers, 3.3:1; ocean, 18.8:1. The ratios for lakes and rivers are those used by J. R. Mahoney, Utah Economic and Business Review, June 1942, p. 5. In normal times the rate from Chile to Sparrows Point varied from $4.20 to $4.70 a ton, compared with a rate of 80 cents a ton on the Lakes. Thus, a given sum of money would carry iron ore twice as far on the ocean as on the Lakes.

[3] Figures used by J. R. Mahoney, the same.

[4] In this and the following tables nautical miles have been converted to statute miles.

Source: BIR, Economics of Iron and Steel Transportation, p. 120.

***Number of ton-miles necessary to assemble the materials for 1 long ton of pig iron and to transport 1 long ton of steel to Chicago, at selected producing centers*[1]**

Producing center	Ton-miles per ton of steel			Ton-miles per ton of pig iron, rail equivalent[2]	Total ton-miles, rail equivalent
	Rail	Water	Total, rail equivalent		
Chicago-Gary	0	0	0	832	832
Birmingham	85	896	365	49	414
Detroit	0	633	122	512	634
Cleveland	0	740	142	475	617
Buffalo	0	893	172	528	700
Youngstown	63	740	207	507	714
Weirton-Steubenville	110	740	252	522	774
Pittsburgh	131	740	273	528	801
St. Louis	0	808	155	673	828
Duluth	0	365	114	708	822
Middletown	295	0	295	747	1,042
Ashland	0	1,201	375	788	1,163

[1] In this and the similar tables which follow, the water mileages have been reduced to their cost equivalent in rail mileages. The following ratios were used: Lake, 5.2:1; rivers, 3.2:1. These ratios were obtained by averaging the rates of tables 55 and 56. The ratio for rivers is the average of rates for a 500-ton minimum; the ratio for cargoes of 200-tons minimum is 2.1:1.

[2] The figures on pig iron for Middletown were obtained by taking the figure for Hamilton and adding 12 ton-miles, the distance between the 2 places being 12 miles. Hamilton, which does not make steel, supplies pig iron to Middletown, which does not have blast furnaces.

Louisiana Leads in Welfare Aid

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1950

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article:

LOUISIANA LEADS IN WELFARE AID—HIGGINS CITES REASONS FOR NATIONAL HIGH

Louisiana has the highest number of old-age pensioners in the Nation because she has gone to the trouble to investigate the need and try to fill it, State Commissioner of Public Welfare Lawrence E. Higgins said here Thursday.

Addressing the annual meeting of the Orleans Parish Department of Public Welfare at the Hutchinson Memorial Building, 1430 Tulane, Higgins said the dependency of large numbers of adults in this State harks back to the days following the War Between the States when the South's whole economy was upset.

Few opportunities and low wages in the intervening years, lack of medical care and proper diet have all contributed to a tremendous backlog of adult dependency, he said.

He foresaw a lowering of the adult case loads in future years provided child welfare and other programs are carried on adequately now.

Meantime, the mounting number of cases is neither "alarming nor surprising," he said.

In Orleans Parish in 1949, total assistance paid to needy people was $17,746,086.97. This was an increase of $8,421,781.33 over 1948.

Number of applications for aid decreased in 1949 by 6,229 to 13,497.

Despite the fewer applications, more money was spent because bigger payments are being made to applicants, said Miss Lillie H. Nairne, Orleans Parish welfare director. She said "more adequate care is being afforded."

Higgins called upon employees in the department to interpret the needs of assistance to the taxpaying public. He said taxpayers will gladly maintain the welfare services when they understand the need.

He said the Louisiana Department of Public Welfare is pushing for an expanded old-age and survivors insurance plan under social security, so that all wage earners in their years of productivity may provide for their periods of old age.

A break-down in last year's $17,000,000 expenditure is $11,369,490 for old-age assistance; $226,192 for aid to blind; $3,760,959 for aid to dependent children, and $2,389,438 for assistance to incapacitated adults from 18 to 65 years of age.

Average amount of money paid during the month of December was $47.28 to old-age beneficiaries; $49.12 to blind; $52.98 to dependent children, $42.90 to incapacitated adults.

William J. Guste, chairman of the Orleans Parish Board, said the 1949 operations of the department were "very successful and creditable." The department's functions, methods, and integrity have never been questioned because of the high type of sincere personnel employed, said Guste.

Expenditures for institutional care for 1949 were $110,640 for indigent men and women patients at Touro-Shakespeare Home; $53,092 for temporary care of uprooted children at Sophie Gumble Home, and $160,604 for delinquent boys and at the Milne Boys' Home.

Fifty-second Anniversary of the Sinking of the "Maine"

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. O'HARA of Illinois. Mr. Speaker, this is the fifty-second anniversary of a naval tragedy that more profoundly affected the fate of mankind and the history of the world than any other loss of ship or any destruction of an entire fleet in the records available for modern scrutiny.

February 15 of 1898 is a date the significance of which will grow with the centuries. We are still too close in proximity properly to give appraisement. The fact is clear, however, that with the sinking of the *Maine* in Habana harbor on February 15, 1898, was started a chain of events, tremendous in their impact, that brought to the high responsibility of world leadership the Nation of freedom-loving men and women that had grown from 13 straggling colonies on the Atlantic seaboard.

The period from the sinking of the *Maine* to the end of hostilities in World War II covered a half century during which three wars were fought and won and from which the United States of America emerged the first power of the world. Between each two of these wars was an intermission of peace, when muscles were being flexed, but the common circumstances that surrounded them and the inescapable consistency of the purposes of destiny that was revealed would justify the future historian, viewing at long range and writing when cause and effect had become a matter of recorded fact, to group the three separate wars—Spanish-American, World War I, and World War II—as one war, the 50-year war starting with the sinking of the *Maine* and ending with the bombing of Hiroshima, the 50-year war that ushered in the golden age of American influence as the first power of the earth.

It is immaterial at this time upon whom should be fixed the guilt of the *Maine*'s destruction while anchored peacefully in a friendly harbor. Suffice that on the morning of February 16, 1898, when in the newspapers of an outraged Nation men and women of good will read of the death of 260 of their countrymen, sailors on the *Maine*, a hot wave of indignation swept into every crevice of the Nation and from the cities, the hamlets and the farms the cry "Remember the *Maine*" swelled into an irresistible chorus of demand.

Time has tempered the passions of the period, and today there is nowhere in the United States any desire to convict, without the positive evidence which never has been forthcoming, the then Government of Spain of a crime which if perpetrated was the most dastardly of any in all history. For the Spanish Government of the time, and the officers who served in its army and its navy, I can say only that after the opening of hostilities they fought honorably and cleanly a war which they lost.

But the sinking of the *Maine* was a large contributing influence in disrupting our relations with Spain, already strained. The Honorable William E. Mason, Senator from Illinois and father of the Honorable Lowell Mason, presently serving on the Federal Trade Commission, was one of the dynamic forces in the debates in the Congress which preceded the war. On April 12, 1898, almost 2 months after the *Maine* was destroyed, he said in the Senate:

> I am for war, and have been since the hour our flag was lowered in Habana Harbor and the lives of our citizens taken by the Government of Spain. * * * I have no desire to destroy the Spanish Nation, but her flag must be dishonored by surrendering her sovereignty over Cuban territory as an atonement for lowering our flag, sinking our ship, and murdering our men.

The war with Spain was fought and won in 101 days, her Pacific and her Atlantic fleet completely annihilated and in Cuba, Puerto Rico, and the Philippines the flower of her once proud all-powerful armies crushed by the greatest all-volunteer army in the history of warfare.

Because the victory of the American arms was so quick and so devastating the legend, properly resented by Spanish war veterans, has grown with the years that Spain was a set-up.

To get the picture straight, as it was seen by the people who lived in that period just before the sinking of the

Maine, permit me to quote from an editorial in the London Globe of June 1897:

> The American Navy is absolutely unfit to protect the islands of Hawaii, which lie at the mercy of any Spanish ships appearing at Honolulu, while Japan's sea power is so immeasurably superior to that of the United States that a Japanese naval demonstration would place President McKinley in a difficult and perilous position.

If I here may be permitted for the moment a personal note, and only for the purpose of giving a better understanding to a younger generation of the "spirit of 1898," born in the heat of wrath over the destruction of the *Maine* and which was destined to continue for half a century of warfare, with intermittent periods of peace, to permeate the hearts and minds of Americans: When the news came of the tragedy in Havana Harbor, I was 15 years of age, a sophomore in the high school at Benton, Harbor, Mich. With seven other boys in that high school in Michigan I forthwith enlisted for the period of hostilities and until the *Maine* had been remembered so that nowhere ever again would American lives be endangered by the treachery of professing friends.

A little over 4 months after the sinking of the *Maine* those eight high-school boys from Benton Harbor, wearing winter clothing in the heat of the tropics and armed with smoking Springfields to face the modern smokeless Mausers of the Spanish defenders, were splashing through the waters of the Carribbean from the small boats from the transport toward the Spanish earthworks at Siboney defending Santiago.

On July 1, 1898, when the first general assault was made on Santiago, with Teddy Roosevelt and the Rough Riders storming San Juan Hill, it was the Thirty-third Michigan Volunteer Infantry, mostly high-school boys with antiquated smoking Springfields and wearing on the hottest day they had ever known an issue of heavy winter clothing, that held Shafter's attacking line on the coast of the Carribbean at Fort Aquadores. It was M Company that suffered the first casualties, M Company every soldier of which was the son of a veteran of Grant's army from the North, and when I in I Company, stationed immediately ahead of M Company, heard of the deaths among those sons of veterans the thought ran through my mind that in the grief of their parents would be mingled the pride of blood running true to blood.

Although my pride and my heart ever have been with that old Thirty-third Michigan Volunteer Infantry that went largely from the high schools of Michigan to the battlefield at Santiago, a sense of the proprieties on this occasion would have commanded my silence on the subject of any specific regiment, and certainly of my own regiment.

But yesterday I learned for the first time that my distinguished colleague, the gentleman from Michigan [Mr. WOODRUFF] also was a soldier in the Thirty-third Michigan Volunteer Infantry, a private in Company H, from Owosso, and I thought it noteworthy that after these 52 years, of the four veterans of the Spanish-American War in the House of Representatives in the Congress of the United States, two, or 50 percent of the whole, were from the old Thirty-third Michigan Volunteer Infantry.

Under the circumstances, and in justice to the memory of young Shanks, about my age, who, after the Santiago campaign, went to the Philippines and fell in action over half a century ago; of Charlie Loeffler, and so many others who fell in action or who died of fever, including the brother of my beloved friend, Arthur Evans, of the Chicago Tribune, I could not remain silent about the regiment of high-school boys, and the boys from the towns and farms, that was the first volunteer outfit after the Rough Riders to land in Cuba and which, 52 years after that landing, had two survivors serving in the Congress of the United States dedicating themselves to the task of saving our country from another and more devastating war.

Four of the Members of this House are veterans of the Spanish-American War which followed the sinking of the *Maine*. Another of my distinguished colleagues, the gentleman from Michigan [Mr. MICHENER], was a soldier in the Thirty-fifth Michigan Volunteer Infantry, of which the then Secretary of War, Russell A. Alger, had been colonel. I trust the State of my adoption, Illinois—where I have spent all my adult life, where my children were born, and which, to the best of my ability and with devotion I have served—will not hold me as one giving preference to the State of my nativity when I direct the attention which I think due, to the fact that of the four Members of this body who served in the Spanish-American War, three served in Michigan regiments.

The fourth veteran of this war of 52 years ago who is a Member of this body is the distinguished gentleman from New York [Mr. WADSWORTH], whose long and honorable service in this body has been a sequel to that service to country, to justice, and to humanity which he rendered as a young soldier in the American Army which landed in 1898 in Puerto Rico and took the oppressed people of that island under the folds of the American flag.

Only four of us. It has been a long time since the cry "Remember the *Maine*" stirred America as perhaps never before it had been stirred. But from that cry has followed a sequence of events which only the historian of the future properly can evaluate. The spirit of 1898 was the spirit of American idealism. To Spain, defeated, we gave the hand of friendship, exacting none of the tribute of the conqueror. To the peoples of Cuba and Puerto Rico we gave bountifully of our means to save them from threatened starvation and to aid in their rehabilitation. To the Philippines we sent our doctors, our nurses, and our school teachers, pouring out our wealth with no expectation of return, other than the satisfaction of adding another self-respecting, self-governing, independent nation to the family of the world. That was the spirit of 1898, which has not faltered and which will continue to prevail despite the threat of dictatorship, atomic bombs, and the destruction of civilization through biological warfare and hydrogen bombs.

It is not reasonably to be expected that the number of Spanish-American veterans on the floor of this historic Chamber ever will be increased. Another decade, more or less, and no one in this House will represent that war of 52 years ago that started the United States of America on the way to world leadership.

It is our hope that in our absence this anniversary of February 15 will be observed annually in this Chamber during all the years to come, when in the spirit of 1898 and idealism that is its embodiment, our country, with large responsibility for human contentment, shall lead mankind from the fog of strife and friction to the heights of brotherhood.

Do not underwrite the Spanish-American War. Do not minimize the significance of the February 15 memorial anniversary which today and tonight every Spanish-American War veteran is joining with the representatives of all patriotic orders in observing with fitting ceremonies.

Mr. Speaker, I cannot close without mentioning a letter which I received from a good woman in Columbia, S. C., and which brought vividly back to mind the yellow-fever experiment in Cuba many, many years ago when soldiers of the Spanish-American War permitted themselves to be inoculated with deadly yellow-fever germs that medicine might score another great triumph in the eradication of this dread disease. The letter is from Mrs. May Jernegan, box 97, Columbia, S. C., and reads:

> Hon. BARRATT O'HARA:
>
> I am very much interested in (the House memorial service) having lived in Cuba during the Spanish-American War, with my husband until our Government troops left the island.
>
> I am 74 years old, the widow of Warren G. Jernegan, who during his Spanish War service, rendered extra service to science, humanity, and our Government. He took more yellow-fever experiments than any of that group of men at Camp Lazear, Quemados, Mariano, Cuba, under the yellow-fever board of which Walter Reed was the head. Walter Reed's memory lives in the great Walter Reed Hospital in Washington. My husband's memory lives only in the heart of his wife and only child—for he has slept in a lonely grave in Spartanburg, S. C., for he was still in the Government employ * * * at the date of his death in 1919. He died during the flu epidemic.
>
> My husband was the only man to take four different experiments and the only man to take the inoculation of human yellow-fever blood from the Spaniard, Jose Martinez. In this experiment they took the syringe of yellow-fever blood from the Spaniard and my husband permitted them to inject this Spaniard's yellow-fever blood into his own system, from which my husband became desperately ill—thus proving the yellow-fever theory.
>
> I have an 8-ounce gold congressional medal of his for this service, and congressional pension of $125 per month for this service. This pension has never been increased. Other widows have had their pensions increased, but my congressional pension was not increased 20 percent like theirs.
>
> I also have a Panama Medal given my husband for his Panama service during the building of the Panama Canal where my

son and I lived with him for many years. This medal was given him by Teddy Roosevelt. * * *

I thank you.

Very truly,

MRS. MAY JERNEGAN.

It was 21 years ago this month of February that the Congress gave recognition to the high public service rendered by Maj. Walter Reed and those associated with him in the discovery of the cause and means of transmission of yellow fever. One name was omitted from that list of heroes, and for 21 years Gustaf E. Lambert has fought in the "spirit of 1898" for that recognition of his magnificent service which cruelly and without adequate reason has been denied him. He is now an old man, his health is frail, and his days are numbered, and he hopes, and I pray, that before he has passed to the final rendezvous of all heroes, the Congress of his country at long last will have added his name to those of the others recognized for high public service in the yellow-fever experiments of the Spanish-American War.

Our distinguished and beloved former colleague, the Honorable Raymond McKeough, who for years represented brilliantly the district which now I have the honor to represent, introduced a bill to give this recognition to Gustaf E. Lambert, but for reasons difficult to fathom the opposition blocked the way to this doing of simple justice.

At the request of many comrades of the Spanish-American War, and responding to the resolutions passed by the United Spanish War Veterans, Department of Illinois, and posts of the Veterans of Foreign Wars, I introduced the same bill in the Eighty-first Congress, H. R. 2257. I think it is fitting that on this occasion, when we are observing the anniversary of the sinking of the *Maine*, attention should be called to the case of the one hero of the yellow fever experiments in Cuba who so far has been left shivering in the cold of his country's ingratitude.

It is said by some who stubbornly stand in opposition that Lambert was only an army nurse as though being a nurse should deprive a hero of a hero's recognition.

I bespeak for my comrade, Gustaf E. Lambert, and in behalf of all surviving veterans of the war of 52 years ago, the sympathetic consideration of H. R. 2257. That my colleagues may know the facts from a first-hand source I read the following letter dated March 3, 1949, from Paul L. Tate, 1530 Tyler Street, Berkeley, Calif., to the Honorable JOHN J. ALLEN, JR., a copy of which has been furnished me:

DEAR CONGRESSMAN: I am writing this to ask your support of House bill No. 2257, asking recognition of the work of Dr. Roger Post Ames and Nurse Gust. E. Lambert for their work during the yellow-fever experiments conducted by the Walter Reed Board in Cuba during 1900–1901.

I was the clerk of the Hospital Corps at Columbia Barracks, Cuba, during the time of these experiments and have some familiarity with the subject.

I kept the post hospital records and knew personally all the doctors there, including the members of the board and their various duties. I also knew personally all the members of the Hospital Corps who volunteered for the yellow-fever experiments, and saw most of them daily before and after the experiments.

There is one thing that is not generally known: After these men were inoculated with the fever virus by infected mosquitoes and/or blood transfusion, they were then treated by one doctor only, and that one was Dr. Roger Post Ames. That all of them were cared for by one nurse only, Gust. E. Lambert, of the Hospital Corps. And that every one of these cases was cured.

Not only that, but Dr. Ames and Nurse Lambert treated and cured (including all the experimental cases) about 67 cases of yellow fever. Many other cases of Army personnel and officers treated by other doctors and nurses during this same period died of the disease.

I well remember the horror we all had of yellow fever—its mystery, and swift, awful, death. So I know for a certainty that if only one of these experimental cases had died, there would have been no more volunteers to conduct the experiments with, and it would have ended in failure.

But the wonderful success of Dr. Ames and Nurse Lambert in curing each case as it developed encouraged more volunteers to take the risk.

Another fact not generally known is that neither Ames nor Lambert were immune to the disease. They were both as vulnerable to it as anyone else, and, in fact, Dr. Ames did contract yellow fever during the final phase of the experiments, and yet through the aid of Lambert saved another patient from death while he himself was sick.

Dr. Ames, besides being the only physician to treat these cases, personally made transfers of infected blood and applied disease-bearing mosquitoes to experimental cases at various times. So he performed practically every duty that any member of the board did and more.

As for the Hospital Corps men who bravely volunteered for these experiments, without detracting one iota from the courage of any one of them, I still think that, all facts considered, Gust. E. Lambert was their equal or better in heroism. During the contagion tests each volunteer went through his siege, but Lambert, equally vulnerable, worked and slept constantly in these quarters, never leaving day or night through all these tests. He took more chances of becoming infected than all of them combined.

No one has solicited me to write this and I have no special interest in the case, but I wish only to add my testimony in the hope that it will aid long-delayed justice to two of the key figures in that great medical experiment that conquered one of the most terrible scourges, yellow fever. At least I was there, and present briefly here just a few of the facts known to me.

Sincerely yours,

PAUL L. TATE.

Potatoes, Politicians, and Atom Bombs: Aroostook County Has Done Its Job Well

---

EXTENSION OF REMARKS

OF

HON. MARGARET CHASE SMITH

OF MAINE

IN THE SENATE OF THE UNITED STATES

Monday, February 20 (legislative day of Wednesday, January 4), 1950

Mrs. SMITH of Maine. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Potatoes, Politicians, and Atom Bombs: Aroostook County Has Done Its Job Well," published in the Bangor (Maine) Commercial of February 18, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POTATOES, POLITICIANS, AND ATOM BOMBS: AROOSTOOK COUNTY HAS DONE ITS JOB WELL

Today our editorial, which is rather longer than most, deals with potatoes, politicians, and atom bombs:

Potatoes, because we are pro-Aroostook, for reasons which we think are sound.

Politicians, because we think too many of them are too willing to play politics with Aroostook County's future.

Atom bombs, because we suspect that too few people are looking at the problem of our food surpluses in its true light. A clearer view may reveal that everyone with a stake in civilization has a vital interest in what happens to Aroostook's potatoes.

The price-support crisis that is making headlines out of potatoes has brought plenty of resounding statements from Washington. As yet it hasn't brought anything that is very constructive.

Congressmen, like other people, aren't fond of solving difficult problems. It's easier to blame somebody when the going gets rough.

As soon as it became known that many of 1949's spuds would be returned to rot on the fields that bore them, the name calling started. Some of our lawmakers began lambasting the growers.

Representative THOMAS J. LANE, Democrat, of Massachusetts, whose constituents live by Government-protected manufactures, called the potato farmers a parasite group. Senator SPESSARD L. HOLLAND, Democrat, of Florida, whose State is at the early end of the potato-growing cycle, piously described Maine growers as "principal sinners" in the price-support crisis.

SCOTT W. LUCAS, Democrat, of Illinois, the Senate majority leader, got even more sanctimonious this past week. He talked of "those potato farmers who are taking advantage of the pocketbook of Uncle Sam." A "scandalous situation," he said.

The whole performance was absurd. What is needed is less oratory and faultfinding—and more common sense.

First of all, Congress makes the laws. If there has been something grievously wrong with the law affecting potato prices, then it would seem that Congressmen, rather than farmers, are at fault.

We suggest, too, that the veil is going to have to be ripped away from a lot of economic hypocrisy before Congress gets to first base with any proper remedial measures.

Hoisting the standard of free enterprise, a lot of professional banner wavers are pretending that it would be quite all right to turn potatoes over to the tender mercies of the law of supply and demand. They talk as though there is something inherently wicked in supporting the price of potatoes.

But in our book Aroostook County has no need to apologize for the fact that its principal crop is price-supported.

Have you heard the steel industry apologize for the governmental protective wall that has safeguarded the prices of its products for so many generations?

Do you hear Representative LANE and his home town (Lawrence, Mass.) apologizing for the tariff protection given to the textile mills?

Are any apologies made by the spokesmen of many other industries that have enjoyed governmental largess in one form or another since Alexander Hamilton and other sound men introduced the protective tariff? Or

by the growers of other price-supported farm crops?

And, if supply and demand are supposed to rule supreme, how about labor? Is it bad to support the price of potatoes but good to support the price of labor with a minimum-wage law? Mr. LUCAS seems to see no inconsistency in his loudly proclaimed position. But we do.

One man's free enterpriser, it seems, is another man's parasite.

Further economic hypocrisy is involved, we believe, in what looks like a definite effort to whittle down Aroostook's earned share of the Nation's annual potato output.

By the most orthodox teachings of traditional economics, men and regions are entitled to produce the things they produce most economically. It simply doesn't make sense that Aroostook, which produces potatoes more efficiently than anybody else, should suffer production curtailments for the sake of others who can't produce them as efficiently.

If the price-support plan is to be readjusted, why readjust it in a way that puts a penalty on being up to date and knowing how? Neither sound economics nor national interest is going to be served by shackling Aroostook just because it has done the world's best job of raising potatoes.

Now let's go a step farther. Let's see what is sinful or scandalous about producing food in a hungry world.

Unless all the ancient virtues are dead, and they aren't, the ethics of potato raising require that a man do the best job he can. If he can raise more on an acre, it's not only his privilege but his ethical obligation—his social responsibility—to do so. It's his equivalent of industry's honest day's work.

One may well talk of sin and scandal in connection with the destruction of potatoes in a world in which many people lack food. But the sin cannot be laid at the door of the man who raised the potatoes. He did his part.

We are pro-Aroostook because we like Aroostook's way of doing things. In its particular branch of agriculture, the county is modern civilization's advance guard. It has been showing the world how food can be produced in the twentieth-century way. It has been showing the world how to have a better future.

Aroostook's potato crop is just as much a product of modern science as the atom bomb. They have another affinity in that wars are fought, in large measure, over food. Rake the ashes of the last two wars and you will find the bones of people who could be led to destruction because they wanted more to eat.

In time of war we are a bold and imaginative people. We marshal our best brains, unleashed our resources, and take huge problems in our stride.

In time of peace, apparently, the too successful cultivation of potatoes can throw us for a loss.

Face enough facts, and you collide with this plain truth: Potatoes are going to be destroyed—in a world that still needs potatoes—simply because the American people as a whole haven't been ingenious enough, industrious enough, or even interested enough to find out what else to do with them.

The American taxpayer who feels that he can't feed the world may do well to start counting the comparative costs of potatoes and atom bombs.

As we see it, Aroostook points up the epic challenge of our times.

It is a challenge that calls for our best brains and our most earnest effort.

If Congress, for instance, could just do its job as well as Aroostook has been doing its job of raising potatoes, we suspect that things would be a lot different. And if all the rest of us—taxpayers, voters, and civil leaders—could rise to the same standard of performance, we would have solved much more than a marketing problem.

We'd be well on our way toward learning how to live in the twentieth century.

Economic and Military Problems in the Pacific

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, February 20 (legislative day of Wednesday, January 4), 1950

Mr. MURRAY. Mr. President, on February 16, 1950, Gen. William J. Donovan delivered a very important address on the occasion of the presentation to him by Columbia University of the Alexander Hamilton award. His address deals with the very important economic and military problems in the Pacific. I think General Donovan is probably one of the best informed Americans on the situation in Asia, and I think the Members of this body will be very much interested in reading the address. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The Soviet Union has completed the conquest of China and this has been given formal approval by the 30-year peace treaty.

Throughout the Far East this marks a defeat for the United States.

This victory now makes Russia the dominant power in Asia as well as in Europe.

There may be disagreement whether this breach of the former balance of power in Asia has already gone so far that it threatens our security. But there can be no difference of opinion that the balance of power on which formal peace depends will be hopelessly upset if the Russians carry out their projected extension of the Chinese conquest to Indochina, Hong Hong, the Philippines, Siam, Malaya, Indonesia and Burma. This was the path by which the Japanese before them got all the way to India.

I visited all these countries, except Burma and Korea, and also visited Japan. During my trip the Russians boldly announced that they were going to try for just such an extension of their continental conquest. They made that announcement by recognizing the Communist revolutionary parties as the Government of French Indochina. Within a week the Western Powers had to accept the challenge. The British, the French and ourselves recognized the opposition government of Bao Dai. In Asia it is completely appreciated that the Russians have declared a subversive war on the rest of non-Communist Asia and ourselves. I wonder if the significance of that choosing up of sides has really come home to us here in the United States.

In the face of this Russian declaration of further conquest beyond China, with the Russians having demonstrated that they do know how to wage this kind of war, the non-Communist Asiastics wonder if the poet Shelley does describe us, if we indeed are "An ineffectual angel beating in the void his luminous wings in vain."

They want to be on our side if we're safe to be with—if we can be relied upon to stick with them when the going gets bad.

What is there we can do to justify their reliance upon us? What are the elements in that area that we can pull together for the sake of the people there as well as for our peace and security? As a line of departure I accept the statement of the Secretary of State that "It is hardly necessary for me to say that an attack on the Philippines could not and would not be tolerated by the United States but I hasten to add that no one perceives the imminence of any such attack." Let us see how, even at this late day, this defense could be accomplished.

Southeast Asia stretches from the subcontinent of India to the Australia subcontinent. In the center of this great south Asian triangle lies the spreading culture of Southeast Asia—on the Indochinese Peninsula, on Burma, Siam, and Malaya; on the island at its base are the archipelagoes of Indonesia and the Philippines.

Within this triangle live almost 600,000,000 people or about 25 percent of humanity.

The first thing we have to do is to recognize that the theater is one theater—Burma, India, Siam, Indochina, Manila, Malaya, Formosa, Korea, Japan.

That it is all one in spite of the differences that lie between. That it is one in which victories won, time gained, or material salvaged, in Indochina or Formosa, may greatly help in an intelligent defense of the Philippines or in the reconstruction of Burma or Indonesia.

When we look at our map and wipe out of our minds the wartime artificial separation into theaters of operation, we see that the Western Pacific is a strategic unit of which the Philippines are an integral part.

There is disorder to the point of chaos in Burma. Yet it is the bulwark before India and only speedy political and economic reform can save it from Soviet exploitation. In Indochina the Soviet has picked Ho Chi-Minh, to do there what they used Mao to do in China proper. In Malaya the British are contending against a campaign of ambush and assassination by the Malayan Communist Party.

Japan and its associated islands 1,600 miles from the Philippines give it protection from the north and Formosa almost halfway between must be denied to enemy occupation by Nationalist China until next June at least.

Indonesia is the master key for the defense of the Philippines because with Malaya it forms a protective shield against the south and that shield is given depth by Australia only 300 miles south of it. Strategically, Southeast Asia is of more than local interest. Whoever controls the Strait of Malacca and Singapore dominates a sea route comparable in importance with the Panama Canal. Indonesia is an island gate between the Pacific and the Indian Ocean. In 1942 Japan took the islands and broke out of the Pacific to extend its operations as far west as Ceylon. The Indian Ocean may well be the warm water target that Russia has always sought.

The American naval and air bases in the Philippines are only a thousand miles from Saigon in French Indochina.

Indonesia is the most important of the southeast Asian countries that have emerged from colonial status into nationhood. An archipelago stretching nearly 4,000 miles, or one-seventh of the way around the earth, and and having some 750,000 square miles of land area, and a population of 75,000,000.

It is probably the most westernized of the far-eastern countries. Its economic, financial, and even its transport system are based upon Western models. It is even by modern standards rich in resources and is fully able

to repay any loans advanced to it for reconstruction and capital expenditures.

Its top leadership is anti-Communist by conviction. Although on lower levels there is needed experience in organization and administration, the government in control is about the best that could be obtained. The four or five leading men are competent and honest. They seek United States technical advice both of an industrial and military nature. If we could meet this request for aid as well as counsel, our position would gain strength from the fact that for the last 2 years we have carried out a policy there, consistent, definite, and to a degree successful.

In addition, our Ambassadors in the vital countries of India, Siam, and Indonesia are men of training, experience, and understanding. They already have the respect and friendship of those countries to which they are accredited.

There is general agreement among those whose opinion should be given weight that Russia has a program in southeast Asia and that the timetable for that program has been stepped up in an endeavor to take full advantage of the momentum from their speedy victories in China.

The urgency requires leadership now. It requires a leader—whether you call him a supreme commander or a high commissioner with the authority, the experience, and the ability to deal with political as well as military problems. He should be vested with the discretion to deal with those problems on the spot and should be located in the theater close enough to see it at first hand, yet not so close as to lose his perspective.

The cooperation of the British, the French, and the Dutch would be eagerly given, and they know our leadership is needed. The establishment of such leadership would be welcomed by the people of the countries concerned and would allay their present fear that we would abandon them.

We must make clear to them that having picked our friends we will stay with them to the finish whatever the consequence.

We have a precedent for this action.

In June 1948 Russia, in the Berlin blockade, employed a menacing and dangerous tactic to test the will of the Western Allies and to stop the European recovery program at the outset.

General Clay met the challenge with boldness and resolution. The dramatic success of operation "vittles," which maintained Berlin's food supply despite the seizure of the city, caught the Soviets flatfooted with surprise.

General Clay saw that if the Soviets intended war, war could not be avoided by a retreat from Berlin. On the contrary, it would mean that we would be driven progressively to weaker positions. He saw, too, that if Russia was bluffing, that the moment had come to call the bluff or to surrender the initiative he had won.

The courageous and common-sense action of General Clay in that crisis is a guide and an example for us all.

We have shown our great desire for peace with Russia and our willingness to settle differences. But we have learned that up to now at least agreement with the Russians is a hopeless illusion.

We now see that what happens in Berlin or in Peking has its repercussions in every area of the world where our country and the Soviet Union face each other. It is a war of subversion on a global scale in which Russia is trying to whipsaw us from one side of the world to the other.

We must win now the war in which we find ourselves. It is a war which on many fronts Russia has been waging and winning. A war that we can lose without a shot being fired. A war that, if we win, may make impossible a shooting war. We can neither buy our way out nor appease our way out. Our strength must be found in ourselves—in our decision and in our resolution.

Leadership in Asia

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, February 20 (legislative day of Wednesday, January 4), 1950

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD, immediately following the printing of the address delivered on February 16 by General Donovan, a very valuable editorial entitled "Leadership in Asia," published in the New York Herald Tribune of last Saturday.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LEADERSHIP IN ASIA

The revolutionary changes that have swept over eastern Asia during the last few years in an accelerating tempo of change have found the United States, in great measure, unprepared. Successive missions by individuals and groups, conferences of ministers and ambassadors such as that which recently ended in Bangkok, long and futile exchanges of recriminations in Congress and the press, have all testified to a basic lack of organization and intelligence (in the military sense) in respect to a vast and complex continent. It was toward that situation, no less than toward the spreading danger of Communist expansion in Asia, that Gen. William J. Donovan directed his address on Thursday night.

General Donovan proposes effective leadership, the appointment of an official representative of the United States, "with the authority, the experience, and the ability to deal with political as well as military problems" in Asia. His theater of operations would be vast, territorially, but it is so closely linked strategically that no confusion or cross-purposes should be permitted to divorce policy in the Philippines, for instance, from policy in Indonesia. He would need discretionary powers for an emergency, but the over-all program would have to be laid down clearly in advance, and close liaison with Washington is essential. Such an individual, backed with a suitable organization, would be evidence of America's intention to form a core of resistance to communism; it would also provide the information and the operative facilities needed to enlist the support of the peoples of the area and provide channels through which to strengthen the native forces of freedom.

A high commissioner for southeast Asia would not, needless to say, be the whole answer to the multiplying problems of that continent. The creation of such an office would not absolve the State Department, the Defense Establishment, Congress, or the American people from the hard thinking and strong action which the Asiatic dilemma demands. Rather, it would be a tool, a very useful tool if filled competently and used imaginatively, to implement American purposes in a region full of peril. General Donovan's suggestion is well worth consideration—in some form or other what he proposes must be done, and done speedily.

Brotherhood Week

EXTENSION OF REMARKS
OF
HON. WILLIAM BENTON
OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, February 20 (legislative day of Wednesday, January 4), 1950

Mr. BENTON. Mr. President, on the occasion of Brotherhood Week, now being celebrated throughout the United States, I ask unanimous consent to have printed in the Appendix of the RECORD a very incisive address by a citizen of Connecticut, Mr. Joseph J. Morrow, personnel manager of Pitney-Bowes, Inc., of Stamford, Conn., before the Catholic Interracial Council of New York on November 20, 1949, entitled "Prejudice—A Moral Problem."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PREJUDICE—A MORAL PROBLEM

We've heard a lot about prejudice in the past few years, associated mainly with the problems of American minorities. Not many people nowadays would be caught admitting they were prejudiced about anything. There are a few exceptions, of course, such as the rather notable southern gentleman who earlier this month offered to devote a breathtaking sum of money to the cause of segregation, with a lack of success that was equally notable. To us, he seems a perfect example of extreme prejudice; but when we stop and think, a good many of our own daily actions are guided by prejudices which take the form of likes and dislikes about a variety of things—feelings which have no sensible basis. Localized in our own lives, they harm few people, if any. Still, their existence can help us understand how easily prejudices are formed, and how, spread out as race attitudes, they can defeat Christian purposes more readily than conscious scheming ever could.

We all recognize now that negative feelings about people who belong to certain racial or religious groups are an extremely disturbing factor in our country, and one of utmost importance to us right now. After all, every American, at some point in this world, is a member of a minority—one of less than a 150,000,000, among a world population counted in billions. The American is set apart by his thinking and his ideals from a very great part of the world; and is different in ways which have lined him up willy-nilly, on one side of an ideological struggle with an aggressive and powerful opponent. We must not forget for a moment that American Negroes, or Jews, are not the only Red Riding Hoods in this world; or that there is more than one kind of wolf in the forest. Justice and self-protection have become inseparable for us; and Americans of all races and all beliefs must cling together for their common salvation as they never have before.

Just not to be prejudiced against a minority group isn't enough. Passive tolerance is certainly a more valuable attribute than intolerance, of course, but its value is limited to the tolerator himself. On the other hand, tolerance combined with action develops a chain reaction which increases daily. I think that's the kind of tolerance we are beginning to have in much larger quantities than before. The evidence is in the press; in the growing number of State fair employment practice laws; in organized promotion of unrestricted job opportunities for Negroes in many cities; and even in the

movies. Most everyone reads the papers and goes to the movies; and both have tremendous influence on public thinking. Continued increase in the number of fair employment practice laws, and in local fair employment efforts, means that more and more people will eventually either be working with Negroes, or will at least know someone who does. At the same time, they'll be learning first-hand that a Negro is a normal human being, with a personality as separate and distinct as any white man's—that he is someone who certainly doesn't look or act like a social or economic menace.

These are some of the results we can get, and are getting, from the growth of aggressive tolerance. If I have made them sound like cure-alls, I haven't meant to. Naturally, these weapons have little effect yet in those parts of the Nation where the causes of prejudice are deep-rooted and complex, and often expressed with violence. Nor can they be immediately effective with those whose prejudice stems from strong personal insecurity. There are many kinds of insecure people. You all know the fellow who becomes angry and feels frustrated when he sees a Negro driving a new car; who is resentful when a Negro takes over the shop bench next to his and gets an identical wage for his work. There is the salesgirl, too, who waits on the Negro woman with coldness and inward humiliation, and the mother who first teaches her child about bias when she tells him his dark-skinned playmate doesn't belong.

The people with only a little of those feelings are the most receptive to education in tolerance when they are exposed to it. As a group, they are also the people who live in a reassuring, well-established home and community atmosphere, free from physical need. They are quite different from the group in the hand-to-mouth economic bracket, whose lower living and social standards paradoxically increase their estrangement from the even more underprivileged Negro. They are different from this group because the idea of advancement for the Negro is no real threat to their own firm and well-defined position in our social structure. They can afford to be generous.

What bridge, or link, then, can be provided for those people whose precarious spot in our class structure prevents their accepting the idea of equal job rights and fair personal treatment for Negroes? Obviously the link must provide an incentive toward sympathy which is stronger than fear-bred race hatred and compelling enough to overcome the compensating belief in the righteousness of their hatred.

In each man's life there is only one influence which can meet these requirements. It is his church. The Christian and Jewish religions are the strongholds of the philosophic idea of brotherhood among men—not the destructively leveling brotherhood of collectivism, but the kinship in love and hope of those who worship God. All arguments against discrimination must have their roots in religion if they are to furnish convincing answers to the "why?" of the biased.

I do not in any sense believe that the amount of prejudice in the United States is a sign that the faith of American Christians is weakening. If all Christians were automatically infallible, there would be no need for the spiritual leadership which heavenly wisdom has provided through our church. And when Christian ears are plugged by un-Christian resentments, the church need only raise its voice enough to reach beyond these obstacles.

At this point I want to fall back on my own experience in the city where I live and work, to make a statement which I am sure must hold true in many other parts of our country. Prejudice in our city of Stamford is no greater than that in any other northern industrial city, but the prejudice I have found does not come from our old Yankee stock, but from some of the comparative newcomers—the first or second generation Americans who come to the United States from Italy, Poland, Ireland, or any other country you might mention. The country isn't important; but it is important that some of these people are not yet secure and settled enough in their jobs and community relationships to be ready for the idea of equal working opportunities for Negroes in industry and commerce. They are good citizens otherwise; and they can respond to the kind of guidance which will stir their consciences. For these people, help should and will come from the church, particularly our own Catholic Church—because a majority of such newly transplanted citizens are Catholics, from Catholic countries. This is no more a reflection upon catholicism than the bigotry of some southerners should be considered a reflection upon protestantism. But to me it is a sign that the church's voice ought to be raised especially for these people, to give them understanding of true tolerance, how it may be applied within their own lives, and to what end. Along with the immense satisfaction of practicing their Catholic faith as it is meant to be practiced, those who listen to the church's voice will find a good measure of the security in community existence which has been lost somewhere along the way. For what can add more to a man's self-respect and spiritual fulfillment than knowing he is capable of replacing his fear with compassion; his hatred with friendship; and his self-seeking with charity?

The subject of race attitudes in foreign-born Americans produced an interesting by-product when I was discussing it a few weeks ago with a young Negro employee at Pitney-Bowes. He spoke of the excellent treatment given the Negro GI's in the western countries of Europe during the war, and the cordiality and friendship they found nearly every place they went. He told me that many Negroes, received warmly in the churches, homes, and public places of Italy, have actually returned there to live. They have found complete freedom to work at any job for which their abilities have qualified them, or to continue their education in any of Italy's universities.

While the welcome they were offered in Europe was undoubtedly extended, in part, because of their status as United States soldiers, I believe it was due mainly to the generally recognized absence in Europe of anything which could be called class feeling against Negroes. This doesn't prove that Europeans are basically more generous than we; or even that they have learned to be. Race tolerance isn't something human beings are born with, to be unlearned later; it simply does not exist unless a set of unnatural conditions have produced it. The Negro was never a slave in Europe, or an economic problem; and he has no history of social ostracism there to frustrate his attempts to live as others do. How ironical it seems to hear American Negroes, even a few, finding their free home in Europe, while western Europeans look to the United States, with hope and longing, as the land of the free.

Class patterns in the United States explain easily why the Negro has been so often labelled "inferior," in spite of proof that, all things being equal, his mentality and spirit are identical with the white man's. Class levels are chiefly levels of material worth, and the Negro, as a whole, still exists on the fringe of the very lowest economic bracket—the spot into which he immediately fell upon his release from slavery, and where prejudice has kept him ever since. Many brilliant Negroes, of course, have carved out places for themselves which are in true proportion to their worth; but still mor have fallen by the wayside trying—college men working as janitors, college women working as domestics; intelligent high-school graduates often not working at all. Industry and commerce, in many States, are already beginning to recognize their personal responsibility to do something about this tragically wasteful aspect of prejudice, and to accept it by employing Negroes in capacities which are equal to their skills.

Well-paying jobs are the only practical answer to the question of how to remove the Negro from the "inferior" class into which poverty has forced him. We are doing our best at Pitney-Bowes to meet our own responsibility; and we know that not one of our Negro employees is "inferior" in any sense. We have chosen them carefully for the skilled jobs in which most have been placed; but we have not gone beyond our own locality to find them. We will employ more Negroes, as we have an opportunity to do so, and as they come to us—just as we do qualified whites. If we started our program with a little feeling of self-conscious philanthropy, and some doubt of our success, these have long since left us. The Negroes in our company have proven themselves almost without exception to be responsible, loyal employees, not charity patients; and they are accepted on that basis now by our entire plant.

With the complete support and encouragement of our top management, we started an active program of employing skilled Negroes in our shop about 5 years ago, and placed our first Negro office worker on the pay roll in the summer of 1946. We had some anxious moments trying to anticipate as best we could the type of problems which might arise from employee resentment at working with Negroes. We had always worked for a healthy relationship with our people, and believed that this record would make our job easier—which it did. When we began to employ a few skilled Negroes to fill shop jobs as machinists and assemblers, no objections reached us except those of a very few who thought the company might be planning to flood the plant with poorly paid Negroes at the expense of our white personnel. This, incidentally, is a good example of the sort of irrational reaction produced by a feeling of economic insecurity. The story got little attention, and died a quick death, apparently because the great majority of our employees had found within our plant a measure of the security and sense of personal identification with the company's aims which we had tried to give them.

We knew our real problem would come in placing Negro girls within our office departments. The first young woman we hired was assigned to our personnel department, among employees who understood what we were trying to do and who had assured us of their cooperation. At first, some negative comment did come from girls in other departments whose work was related to hers; but her ability and pleasant manner later earned her the friendship and support of everyone who had become acquainted with her. She has worked hard to improve her value to the company during the 3 years she has been with us, and I think she is deeply happy in her job.

We have employed a number of young Negro women for office work since then, and have encountered very little opposition of a really serious type. What we did find seemed to be completely checked when we made it plain that our employment policy would definitely be continued, and that we would insist upon cooperation from everyone in helping to make the program work.

We have found frank discussions of the prejudice problem with our white and Negro

personnel to be a real help. Through such discussions we have prepared our new Negro employees for possible rebuffs, and at the same time emphasized the importance of their behavior as missionaries for their race. Through similar talks with the white employees among whom the newcomers will work, we have explained the purpose of our program and tried—successfully, I think—to enlist them on our side by bringing the subject of prejudice into the open ourselves, not waiting until trouble puts us on the defensive.

Whatever factor weighs most heavily in the success we have had, our employees, white and Negro, have found the secret of working together with harmony and forbearance. Our own company is not the only industry where this has been done, by any means. Some of our largest corporations, both northern and southern, have taken the leadership in destroying race barriers inside their own gates. Some job opportunities are opening up for Negroes in stores and public utilities, too. Still, "some" is not most, or anything like it. A lot of education and guidance will be needed all over the Nation before we can really say that industry is taking its share of responsibility for the Negro's economic betterment.

I know, as we all do, that complete equality for Negro citizens in all the segments of our national life is a long way off. The revolution in thinking which will bring it about won't be the product of a brief, white heat of inspiration. It will need a lifetime—or two—of steady consecration from those who carry Christian principles closest to their hearts. When the job is done, American democracy will be its own triumphant answer to the haters and the doubters who are challenging the strength of our faith, and the truth of our ideal.

Brotherhood in America

EXTENSION OF REMARKS
OF
HON. ROBERT C. HENDRICKSON
OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, February 20 (legislative day of Wednesday, January 4), 1950

Mr. HENDRICKSON. Mr. President, I hold in my hand an editorial from the New York Times of yesterday, February 19, 1950, entitled "Brotherhood in America." Confronted as we are in the second session of the Eighty-first Congress by major issues affecting the brotherhood of mankind, this editorial, during the current week has been designated as Brotherhood Week should be a forceful reminder to us of our clear and unmistakable course of duty.

I, therefore, ask unanimous consent that the editorial be inserted in the body of the RECORD at this point in my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BROTHERHOOD IN AMERICA

The week of Washington's Birthday has been set aside, appropriately enough, as Brotherhood Week. Its spirit is well expressed in Washington's prayer following his inauguration, that "Thou wilt incline the hearts of the citizens * * * to entertain a brotherly affection and love for one another and for their fellow citizens of the United States at large." It is the week, conceived by a Catholic priest in Denver and observed every year since 1934 under sponsorship of the National Conference of Christians and Jews, that recalls to all the inhabitants of our land the basic principles of human fellowship on which our democratic society is founded.

A respect for the dignity of man is one of the distinguishing characteristics of our western civilization. It is not an empty phrase. While it is of course true that this country of ours is not yet entirely rid of racial conflicts and religious prejudices, it is also true that all that is best in America stands with increasing strength in firm opposition to such forces of retrogression and despair. The dignity of man requires firm adherence to the principle and practice of civil and political liberty, of racial and religious tolerance. Those who belong in the free world understand this. Brotherhood Week is a good time to think about it.

History of the Military Order of the Carabao

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, February 20 (legislative day of Wednesday, January 4), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excerpt from the history of the Military Order of the Carabao, written by Commander Arthur Stanley Riggs, United States Naval Reserve, for the 1939 Wallow, and published in the Army and Navy Journal of February 18, 1950.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

CARABAO MAKES HISTORY

The Military Order of the Carabao was organized in Manila, P. I., in November 1900, for the purpose of fostering a high standard of military and social duty and to perpetuate the memories and associations of military service in the Philippines during the early days of American occupation.

In the closing days of the great Boxer campaign in China, when the fighting was all over, the officers of the allied armies met in the Temple of the Dragon in Peking and decided to perpetuate their comradeship in arms with a military order of their own. That was the origin of the famous Order of the Dragon, limited to officers of the American, British, Russian, French, German, and Japanese armies who had served together during those hectic days. The officers of the Sixth United States Cavalry in particular had had a wonderful time in China, and when some of them arrived in Manila, sporting the yellow ribbon and gold badge of the new order, some officers of the Philippine Expeditionary Force—it wasn't called that in the days of the empire—among them Col. John Biddle Porter, United States Army, and Maj. George L. Byram, United States Army, at a dinner in the old Army and Navy Club in the Walled City, decided to form a joke society to offset the Chinese organization.

To spoof the proud wearers of the dragon, something ridiculous was necessary as a badge of the new society. Major Byram promptly suggested the most lowly, despised, cursed-at, and best-loved animal the forces knew, the patient water buffalo, or carabao. The name caught instantly, and the Military Order of the Carabao came into being with a cheer. The carabao, as anybody who ever had to work with him knows, is a beast of cow-like demeanor and docility—so long as he stays wet. He is the donkey, the mule, the elephant, the abused and inevitable drudge of the Filipino and of all who live in the islands. When our troops reached the islands they had no mules. The roads were bad, the bush impenetrable, all the conditions such that the guns could not go up without reliable motive power that would not bog down in the rains or wilt under the torrid heat. The answer was God's gift to the little brown brother, the most faithful of all beasts of burden, so long as he can have his daily supply of something wet. Deprive this docile creature of his right to water in unimaginable quantities, and the time to wallow in the muddy shallows, and he becomes a very different and a very formidable beast indeed. This characteristic made the carabao the butt of infinite jest in the Army. Even the fact that the first field artillery used in the islands got into action only by grace of the humble carabao, did not save him from the ribald joking the troops enjoyed so much. As a name for a derisive organization, also, carabao was priceless, and wallow as a name for the dinner meetings when Carabaos gathered from far and wide to gambol and swap reminiscences of the fighting days, had something more than a poetic significance.

With the gradual development of the order into an organization of Nation-wide significance, and the transfer of the main corral from Manila to Washington, the annual wallows or dinners have become affairs of the greatest interest and importance. Carabaos come from remote sections of the country to attend. The President of the United States is always invited, as are the members of his Cabinet. Invitations to these hilarious affairs are eagerly sought, and legend has it that a Marine will fight anybody for one at any time.

Ex-President William Howard Taft, who was delighted at his election to the order, enjoyed the fun and satire at the wallows with great heartiness and always requested the singing of the song, He May Be a Brother of William H. Taft, But He Ain't No Friend of Mine. Sometimes these festivities included very trenchant comment upon national affairs. The press was quick to realize the tonic effect of such outspoken criticism from men who were themselves a part of the Nation's administration, and gave the wallows the widest publicity. One of these famous dinners gave rise to perhaps as curious an incident as ever marked the lives of any public officials in the United States.

During his first term as President, Woodrow Wilson was invited to become an honorary member of the Carabao Order by Maj. William E. Horton, Grand Lead & Wheel Carabao. Writing from the White House on November 22, 1913, President Wilson replied:

"MY DEAR MAJOR HORTON: Allow me to thank you for your very kind letter of November 19, and to say that it affords me much pleasure to accept your tender of honorary membership in the Military Order of the Carabao.

"With assurance of my appreciation of this compliment, believe me,

"Sincerely yours,

WOODROW WILSON."

On December 11, 1913, came the annual wallow with the familiar, somewhat boisterous good time. Included in the program of stunts was a satire upon the policies of the President, of the Secretary of the Navy Josephus Daniels, and Secretary of State William Jennings Bryan. The whole thing summed up into a good-humored poking of

fun at our Philippine policy and the peacefulness of Secretary Bryan—subjects hardly to be expected to excite the admiration of sturdy fighting men sworn to maintain, uphold and defend the Government. During the festivities an army officer who was not on the official program got to his feet and began to sing the famous Insurrecto song. With a wild shout of applause, the diners responded and the chorus nearly unroofed the sedate old Willard Hotel. After one verse, the chairman of the program committee pulled the speaker down.

Then, mounted upon the shoulders of stout lads from the Navy and the Marine Band playing "Columbia, the Gem of the Ocean," three battleships hove into sight: U. S. S. *Friendship*, U. S. S. *Fellowship*, and the U. S. S. *Piffle*. The last-named was rigged up with nosegays, grape-juice bottles, lecture platform, and other gadgets thrusting adroitly at the policy of the State Department.

The applause was uproarious. Secretary Daniels chuckled over it as heartily as anybody. The next day he wrote the following letter officially:

THE SECRETARY OF THE NAVY,
December 12, 1913.

Rear Admiral THOMAS B. HOWARD,
United States Navy, Navy Yard,
Washington, D. C.

MY DEAR ADMIRAL: I wish to congratulate the patriarch of the herd for the brilliant entertainment given by the Carabaos last evening and to tell you how much I enjoyed the steady stream of wit and wisdom that flowed around the festal board.

I assure you, my dear Admiral, that I shall always have a happy memory of the dinner and beg to thank you most cordially for giving me that pleasure.

With best wishes,
Sincerely yours,

JOSEPHUS DANIELS.

President Wilson, however, was not only not at the dinner, but he was not at all pleased with the ridicule his policies had drawn. A day or so later he directed Secretaries Daniels and Garrison to investigate and report to him. When he received their reports, he ordered one of the sharpest reprimands on record for the officers who had arranged the program.

The climax of the affair was reached when, still smarting with irritation, the President wrote as follows to Major Horton:

THE WHITE HOUSE,
Washington, December 17, 1913.

MY DEAR MAJOR HORTON: Sometime ago I had the pleasure of accepting honorary membership in the Military Order of the Carabao. I now beg to be permitted to withdraw my acceptance. I am constrained to make this request because of circumstances which I am sure the society will understand.

Sincerely yours,

WOODROW WILSON.

Both President Wilson's letters and all the documents covering this amazing outburst are in the official archives of the order. There was some talk of court martial for the officers concerned, but naturally nothing came of it. The reprimand was more than enough. Secretary Daniels suggested to Admiral Howard that he relinquish his office as patriarch of the herd. Asking a naval officer to be a quitter had the result to be expected. The society backed him up steadfastly, and the only civilian among the officers, former Col. Joseph M. Heller, Medical Corps, assumed the entire responsibility for the entire incident and made a public apology. The order also officially apologized, and the incident was closed. Though the amende honorable had been made, not a Carabao retreated an inch from the ground taken. The years that quickly followed demonstrated that whatever President Wilson thought of the patriotism and intelligence of the officers he had censured so caustically, they were straining at their moorings when the call came in 1917 that scattered them over the seven seas and throughout a war-torn world from the icy steppes of Siberia to the south of France, spread them over the man-killing cold and storm of the North Sea and the Channel and into the hell of the Argonne. The World War added fresh laurels to the order, and sounded taps for many a devoted Carabao who, when the moment came, joked with death as cheerily as he had with the herd when the lights blazed and the wine sparkled at the wallow that brought him into disfavor.

Since then two more decades have gone by, and wallow has followed wallow without any repetition of the incident, though the herd remains as always ready on the instant for frolic or fight, with the leaders of all the services and hundreds of eager civilian guests gathering each year on the date closest to the day when the Philippine Insurrection broke out, February 4, 1899.

Today the order is centered in Washington, where many of the officers of all three services are quartered, and in Manila, in a newer, more comfortable Army and Navy Club. All the other branch corrals are gone, but the inextinguishable spirit that won the Philippines, first from Spain and then from some seventy thousand Filipino irregulars as elusive and hard to catch as tropical fleas, lives on and burns as brightly through the years as when the first shot fired in the Islands lighted it.

WALLOW MARKS CARABAO'S FIFTIETH ANNIVERSARY

Its members bonded and blended together in historic camaraderie, the famed Military Order of the Carabao, conceived in the tropical brain of a socially and spiritually inclined officer, and named to honor an animal of distinction so constitutionally created that frequent libations are necessary to his very existence, tonight celebrates its fiftieth anniversary.

At this historic wallow, old grandads of pre-World War I Philippine service will thrill alike with youthful Virginia gentlemen who sailed or flew across the Pacific to liberation action in World War II to the lofty words of the bountiful bombinero.

Sober pedants may insist petulantly that the celebration should be delayed until November, for it was in that month of the year 1900 that the Military Order of the Carabao was founded in Manila.

But neither Carabao nor hombre need tip his hat or his glass either to such a scholar, for no search of archeological ruins or examination of nonexisting archives ever will disclose the actual date of the first meeting.

And there is a reason for this. It is not, as some might suspect, because members were too Scotch to provide proper record books. As Col. Herbert A. White, United States Army, the bombinero of the epic 1913 wallow, revealed the true story, it went as follows:

"The paramount Carabao was found to be in such a high state of exhilaration over the future of the order that he was unable to put a motion, and the secretary was in such a similar state of exhilaration that he was unable to record a motion that had been put."

As a hang-over from that first meeting, each successive wallow has been characterized by great exhilaration. At times, notably in 1913, the effervescent spirit of the order's annual wallow has bubbled over into unprecedented situations of corking national interest.

Thus it was in the unlucky year of thirteen that President Wilson, not present at the wallow but disturbed at traditional Carabao satire which his policies evoked, ordered a very serious reprimand for officers responsible for the program.

Of this reprimand, the New York Sun commented editorially: "Let us quote the classic rebuke; it is a model for any pedagogue who may ever have occasion in the course of stern duty to administer verbal chastisement of men of war."

Official apology was made by former Col. Joseph M. Heller, Medical Corps, United States Army—the only civilian among the order's officers and the incident was closed. Not ended, however, was the unwavering adherence to the creed which keeps the herd, as tonight, "always ready on the instant for frolic or fight."

Among the 270 persons present at the 1913 wallow, described in detail in the history reprinted herewith, was Assistant Secretary of the Navy Franklin Delano Roosevelt. Records do not reveal his reaction to the evening of mirth, but the undisputed belief is that his famous smile was much in evidence at the wallow, symbolized by many refills and only that solitary one but straight reprimand.

At the 1939 wallow Assistant Secretary of War Louis Johnson told the Order of the Carabao that "you are the romantic old guard of the services and your achievements in song and battle have been perpetuated in the traditions of the Army and Navy."

Then, in Sybilline words, Secretary Johnson made this wry observation: "The reactionary and the conservative are not of the same type. A reactionary resents change merely because it is change. A conservative comes from Missouri.

"He is slow to change. Once convinced that the change is for the better, he becomes eager and ready to turn to the new. The old guard is properly conservative. It could never become reactionary."

Just as the 1939 wallow saw the inauguration of a Marine Corps officer, Maj. Gen. James C. Breckinridge, as grand paramount carabao, so tonight, Gen. Clifton B. Cates, Commandant of the Marine Corps, takes over the reins of Carabaos, an organization eager to demonstrate that there will be no wateringdown of the order's richly deserved reputation, and exhilarated at the prospect of another evening devoted to "a temperate amount of prudence and a prudent amount of temperance."

"Housing" Is a Misnomer

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO

IN THE SENATE OF THE UNITED STATES

Monday, February 20 (legislative day of Wednesday, January 4), 1950

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled " 'Housing' Is a Misnomer," published in the New York Times of February 20, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOUSING IS A MISNOMER

Thomas B. McCabe, chairman of the Federal Reserve Board, speaking for that body, has gone on record as opposed to the administration's $2,000,000,000 so-called middle-income home-financing bill, as now set up. The Board's position is hardly surprising. Nobody charged as the Reserve Board is with responsibility for stabilizing the Nation's credit system could conscientiously or logically support a measure so economically irresponsible.

This newspaper has consistently favored public-housing programs where they could be justified on legitimate humanitarian or

social grounds. But to describe this proposed bill as a housing program in that sense of the term is a complete misnomer. The plan is not restricted to families with substandard incomes. The Internal Revenue Bureau classes persons in brackets up to $6,000 as in the middle-income group. Actually, this bill doesn't even include that limitation. The nearest it comes to it is to provide that the particular residential project contemplated should meet the need of moderate-income families in the locality.

Specifically, the bill calls for the creation of another Government lending agency, this one to be known as the National Mortgage Corporation of Housing Cooperatives. The new institution would be authorized to make long-term low-interest rate loans to housing cooperatives and other nonprofit organizations for housing purposes. The proposed terms for such loans are so fantastically liberal that they come close to being merely thinly disguised subsidies. Lending rates would be only slightly higher than those at which the United States Government itself can borrow. In fact, the bill provides that the two should be tied together. The loans would be amortizable over a period of 50 years—half a century. Nor is that all. An extension of another 10 years would be obtainable by the borrower; also, the Corporation would be authorized to defer payment on both principal and interest for as long as 3 years during the life of the loan. No wonder that Mr. McCabe observed that "we know of no mortgage credit currently available in this country on amortization terms of 50 to 60 years or at interest rates such as are contemplated here."

Surveying the provisions of this bill, we find ourselves tempted to repeat an observation we made after going through the Brannan farm bill—namely, that no measure which rested on a sound economic basis would have to be made so thoroughly delectable as this one politically.

The New Grand Paramount Carabao

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, February 20 (legislative day of Wednesday, January 4), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The New Grand Paramount Carabao," written by Carabao Robert Sherrod, and published in the Army and Navy Journal.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE NEW GRAND PARAMOUNT CARABAO

(By Carabao Robert Sherrod)

Clifton Bledsoe Cates, who becomes tonight the forty-sixth grand paramount of the Military Order of the Carabao, took office as the nineteenth commandant of the Marine Corps on January 1, 1948.

It is not difficult to discover why there have been more Grand Paramounts in 50 years than there have been commandants in 175 years. In the early years of the Republic—and of the Marine Corps—commandants served unconscionably long terms. Of the late, great Archibald Henderson it is said that after 37 years in the office he forgot and willed the commandant's quarters to his son.

General Cates' son is a naval officer.

As a colonel the new Grand Paramount commanded the First Marines at Guadalcanal. There he gained a distinction among his gyrenes which stuck with him throughout the war; he always looked as if he had just stepped out of a bandbox. Let it rain, let the mud get shin-deep, let Pistol Pete fire until his guns melt—Cliff Cates' pants were still pressed.

The legend persisted throughout the Tinian battle in 1944, the still immaculate General Cates commanded the Fourth Marine Division in what was probably the corps' smoothest amphibious operation of World War II. During that beachhead in hell which was called Iwo Jima, General Cates had his division CP in what had been a Japanese underground ammunition dump. Despite an almost total lack of sleep, despite the gore and brimstone, despite the dank quarters, General Cates nontheless managed to turn up each morning clean-shaven and neatly pressed. His only concession to the surroundings was his failure to wear a necktie.

Outside this CP one of General Cates' staff planted a street sign, "Maui Blvd." The Fourth Marine Division always returned to the Hawaiian island of Maui between battles, and the people of the island referred to the outfit as the "Maui Marines." Probably nowhere on the globe was there a closer affinity between the local population and the military visitors. Whenever the marines came back, almost every man, woman, and child among the island's 45,000 population turned out to greet the transports, and Cliff Cates became by common consent No. 1 citizen of the island. General Cates still has a petition signed by 1,191 citizens, beseeching Admiral Nimitz to send the division back to Maui "when it has finished its current battle." Nearly every inhabitant of Maui made friends with someone in the division, which was stationed there well over a year. Greatest of all the homecoming welcomes was after Iwo Jima. The local citizens outdid themselves when the transports docked this time—there were coffee, doughnuts, cakes, and flowers, and huge street signs welcoming the Fourth Division. But after the ships docked a great wave of sadness swept over the crowd. Half the Fourth Division failed this time to come back. Nearly two thousand of the "Maui Marines" were dead; six thousand others lay in hospitals from Saipan to San Diego. As long as he lives, Cliff Cates will probably remember above all else the return to Maui after Iwo.

In World War II General Cates was awarded two DSM's and a Legion of Merit. His record in the First World War, in which he served as a platoon commander and company commander of the Sixth Marines, was equally distinguished: two DSC's, a Navy Cross, two Silver Stars, two Purple Hearts, and a Croix de Guerre with two Palms and a Gold Star. He was wounded and gassed at Chateau Thierry, and wounded again at Soissons. He acquired the nickname "Lucky" during an assault on the village of Bouresches, which he survived with ten of his men after being knocked cold by a bullet which bashed in his helmet. A week later, only Cates and Private Levine were left of his entire company. The nickname and the trait stayed with him throughout World War II, which he escaped without a scratch, although at Iwo a warrant officer standing next to him was decapitated by a Japanese mortar fragment.

Concerning his nickname Cliff Cates has one standard answer: "Better born lucky than good looking."

General Cates was born in Tiptonville, Tenn., 56 years ago. He started out to be a lawyer, and graduated in law from the University of Tennessee. He enlisted in the Marine Corps June 13, 1917, and has not shown any disposition to return to law since then.

America's Role in the Chinese Tragedy

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, February 20 (legislative day of Wednesday, January 4), 1950

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio commentary entitled "America's Role in the Chinese Tragedy" by W. Earl Harr, managing editor of the Mason City Globe-Gazette, of Mason City, Iowa, and appearing in the February 6 issue of that publication.

There being no objection, the commentary was ordered to be printed in the RECORD, as follows:

ONE MAN'S OPINION—AMERICA'S ROLE IN THE CHINESE TRAGEDY

(A radio commentary by W. Earl Hall, managing editor)

There may be such a person but I have yet to meet an American who is proud of the role our country has played in China these past 10 years. In my opinion we should be hanging our head in shame rather than throwing out our chest in pride.

Actually the policy pursued by our State Department almost from the time of Pearl Harbor could have had no other result than the one which we now behold in China—complete domination by the Communists.

The Communists are in control of China for the plain and simple reason that those at the helm in the shaping of our foreign policy considered them better than Chiang Kai-shek and his Nationalists.

LIKE A BIRD ON A PLATTER

Joseph Alsop in his recent series of articles on why we lost China in the Saturday Evening Post didn't overstate matters when he wrote:

"Throughout the fateful years in China, the American representatives there actively favored the Chinese Communists. They also contributed to the weakness, both political and military, of the national government (under Chiang Kai-shek).

"And in the end, they came close to offering China up to the Communists, like a trussed bird on a platter, more than 4 years before the eventual Communist triumph."

Mr. Alsop in his articles reviews the whole sordid mess, going back to the time shortly after the war broke out when Gen. Joseph ("Vinegar Joe") Stillwell was placed in charge of America's interests in China. Qualified to lead an army in the field, Stillwell was as ill-equipped for a post calling for diplomacy as anybody who could have been named.

"IDIOT" AND "RATTLESNAKE"

The general from the start had an abiding contempt for the Chinese generalissimo. "Idiot" and "rattlesnake" were two of the endearing terms applied by the crusty old general to Chiang.

It was probably because of his unreasoning loathing of the generalissimo rather than because of any affinity for communism that Stilwell cultivated and propagated the idea that China's Communists weren't Communists at all in the real sense of the term. They were merely agrarian reformers.

From the day of his arrival on the assignment, General Stilwell was obsessed with two ideas. One was opening up the Burma road; the other was sinking a stiletto into Chiang Kai-shek. No cost was too great for bringing embarrassment to the generalissimo.

In Stilwell all of this can be explained as a manifestation of senility in a venerable man attempting to fill an assignment for which he wouldn't have been qualified even in his better days. It's regrettable that this had to be the closing chapter of a life story which otherwise was lustrous.

USED BY OUR PINKOS

But the wholly unfortunate fact in the situation was that the Stilwell childish prejudices geared into the philosophy of those in the State Department who had the loudest voice in determining American policy toward China.

In June, 1944, Henry Wallace, then Vice President stopped off in China, accompanied by three left-wing advisers. Most of his 2 weeks there was spent trying to persuade Chiang Kai-shek that he should take the Communists into his family.

Chiang knew, as Wallace could have learned if he had been interested, that the Communist troops in those days weren't much interested in fighting the Japanese invader. Their interest was in setting the stage for taking over China after the war.

THE SAME HENRY WALLACE

On his return to America, the Vice President reported to President Roosevelt in these words:

"Chiang, at best, is a short-term investment. It is not believed that he has the intelligence or political strength to run postwar China. The leaders of postwar China will be brought forward by evolution, or revolution, and it now seems more likely the latter."

Yes, this is the same Henry Wallace who a few short months ago sought the Presidency on a platform which found nothing to criticize the Communist ideology. He helped shape our policy toward China in the critical war years.

At Cairo, President Roosevelt and Prime Minister Churchill pledged undying loyalty to China and the nationalist cause for which Chiang Kai-shek spoke. Without reservations they promised him a larger measure of assistance in a military way.

WE WERE "INDIAN GIVERS"

Josef Stalin wasn't in on that Cairo conference. A diplomatic nicety had to be observed. China's war was with Japan and Russia hadn't come into that war as yet. Whether she ever did is debatable—but that's another matter.

Anyway, a few days after the Cairo meeting Churchill and Roosevelt met with Stalin at Tehran. On Russian demand all available landing craft—including those promised to Chiang Kai-shek—were promptly reallocated to the European theater.

"Thus," as Mr. Alsop points out, "a major promise to Chiang Kai-shek was broken almost as soon as it was made."

And so it went month after month as China, already weary from years of war against the Japanese, sought to protect its homeland from an invader. The people of America thought they were allied with the government under Chiang, but State Department policy was all slanted at building up the Communists.

JUST A BLANKET CHARGE

In the closing months of the war Gen. Albert C. Wedemeyer replaced General Stilwell in the Chinese theater. Like many another, he had been told what a "monstrous crook" Chiang Kai-shek was. But he never was told what crooked things Chiang had done. It was just a blanket charge.

As recently as last November General Wedemeyer had this to say about the Chinese Generalissimo:

"My faith in the Chinese people remains unshaken. Personally, I have never questioned Chiang Kai-shek's sincerity of purpose and I am convinced of his desire to establish true democracy in China. He has already been a symbol of China's consistent opposition to forces of aggression."

With the war ended, those with a Communist leaning in the State Department—including one Alger Hiss—were free to step up their program designed to help the forces of Mao Tse-tung and throw the harpoon into Chiang. That's exactly what they did.

YES; ALGER HISS WAS THERE

It's not to be forgotten, or minimized, that at Yalta the President's aide was Alger Hiss. Could that have had something to do with the secret agreement giving Russia Outer Mongolia, Sakhalin, the Kurile Islands, Dairen, Port Arthur, and vast railroad properties in China and Manchuria?

One of the commonest charges laid at Chiang's door is that much of the arms and ammunition intended for Chiang's Nationalist forces fell into Communists' hands. Are you naive enough to believe that just happened?

At the conclusion of the war in Europe it was decided that some of the surrendered German arms and ammunition should go to China. The order was dispatched to General Eisenhower and compliance set under way. At least one ship was started toward Asia.

Then something happened. A countermanding order on White House stationery was dispatched to Eisenhower. It was signed by Lauchlin Currie, administrative assistant. No further German arms went to China. Where have you seen that name, Lauchlin Currie? In the testimony of both Whittaker Chambers and Elizabeth Bentley, former workers in the Communist fold.

CONGRESS WAS IGNORED

In 1948 Congress wrote into law an affirmative policy of resisting communism. This was long before the Reds even reached the Yellow River. But nothing much happened. There was delay and dawdling in the State Department. The clear-cut intent of Congress to aid Chiang was aborted.

More recently a white paper covering the Chinese situation has been issued by the State Department. Mostly it's an apology for our policy of do-nothing in the face of the constant extension of the Communist grip on all of continental China.

In September 1947, General Wedemeyer at the conclusion of his second mission to China turned in a report which gathered dust for more than 2 years in some Washington office. It outlined a plan of supervised military aid to the nationalists to halt the march of the Communists.

WHERE ACHESON STOOD

In the line-up within the State Department of pro-Communists and anti-Communists, Dean Acheson in his days in subordinate position usually could be found alongside those highly critical of Chiang Kai-shek—and not so critical of the Communists.

In 1947—at just about the time General Wedemayer was recommending military aid to Chiang—Mr. Acheson, as acting Secretary of State, made this report to the House Foreign Affairs Committee:

"The Chinese Government is not in the position at the present time that the Greek Government is in. It is not approaching collapse. It is not threatened by defeat by Communists. The war with the Communists is going on much as it has for the last 20 years."

This point of view is in quite violent contrast with the one expressed by Mr. Acheson, now as Secretary of State, in that white paper of last year:

"The unfortunate, but inescapable, fact is that the ominous result of the civil war in China was beyond the control of the Government of the United States. Nothing that this country did or could have done within the reasonable limits of its capabilities could have changed that result; nothing that was left undone by this country has contributed to it."

ALL RESPECT FOR US GONE

Well, that's the story in sketchy outline form. That brings us down to where we are now—with the Chinese Communists tossing our officials into jail without fear of appropriate reprisals. In India and elsewhere in the Orient, American prestige has taken a terrific wallcping.

The question of whether Chinese Reds are true Communists has been answered, at least in part. Mao Tse-tung, the man about whom the Communist forces have centered their efforts in China, has been a guest of the Kremlin. Later his first assistant joined him for the conferences.

According to some dispatches out of China, which may or may not be wishful thinking, Moscow is making some unreasonable demands on China. One writer mentions insistence on a half-dozen ports for Russian use. Another talks of demands for large shipments of food from underfed China.

WE ASKED FOR IT

By the nature of the policy we've pursued in China—buddying up to the Communists when we ought to have been giving full support to the forces seeking to halt the Communist march—we're getting exactly what we asked for.

The time is past when we can give effective aid to Chiang Kai-shek or the cause which he represents. The hazards involved in trying to protect Formosa are all out of line with any possible benefits to be derived from what would have to be a military operation.

History tells us that no conqueror of China ever prospered. Always the invader has been swallowed up. We can only hope that history will repeat itself and help us out of the hole which we deliberately dug for ourselves.

Expensive "Wildcats"

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, February 20 (legislative day of Wednesday, January 4), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Expensive 'Wildcats'," published in the Oil City (Pa.) Derrick of February 14, 1950. The article should be of great interest to the Members of the Senate because of the study now being given to depletion charges for income-tax purposes.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

EXPENSIVE WILDCATS

Last year, the American Petroleum Institute announces, the oil industry drilled about 7,250 wildcat wells—the greatest number in any one year since the discovery of oil in 1859.

Wildcat wells are test wells which the oil men drill in the course of exploring new or unproved territories. Through them new pools are discovered and new fields brought into production. Our proved oil reserves have now reached the enormous figure of nearly 27,000,000,000 barrels—and the wildcats are largely responsible for that.

A wildcat, however, is not a safe, sure, and conservative piece of business. It involves great financial risks since four out of five of them turn out to be dry holes. The science of geology has made great progress, but it isn't foolproof by a long shot. The only sure way to prove that there is oil in any given place is to go down and look.

Last year's wildcats cost the oil industry more than $350,000,000 in drilling expense.

Since only one out of five was a producer, the average cost of finding a worth-while well was about $250,000. And that doesn't include the huge sums paid to landowners for leases, the cost of geological and geophysical exploration, and other heavy and necessary costs. In 1949 the total cost of exploring for oil and gas within this country was over $1,000,000,000.

In a free-enterprise economy, men will take these risks for the possible rewards for success—thus bringing progress and a better life for millions of people. What is true of oil is true of all the rest of our basic enterprises.

Portrait of a Statesman

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, February 20 (legislative day of Wednesday, January 4), 1950

Mr. SPARKMAN. Mr. President, there recently appeared in the Montgomery Examiner a very excellent article entitled "Portrait of a Statesman," under the pen name of "Rev. A. S. Turnipseed." I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PULPIT ECHOES—PORTRAIT OF A STATESMAN

(By the Reverend A. S. Turnipseed)

Week before last I happened to have been on the campus of the University of Alabama talking with the Reverend William Graham Echols, director of the Wesley Foundation at the Capstone. Dr. Echols told me the story of the spring elections of 1913 at the university when LISTER HILL made a successful race for president of the student body. Echols was then a student from Russell County and managed HILL's campaign.

Echols was the campus champion of the "little man" and had well organized the nonfraternity element of the university. Echols led the nonfraternity men in choosing HILL as their candidate.

HILL was a member of Deke. It must be remembered that Deke is often referred to, whether rightly or not, as the "snob club." Thus it was quite a tribute to HILL for the nonfraternity men to choose him as their candidate against the organized opposition of the whole fraternity system at Alabama. According to Echols, HILL lost friends in his own fraternity, to say nothing of the other fraternities, because of this move. It was a bitterly contested election but HILL won.

Cynics may say that even at this early date HILL was simply the demogague going the way of the most votes. Surely the selfish element was in it but that is not a full explanation.

NO ARISTOCRAT

This incident out of HILL's student days is indicative of the man himself. I always am a little confused when people refer to HILL as an aristocrat. I do not venture in this column a definition of the term "aristocrat." But to my mind HILL is not an aristocrat in the usually accepted sense of the word.

This man's grandfather, the Reverend L. L. Hill, was one of the leaders in Methodism during the last half of the last century who fought for democracy in the church. He was ordained in the Methodist Protestant Church which was a protest movement against some of the autocratic practices of the main Methodist body. Today the things for which the Methodist Protestants stood, such as lay rights, have long been accepted by the main body of Methodists. (The Methodist Protestant Church has gone out of existence because of the unification of all Methodist churches in 1939.) The Methodist Protestant movement was to the Methodist Church what the Populist movement was to the Democratic Party. A lot of that old grandfather was showing up in young LISTER when he was the candidate of the nonfraternity element at the university.

Now that LISTER HILL is up for reelection he should be reexamined in the light of his contemporary setting. Representing a deep south State his liberalism is far more to his credit than the liberalism of representatives in the Congress of large industrialized and urban constituencies. It takes time and circumstances to develop a statesman. Maybe for the first 14 or 15 years HILL's performance in Washington indicated no deeply worked out social philosophy. It remained for the New Deal really to develop this man. His stands on such things as labor legislation, TVA, hospital legislation, social security, and agriculture during the last 12 or more years have been so consistently liberal as to indicate that his politics is motivated by a basic social philosophy.

I asked Dr. Echols if HILL were a good student at the university and he enthusiastically answered in the affirmative. When he first went to the United States Senate it was not uncommon to hear people say that HILL was an opportunist and intellectually superficial. His consistent liberal record in the Senate would confirm Dr. Echols' opinion rather than that of his detractors of some dozen years ago. In November 1939 I heard Senator HILL address the Alabama conference on the application of Christianity to social problems. It was a scholarly address which led many of us to conclude that religion was central in the motivation of the Senator. This speech caused some of the older ministers in the conference to recall that HILL made a profession of faith and joined the church in a revival meeting here in Montgomery when he was a young man just starting the practice of law.

It is remarkable that in a State that elected a very reactionary governor not more than 12 years ago, LISTER HILL stands today as the almost unchallenged leader. (I believe one or two have indicated they might run against HILL but at the present I cannot think of their names.) Two years ago the lamentations of modern Jeremiahs were heard everywhere to the effect that HILL was a "dead duck." In the midst of the terrible storm over civil rights, which everybody knew was used in Alabama as a blind for reactionary rights, HILL emerged to lead the ticket of those elected to the Democratic convention.

PROPERTY VERSUS PEOPLE

Books have been written around the thesis that the Negro is the determining factor in southern history. To me this is a thin thesis. The real fight in the South, since the days of Thomas Jefferson on down to the days of LISTER HILL, is property versus people. This is what makes southern politics so precarious for any man with any independent proclivities. All the reactionaries have to do is use the Negro issue against him to discredit everything else for which he stands.

HILL has vigorously opposed the imposition of civil rights by the Federal Government and has contended that the South must work out its problems within the Democratic Party. This in effect puts the Negro question where it ought to be put—off to the side and out of the center of southern politics. This seems to be the tact taken by all liberal men who are effective in southern public life.

The great burden of this region is to rid ourselves of all forms of exploitation—whether it be the exploitation of our natural resources, such as erosion of the land, or the exploitation of our human resources, such as the economic exploitation of poor whites and Negroes. We can save ourselves from an economy dominated by economic monopolists by preserving free enterprise for little operators. But how can there be any free enterprise for little people who have diseases, ignorance, and superstitious religion directly derived from abject poverty? What makes HILL a statesman is his consistent advocacy of Government policy that strikes at this abject southern poverty.

RACE ISSUE INJECTED

The political fortunes of LISTER HILL sank the lowest in 1944 when he was returned to the United States Senate by a close margin. The issue of property versus people was smoke screened in that race by the skillful injection of the Negro issue by the monopolies. In large part HILL won that fight because the majority of the people of Alabama believe that property should be held by a constantly increasing number with a corresponding lessening of control of property by monopolies. But the balance of power in that election was tipped by a large element in this State that abhors another form of exploitation—that perpetrated by the liquor traffic.

When Col. Oscar Tompkins, of Dothan, Ala., wrote letters to the church periodicals of this State pointing out the record of James Simpson in the legislature on the alcohol issue thousands of people began to veer toward HILL. Protestant preachers became indignant and a wave of resentment went over the State large enough to sweep into the HILL fold enough additional votes to get him over the hump.

I know political prophecy is precarious but I venture the prediction that LISTER HILL will stay in the United States Senate as long as he wants to.

Youth Rally Attracts 2,000 White and Negro Students

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, February 20 (legislative day of Wednesday, January 4), 1950

Mr. O'CONOR. Mr. President, voluntary attendance of some 2,000 white and Negro students in the public, private, and parochial schools of Baltimore made possible an interracial meeting for better understanding and tolerance in Baltimore's Polytechnic Institute last week.

As reported in the Baltimore Morning Sun of Saturday, February 18, the principals in this most laudible effort, held in connection with the silver anniversary week program of the Urban League of Baltimore, were James J. Lacy, Jr., former Loyola College student and basketball star, and Levi Jackson, Negro

captain of the Yale University football team. Judge Herman M. Moser, of the supreme bench of Baltimore, was the adult speaker for the occasion.

Because of its widespread favorable implication, I ask unanimous consent that the report of this meeting be inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

YOUTH RALLY ATTRACTS 2,000 WHITE AND NEGRO STUDENTS

More than 2,000 white and Negro students in the city's public, private, and parochial schools joined yesterday in a youth rally in the auditorium of the Polytechnic Institute, which was a feature of the silver anniversary week program of the Urban League of Baltimore.

The large interracial attendance, which was by invitation to all students and not obligatory, was particularly gratifying to the sponsors of the meeting, some of whom said it was, in their opinion, the largest outpouring of white and Negro youths to attend an interracial event held here under private auspices.

The interracial theme was carried to the stage where James J. Lacy, Jr., former Loyola College student and a basketball player of national reputation, and Levi Jackson, Negro captain of Yale's football team, were the principal speakers with Judge Herman M. Moser, of the supreme bench of Baltimore.

BAND, CHOIR PROVIDE MUSIC

The music was provided by the Baltimore City College Band under the baton of Donold B. Norton, and the Frederick Douglass High School choir directed by Mrs. Georgianna Chester.

Without directly mentioning discrimination or integration, the speakers, who were introduced by Nick Campofreda, used sports to show how teamwork can produce results both on the playing field and in other spheres of life.

Judge Moser emphasized that the United States must not give aid and comfort to enemies by disunity. America, he insisted, must be united at all times.

Mr. Lacy said that boys and girls must apply to their lives the same rules that apply to sports, a determination to do a good job, play as a team, train for it and be a good sport, "playing the game to the hilt."

Mr. Jackson said each boy and girl must take advantage of every opportunity offered them, especially opportunities of going to college. He insisted that "schools can't aid you unless you desire that aid." Sports, he said, are a "wonderful adjunct to education."

Edgar M. Ewing, president of the Urban League, presented Mr. Lacy and Mr. Jackson with citations pointing out their successes not only as leaders in sports, but as citizens looking toward the advancement of all persons.

DINNER SLATED MONDAY

The anniversary week program will end Monday night with a dinner at Morgan State College.

Alexander J. Allen, executive secretary of the league, will make his annual report.

Addresses will be made by Dr. Paul S. Douglass, president of American University, Washington; Dr. Martin D. Jenkins, president of Morgan College; and Dr. Broadus Mitchell, first president of the Urban League of Baltimore, a former member of the Johns Hopkins University faculty, and currently professor of economics at Rutgers University.

Miss Anne Baedenkopf will present the local league an original oil painting. There will be a business meeting and election of officers.

Prohibition of Interstate Liquor Advertisements

EXTENSION OF REMARKS
OF
HON. HARLEY M. KILGORE
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, February 20 (legislative day of Wednesday, January 4), 1950

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I have received from the Honorable Harlan M. Calhoun, judge of the twenty-second judicial circuit in Moorefield, W. Va., who expresses his opinions on S. 1847, which is the bill proposing to prohibit interstate liquor advertisements.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MOOREFIELD, W. VA., *February 7, 1950.*

Hon. HARLEY M. KILGORE,
United States Senate,
Washington, D. C.

DEAR SENATOR KILGORE: I am writing to you to express my very great interest in the enactment of Senate bill No. 1847, prohibiting interstate liquor advertisement. I trust you will pardon a rather extended expression of my views.

Definitely this is not a mere wet and dry issue. I am not a dry in the sense of being an abstainer myself, nor in the sense of favoring a return to prohibition. I was prosecuting attorney of my county during prohibition days and in that capacity I learned the futility of such a law. I am confident, however, that just as many wets as drys are keenly conscious of the need of a law such as this.

Perhaps the Democratic Party, of which I have the honor of being an ardent member, was the political party most directly responsible for repeal. However that may be, I feel that all those individuals or groups who were in any way responsible for repeal owe to the American public a responsibility for keeping faith. There can be no denial of the fact that the theory back of repeal was that liquor was a necessary evil; that a great portion of our people were determined to have it, lawfully or unlawfully; and therefore advocates of repeal had the very plausible argument that intoxicants should merely be made available to meet this insistent demand. Reasonable regulation was to follow repeal.

But the most ardent advocates of repeal never once asserted that prohibition should be repealed because liquor represented a public good. They never once, in urging repeal, asserted that there should be a greater consumption of liquor for the good of the country. They never once urged that any individual consumer should consume more, nor that the number of drinkers should be increased. Most certainly they never urged that our youth should be urged to consider drinking a social necessity nor to believe that all men of distinction are necessarily drinkers.

On the contrary, the very logical, plausible argument for repeal was that liquor, as a necessary evil, should merely be made available for those who insist upon having it, and that it should be reasonably regulated. In that, I feel, we must keep faith.

As an argument against this proposal, it is urged that it represents one step toward a return to prohibition. On the contrary, the best insurance against a return to prohibition, the best assurance against a further extension of the dry areas of the country, is for the liquor and beer industries to submit to reasonable regulation. A prominent official of this State, during the recent Christmas season, told me how his small children had been hurt and disillusioned by an advertisement showing Santa Claus consuming a popular brand of beer. From a purely selfish standpoint the liquor and beer industries must submit to a reasonable restraint upon such avaricious inclinations or else suffer the public reaction.

In connection with the hearing before the Senate committee, I noted the effort to characterize as "drys" all advocates of this legislation. One could be guilty of no greater error than to assume that there is reasonable truth in such a position. It happens that, for years, I have keenly felt a need of such legislation. Meantime, I have discussed the matter with perhaps hundreds of people. I am quite certain that the vast majority of these people drank to some extent, some to a most unfortunate degree. I have not yet encountered one single individual, wet or dry, but who favored such a law. Opponents of this bill are hard-pressed to find any semblance of a logical argument to support their position. I urge you, in your own mind, to consider what sound argument may be advanced against the proposal.

If we admit that a greater consumption of liquor should not be encouraged among a greater number of people, particularly youth, then there can be no logical basis of opposition to this bill.

I have no way of knowing the number of millions of dollars spent annually on such advertisements. Let the "wet" opponents of this bill bear in mind that this cost is paid by the "wet" consuming public for whom they assume to speak. Or, if this immense cost of advertisement remains the same, let us consider the field for public revenue which will be created thereby.

I have endeavored in this letter to disabuse your mind of any impression you may have that this legislation is favored only by a lot of long-faced prudish cranks under the general characterization of "drys." I am not an advocate of prohibition, nor a "dry."

Nevertheless, perhaps I am in a better position than the average citizen to note the havoc which is being wrought by liquor on an America which owes it to the world to be strong. Other judges of my acquaintance agree with me that at least 50 percent of criminal law violations in our courts of record relate in some way to liquor or its use. I cannot estimate the cost in divorce, broken homes, juvenile delinquency, public welfare grants, poverty, loss of health, or loss of mind. Any impartial observer, wet or dry, must agree that liquor probably constitutes the greatest curse of civilization next to the institution of war. Why, then, permit a systematic, immensely-financed program to extend its evil tendencies?

The motive of gain will doubtless drive to great lengths both the liquor interests and portions of the press. Excluding these two groups, I venture the assertion that 90 percent of the American people who know of the proposal favor its enactment into law. I urge further investigation on your part to determine whether or not my estimate is correct.

I am the father of two teen-age children. There is a very sordid side to liquor and beer not portrayed in the enticing advertisements in expensive magazines. I believe American parents may reasonably expect the cooperation of Congress in their efforts to shape the thinking of their teen-age youngsters along lines you and I know to be sound.

Very respectfully yours,

HARLAN M. CALHOUN.

It's Fun To "Speak Your Piece," Too

EXTENSION OF REMARKS
OF
HON. HOMER FERGUSON
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Monday, February 20 (legislative day of Wednesday, January 4), 1950

Mr. FERGUSON. Mr. President, sometime ago I had the distinction and pleasure of participating in a program at Manistee, Mich., which was a part of a plan for spreading in that community the ideals of good citizenship under a slogan, "It's Fun To Live in America." One of the leaders in that movement has been Judge Max Hamlin. He has sent me a copy of a piece of literature, which is one of several that go into the homes of Manistee citizens each month. It is in the form of a letter to a Member of Congress and is headed "It's fun to 'speak your piece,' too." This particular piece reflects Judge Hamlin's ideas and my own with respect to the objectives of the Hoover Commission, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the folder was ordered to be printed in the RECORD, as follows:

IT'S FUN TO "SPEAK YOUR PIECE" TOO

MY DEAR MR. SENATOR AND CONGRESSMAN: I am writing you about this business of Federal spending. I am what you call one of the little guys. I am single, make 50 bucks a week and own a second-hand car. It may sound corny, but I want to save enough to buy that little white cottage.

Out of my 50 bucks, my boss has to withhold $5.45 for Federal income tax. That's $283.40 a year, and brother, that ain't hay. That means I work about 34 days out of every year just to pay income tax.

Now, I don't mind spending for good Government. I think our defenses should be strong and that we ought to pay for such things as the Postal Department, FBI, and other necessary services. But I don't believe in waste. My grandpop used to say, "A penny saved is a penny earned." As I look back on it now, grandpop was a pretty smart old duck. He saved his money, bought a horse here and a mule there, and finally had a livery stable. Automobiles came along, so he sold his stock and started a garage. He didn't ask nobody for nothing, just saved his money, worked hard and wound up with a pretty good stake. When he got old he was able to sell his business and take it easy.

Well, to get back to this business of Federal spending. As I said, I don't mind spending for good Government, but it burns me up when a lot of bureaus up there in Washington come along and put the heat on you fellows to give them more and more money to keep adding people to their departments.

The other day I got hold of one of these reports by the Hoover Commission, the group appointed by the President to look into the cost of Federal Government. Believe me, some of the facts I read made my blood boil.

For instance:

That approximately one-half the several million purchase orders issued by the Government each year are for items totaling less than $10, yet the paper work done on every purchase transaction costs more than $10.

That Government records fill a space of 18,000,000 square feet at a cost of $20,000,000 a year and the filing equipment alone is worth $154,000,000.

That in one county in Georgia, 47 Government employees attached to seven separate field services of the Agriculture Department have been working with only 1,500 farmers.

That the Government worker handling my GI insurance policy carries a work load of only 450 policies, whereas the worker in a private insurance company handles 1,762 policies.

These are just a few of the facts that this report gave. All this talk in millions and billions is mighty confusing, but I have enough common horse sense to know that a lot of this money has been wasted just like pouring sand down a rat hole.

Now, Mr. Senator and Congressman, and I don't care what your politics are, I am writing you to ask you point blank to get behind some of these ideas recommended by the Hoover Commission. We little guys have heard this business about soak the other guy quite a while. Now we realize that every dollar we pay in taxes is just as hard on us as it is on the other fellow. So, we want you to do something and do it quick.

Respectfully yours,

JOE DOAKES
(Just an Average Joe.)

The Buchanan Committee's Task in the Light of Some Lessons From Past Congressional Investigations of Lobbying

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. BUCHANAN. Mr. Speaker, the Public Opinion Quarterly early next month will publish an article by Dr. Edgar Lane, instructor in politics at Princeton University, entitled "Some Lessons From Past Congressional Investigations of Lobbying." I have been fortunate enough to read an advance proof of this article, and I am deeply impressed by the scholarly job performed by Dr. Lane in analyzing the three previous investigations of lobbying activities conducted by committees of the Congress during this century. Out of his research into those previous inquiries, the author reaches some interesting conclusions as to the fields in which he believes the House Select Committee on Lobbying Activities of this Congress can perform the most worth-while public service.

Although it is not scheduled to appear for several weeks in the Public Opinion Quarterly, I have obtained the permission of Dr. Lane and of his publishers to have this article appear now in the CONGRESSIONAL RECORD. I have requested that permission because I believe this article, with its careful review of the background of our present investigation, can serve as a useful subject of discussion within the House Select Committee on Lobbying Activities and among those Members of Congress, the press and the general public who are demonstrating a deep interest in the subject matter of our investigation.

I have called an executive session of the House Select Committee on Lobbying Activities, which includes, in addition to myself as chairman, Representatives LANHAM, ALBERT, DOYLE, HALLECK, BROWN, and O'HARA of Minnesota, for Tuesday afternon, February 21, at 3 p. m. At that meeting, we may decide on a priority list for intensive investigation and for hearings.

As a prelude to that meeting, I think it would be most helpful if we could have this article before us for study and review and I know other Members would also find it exceedingly interesting. Therefore, Mr. Speaker, under unanimous consent, Dr. Lane's article, Some Lessons From Past Congressional Investigations of Lobbying, as prepared for the Public Opinion Quarterly, is inserted in the Appendix of the CONGRESSIONAL RECORD, as follows:

SOME LESSONS FROM PAST CONGRESSIONAL INVESTIGATIONS OF LOBBYING

(By Edgar Lane, Ph. D., instructor of politics, Princeton University, Princeton, N. J.)

(Congress has conducted three major investigations of lobbying activities since 1900. None of these has been completely successful, and it is to be hoped that the House lobbying investigation of 1950 will profit by the experience of its predecessors. Such an inquiry is most likely to serve the public interest if it adheres to a predetermined agenda, is based on careful research, does not bog down in colorful detail, submits periodic reports, and avoids partisan division. The present committee could make a major contribution by concentrating its attention on the improvement of legislation governing lobbyists, a subject which has been too much neglected in the past.)

Congress has decided to take another long look at the lobbying problem.

Under the terms of a resolution passed in August 1949 by the House of Representatives, a select committee of seven Members, headed by Representative FRANK BUCHANAN, has been empowered to study all lobbying activities, both private and governmental, which are "intended to influence, encourage, promote, or retard legislation."[1] Only an end-of-session jam of business prevented the Senate from becoming a partner in the enterprise. The primary purpose of the investigation, at least according to published reports, is to disclose the inadequacies and loopholes of the Regulation of Lobbying Act of 1946 and to seek means of correcting them.[2]

If the Buchanan committee does nothing more than find correctives for the internal contradictions of the Lobbying Act, it will have performed a valuable even though somewhat limited service. The present act stands very much in need of careful revision, and an investigation which looks in this direction is thoroughly opportune.

The committee has not yet indicated, however, whether or not it intends to tie itself to proposals based on the present system of regulation by registration. Even if it does not recommend a radical change of approach,

[1] 81st Cong., 1st sess., H. Res. 298. The President made an early session pledge that there would be a full-dress lobbying investigation, but expressed a preference for the joint investigating committee envisaged in S. Res. 23. The Senate failed to act on this resolution, however. New York Times, October 9, 1949.

[2] Ibid. See also Washington Post, October 7, 1949.

the group will be obliged to face during its investigation more complex problems than the mere clarification of conflicting statutory language. Primary among these is the necessity of agreement on purposes. What end is the investigation intended to serve? Is it conceived of as a means of informing congressional and public opinion on the scope and meaning of pressure-group activity? Or is it designed to serve primarily as a medium for the development of a more satisfactory system of pressure-group regulation?

Assuming that the Buchanan committee clearly accepts one or the other of these alternatives—and this in itself is unlikely—there immediately arise corollary questions of investigation procedure. Is it more productive to investigate extensively or intensively? Should the approach be spectacular or scholarly, carping or gentle? The manner in which these questions are resolved cannot help but materially affect the Buchanan committee's contribution to the effective management of the sprawling complex of modern pressure politics.

In attempting to meet these problems of purpose, scope, and method, the committee can profitably turn for guidance to the experience of past congressional lobbying investigations, although more often than not this guidance is negative in character. The investigations of 1913, 1929, and 1935 yielded valuable information on pressure operations, but at the same time they were in most cases models of confused purposes, inadequate planning, poor procedure, and wasted opportunity. Their primary value is that they demonstrate graphically the errors of omission and commission which can so easily blunt the impact of any congressional effort in this area. They suggest pitfalls to be avoided rather than guidelines to be followed.

We do not imply that the record of these earlier inquiries is necessarily predictive of the success or failure of the present effort, for the context in which the Buchanan committee works is somewhat unique. The purposes of this paper are rather to indicate the ends which earlier investigations have best served, to suggest the approaches which have yielded the most useful results, and to show how this experience can be particularly relevant to the new undertaking.

CONGRESSIONAL INVESTIGATIONS OF LOBBYING

The investigations of 1913

Congress did not suddenly awaken to the existence of lobbying in 1913. The history of the latter half of the nineteenth century is dotted with frequent cases of corrupt lobbying and subsequent congressional investigations.[3] Outright bribery was not uncommon in the 1870's and 80's, and to buy Congressmen for the smallest possible sum was all too often "the acme of ambition to the successful lobbyist."[4] But by 1913 both the methods and practitioners of lobbying had changed, and the investigations of that year represent the first congressional recognition of lobbying in its newer forms. Persuasion and promotional activities had supplanted overt corruption. Pressure group representatives and public relations experts had largely replaced the brokers of entree and influence of an earlier era.

The impetus to the investigations of 1913 came primarily from President Wilson's statement to the press on May 27. Referring to the tariff lobby, which had been particularly active in opposing the administration's Underwood tariff, the President charged:

"Washington has seldom seen so numerous, so industrious, or so insidious a body. The newspapers are being filled with advertisements calculated to mislead the judgment not only of public men, but also the public opinion of the country itself. There is every evidence that money without limit is being spent to sustain this lobby and to create an appearance of a pressure of public opinion antagonistic to some of the chief items of the tariff. * * * It is thoroughly worth the while of the people of this country to take knowledge of the matter. Only public opinion can check and destroy it."[5]

Within 2 days, the Senate authorized its Judiciary Committee to "investigate the charge that a lobby is being maintained at Washington, or elsewhere, to influence proposed legislation now pending before the Senate.[6]

In the House, approval of a resolution providing for a parallel investigation lagged. It was not until the appearance of a series of articles in the Chicago Tribune and the New York World, beginning on June 29, 1913, that the House was provoked to action. These articles, which have since become known as the "Mulhall Revelations," charged a number of past and present Members of both Houses of Congress with having entered into various improper dealings with the National Association of Manufacturers through the agency of one Martin Mulhall, a former representative of the association. The House, apparently fearful of another Credit Mobilier, quickly authorized its own select investigating committee to inquire into these charges and to report whether the NAM or its agents had actually influenced "any officer or employee in this or any former House of Representatives in or about the discharge of their official duties."[7] Thus began the two investigations which gave the first thorough airing to lobbying in the Nation's Capital.

SENATE INQUIRY WANDERS

What did these inquiries accomplish, and what can be learned from them? In the case of the Senate investigation the record of accomplishment was highly uneven. The committee's hearings were both brief and diffuse, and the entire investigation suffered from a failure to focus on any central theme.[8] President Wilson's charge had been made with particular reference to extensive lobbying by beet-sugar interests, and the investigation at first centered on these activities. But within 2 weeks, the committee's attention had wandered to charges made by President Lovett, of the Union Pacific Railroad, to the effect that David Lamar, an alleged "Wall Street scavenger," had impersonated two Congressmen over the telephone in seeking to aid one Edward Lauterback in securing employment in the then-pending Union Pacific dissoluation case.[9] Nor was this the end. Before its hearings were concluded, the Senate Committee had plunged exuberantly into the Mulhall affair, which was ostensibly the province of the House investigation.

This lack of concentration, although understandable, was unfortunate. Even more unfortunate from the tactical point of view was the committee's failure to present to the Senate any interim or final report of its findings. President Wilson's angry indictment had at first been dismissed as the exaggerated statement of a newcomer in the National Capital. When the Senate investigation was completed, there was little doubt that his charges had been more than substantiated.[10] The committee found that the Beet Sugar Growers Association and the Wholesale Grocers Associations had each raised and spent over $500,000 in their efforts to influence the passage of the Underwood tariff. One million five hundred and twenty-five thousand pieces of literature, pro and con, had been mailed under the frank of friendly Members of Congress. Recalcitrant Members had been threatened with political reprisals, and deliberately falsified statistics had been righteously submitted to congressional committees.[11] The evidence of diverse and powerful pressures was both abundant and disquieting, and had the Senate committee submitted a report recommending the enactment of regulatory legislation, Congress might well have acted on its recommendations.

House report outlines pattern of lobbying

The House investigation undoubtedly rendered a more valuable service than did the more discursive Senate inquiry in two respects: the scope of the committee's hearings was successfully confined to the Mulhall charges and to the even-then multifarious legislative activities of the NAM; [12] and when these hearings were ended, the House committee submitted a report which is still notable for its balance and prophetic insight. The committee found that the NAM was—

"An organization having purposes and aspirations along industrial, commercial, political, educational, and other lines, so vast and far reaching as to excite at once admiration and fear—admiration for the genius which conceived them and fear for the effects which the successful accomplishment of all these ambitions might have in a government such as ours." [13]

This statement of the broader problem implicit in organized group activity is as modern as tomorrow.

The most tangible contribution of the report, however, consisted in the light which it threw on the methods by which the NAM had sought to obtain its objectives. The committee found occasional instances in which NAM representatives had attempted to prevent legislation by striving to induce Congressmen to remain away from the Chamber when a vote was being taken.[14] It found, too, that the chief page of the House had been in the employ of the NAM, and that at least one Congressman mentioned in the Mulhall papers, James E. McDermott, of Illinois, was guilty of acts of grave impropriety, unbecoming the dignity of the distinguished position he occupies.[15]

But these activities were trivial, except for the moral turpitude involved; [16] the NAM placed far heavier reliance on more subtle and tangential avenues of approach. The committee found that the association con-

tributed through its agents to the election campaigns of properly disposed congressional candidates; that it carried on a disguised propaganda campaign through newspapers, publicists, speakers, and literature in schools, colleges, and civic organizations throughout the country; and that it had promoted employee alliances for use in opposing prolabor congressional candidates.[17]

These activities may have been less than forthright; they were certainly concealed as carefully as possible. But, withal, there was a notable absence of the widespread and systematic bribery which had disgraced Congresses in the past. If the report proved only that outright corruption was no longer a principal instrument of the lobby, it had served an important purpose.[18]

Beyond demonstrating the new modus operandi, the report was significant as the first official congressional expression concerning the status of the lobby. It clarified that status and suggested a new code of practice for the future.[19]

Equally, the report gave unmistakable notice that Congress would not tolerate indefinitely a continuation of the devious means of special pleading which it had found were employed by the NAM. The committee agreed that:

"To place the Congressman in a cloister to legislate, rendering him immune to extraneous influences, would be impossible, and, if possible, it would be exceedingly ridiculous." [20]

But, at the same time, the committee warned that the NAM and its agents had gone beyond the limits of legitimate effort and that they deserved "the severest censure as well as a pointed invitation and suggestion that they completely reform their methods or else remain away in the future." [21]

The report recognized, however, that these secretive, reprehensible, and disreputable methods were largely vestigial aberrations, and that the deliberate creation of a charged public opinion and a consequent coercion through propaganda were the important means by which the new lobby operated.[22] Although it never submitted a formal statement, the Senate investigating committee had been led to a similar conclusion. Senator Overman, chairman of the Senate group, declared that lobbying consisted less of personal appeals to Congressmen than it did of "the newer form of organized activity to mold public sentiment and to influence Senators by means of public pressure from various sources." [23]

The recognition and at least partial documentation of this changed approach were probably the most useful contributions made by the investigations of 1913. They had the further effect of indirectly stimulating the introduction during the Sixty-third Congress of 12 bills calling for various kinds of congressional regulation of lobbying.[24] No one one these bills was ever reported from committee. It seems reasonable to conclude that they might have been differently received had they been actively sponsored by the two investigating committees.

[19] Ibid., p. 45.
[20] H. Rept. 113, loc. cit., p. 574.
[21] Ibid.
[22] Herring, op. cit., p. 46. Herring suggests that these investigations were the government actions which had the most direct effect on "the reform of lobbies in the National Capital." (p. 43). One might equally well conclude that these investigations reflected reform more than they stimulated it.
[23] "The Lobby Exposed," loc. cit., p. 75.
[24] These bills called for either prohibition of various lobbying methods, or for registration of lobbyists.

Near-regulation and investigation, 1927–29

The investigations of 1913 had injured several reputations and forced a number of notorious lobbyists to leave town, but pressure group activity did not diminish as a consequence. Lobbying activity, in fact, became steadily more intense. The world war prompted a greater vertical mobilization of industry, which in turn resulted in a substantial increase of economic groups and associations.[25] This increase in interest alinements combined with the war-spurred development of propaganda techniques to heighten pressure activities during the 1920's.

Apart from the occasional introduction of proposals for registration of lobbyists, Congress gave relatively little consideration to the problem during this period. It was not until 1927 that lobbying again came to the forefront of congressional and public attention. Interest was first provoked by the dubious character of many of the witnesses and organizations who had opposed the Federal estate tax before congressional committees during the Sixty-ninth Congress.[26] Congressional suspicions were aroused, and when the new Congress met in December 1927, a number of regulatory bills, resolutions of inquiry, and proposed rules amendments were immediately introduced in both Houses. One of these bills, a registration and reporting measure sponsored by Senator Caraway, was actually passed by the Senate in March 1928, but was pigeonholed in the House Judiciary Committee until the end of the Congress.[27]

Lobbying and the tariff

The big storm still lay ahead, however. On April 22, 1929, Senator Caraway reintroduced the resolution of inquiry which he had unsuccessfully offered in 1927.[28] The resolution was referred, and during the long summer nothing was heard of it. Meanwhile, the Senate Finance Committee was conducting hearings on the Smoot-Hawley Tariff bill. These two seemingly disparate matters were dramatically joined in the Senate on September 25, when Senator Harrison, following extended debate on tariff increases proposed by the Finance Committee, charged that:

"The rates upon which such increases may be based are determined by such methods as should cause the American people to revolt against them.[29]

Senator Harrison then read the following newspaper statement into the record:

"An executive of one of the country's most important lobbying organizations sat in the secret sessions of the Senate Finance Committee's tariff meetings, investigation by the Hearst newspapers disclosed today. * * *

"Charles L. Eyanson, assistant to the president of the Manufacturers Association of Connecticut, is that man.

"He admits he helped draft some of the provisions of the Smoot-Hawley tariff bill.

"He acted as tariff 'expert' for Senator Hiram Bingham, Republican, of Connecticut, during June, July, and August when the Senate Committee was revising the bill's various schedules." [30]

[25] Herring, op. cit., p. 51.
[26] Ibid., pp. 253–254.

[30] Ibid., p. 3949. E. E. Schattschneider's Politics, Pressures, and the Tariff (New York, 1935).

"Here is what this paper said," asserted Senator Harrison; "It calls for a reply." Senator Bingham attempted to justify his action on the ground of needing expert information in order to properly serve his constituents' best interests. The Senate does not appear to have been satisfied with the explanation, however, for 6 days later the Caraway resolution was passed and a Judiciary Subcommittee headed by Senator Caraway was authorized to investigate not only the Eyanson affair, but also the activities of all other "lobbying associations and lobbyists," their revenues and expenditures, and "the effort they put forth to affect legislation." How far did this authorization extend? Senator Caraway had very decided ideas on the matter. When asked if the resolution were broad enough to allow investigation of the "social lobby," he replied, "Yes, sir; it is broad enough to investigate anything in which one might feel interested." [31]

Investigating trees rather than the forest

During the course of its investigation, the committee heard from some 92 witnesses whose testimony filled over 5,000 pages. The hearings, which began on October 15, 1929, were not finally terminated until November 24, 1931.[32] What did this lengthy and detailed investigation accomplish? In the first instance, it brought forth massive proof of the charges which had been made against Senator Bingham. The Senate had sought expert aid on tariff questions, and the president of the Connecticut Manufacturers Association had supplied Mr. Eyanson to provide it. Eyanson continued to draw his private salary but at the same time accepted employment as a clerk to Senator Bingham. He returned his Government salary to the the Senator, who, in turn, forwarded the money to the permanent clerk who had been dismissed to make room for Eyanson's appointment.

If nothing else, the Caraway committee report on the affair showed that Senator Bingham had used bad judgment and that Eyanson has pursued his employment as clerk with conspicuous success.[33] These disclosures alone, however, were hardly enough to warrant an investigation which extended for almost 2 years. As had been the case with certain of the more disreputable NAM activities in 1913, the offenses exposed were trivial in importance. But while the House committee of 1913 had placed the whole pattern of NAM pressure operations in a broad and thoughtful framework, the Caraway committee seemed content to take its data where it found it and to present this data without attempting to organize it or to evaluate its significance.

This apparent lack of basic orientation was revealed in the subsequent reports which the Caraway committee submitted to the Senate.[34] Each of these reports dealt only with

a single individual or a single pressure organization. There was, for example, a separate report on Mr. Joseph R. Grundy by reason of the "extraordinary and commanding place he holds among the lobbyists in the National Capital." There was no suggestion that Mr. Grundy had acted illegally; the committee merely concluded that "the consumer does not figure at all in Mr. Grundy's views in respect to tariff legislation." This information was no more novel than was the committee's irresistible inference that Mr. Grundy believed that his campaign-fund raising services would enable him to influence his party associates in Congress.[35]

There were other reports in similar vein, each of which drew attention to some particularly notorious or free-spending lobbyist or pressure group.[36] These reports detailed the money spent and received, the methods employed, and the legislation in which the individual or organization was interested. They did not, however, suggest means by which the situation could be improved. The committee never proposed the enactment of a lobbying law, a surprising omission in view of Senator Caraway's earlier efforts in this direction. The committee did not, in fact, submit a final or general report of any kind. It neither summarized its activities nor proposed any correctives for the abuses which it had found.

Another factor which sapped the initial promise of the investigation was the development of political antagonisms among the members of the committee. The first six reports were submitted unanimously, but with the seventh, Senator Robinson, of Indiana, the only administration Republican in the group, felt obliged to leave his colleagues and submit a minority report. Senator Robinson charged that the majority report was purely political condemnation of Mr. C. H. Huston, who happened to be chairman of the Republican National Committee.[37] Senator Robinson dissented from the eighth report on similar grounds and presented his separate views.[38] Thereafter there was considerable discord within the committee as regards both its purposes and its jurisdiction.

The very time for which the investigation extended was also a factor which limited its utility. When the investigation began in 1929, there was reason to believe that it could serve as the motive force behind congressional adoption of a system of pressure-group regulation. Particularly after the Evanson disclosures, a substantial body of editorial opinion demanded the adoption of a regulatory law, or a code of practice, or an enforced code of ethics.[39] But the Caraway committee proposed nothing: it merely reported. The iron cooled very rapidly after October 1929, and the Caraway Committee never succeeded in reheating it.

Finally, Senator Caraway's attitude toward lobbying undoubtedly contributed to the practical failure of the investigation. He did not treat political pressure as an inevitable concomitant of economic development, nor did he recognize that this pressure was effecting vast changes in the representative system. Rather he believed that lobbyists were greedy and dishonest and that 90 percent of the associations in Washington were what he called fake organizations.[40] Thus the Senator's incessant badgering of witnesses, noticeable in the must cursory examination of the committee hearings, may well have sprung from his determination to buttress his existing convictions about the dishonesty of lobbyists as a group. Whatever the cause, the results were frequently more tasteless and time-consuming than they were informative.

These factors, then, combined to make the investigation a rather sharp disappointment. It threw some light on the development of pressure group methods, particularly in electoral campaigns, and it indirectly reaffirmed the major conclusions of the investigations of 1913; namely, that overt corruption was infrequent and that group pressures had to a very great extent replaced personal solicitation. But given the broad scope of the enabling resolution and the initial receptiveness of congressional and editorial opinion to regulatory proposals, the drawn-out and uncoordinated reports submitted by the Caraway committee were less than might reasonably have been expected.

Congressional action in 1935–36

For the 4 years following the Caraway investigation Congress was quiescent concerning lobbying. Occasional proposals to regulate or investigate lobbying were introduced without success. But with the seating of the Seventy-fourth Congress, there began a period of lobby-busting which was ultimately more significant than either of its predecessors. As in 1913 and 1929, the impetus to congressional action was provided by the particularly extensive pressure exerted in connection with a single piece of legislation. In 1913 and 1929, lobbying on tariff bills led to investigations: in 1935 the legislation at issue was the Wheeler-Rayburn bill to regulate public utility holding companies.

Even prior to 1935 the series of monthly Federal Trade Commission reports on public utility corporations, submitted over the period from March 1923 to December 1935, had amassed impressively detailed information on the pressure and promotional activities of these companies.[41] The methods by which they opposed the Wheeler-Rayburn bill were not wholly new ones, but because they were excessively used they attracted Nation-wide attention.

Congress was well aware of the utilities' efforts to escape regulation. As the House Rules Committee reported subsequent to the passage of the Holding Company Act, the campaign waged in opposition to the measure was probably as "comprehensive, as well-managed, as persistent, and as well-financed as any in the history of the country."[42]

Nor was the congressional recognition of extreme pressure wholly retrospective. Before the Wheeler-Rayburn bill ever came to a vote the Senate had acted favorably on a lobbyist registration measure sponsored by Senator Black.[43] The House took no action on the bill during the remainder of the session, but shortly after the passage of the Holding Company Act both Houses took steps to investigate the pressure which had been exerted for and against the measure. The Senate authorized a special committee of five Senators, headed by Senator Black, to investigate all efforts to promote or retard the passage of the Holding Company Act "or any other matter or proposal affecting legislation." The committee was charged with reporting to the Senate as soon as possible the results of its investigation together with its recommendations.[44]

The utility-lobby investigation

In the House the investigation was authorized with respect only to attempts to influence legislation affecting holding companies during the Seventy-fourth Congress.[45] While the Senate investigation was to be conducted by a special committee, the House investigation was made the responsibility of the already overtaxed Rules Committee. There was, in addition, a hard core of opposition to the House investigation on the ground that Congress already knew that every big utility company had had lobbyists in Washing to keep the Wheeler-Rayburn bill from passing. As Representative Blanton put it: "No new facts will be developed that will be worth 5 cents to the people."[46]

This prophecy partially matured, at least with respect to the House investigation. The Rules Committee held hearings only between July 9 and August 23. A large part of these hearings, furthermore, were dedicated to an examination of charges by Representative BREWSTER, of Maine, that Thomas G. Corcoran, a key administration strategist, had attempted to coerce him into supporting the Wheeler-Rayburn bill by threatening to block clearance of the Passamaquoddy project, in which BREWSTER was particularly interested.[47] The case was colorful, even brazen, but it was trifling when compared to the enormous pressures brought to bear by the private utilities.

When the Rules Committee did turn to an investigation of these pressures, it became embroiled with the Black committee over the custody of a witness, Mr. H. C. Hopson of the Associated Gas & Electric Co. It is perhaps significant that the only response of the House to its Rules Committee's request for authority to arrest Mr. Hopson was the introduction of a resolution to return the committee's unexpended funds to the General Treasury.[48]

The Rules Committee submitted one six-page report on its investigation to the House, and this almost 6 months after hearings had ended.[49] This report, inaccurately labeled "preliminary," agreed that there had been a widespread and well-organized campaign in opposition to the Holding Company Act. The report did not condemn the campaign per se, but rather decried it because it appeared to have been excessive. Thus it scored as "arrogant" Mr. Hopson's candid admission that his company had spent $900,000 in an effort to defeat the "death sentence" for utilities. No question was raised as to the ethics of this particular use of investors' money.

The excessiveness of the campaign notwithstanding, the committee seemed to have little faith in its own investigation. The report moodily concluded:

"The truth is that coming (as the investigations do) after the legislation in question has been disposed of, they are too much like closing the stable door after the horse has departed, usually leaving a very dim and uncertain trail."[50]

The Senate investigation had its limitations, but self-doubt was not one of them. The Black committee fought a lively skirmish with the House Rules Committee over

the custody of Mr. Hopson. It later became involved with Mr. William Randolph Hearst over the seizure of certain telegrams which Hearst had sent to his employees concerning the Wheeler-Rayburn bill. This dispute was finally settled in the District of Columbia Court of Appeals in a manner which cast the committee's procedures in a distinctly unfavorable light.[51] Both the Hopson and Hearst episodes did considerable damage to the good public relations which the committee needed to bring its investigation to a fully successful conclusion.[52]

The Black committee further failed to submit either a final report or the recommendations which it had been charged with submitting as soon as practicable. It reported to the Senate only once, and this report was confined to a discussion of Mr. Hopson's failure to respond to the committee's summons.[53]

On the positive side, the Black investigation had at least one tangible consequence. The committee's carefully documented evidence on the utilities' campaign to defeat the Wheeler-Rayburn bill was certainly an important factor in the approval by the House on August 22, 1935, of the death sentence clause in only slightly modified form.[54]

The Black investigation was also significant from the purely procedural point of view. The committee's staff was painstakingly attentive to details, and this careful spadework contributed significantly to the nature and conduct of the investigation. To give but one example, Senator Black submitted sworn statements from telegraph office managers in 20 towns which indicated that of 31,580 telegrams sent to Washington regarding the Holding Company Act, all but 13 were filed and paid for by utility company agents, almost invariably without the consent of the person whose name was used.[55] Nor is this example an isolated one. Throughout the committee's hearings an abundance of comparable evidence was introduced on other facets of the utilities' campaign. This documentation both speeded up the committee's hearings and gave substance to its findings.

But beyond its contribution to the passage of the Wheeler-Rayburn bill and its demonstration of the possibilities of the documentary approach, it is doubtful whether the Black investigation had any other lasting value. The committee developed a fairly full picture of a particularly intensive pressure campaign, but it left untapped a great part of the broad investigatory power which it had been granted. It failed to give any essentially new insight into either the methods or significance of organized group action. And, finally, if it is presumed that an investigation means little unless it stimulates congressional action, one would have to concede that even this relatively well-conducted investigation was a failure.

CONCLUSION: APPLYING THE PAST TO THE PRESENT

It would be extravagant to predict that the new investigation will succeed only insofar as it transcends limitations which have marred earlier investigations. Certainly the subject matter involved is too broad, too complex, and too fluid to be dealt with purely in terms of methods which have succeeded or failed in the past. Every investigation has been addressed to a specific situation which can have no exact counterpart. These reservations notwithstanding, past experience strongly suggests a few general conclusions as to the most viable means of conducting a lobbying investigation. Let it be noted that these conclusions are offered only as rules of thumb; no stronger term is possible.

First, considerable research should precede the actual hearings. It seems safe to say that this has never been done in the past, and that the investigations have suffered as a consequence. This research should begin with an analysis of past investigations and a survey of the literature on both pressure groups and pressure-group regulation. Assuming that the Buchanan committee is particularly concerned with improving the present Lobbying Act, this research should also include a careful examination of the act's operation over the past 3 years and a parallel examination of the content and efficiency of State regulation of lobbying laws.

Second, an agenda for hearings should be established and adhered to. Here the Buchanan committee is in a particularly favorable position. Past investigations have come in immediate response to charges of heavy pressure on specific matters. The committees have usually probed these charges with great initial energy, but when this source has been thoroughly mined the investigations have usually petered out in planless confusion, the House inquiry of 1913 being the one notable exception. The present investigation is addressed to a general situation rather than to specific cases, and this fact should enable the Buchanan committee to plan its work more carefully than did any of its predecessors.

Third, the committee should make every effort not to let its hearings bog down into a welter of interesting but trivial detail. Here again the example of the House investigation of 1913 is worth following, while the Black committee's hyperscrupulous attention to the utilities' telegram campaign in 1935 is an obvious case of the extreme to be avoided.

Fourth, the committee should strive to avoid an overly caustic treatment of witnesses or an excessive use of its subpena power. The experience of the Caraway and Black committees on these points is persuasive. The temptation may be overwhelming, but untoward grilling or unnecessary seizure of evidence tends to turn the public against such an investigating committee.

Fifth, the provocation and maintenance of congressional and public interest in the investigation is essential. To this end, the committee should submit interim progress reports on its work as did the Caraway committee in 1929 and 1930. A final report embodying the committee's recommendations for revision of the Lobbying Act is even more important, particularly since the hope that the committee can find means of strengthening the present act is a central reason for its existence.

Sixth, the committee should take steps to avoid the development of the internal political cleavages which so seriously handicapped the latter part of the Caraway investigation. The present committee's authority to study the Government lobby is potential political dynamite and is, therefore, liable to become a serious divisive factor. One can only hope that the Buchanan committee will approach this problem cautiously, with full awareness that the publicity activities of Government agencies are not strictly comparable to those of private interest groups and require different techniques for both investigation and regulation.

These suggestions relate primarily to procedure. It is somewhat more difficult to indicate the proper scope of the investigation since this is so largely a function of the substantive purposes which the investigation is designed to serve. On this point, the Buchanan committee has not yet clearly declared itself.

What purposes can an investigation of this kind serve? There would appear to be two primary alternatives, both of which may be present at once: the investigation can be a means for the development of an improved system of regulation, or it can be a medium for the development of information. Every previous investigation has centered on this second alternative to the exclusion of the first, and it is impossible to avoid the conclusion that this choice has usually been unfortunate. This past experience, buttressed by the general limitations of the congressional investigatory process, suggests that the Buchanan committee is unlikely to make a comprehensive, meaningful, or informative analysis of group pressures on Government. It is highly doubtful for example, that the committee could add much more than recent detail to the broad coverage, the basic and penetrating orientation of Donald Blaisdell's TNEC monograph, Economic Power and Political Pressure.

It would appear, therefore, that the present investigation can be of greatest service in fulfillment of the first purpose, i. e., the development of improved regulation. This is not to suggest that the Buchanan committee could or should rewrite the Lobbying Act without a fairly broad investigation into the whole pattern of pressure group activities, particularly into those parts of the pattern such as institutional and editorial advertising, or other indirect pressure practices whose standing under the present act is uncertain. Information and regulation cannot be wholly divorced; it is, rather, a question of emphasis. Effective regulation should be the first consideration, not because further information in unnecessary but rather because a congressional committee is simply not equipped to provide this information in a complete or well-integrated way. The Buchanan committee should do that which is most urgent and that which it can do best. On either score, its primary task is to find democratic solutions for the problem of political pressure.

[51] Judge Groner held that the seizure had been unlawful, but that complaint had been made too late to affect the committee's use of the material. *Hearst* v. *Black* (87 Fed. (2d) 68 (1936)).

Control of Coal Supplies in the State of New York

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, February 20 (legislative day of Wednesday, January 4), 1950

Mr. IVES. Mr. President, in line with my remarks of February 17 and my insertion in the Appendix of the RECORD, page A1179, I ask unanimous consent to have printed in the Appendix of the RECORD, chapter 15 of the Laws of 1950, State of New York, which is the text of "An act providing emergency measures for the control of coal supplies" approved by Governor Dewey on February 14, 1950.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

An act providing emergency measures for the control of coal supplies

The people of the State of New York, represented in the Senate and assembly, do enact as follows:

SECTION 1. Legislative finding: The legislature hereby finds that in the State of New

York the exhaustion and scarcity of coal constitute a public emergency directly affecting the health, safety, and welfare of the residents of the people of the State. At the present time such a scarcity exists. Coal supplies in important cities are so reduced that industrial establishments have been forced to stop work and there is danger of widespread further stoppages. Unless coal mining is resumed immediately, existing and anticipated supplies of solid fuels will be insufficient to assure the continued operation of hospitals, water systems, sewage systems, food processing plants, schools, and other facilities essential to the health, welfare, and safety of the people. It is therefore necessary that the distribution and use of solid fuels be regulated in order to ensure the continuance, as long as may be possible of services, activities, and functions essential to the people of the State.

SEC. 2. Solid fuels administrator: There is established in the Department of Public Works, the office of solid fuels administrator. The head of the office shall be the solid fuels administrator who shall be appointed by the Governor and serve during his pleasure. In the event that he should not be a public officer or employee, he may receive compensation to be fixed by the Governor within the amount made available by appropriation therefore. He shall be reimbursed for his actual expenses necessarily incurred in the performance of his duties. With the approval of the Governor, he may employ such assistants as he deems necessary and fix their compensation within the amounts made available by appropriation therefor.

SEC. 3. Definitions: (a) The term "solid fuels" as used herein shall be termed to mean and include all forms of anthracite, bituminous, subbituminous, and lignitic coals. (b) The term "dealer" as used herein shall include any person employed or engaged in the business of selling, transporting, or distributing solid fuels at wholesale or retail.

SEC. 4. Powers of the administrator: The administrator shall have the following powers and duties: (a) To establish a system of preferences in the use of solid fuels.

(b) To ration and allocate supplies of solid fuels in the possession of or subject to the control of a dealer and assign priorities with respect thereto.

(c) To limit, regulate, or prohibit the sale, transportation, delivery, or transfer of solid fuels in the possession or subject to the control of a dealer.

(d) To restrict the use of solid fuels by ordering the full-time, part-time, or intermittent closing of any building, facility, or plant in connection with which solid fuel is used for any purpose and to restrict the use of electric power, gas, steam, and other products requiring solid fuels in their manufacture.

(e) To adopt, promulgate, and make effective plans, regulations, rules, and orders to implement and carry out the purposes of this act.

(f) To make such investigations and surveys as may be necessary or appropriate to carry out the purposes of this act and to inspect the premises or property, books, records, and other writings of any person, partnership, company, or corporation. Except in accordance with proper judicial order or as otherwise provided by law, it shall be unlawful for the administrator or for any person who is permitted to inspect any book, record, or writing which has been produced in accordance with this paragraph or to whom any information contained in any report or record as a result of the production thereof pursuant to this paragraph, to divulge or make known in any manner any of the particulars set forth or disclosed in any book, record, or writing hereunder. Any violation of the provisions of this paragraph shall be punished by a fine not exceeding $1,000, or by imprisonment not exceeding 1 year, or both, at the discretion of the court.

SEC. 5. Standards: In establishing the preferences, rationing, allocations, and priorities provided for in the preceding section and in performing his other duties under this act, the administrator shall with respect to each use of solid fuels under consideration take into account:

1. The relationship of such use to the preservation of the health, welfare, and safety of the people of the State.

2. The consequences with respect to the health, welfare, and safety of the people of the State of the cessation or curtailment of such use.

3. The amount of solid fuels which such use requires.

4. The degree to which fuels other than solid fuels may be substituted with respect to such use.

5. The degree to which the public benefits of such use may be otherwise obtained.

SEC. 6. Prohibitions: No person shall sell, deliver, transfer, or otherwise distribute coal in violation of the rules, regulations, or orders of the administrator.

SEC. 7. Utilization of State and local agencies: The administrator is hereby empowered to direct or authorize any department, agency, or officer of the State or any political subdivision thereof to provide such facilities, personnel, assistance, and data as will enable him to carry out the purposes of this act.

SEC. 8. Exercise of powers through State and local agencies: The administrator may exercise any power, authority, or discretion conferred upon him by this act through any department, agency, or officer of the State or any political subdivision thereof in conformity with any rules or regulations which he may prescribe.

SEC. 9. Inconsistent laws: Superseded. All laws, general, special, or local, or parts thereof, which may be inconsistent with the provisions of this act shall be superseded and suspended in their operation to the extent that they are inconsistent with the provisions hereof or any rule, regulation, or order issued hereunder.

SEC. 10. Injunctions: Whenever in the judgment of the administrator any person is engaged or is about to engage in any acts or practices which constitute or will constitute a violation of any provision of this act or of any rule, regulation, or order issued hereunder, the administrator, through the attorney general, may make application to the supreme court for an order enjoining such acts or practices, or for an order enforcing compliance with such provision, rule, regulation, or order, and upon a showing by the administrator that such person is engaged or is about to engage in any such acts or practices, a permanent or temporary injunction, restraining order, or other order shall be granted without bond.

SEC. 11. Penalties: Any person who willfully performs any act prohibited or willfully fails to perform any act required by any provision hereof or of any rule, regulation, or order issued hereunder, shall be guilty of a misdemeanor. Any public officer who willfully violates any such provision, rule, regulation, or order shall be subject to removal from office by the governor in the manner provided by law for the removal of sheriffs.

SEC. 12. Contract liabilities: No person shall be held liable for damages or penalties for any default under any contract or order which shall result directly or indirectly from compliance with this act or any rule, regulation, or order issued hereunder, notwithstanding that this act or any such rule, regulation, or order shall thereafter be declared by judicial or other competent authority to be invalid.

SEC. 13. Expiration date: The provisions of this act shall take effect immediately and shall continue in effect for 90 days.

Judicial Legislation: A Threat to Constitutional Government

EXTENSION OF REMARKS
OF
HON. HOMER FERGUSON
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES

Monday, February 20 (legislative day of Wednesday, January 4), 1950

Mr. FERGUSON. Mr. President, one of the fundamental problems in the Government of the United States today is a blurring of the lines which mark the separation of powers between the three coordinate branches of legislature, executive, and judiciary. The distinctions are basic in the Constitution. Encroachments, particularly on the functions and powers of the legislature, are serious threats to representative government. On February 11 Senator BRICKER delivered a penetrating and scholarly address before the State of Illinois Bar Association at Peoria on one phase of this matter. The subject of his address was "Judicial Legislation: A Threat to Constitutional Government. His remarks are so significant that I feel they deserve permanent reference and I therefore ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

JUDICIAL LEGISLATION: A THREAT TO CONSTITUTIONAL GOVERNMENT

(An address by Hon. JOHN W. BRICKER)

The paramount political issue of the day is that of liberty versus the planned economy of a socialist state. There are some, of course, who do not agree with Herbert Hoover that we are now on the last mile to collectivism. There are others who feel that the promised economic security is worth a substantial price in terms of individual freedom. It is not my intention this evening to restate my opposition to the so-called welfare state. That issue should be resolved by the Congress after the people have spoken in the elections of 1950 and 1952.

Unnoticed by the general public, however, is the increasing amount of judicial legislation which tends to make the votes of the people and the deliberations of Congress academic. In spite of the political beliefs which individual lawyers may hold, usurpation of legislative powers by the Supreme Court should lead to vigorous opposition on the part of all the members of the American bar.

First, let me emphasize that there is a vast amount of so-called judicial legislation which does not undermine the constitutional separation of legislative and judicial powers. One common type of legitimate judicial legislation arises out of the interpretation of statutes couched in such vague language that Congress has by implication delegated legislative power to the Court. Also, the Court frequently applies a statute to a specific situation never contemplated by Congress and where a decision either way would not contravene the intent of Congress as disclosed either in the statute or its legislative history. Judicial legislation of the type described does not upset the constitutional division of labor between the Court and Congress, however unwise some of it may seem.

By virtue of its power to determine the constitutionality of laws passed by the Congress, the Supreme Court also exercises what can be described as a legitimate legislative

function. Since 1937 the Court has refrained from junking legislation on constitutional grounds, and, to this extent, has increased the power and responsibility of Congress.

In the past 10 years, there has been increasing evidence of another type of judicial legislation which conflicts with article I, section 1 of the Constitution providing:

"All legislative powers herein granted shall be vested in a Congress of the United States which shall consist of a Senate and House of Representatives."

It is this illegitimate judicial legislation to which my remarks this evening are directed. This judicial legislation springs from the insistence of a group of justices to establish, under the guise of statutory interpretation, their own preconceived notions of wise social and economic policy. Justices Black, Douglas, Murphy, and Rutledge comprised this group. They frequently succeeded in having one or more of the other Justices join them in resorting to some process of illegitimate statutory interpretation to reach a result coinciding with their own left-wing attitudes and opinions. In general, the political philosophy underlying judicial lawmaking is strikingly similar to that involved in State socialism. That philosophy consists of: (1) a desire that State regulation be superseded by Federal regulation; (2) hostility toward business in general and big business in particular; (3) an irrespressible sympathy for the under dog in both economic and political activities; (4) suspicion of the rich; (5) the conviction that labor organizations can do no wrong; and (6) the belief that administrative action should not be hampered by judicial review.

A collectivist society requires virtually complete centralization of all governmental powers. Because the draftsmen of the Constitution feared a strong central government, they not only divided authority at the national level, but reserved the bulk of political power to the States. That constitutional plan has been thwarted, of course, by decisions construing the welfare clause as conferring substantive powers on the Congress and by imaginative expansion of the interstate commerce clause. Nevertheless, Congress has generally been unwilling to supersede State regulation to the full extent permitted under recent constitutional doctrine. The Supreme Court, however, has been eager to centralize authority through the unwarranted expansion of existing legislation.

An example of this type of judicial legislation is the East Ohio Gas case,[1] decided on January 9 of this year, where the Court held that the Federal Power Commission's authority extended to a distributor of natural gas operating solely within the boundaries of a single State and selling gas only at retail. In spite of the clearly expressed desire of Congress not to intrude upon the area of effective State regulation, the East Ohio case sanctions overlapping regulation, nullifies an uncertain amount of State regulation, and, unless Congress acts, will lead to complete Federal regulation of the natural-gas industry. Other decisions by the Supreme Court involving electric power companies reveal a similar type of judicial legislation. Similarly, in the Southeastern Underwriters case[2] the Court cast aside prior judicial decisions accepted by numerous Congresses over a period of 75 years for the purpose of federalizing insurance regulation.

The centralizing influence of the Supreme Court's legislation is not confined to insurance and public-utility regulation. By now most lawyers are thoroughly familiar with the manner in which the Fair Labor Standards Act, the National Labor Relations Act, and other Federal laws have been thrust upon businesses as far removed from the stream of interstate commerce as the corner drug store and grocery store. In each case an unbiased examination of legislative history would have disclosed that Congress never intended its statutory definition of interstate commerce to be determined by any ingenious "house that Jack built chain of causation."[3]

There is a peculiar quirk in the mind of every socialist planner that employers who provide gainful employment to several hundred men and who compete for the consumer's favor are exploiters, but that the bureaucrat who fixes prices, allocates markets, and limits competition is a public benefactor. This curious thinking is reflected in much of the judicial legislation affecting business.

In the famous Cement case,[4] for example, the Court approved the fantastic theory of competition advanced by the Federal Trade Commission that manufacturers discriminate unless they net the same price from each customer. This mill-net theory, of course, is sufficient to outlaw all delivered pricing and freight absorption. Congress certainly never intended any such result because language having that result was deleted from the Robinson-Patman Act, and specific anti-basing-point legislation was rejected. The Cement case apparently requires many manufacturers to sell only on an f. o. b. mill basis. As a result many industries are threatened with balkanization; each company selling only within its freight-advantage territory. When the Department of Justice notes the rise of a series of local monopolies sponsored by the Federal Trade Commission, it may then invoke the Sherman Act. Unless Congress reverses the Cement-case legislation, lawyers will be placed in the unhappy position of offering their business clients a Hobson's choice.

Hostility toward business is also reflected in the Supreme Court's patent cases. Time does not permit me to delve into the intricacies of patent law. However, since the first patent law of 1790, Congress has tried to perform its constitutional duty of encouraging invention by granting to inventors an exclusive right to work their invention for a limited period. The extent to which the Court's legislation has been substituted for that of Congress is revealed in a recent dissent by Mr. Justice Jackson. Summarizing the effect of the Court's decisions on patent law during the past 10 years, Mr. Justice Jackson said: "The only patent that is valid is one which this Court has not been able to get its hands on."[5]

Evidence of the Court's hostility toward business is clearly evident in its expansion of the Sherman Act far beyond what the Congress of 1890 and subsequent Congresses intended. Quite appropriately, this law is now commonly referred to as the new Sherman Act, but it was amended not by Congress but by the Supreme Court. As a result, no lawyer can advise a company with any confidence that it is not a monopoly and not engaged in restraint of trade. Intent to monopolize or to restrain trade is now immaterial. Competition which hurts competitors is suspect. Patent uses held valid under numerous Court decisions, and accepted by the Congress, are now invalid.[6] Meeting the price of competitors has become per se proof of conspiracy. In short, the Supreme Court has given the Federal Trade Commission and the Department of Justice blanket authority to harass business at will.

For many years Socialists have been preoccupied with the plight of the economic and political under dog. Unfortunately, the sometimes sincere desire to help the less fortunate means that rules of law must be twisted and bent beyond all recognition. The Supreme Court has been motivated by the same compassionate instincts, sometimes laudable, but generally doing violence to the principle of equal justice under the law.

In the Federal Employers Liability Act, Congress established negligence as the rule of liability. By the simple process of never reversing a judgment in favor of the worker and never failing to reverse a directed verdict for the carrier, the Court has transformed that act into one of absolute liability.[7] It has done the same thing in many cases for the benefit of injured seamen.[8] In fact, its sympathy for injured railroad employees was so great that it permitted them to shop for the most liberal forum regardless of established rules relating to the convenience of the carrier and of the Court.[9] It may be true that the Federal Employers Liability Act is outmoded, but the Supreme Court has no constitutional right to act as a legislative reformer by making the act a workmen's compensation statute.

There has always been a close affinity between socialism and communism. This is only natural since both have the same ends, the only difference being in the method and speed of attainment. In at least three cases, Communists or Communist sympathizers have been the beneficiaries of judicial legislation.

In the case involving Harry Bridges,[10] the Attorney General and two lower courts found substantial evidence of Bridges' membership in the Communist Party and ordered his deportation. The statute provided that the decision of the Attorney General should be final. Nevertheless, the Supreme Court reviewed the proceeding de novo and reversed on the ground that some hearsay evidence had been introduced. With much more tenuous support in the evidence, the Supreme Court has affirmed findings of the Labor Board and most other administrative agencies. It should be obvious that Congress did not intend to give Communists a broader type of judicial review than that available to American citizens of unquestioned loyalty.

In the Schneiderman case,[11] an avowed and ardent disciple of communism escaped denaturalization through the Court's rationalization that a spreader of communism can be attached to the principles of the United States Constitution within the meaning of the naturalization laws. It should be unnecessary to add that no Congress has ever believed that a man can be genuinely attached to both the Communist manifesto and the United States Constitution.

In a case decided last year, the Court set aside the conviction of Harold Christoffel for perjury before the congressional committee, because there was some evidence that only 11 Congressmen, 2 short of a quorum, heard the lie that he was not a Communist.[12] The Court disregarded prior decisions, established parliamentary authority, and the custom and practice of Congress for over 150 years that a quorum is presumed to continue unless a point of no quorum is raised.

A common delusion under which all Socialists and planners labor is that the wealthy have an inexhaustible pool of money which can be tapped at will for what they conceive

to be the common good. It has been discovered in England, and it is rapidly being found out here, that persons of modest means pay the cost of social and economic experimentation. The Supreme Court's ability to redistribute wealth has been necessarily limited. However, those of you who deal with tax questions can appreciate that the Court has made some progress in that direction.

In the famous Clifford case [13] the Court plugged a sizable loophole in the income-tax law. However, it was a loophole which the Congress, in providing for a different method of taxation for trusts and individuals, had expressly refused to close. In common with most judicial legislation, the Court's Clifford rule proved so vague and confusing both to tax lawyers and the lower courts that the Treasury was forced to implement it with a body of administrative legislation. What has been said with reference to the Clifford case applies also to the Court's family-partnership cases.[14]

The Court has been no less ingenious in milking large estates. In the Spiegel case,[15] for example, the Court sustained a $450,000 tax on the estate of a decedent because of a possibility of reverter, which, if it existed, was never worth more than $4,000. Speaking for the Court, Mr. Justice Black refused to consider the future-interests law of Illinois to see if the tenuous possibility on which the tax rested did in fact exist.

It is indeed ironic that workers who suffer most under a totalitarian regime have, through their labor organizations, supplied the springboard to power. Much of the Supreme Court's legislation reflects the attitude that labor organizations, in spite of their economic power, should not be hampered by any legal restrictions.

The outstanding example of judicial legislation in this field is the famous Hutcheson case.[16] Although Congress in the Norris-LaGuardia Act had banned the injunction remedy for certain acts of labor unions outlawed under the antitrust laws, the Court proceeded to repeal all other remedies for labor union antitrust violations. The work of removing labor unions from the reach of the Sherman Act was completed in the Carpenters case,[17] where the Court immunized labor unions from liability for the unlawful acts of their duly authorized agents. Other decisions of the Court have sanctioned labor union violence,[18] forbidden by Congress in the Antiracketeering Act, and kickbacks of wages to dishonest union officials,[19] clearly outlawed by the Kickback Act of 1934.

In Dr. Friederich Hayek's brilliant work, the Road to Serfdom, chapter 6 is devoted to planning and the rule of law. The first two sentences of that chapter are:

"Nothing distinguishes more clearly conditions in a free country from those in a country under arbitrary government than the observance in the former of the great principles known as the rule of law. Stripped of all technicalities, this means that government in all its actions is bound by rules fixed and announced beforehand—rules which make it possible to foresee with fair certainty how the authority will use its coercive powers in given circumstances and to plan one's individual affairs on the basis of this knowledge." (P. 72.)

If you fully understand the meaning of those sentences, you will appreciate why the symbol of justice wears a blindfold. It simply means that justice is based on standards which are both rational and communicable, and above all else impersonal. In other words, in a free society justice is dispensed in accordance with definite rules which in themselves prevent arbitrary action for or against particular individuals. In a collectivist society, those who plan the details of the lives of the people necessarily require power of such magnitude that it cannot be tested by any definite act of the legislature. The authority granted to the OPA, for example, meant that whatever action it might take in controlling prices would be legal. The growing trend toward what Dean Pound has described as administrative authoritarianism is due in part to legislation by the Supreme Court.

In the Dobson case,[20] the Supreme Court completely nullified the law providing that decisions of the Tax Court not in accordance with law should be reversible on appeal. The Court, on behalf of itself and the circuit courts, abdicated authority to review Tax Court decisions not showing at first blush a serious legal error.

In numerous cases involving the definition of employee, the Court, contrary to the intent of Congress, has relinquished the burden of interpretation to the administrative agency involved. Until the decisions of the Court were reversed by Congress, the Labor Board, and the Treasury Department under the Social Security Act, were empowered to define employee under vague standards of the broad social purpose of the legislation, instead of the usual common law test intended by Congress.[21]

By abdicating powers of judicial review, the Supreme Court has granted to many administrative agencies arbitrary power over the businesses they regulate. In cases involving, for example, the Federal Power Commission,[22] the Federal Trade Commission,[23] and the Securities and Exchange Commission,[24] the Court held, in effect, that Congress intended the courts to give rubber-stamp approval to the actions of those agencies because of their presumed expertness.

What are the dangers involved in judicial legislation inasmuch as Congress has already corrected many of the examples already discussed?

First. The desire of Congress to reestablish its original intent can be thwarted by a Presidential veto.

Second. Considerable time is required for Congress to correct judicial legislation as shown by the aftermath of the Cement case. This increased work has been thrust upon Congress at a time when its responsibilities with relation to foreign affairs and national security have been greatly increased.

Third. Correction of some judicial legislation subjects the Congress to unwarranted, but perfectly natural, criticism. The general public still assumes, almost instinctively, that the Supreme Court should be immune from criticism, because, unlike Congress, it is emotionally unconcerned about the desirability or undesirability of particular legislation. In 1947, for example, the Congress wiped out retroactively the effect of the Court's portal-to-portal legislation imposing a multi-billion-dollar liability on business and the Government. It is only natural that many wage earners would be bitter about the action of Congress in taking away the money so generously promised by the Court.

Fourth. Some judicial legislation is virtually beyond the power of correction because the Court has blinded itself to socially desirable practices and equitable principles, universally recognized but difficult to express in legislative form.

Fifth. Judicial legislation, because it is generally retroactive and incomplete, befuddles the lower courts and lawyers until such time as Congress makes the necessary correction.

Sixth. Judicial legislation, sooner or later, must lock the Supreme Court and Congress in another open struggle for power in which the reputation of both may be damaged.

There is no more important work which members of the bar can undertake than to devote their exceptional talents to a study of judicial legislation. The separation of legislative and judicial power is one worthy of eternal vigilance, because the judiciary owes no responsibility to the electorate. The impending struggle between the Court and Congress concerns the right of the people, through their elected representatives, to make the laws under which they choose to live. Lawyers, whatever their political affiliation, should be willing to work together toward seeing that the right of the people to rule shall never be impaired.

Jefferson-Jackson Day Dinner Address by the President

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1950

Mr. BOLLING. Mr. Speaker, the Jefferson-Jackson Day dinner speech of the President of the United States is included herewith under the unanimous consent granted me. In this speech, delivered on February 16 to more than 5,000 Democrats at the dinner and to a radio audience of millions, President Harry S. Truman outlined clearly the forward-looking goals of the Democratic Party, and the means of achieving those goals. The President made clear the contrast between the two major parties. The Democratic Party looks forward to the future with faith and confidence, while the Republican Party yearns for the past predicting a gloomy future.

Fellow Democrats, this is a most remarkable dinner.

This dinner and others like it throughout the land are evidence of the growing strength of the Democratic Party. They show that our party is determined, more than ever before, to carry its message to the voters of this country.

It is very significant that such great interest and enthusiasm are being shown in a congressional election year. We know that congressional elections are as important as Presidential elections. We found out in

1946 how much harm can be done to our country when a congressional election goes wrong. We are not going to let that happen again. We don't want another do-nothing Eightieth Congress.

These dinners carry forward a great tradition. The original Jefferson-Jackson dinner was held in this city in 1830, 120 years ago. It was given in memory of Thomas Jefferson, and its guest of honor was President Jackson. At that first Jefferson-Jackson dinner President Jackson gave his famous toast: "Our Federal Union, it must be preserved."

Tonight we meet again to think of our Federal Union, to be thankful that it has been preserved, and that it has grown in strength and in service to the people. As in Jackson's time we meet to discuss some of the problems that our country faces.

We have some very serious problems today. We are living in a troubled period of the world's history. Our responsibilities as a Nation have never been so great, and the decisions we face have never been more difficult. We confront serious questions of foreign policy. We have the problem of maintaining an adequate national defense. We have the task of maintaining prosperity and protecting our economy from depression. We have the question of handling the Nation's finances and the national debt.

These are grave issues. And the Democratic Party is meeting them squarely. We do not believe in trifling with the people about these issues. We do not offer to solve them with vague generalities or worn-out slogans. We know that the solution of these problems requires all the wisdom and energy we possess as a Nation. We know that their solution requires heavy expenditures. The Democratic Party does not propose to deceive the people either about the problems we face or the cost of solving them.

The Democratic Party has confidence that the United States will meet these great responsibilities. It knows that the United States is a dynamic, growing Nation. We believe that this country will make as much progress in the next 50 years as it has made in the last 50 years.

But we cannot meet the responsibilities of today or the challenge of the future by following the outmoded concepts of 50 years ago. The promise of the twentieth century cannot be fulfilled by those who would like to return to the days of McKinley.

We must go forward with our programs for peace through defense and foreign aid. We must proceed with our domestic programs for health, education, social security, and economic stability. Both our foreign programs and our domestic programs are necessary to answer the demands which this critical period of history makes upon us. We cannot have prosperity at home unless we play our full part in the defense and the revival of other free nations. We cannot have peace abroad unless we increase the strength, the freedom, and the well-being of our people at home.

There are some who would like to see us turn our backs upon the rest of the world and drop our efforts to strengthen our domestic economy. At the present time they are spreading the mistaken idea that we can save money by going backward. They advocate slashing our expenditures for peace and for our domestic programs. These people are blind to the problems that confront us. They can see that a tax cut would help their own pocketbooks temporarily. They fail to see that in the long run false economy would endanger not only their pocketbooks but their lives and the continuation of civilization itself.

It is true that our present expenditures are large. But the Democratic administration is working toward a balance in the Federal budget. I wish we could balance the budget immediately by the simple expedient of cutting expenses. But that is out of the question. More than 70 percent of our Federal budget goes to pay for past wars and to work for peace in the future. Anyone who says that these expenditures are extravagant does not understand the kind of world we live in. Our other expenditures are less than one-third of the budget, and less in proportion to the national income than they were 10 years ago.

I would like to cut expenditures further, and I intend to do so at every opportunity. But I do not propose to weaken the strength and security of this country. I do not propose to place the peace of the world in jeopardy to satisfy the advocates of false economy.

In this difficult world situation some people are talking about general tax reductions. I regard this as political hypocrisy. We had one recent experience with an ill-timed, irresponsible tax cut. Much of our present financial difficulty is the result of the sweeping tax reduction which was enacted in 1948 over my veto—at a time when expenditures for defense and foreign policy were inevitably rising. We must not make the same mistake again.

In this election year the Democratic Party will not play politics with the Federal budget. We will state the honest truth about the budget, just as we will about all other issues. We believe that the people are entitled to the plain facts about every issue, so that they can make up their own minds.

The Democratic Party can afford to be frank and truthful, because it is working for the general welfare of all our citizens. It does not serve any narrow group or clique. This makes it easy for the Democratic Party to put its program before the country openly and completely. We have nothing to hide from the people. Our strength lies in explaining our program and our policies to the people. And the more thoroughly we explain to them what the Democratic Party is trying to do, the more certain we can be of their continued support.

There are many differences between the Democratic and the Republican Parties. But I think the greatest difference is that the Democratic Party is the party of affirmative action—it is for measures to achieve prosperity and progress. The Republican Party is the party of negative inaction—it is always against things.

The principal thing that Republicans are against, of course, is the Democratic Party. But they can't win on that plank alone. They must try to find reasons for being against the Democratic Party. They must persuade people to vote against the Democratic Party. And that is getting harder and harder to do.

One reason it is hard to do is that the Republican Party has no affirmative program of its own. It refuses to face the problems of our economy. It refuses to take thought and make plans for the future. Instead of presenting a positive program of their own, the Republicans sit around waiting for us to make a proposal. Then they react with an outburst of scare words. They are like a cuttlefish that squirts out a cloud of black ink whenever its slumber is disturbed.

Right now, the main problem of the Republican leaders seems to be to find some new scare words. They have not had much luck along that line lately. They tried using the phrase "welfare state" as a scare word for a while, but they discovered that the people are in favor of a Government that promotes their welfare. So they dropped that scare word. Then they tried "statism." But my good friend Governor Lehman took care of that one in the New York election—so they had to drop it, too.

Now, the Republican leaders have had to go back to an old stand-by. Frankly, I don't think it's as good as some of the others, but it appears to be the best they can think of. Their current scare word is "socialism."

It's perfectly safe to be against "socialism." The difficult thing is to make the country believe that the Democratic Party stands for socialism. How in the world can the Republicans persuade people that all you Democrats at all these dinners are socialists?

It can't be done. But the Republicans will try it just the same. That's what they've been trying to do ever since 1933. For the last 17 years they have called every new Democratic measure "socialism" or "communism," and they have made constant predictions of doom and disaster. The plans and proposals that we have advanced for improving the condition of the people of this country have been greeted with these same old scare tactics during all these years.

And I'm going to prove that to you.

Let us take it step by step.

In 1933, this country faced some of the greatest problems in its history—the problems of providing food and work for millions of jobless persons and their families, of saving millions of farms and homes from foreclosure, of restoring a banking system that had collapsed, of placing the entire economy on the way to recovery.

The Democratic Party rolled up its sleeves and went to work. It took steps to provide relief and jobs, to save farms and homes, to restore banks and businesses. Bit by bit the economy responded to those vigorous measures. Income began to grow, confidence returned, business activity mounted. This was the response of the economy to our farm and labor and business programs—our programs for resource development and public works and the building of homes.

As this miracle of recovery unfolded, what was the attitude of the Republican Party?

In 1934, the Republican National Committee issued a policy statement. And in that statement they said:

"American institutions and American civilization are in greater danger today than at any time since the foundation of the Republic."

That sort of talk may have frightened the members of the Union League Club. But it didn't frighten the people who had been saved by the New Deal from bread lines and bankruptcy.

In 1936, the Republicans thought the danger was worse. In that year, the Republican platform cried out:

"America is in peril. The welfare of American men and women and the future of our youth are at stake * * *. The New Deal administration"—this is from the 1936 Republican platform—"has bred fear and hesitation in commerce and industry, thus discouraging new enterprises, preventing employment, and prolonging the depression."

People weren't scared by that one either. They knew it just didn't make sense, because the national income had risen more than 50 percent in the previous 4 years, and it was still rising.

In 1940, the Republicans tried to scare us again. This time their platform said:

"The administration has imposed upon us a regime of regimentation which has deprived the individual of his freedom and has made of America a shackled giant. * * * The New Deal administration has failed America."

That's what the Republicans said, but the America that the New Deal had saved—the economy that the New Deal had freed and made productive again—became the arsenal of democracy that overwhelmed the forces of totalitarian aggression.

But that still didn't teach the Republicans anything. In 1944, when we stood at the peak of our wartime production—the economic bulwark of the free world—the Republican Party platform proclaimed: "The fact remains that under the New Deal, American economic life is being destroyed." That's what they said in 1944—"American economic life is being destroyed."

Apparently, they never learn anything. Today, when we have a national output of over $250,000,000,000 a year, and a higher standard of living than ever before, the Republican Party still cannot see anything good about the situation. In their policy statement issued 10 days ago, the Republican National Committee declared: "The major domestic issue today is liberty against socialism: * * * Basic American principles," they said, "are threatened by the administration's program. * * *"

It's the same old story—the same old words and music—the same empty and futile attempt to scare the American people—in complete contradiction of the plain facts that are visible to every citizen in his daily life.

For the past 17 years, the same outcry has greeted every proposal advanced by the Democratic Party—whether it was for better housing, social security, rural electrification, farm price supports, minimum wages, or any other program for the general welfare.

In 1944 Representative JOSEPH W. MARTIN, Jr., summarized the Republican attitude toward all these progressive steps in one brief paragraph when he said:

"For 11 years we have been steadily drifting into a regimented nation, with absolute control vested in a power-mad group of bureaucrats and social planners. Unless there is a change in government this year"—that was in 1944—"we can be reconciled to some kind of totalitarian, socialist government."

That is what the Republicans said about our programs in 1944. That is the way they talked about them in 1948. That is what they are saying about them now.

Today, we are proposing further development of our resources, further strengthening of our economy, new measures for the welfare of the people. And what do we hear? The same old story. It is all repeated in that latest statement of the Republican National Committee:

"This program"—they said, and they were talking about the program of the Democratic Party—"This program is dictated by a small but powerful group of persons who believe in socialism, who have no concept of the true foundation of American progress, and whose proposals are wholly out of accord with the true interests and real wishes of the workers, farmers, and businessmen."

Well, let's look at the record. What is our program? Where did it come from? Our program is the platform adopted by the Democratic Party in its convention of 1948. And it has been voted on by the people of this country, including the workers, farmers, and businessmen.

If our program was dictated, as the Republicans say, it was dictated at the polls in November 1948. It was dictated by a small but powerful group of 24,000,000 voters.

And I think they knew more than the Republican National Committee about the real wishes of the workers, farmers, and businessmen.

Of course, this program is not socialism. It is based upon a firm faith in the strength of free enterprise. It is designed to strengthen the markets of free enterprise and to expand the investments of free enterprise. It will make our citizens economically secure, well-educated, and confident of the future. Only in a nation of such citizens can free enterprise grow and expand and reach its full possibilities.

The program of the Democratic Party is aimed to promote the prosperity and welfare of the American people. It is aimed to increase the freedom of the American people.

Freedom is not an abstraction. Freedom is a reality in our daily lives. The programs of our party have freed workers from economic subjection to their employers. They have freed farmers from the fear of bankruptcy. They have released farm wives from the bondage of ceaseless drudgery. They have freed older people from the fear of a dependent old age.

Our programs look forward to the day when our people will be freed from the fear of inadequate medical care and crushing medical expenses. They are aimed at freeing our young people from ignorance and poor education. And on these foundations for greater freedom for all our people, we are going forward to break down the barriers to economic opportunity and political liberty that have been created by prejudice and discrimination.

This is the record and the promise of the Democratic Party in expanding the freedom of the American people. And when the Republican Party proclaims that we are engaged in restricting freedom—that we are the enemies of freedom—I ask, "Whose freedom?" Let the American people look into their own lives and ask themselves whether they enjoy greater freedom or less than they did 18 years ago.

About the only freedom we have limited is the freedom of Republicans to run the country. Maybe that is what they are complaining about.

For the Republicans to drag out the same old moth-eaten scarecrow of socialism again in 1950—after having used it, or something very like it, in opposition to every progressive step the Nation has taken since 1933—is an insult to the intelligence of the American people. Out of the great progress of this country, out of our great advances in achieving a better life for all, out of our rise to world leadership, the Republican leaders have learned nothing. Confronted by the great record of this country, and the tremendous promise of its future, all they do is to croak, "socialism."

The Democratic Party is going right ahead to meet the needs and carry out the aspirations of the American people.

Our objective is to advance in freedom—to create a system of society that is ever more responsive to the needs of the people—to establish democratic principles so firmly in the hearts of the people that they can never be uprooted.

In the present anxieties and troubles of the world, the real strength of our country lies not in arms and weapons, important as they may be, but in the freedom of our citizens and their faith in a democratic society. Among the nations of the world, we stand as an example of what free men can do when they are in control of their own affairs and dedicated to the concept of a better life for all.

To work for the prosperity, the welfare, and the freedom of the American people is to work for the vindication of democratic institutions everywhere. And it is only through the growth of democratic institutions that a just and lasting peace can finally be achieved.

In this troubled world, it is more than ever important that the Democratic Party remain steadfast in its devotion to these ideals. It it more than ever important this year that the Democratic Party present its program to the people so plainly that it cannot be misunderstood. If we do that, I am confident that the people will again voice their approval of the principles which lead to increased prosperity, welfare, and freedom—not only for this country, but for free nations everywhere.

Macaulay's Prophecy

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 13, 1950

Mr. REED of New York. Mr. Speaker, under leave to extend heretofore granted, I am inserting in the RECORD a very interesting article entitled "Macaulay's Prophecy," which appeared in the February issue of Partners:

MACAULAY'S PROPHECY

(By George Peck, executive editor of Partners)

On May 23, 1857, Thomas Babington (Lord) Macaulay wrote from London, England, to his American friend, Congressman H. E. Randall, of New York. In this letter he predicted that in the twentieth century America would experience a severe period of depression when "Hundreds of artisans will be fairly brought to the test. Distress everywhere makes the laborer mutinous and discontented and inclines him to listen with eagerness to agitators who tell him it is a monstrous iniquity that one man should have a million, while another one cannot get a full meal."

Space does not permit reproducing here the entire letter, but I would like to quote one significant paragraph from it: "I seriously apprehend that you will, in come season of adversity, as I have described, do things which will prevent prosperity from returning, that you will act like people in a year of scarcity, devour all the seed corn, and thus make the next year not of scarcity, but of absolute distress. The distress will produce fresh spoilage. There is nothing to stay you. Your Constitution is all sail and no anchor. As I said before, when society has entered on this downward progress, either civilization or liberty must perish. Either some Caesar or Napoleon will seize the reins of government with a strong hand, or your Republic will be as fearfully plundered and laid waste by barbarians in the twentieth century as the Roman Empire was in the fifth century; with this difference, that the Huns and Vandals who ravaged the Roman Empire came from without, and your Huns and vandals will have been engendered within your country by your own institutions."

Macaulay died long before the term "Fair Dealers" had been coined, else he probably would have used it instead of the word "barbarians." But the terminology makes no difference. Shakespeare wrote: "What's in a name? That which we call a rose by any other name would smell as sweet." Macaulay was keen enough to foresee that here in America we would sow the seeds for our own eventual destruction by nursing vipers in our bosom.

I TOLD YOU SO

Macaulay died in 1850. Were he alive today, he would have ample justification for saying, "I told you so." Here he would see the sickening spectacle of the American people abandoning the right to govern themselves, delegating more and more power to the Central Government, and looking to that Government for their very need; forsaking the spirit of initiative, thrift, and enterprise which was responsible for making America the great country that she is.

He would listen to soap-box orators haranguing on street corners and to demagogs over his radio advocating various and sundry crackpot economies to replace the splendid one we now have. In certain news-

papers and magazines, Macaulay would read ridiculous charges against the American system of free competitive enterprise—accusations so false, so utterly lacking in factual evidence to back them up, that even he, in spite of his skepticism, would wonder what could have happened to a formerly sane people to cause them to give heed to such drivel.

He would witness the alarming spectacle of National, State, and local governments piling up debts, spending and borrowing with no thought of the morrow, while Americans apathetically look on, making little or no protest about the profligate waste of money and resources.

ONE HUNDRED AND FIFTY YEARS OF PROGRESS

Our founding fathers set up a beautiful thing here in this country. For 150 years we closely followed the pattern they designed for us. We became the envy of the entire world. What has happened to us? Are we going to let the barbarians within our gates destroy us? My fervent prayer is that, before it is too late, America will awaken to its senses, get back on the pathway that led it to unprecedented heights and which, if followed again, will carry it to a new record high in civilizations.

During those first 150 years, the American people established an economy that gave more wealth to more people than has ever been achieved by any nation at any time in world history. It is true that the millenium was not reached; there still existed inequalities, but the gaps between these inequalities were slowly but surely being narrowed. Now we have turned our backs on the tried and proven formula for creating wealth. Barbarians within are propelling us into the welfare state, which more properly should be called the farewell state.

LESSON FORGOTTEN

We have forgotten the lesson learned that the wealth of any nation consists of those things which its people are able to have over their bare needs for existence. It is the surplus of food, clothing, etc., plus luxuries and semiluxuries which people are able to accumulate. Part of this excess must be used as seed corn, to be plowed back in order to insure necessities and luxuries for future years. Just as long as this seed corn is taken from surplus, a nation is progressing in the right direction—the green lights are showing. But when a nation is forced to take seed corn from food supplies really essential to proper subsistence of its people, it is on a dangerous road with red lights showing against it.

All wealth formerly was created by human labor, but today an ever-increasing proportion is created by human imagination. With the advent and development of the machine, labor has become mostly mechanical and now is of value chiefly for carrying out the ideas of human imagination.

For instance, stop to consider the amount of labor that goes into the making of a book. An author writes a book, a best seller. While his imagination was at work, men were laboring months and years ahead of the book coming off the presses. Men in the forest had been cutting down trees; other men in paper mills took those trees, made them into pulp and then into paper. Other men transported the paper from mill to printing plant. While this was being done, other workers were digging in the ground, mining the lead for the type; still others were making the ink.

Finally linotype operators set the type on machines made by other men, and pressmen ran the books off presses that were made by still other mechanics. All of these men were put to work through the imagination of but one man, the author of the book. Even then the author was not finished putting people to work. Men had to transport the books from the printing plant to the bookstores of the Nation, where sales clerks were employed in the selling of the book.

IMAGINATION REQUIRED

It takes far more imagination to build up and conduct a successful business than to write a best seller. As in the case of the book, most of the work which enters into any manufactured product is planned months, sometimes years, ahead of the day the finished article rolls off the assembly line. Since it costs about $6,000 for plant and machinery to put a man to work, new wealth must be created constantly, else there can be no new jobs, no rising standard of living. In recent years there has been an artificial temporary creation of new jobs in America. It has happened because we have made and are still making use of some of the stored-up wealth, or of the credit arising therefrom, to create new jobs. This means, in essence, that we have been eating our seed-corn. This can only end in disaster if long continued. The red lights are up.

One of the functions of business is to create new wealth (more seed-corn), by increasing production (increasing the yield per acre), by building new plants (planting additional acres). That and that alone gives more new permanent jobs and an increasingly higher standard of living.

CAPITAL MUST BE ENCOURAGED

If we continue to eat our seed-corn as we are presently doing, inevitably the day will come when we shall not have enough left to plant the acres already under cultivation, and with fewer acres planted, our standard of living will take a severe tumble. So it is with capital and industry. The flow of new capital into industry must be increased; the using up of present capital must be discouraged, else we shall live to see unhappy time when there will not be sufficient capital to keep the wheels of industry moving. Only by giving capital an opportunity to make a profit commensurate with the risk taken, can new venture money be lured into taking the chance of backing new enterprises and expanding old ones—the two ways, the only two ways—by which new wealth can be created.

The hour is late—very late—but we can still save ourselves. The barbarians within can be defeated and our Republic saved if we demand a halt to wasteful governmental spending and insist on decentralization of bureaucratic power at Washington. If we have the will, the courage, the unselfishness, we can still save America from the sad fate which Lord Macaulay predicted for us—and thereby make him a poor prophet.

The Future of the Republican Party

REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1950

Mr. PATMAN. Mr. Speaker, there has been a great deal of discussion recently about the future of the Republican Party. The subject is of interest to Democrats and Republicans alike, because, strange as it may seem to some, most Democrats are sincerely interested in preserving the two-party system in American politics. And most Democrats believe that the best chance of preserving that system is that drastic action be taken to keep the Republican Party from fading from the political scene.

I do not believe that the Republicans can chart a course for the future without understanding their mistakes of the past. For this reason, in a spirit of sincere effort to aid my distinguished and respected Republican colleagues in the Congress, I am inserting into the RECORD as a part of my remarks a scholarly and thoroughly documented article by Dr. Walter Prescott Webb, of the University of Texas, entitled "How the Republican Party Lost Its Future," as carried in the autumn issue of Southwest Review.

This thought-provoking article, written, of course, without political bias, discloses how the Republican Party has successively turned its back on great segments of our society—on the farmer, on the small-business man, on the workingman. As Dr. Webb so forcefully phrases it, the Republican Party quit the people long before the people quit the Republican Party. I hope that my patriotic Republican colleagues who share my concern over the current threat to the traditional two-party system of our Nation will digest this historical study of their party and profit from its lessons.

HOW THE REPUBLICAN PARTY LOST ITS FUTURE

(By Walter Prescott Webb)

Senator HENRY CABOT LODGE, JR. published in the Saturday Evening Post of January 29, 1949, an article entitled "Does the Republican Party Have a Future?" Though he spoke with objectivity, the fact that he could ask the question indicates that he realizes the dilemma of the party of which he is a distinguished member. It is probably the first time in the history of the party that the question has been asked in such seriousness. Senator LODGE believes the party has a future, but he suggests that it can be realized only on condition that the Republicans clean house, discard old concepts, and adopt a program more in conformity with the will and the aspirations of the American people. In short he implies that the house is in disorder, that the party's present concepts are archaic, and that its program does not mesh with popular spirit and desires.

Many thoughtful persons have tried to explain the recent surprising defeat of the Republican Party, but most of them have been content to do so by analyzing the current situation in terms of such factors as the labor vote, the farm vote, or the Roosevelt vote. At least I have read no account that viewed the present state of the Republican Party down the long gun-barrel of history. I believe that history throws a strong clear light on the problem and makes the eclipse of a once very powerful institution understandable.

It must be remembered that the Republican Party set out as a great crusader bent on emancipating those Americans who were not yet free to enjoy the benefits of democratic life. The cause was one that made a tremendous appeal to the idealist and to the common man. The cause gathered that strength known as moral force. The party that espoused the cause became the champion of suffering humanity, of freedom, of real democracy extended to all men, even the most humble slave. There was something here of unselfishness, of humanitarianism, of philanthropy, and the appeal of it reached in some measure every man whose pecuniary interests did not outweigh his idealism. The party first appeared in 1852, and by 1860 it had enough strength to capture the National Government.

As a result of its first success in the election of Lincoln, the Southern States withdrew from the Union, giving the Republican party its second and its greatest opportunity, that of saving the Union. In saving the Union the party proved itself able to win the hardest war the Nation has yet fought,

and to add to the moral prestige it had exhibited in the election of Lincoln the prestige of physical force sufficient to hold the Nation together in the gravest crisis. Here was the deed that stirred the patriotism and fervor of people everywhere, cementing their allegiance to the party with something approaching blind devotion. If you believed in freedom of men, you were a Republican, or should be; and if you believed in the Union and in loyalty to the flag, you could be nothing else. Thus it happened that the Republican party emerged from the 4 years of civil war triumphant in the shining armor of high moral purpose and armed with the keen sword of patriotic devotion. No political party ever set out on the path of peace—to last for more than three decades—under more favorable auspices. It had found in the shortest time the political holy grail.

But there was a structural weakness in the young party, a weakness which had considerable effect on policy for 10 years after the war, and indirectly for a much longer period. The party was not geographically in the beginning a national party, and this despite the fact that it had kept the Nation from dividing, had saved the Union. It originated as a sectional party, drew its total initial strength from the North, gained its first national election from northern votes, and had relatively little following elsewhere. Had its leaders inherited Lincoln's wisdom as they did his power, the party might in time have become truly national, but it never did. It has in essence always been sectional.

Because the South became so Democratic as to be known as the Solid South, it has been assumed in some quarters that the Democratic Party was sectional. On the contrary it was a national party before the Civil War, through reconstruction, and remains so today. Its members were distributed over the whole Nation, though for long they formed a minority in the more populous region. It was the sectional nature of the Republican Party that led directly to the harsh reconstruction measures. The Republican leaders in Congress knew that they had no Members in the South to speak of, and that if the Southern States were permitted to return Members to Congress, the Democrats would have a majority in the House of Representatives. The only safe thing they could do was to keep the southern Democrats out until the victorious Republicans could be assured of a majority in both Houses of Congress. This political party maneuver, or gerrymander, was carried out under the guise of reconstruction with the result that no Southern State really was represented in the National Congress for nearly a decade after the war closed.

In this decade the Western States were not represented either. They were not represented because 12 of them had not yet been admitted to the Union. They existed as Territories, and these Territories were governed and administered by the National Government, in this case the Republican Party. When time came for the admission of new States, every step was taken to guarantee that they came into the Republican fold. By eliminating the South and conditioning the West, the Republicans built up their strength to a point where they could safely permit the Southern States to send Democrats back to the Congress. But for a period of 10 years the Republican Party, operating from the Northern States, held undisputed political control in theory and in fact over the entire Nation—over the South because it was being reconstructed, over the West because it was largely unoccupied and still Territorial in status.

The Republican Party, having gained a breathing spell by disfranchising southern Democrats, set itself to the task of consolidating its strength and binding its membership to it before memory of its original high idealism and its patriotic achievement in saving the Union had faded into the background. It is perhaps a good political maxim that a party cannot live by its past alone. It must make good every day, at least every administration. This the party succeeded in doing.
